OFFICIAL GAZETTE

UNITED STATES PATENT OFFICE

VOLS 462-463

JAN - FEB

1936

Patents Nos. 2,026,516 to 2,027,359

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 462—No. 1 TUESDAY, JANUARY 7, 1936 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(D. C. Mich.) Carothers patent, No. 1,875,317, for process for producing diphenyl *Held* invalid. *Swann Research* v. *Dow Chemical Co.*, 12 F. Supp. 270.

(D. C. Mich.) Carothers patent, No. 1,907,498, for process of producing diaryl hydrocarbons *Held* invalid. *Id.*

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,798,703, F. M. Rosenzweig, Induction train control system, decided December 12, 1935, claim 13.

Pat. 1,866,845, W. L. Edison, Signaling system, decided November 20, 1935, claims 1, 2, 3, 4, 5, 11, 12, and 13.

Pat. 1,914,612, B. B. Moeur, Jr., Aerial tow advertiser, decided December 10, 1935, claims 1 and 2.

Pat. 1,980,788, G. C. Woodruff, Refrigerator container for container cars, decided December 12, 1935, claim 5.

Notice of Cancellation

U. S. PATENT OFFICE, *Washington, Dec. 12, 1935.*

Coolee Engineers, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Edwin L. Wiegand Company, Pittsburgh, Pa., to effect the cancellation of trade-mark registration No. 164,660, issued February 27, 1923, to Coolee Engineers, 1711 East Seventeenth Street, Cleveland, Ohio, and a notice of such proceeding sent by registered mail to said Coolee Engineers at said address having been returned by the post office as undeliverable, notice is hereby given that unless said Coolee Engineers, its assigns or legal representatives shall enter an appearance within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Important Information

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings, as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially order. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Printed Copies of Patents

A printed copy of the complete specification and drawings of any patent published herein can be obtained for ten cents.

Condition of Applications Under Examination at Close of Business December 21, 1935

(Total number of applications awaiting action, excluding Trade-Mark Division, 31,482; Trade-Mark Division, 1,173. Oldest new case, August 21, 1935; oldest amended, August 22, 1935.)

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the United States

THE CHANDLER & PRICE COMPANY

v.

BRANDTJEN & KLUGE, INC., AND JOSEPH FREEMAN, INC.

No. 11. November 11, 1935

1. INFRINGEMENT SUIT AGAINST USER OF MACHINE—RIGHT OF MANUFACTURER TO INTERVENE.

In patent infringement suit against user of machine, allegations in application by manufacturer of machine that manufacturer was real party in interest, and that plaintiff contemplated suing users of manufacturer's machines for patent infringement *Held* insufficient to show that as matter of equitable right manufacturer was entitled to intervene.

2. SAME—ENLARGEMENT OF ISSUE BY INTERVENOR.

Intervenor *Held* not entitled to come into suit for purpose of having adjudicated a controversy solely between it and plaintiff since issues tendered by or arising out of plaintiff's bill may not be so enlarged by intervenor.

3. EQUITY RULE 30 CONSTRUED.

Federal Equity Rule 30 permitting a defendant to set up any set-off or counter claim against the plaintiff which might be the subject of an independent suit against him *Held* not to authorise one given the privilege to intervene as a party defendant to set up and enforce against the plaintiff a counter claim not available to the original defendant and in which it had no interest.

4. EQUITY RULE 37 CONSTRUED.

Intervenor's counter claim involving nothing in which defendant is concerned *Held* not to constitute the "interest" referred to in the provision of Equity Rule 37 that "Anyone claiming an interest in the litigation may at any time be permitted to assert his right by intervention * * *".

5. INFRINGEMENT SUIT AGAINST USER OF MACHINE—COUNTER CLAIM OF INTERVENING MANUFACTURER DISMISSED.

Intervening defendant's counterclaim alleging infringement of its patent for improvements in sheet transferring mechanism of printing presses by plaintiff in suit for infringement of patent for improvements in automatic feed and delivery of such presses *Held* properly dismissed.

AFFIRMED.

Mr. Wallace R. Lane (*Mr. John F. Oberlin* with him on the brief) for petitioner.

Mr. Dean S. Edmonds (*Mr. John Howie* and *Mr. Curt Von Boetticher, Jr.*, with him on the brief) for respondents.

Mr. Justice BUTLER delivered the opinion of the Court.

Brandtjen & Kluge, Inc., brought this suit in the District Court for Eastern New York against Joseph Freeman, Inc. The bill alleges that plaintiff is the owner of patent, No. 1,363,200, for "Improvements in Automatic Feed and Delivery for Platen Presses", that defendant is using an infringing printing press, and prays injunction and accounting. Before answer by defendant, the Chandler & Price Company applied to the court for leave to intervene as a party defendant. The substance of the facts it alleges in order to show that it has an interest in the litigation (Equity Rule 37) is as follows: Petitioner is engaged in manufacturing and selling printing presses. It made and sold to defendant the one of which the bill complains, and intends openly to defend this suit. After it put its machine upon the market, plaintiff threatened to sue users for infringement and as a consequence petitioner's customers required it to give bonds for their protection. Before bringing this suit, plaintiff's counsel wrote defendant enclosing a copy of plaintiff's patent and asked defendant to respect their client's rights. That letter having been referred to petitioner, its counsel inquired of plaintiff's counsel whether suit would be brought against defendant (a user of one press) in the Eastern District of New York rather than directly against petitioner (a manufacturer and seller) in the Northern District of Ohio. Plaintiff's counsel answered that decision to sue defendant in the New York district had been reached and promised to serve a copy of the bill upon petitioner's counsel; shortly after commencement of suit that was done. Plaintiff's threats to bring infringement suits against users injured petitioner's business and unnecessarily harassed its customers. Although long before commencement of the suit its device had been shown to plaintiff's counsel and plaintiff knew that it was being sold throughout the United States, plaintiff did not sue petitioner. Defendant has not sufficient interest in the result of the litigation to defend this suit on its own account. Petitioner's intervention is necessary for the protection of its interest.

Contrary to the better practice, the application for intervention did not present a proposed answer. Cf. *Toler* v. *East Tennessee, V. & G. Ry. Co.*, 67 Fed. 168, 174. *Stallings* v. *Conn*, 74 F.(2d) 189, 191. It did not suggest that, independently of defendant or otherwise, petitioner sought opportunity in this suit to enforce a claim for patent infringement against the plaintiff. After hearing, the court granted the leave applied for. Thereupon, the defendant and intervenor filed an answer in which jointly they deny infringement and assert invalidity of plaintiff's patent. And in the same answer the intervenor separately sets up a counterclaim against the plaintiff for infringement of patent, No. 1,849,314, for "Improvements in Sheet Transferring Mechanism for Printing Presses" owned solely by it and prays decree against plaintiff for injunction and accounting. Maintaining that it states a cause of action to which the original defendant is a stranger, plaintiff moved to dismiss the intervenor's counterclaim. The District Court granted the motion. The Circuit Court of Appeals affirmed. 75 F.(2d) 472.

The order granting intervention is not here challenged. The sole question is whether intervenor may bring into this suit a controversy between it and plaintiff in which defendant has no interest.

[1] Intervenor insists that it, rather than the defendant sued, is the real party in interest and that its counterclaim should be permitted so that the

entire controversy between the real parties may be settled in a single suit. But intervenor's legal position in relation to the case differs essentially from what it would have been had the bill named it as a defendant and alleged a cause of action against it in the infringement suit. Undoubtedly in such a case the petitioner, whether or not suable in that district (§ 48, Judicial Code) would have had the right to enter its appearance and make its defense, and also to set up counterclaim against plaintiff. *Leman* v. *Krentler-Arnold Co.*, 284 U. S. 448, 451, 1932 C. D. 564. *General Elec. Co.* v. *Marvel Co.*, 287 U. S. 430, 435, 1933 C. D. 570. Here plaintiff's alleged cause of action is use by the defendant of a single machine alleged to infringe patent, No. 1,363,200, belonging to plaintiff. Defendant has no interest in patent No. 1,849,314, owned by intervenor and made the basis of the counterclaim in question. The bill neither alleges any cause of action nor prays judgment against the intervenor. Petitioner was not sued and, until granted leave to intervene, it was a stranger to the suit. The facts alleged in its application were not sufficient to show that as a matter of equitable right petitioner is entitled to intervene. *Western Union Telegraph Co.* v. *United States & M. T. Co.*, 221 Fed. 545, 552. *United States Trust Co.* v. *Chicago Terminal T. R. Co.*, 188 Fed. 292, 296. *Toler* v. *East Tennessee, V. & G. Ry. C.*, supra, 171–172. *Chester* v. *Life Ass'n of America*, 4 Fed. 487, 491. The showing presents a situation familiar in patent infringement cases brought against a user where the maker of the accused article is upon its application and in the discretion of the court permitted to intervene. *Curran* v. *St. Charles Car Co.*, 32 Fed. 835, 836. *Foote* v. *Parsons Non-Skid Co.*, 196 Fed. 951, 953. *Continuous Extract P. Corp.* v. *Eastern Cotton Oil Co.*, 264 Fed. 340. *Baldwin* v. *Abercrombie & Fitch Co.*, 227 Fed. 455; 228 Fed. 895, affirmed *sub nom. Abercrombie & Fitch Co.* v. *Baldwin*, 245 U. S. 198, 200, 246 O. G. 567. See *Angier* v. *Anaconda Wire & Cable Co.*, 48 F.(2d) 612, 613. The record discloses no foundation for the claim that the defendant sued is not, or that the intervenor is, the real defendant in interest.

[2] There is no suggestion that defendant has any interest in the counterclaim or that the issues between intervenor and plaintiff that are tendered by, or that might possibly arise out of, the counterclaim may not be adjudged in a separate suit. The intervenor was not entitled to come into the suit for the purpose of having adjudicated a controversy solely between it and plaintiff. Issues tendered by or arising out of plaintiff's bill may not by the intervenor be so enlarged. It is limited to the field of litigation open to the original parties. *Curran* v. *St. Charles Car Co.*, supra, 837. *Powell* v. *Leicester Mills*, 92 Fed. 115. *Atlas Underwear Co.* v. *Cooper Underwear Co.*, 210 Fed. 347, 355. *Leaver* v. *K. & L. Box & Lumber Co.*, 6 F.(2d) 666. *De Sousa* v. *Crocker First Nat. Bank*, 23 F.(2d) 118, 122. *Board of Drainage Com'rs* v. *Lafayette Southside Bank of St. L.*, 27 F.(2d) 286, 296. *Tretolite Co.* v. *Darby Petroleum Corporation*, 5 F. Supp. 445, 446. The decisions of the District Court and the Circuit Court of Appeals in *United States Expansion Bolt Co.* v. *H. G. Kroncke H. Co.*, 216 Fed. 136; 224 Fed. 868, are disapproved to the extent, if at all, that they tend to support intervenor's contention that it is entitled to set up the counterclaim.

[3–4] The intervenor invokes Equity Rule 30 and insists that counterclaims there referred to are not restricted to those required or permitted to be set up by a defendant sued in contradistinction to an intervenor as party defendant under Rule 37. And it further insists that, by virtue of the leave to intervene and in view of the answer interposed, it is a defendant within the meaning of Rule 30. That rule declares:

"The defendant by his answer shall set out . . . his defense to each claim asserted in the bill . . . The answer must state . . . any counterclaim arising out of the transaction which is the subject-matter of the suit, and may, without cross-bill, set up any set-off or counterclaim against the plaintiff which might be the subject of an independent suit in equity against him . . ."

It is true, as suggested by the intervenor, that this rule does not expressly make a distinction between a defendant named in the bill and one who, leave having been granted, intervenes as a party defendant. But the context makes against construing the word "defendant" as used in the rule to include one permitted to intervene. See *Allington* v. *Sheville-Hixon Co.*, 2 F.(2d) 747, 749. The statement that defendant shall set up his "defense to each claim asserted in the bill" is inconsistent with the construction for which the intervenor here contends. Intervention necessarily is subsequent to the commencement of the suit. As shown above, this bill does not make the intervenor a party or allege aught against it. It is plain that the rule does not authorize one given the privilege to intervene as party defendant to set up and enforce against the plaintiff a counterclaim not available to the original defendant and in which it had no interest. Construction of the rule that denies intervenor the right to set up the counterclaim in question is supported by Equity Rule 37 which declares:

"Anyone claiming an interest in the litigation may at any time be permitted to assert his right by intervention . . ."

It is essential that the applicant shall claim an interest in the matters there in controversy between the plaintiff and original defendant. The purpose for which permission to intervene may be given is that the applicant may be put in position to assert in that suit a right of his in respect of something there in dispute between the original parties. Intervenor's counterclaim, involving nothing in which defendant is concerned, does not constitute the interest referred to in Rule 37.

[5] Exclusion from the litigation of that demand is consonant with reason and in the interest of justice. Introduction by intervention of issues outside those that properly may arise between the original parties complicates the suit and is liable to impose upon plaintiff a burden having no relation to the field of the litigation opened by his bill. *Leaver* v. *K. & L. Box & Lumber Co.*, supra. *Gregory* v. *Pike*, 67 Fed. 837, 845. In the absence of language definitely requiring it, the construction of Rule 30 for which the intervenor contends cannot reasonably be sustained. The counterclaim against the plaintiff was rightly dismissed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE PARKER

No. 3,851. Decided November 25, 1935

1. METHOD AND APPARATUS—FUNCTION OF MACHINE.

"From all the authorities it appears that the rule has become well settled that if the method of a claim can be performed by any other apparatus than that of the applicant, or if it can be performed by hand, it cannot be said that the claim recites the mere function of the apparatus."

2. SAME—METHOD OF GATHERING AND DELIVERING GLASS FROM A POOL.

A claim for a method of gathering glass from a pool and delivering it to a series of moving receivers *Held* improperly rejected as reciting purely and simply the mechanical movement of the device.

APPEAL from the Patent Office. Reversed.

Messrs. Owen & Owen and *Mr. Scott H. Lilly* for Parker.

Mr. R. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

BLAND, *J.*:

Appellant has here appealed from the decision of the Board of Appeals of the United States Patent Office, which affirmed the action of the Primary Examiner in rejecting claim 1, being the only method claim, in appellant's application for a patent on a method of and apparatus for gathering glass from a pool of molten glass and delivering it to a series of receivers where blown glassware is formed. Claims 2, 4, and 5, directed to an apparatus for carrying out the method, were allowed. Claim 1 reads as follows:

1. The method of gathering glass from a pool and delivering it to a series of receivers, moving past the pool, by a gathering device, which consists in moving the gathering device over the pool, while gathering, in a direction opposite to the direction of movement of the receiving devices, then from the pool to registration with a receiving device, then in synchronism with and over the receiving device for a material distance and in vertical alignment therewith while delivering gathered glass thereto, then directly back over the pool to the starting point, and repeating the cycle and delivering a gather to another glass receiver.

While the method involved may be understood fairly well from the claim itself, the Board has stated the steps of the method and the requirements of the claim quite definitely in the following language:

* * * In this connection it may be noted that the method set forth in the appealed claim requires that a gathering device must move over a pool of molten glass in contact with its surface while gathering. This movement must be in a direction opposite to the direction of movement of receiving mold devices while they are moving past the pool. The gathering device must then move from the pool to position over the receiving mold device and travel in synchronism therewith for a material distance in vertical alignment therewith while delivering gathered glass thereto, then the gathering device must again move over the pool to its original starting point and repeat the cycle.

The Primary Examiner in allowing the apparatus claims, said:

* * * The machine has exactly the same mechanical elements as the British patent but to perform in the desired manner would require a different control structure. The apparatus claims have accordingly been allowed.

The method claim which was by the Examiner rejected as unpatentable over the British patent to Thomson-Houston, 293,456 of January 3, 1929, in view of Rule, 1,453,285, of May 1, 1923, was further rejected by him as being drawn to the function of appellant's machine. Certain other patents are in the record and were used to illustrate the movements of feeding devices in the glass feeding art.

The Board of Appeals disagreed with the Examiner as to his rejection of the involved claim on the prior art and definitely held that the claim was not anticipated by the references "either alone or taken in combination". The Board affirmed the action of the Examiner in rejecting the claim on the ground that it was merely the statement of the function of the machine and said:

Concerning the question of rejection on the ground that the appealed claim is merely a statement of the function of the machine, we believe it is established that the situations as to the allowance of machine claims and claims in the form of purely mechanical steps which correspond or are similar to the mechanical action of the machine, may be classed in three groups. In the first situation the statement of method may so closely follow the action of the machine as to be practically dependent thereon and not conceivable as being carried out separately or to any practical extent separately from or independently of the machine. In such case the method represents nothing but the action of the machine and should not be considered to be a true separately patentable method. In another situation the method may be of such nature that while it can be applied in terms to a machine still it is clearly not at all dependent upon any particular machine but would obviously be useful in general as carried out either manually or by implements or other forms of machines built on different plans from the one shown. Probably in most such cases claims for the method would if allowable over the state of the art, constitute a separate subject of invention and generally should not be allowed to stand in the same case with claims for the machine. The third case may be regarded as constituting an intermediate zone where it may be difficult to decide between whether the claimed method represents anything separate from the mere function of the machine or may doubtfully be separate enough as to constitute a true subject of invention. In such cases the question of patentability of the method over the machine is one for individual determination.

After careful consideration of the situation presented here it is our opinion that while it is conceivable that the steps set forth in the sequence of that of the appealed claim might be partly carried out by hand, such alleged method represents nothing of practical importance if separated from a machine of the type shown. So far as stirring the glass in the furnace to produce a current therein is concerned, it is totally immaterial whether the gathering or blank forming element move in one direction or another while in the glass. The essential requirement is that the gathering device which must oscillate for a time with the continuously traveling receiving molds should make the shortest and most conformable path of travel to accomplish this. This is believed to be purely and simply the mechanical movement of the device and it is not regarded as being a true patentable method separate from the machine. It is regarded as so clearly and simply the movement of parts of this particular machine that we do not believe it constitutes such method. *We have given careful consideration to and agree with applicant's contention that the relation of movements of this gathering device and the receiving molds is probably the most efficient of the various different ways of moving them,* that is, where the paths of movement of the two parts are broadly analogous to that of points on two meshing gears. However, this is believed to be only function of machine and not true method. The act of stirring the glass in a backward direction relative to the molds is an independent matter which as such is of no advantage over stirring it in the other direction. [Italics ours.]

It is our opinion that this ground of rejection is warranted.

The courts have frequently had before them questions quite similar to the one presented here, namely: When is a method claim objectionable as being a mere recital of the function of a machine? This court has, on a number of occasions, considered the question here presented. Substantially the same

question was involved in our decision of the case of *In re McKee*, 23 C. C. P. A. (Patents—, — F.(2d)— (Patent Appeal No. 3534), decided concurrently herewith. In *In re Ernst et al.*, 21 C. C. P. A. (Patents) 1235, 71 F.(2d) 169, 449 O. G. 507, the authorities were carefully considered and our reasoning in that case was followed in *In re McCurdy*, 22 C. C. P. A. (Patents) 1140, 76 F.(2d) 400, 459 O. G. 923.

[1] From all the authorities it appears that the rule has become well settled that if the method of a claim can be performed by any other apparatus than that of the applicant, or if it can be performed by hand, it cannot be said that the claim recites the mere function of the apparatus so as to make its allowance double patenting. We think this rule, when applied to the issue at bar, controls the decision of the only question presented. If the steps of the method may be performed by other apparatus or by hand, the ground of rejection by the Board, we think, must be held to be unsound.

It will be noticed that in the opinion of the Board is the following statement:

> After careful consideration of the situation presented here it is our opinion that while it is conceivable that the steps set forth in the sequence of that of the appealed claim might be partly carried out by hand, such alleged method represents nothing of practical importance if separated from a machine of the type shown * * *.

It is difficult to understand just what is meant by the latter part of the last-quoted language. The Solicitor for the Patent Office, after quoting this part of the Board's decision, states:

> As the Board of Appeals intimated, it is apparent that an implement held in the hand and guided by the hand could gather glass from a pool and deposit it in a series of receivers. As the Board of Appeals observed, however, the particular movement imparted by hand would there be without patentable significance * * *.

If the Board by the above-quoted language meant to say, and we know of no other meaning to give the language, that before the rule we are here considering can be applied in cases like that at bar, the carrying out of the method by hand should be of practical importance to the extent that it is commercially important, we think it was in error. In making application of the rule, surely the Patent Office or the courts are not required to weigh and consider the merits of the practical and commercial possibilities involved in a comparison of machine operation and hand operation. It frequently occurs, as it has in the case at bar, that a given piece of work may be done by hand by following a sequence of steps, the steps of which method may be new, useful and inventive, and an inventor then may produce a machine that will carry out the steps of the invention. Invention may rest in the steps of the method and it may rest in the production of the machine. In the case at bar, the Board has held that the prior art did not disclose the steps of appellant's method, and because of the novelty and usefulness of the appellant's device, the article claims were allowed by the Examiner. Appellant in his brief has discussed the prior art with a view of showing not only that appellant's process might be carried out by the hand operation of certain features of prior art machines, but also to illustrate the possibility of appellant's process being carried out by more than one kind of machine.

[2] After careful consideration we are of the opinion that the Board of Appeals erred in holding that the steps of the method were "purely and simply the mechanical movement of the device" which had been held to be patentable. The Board was of the opinion that the relation of movements of the gathering device and the receiving molds was "probably the most efficient of the different ways of moving them". We think it is clearly apparent that appellant's method is an advancement in the art. We think he is entitled to a claim which will afford him adequate protection. He would have no adequate protection if others were privileged to carry out appellant's novel method of glass feeding by using some other kind of machine with which to do it.

The decision of the Board of Appeals is reversed.
Reversed.

Changes in Classification

Order No. 3,336, December 18, 1935, directs:

In *class 17, Butchering* (Division 2), establish the following subclasses and definitions:

Fowl
- 11.1 Plucking.
- 11.2 Scalding tanks.
- 11.3 Sinew removing.
- 42.1 Larding pins.

Supports and shackles
- 44.1 Fowl.
- 44.2 Hangers
- 44.3 Clamp or prongs.
- 44.4 Smoke sticks.

11.1. Devices for removing the feathers from fowls.

11.2. Tanks particularly adapted for the scalding of fowls. Note.—For tank structure of general application, see class 157, WATER DISTRIBUTION, subclasses 21, 68, 106, and 163.

11.3. Devices for removing sinews from fowls.

42.1. Devices for inserting a strip of fat into a piece of meat.

Note.—For devices for inserting a curing medium into meat, see class 99, FOODS AND BEVERAGES, subclasses 256 and 257.

44.1. Devices coming under the definition of subclass 44 specifically adapted for holding fowls.

44.2. Devices for suspending carcasses or parts of animals and the grapples employed therewith.

(1) Note.—See class 211, SUPPORTS, RACKS, subclass 113, for suspended racks.

(2) Note.—See class 248, SUPPORTS, subclass 317, for the general class of suspended supports.

(3) Note.—See class 294, HANDLING, HAND AND HOISTING IMPLEMENTS, for grapples.

44.3. Devices coming under the definition of subclass 44.2 having a clamp or prong to secure the meat.

44.4. Devices for supporting link sausage while smoking the same.

Note.—For smoking apparatus, see class 99, FOODS AND BEVERAGES, subclasses 259–262.

The patents contained in these subclasses have been taken for the most part from class 99, Preserving, abolished in this order, and from class 17, Butchering, subclasses 11 and 44.

In *class 17, Butchering* (Division 2), in the definition of subclass 44 change "suspending" in the first line to *supporting*.

In *class 23, Chemistry* (Division 59), establish the following subclass, and definition:

Leaching
272.1 Dissolving.

272.1. Apparatus for dissolving compounds (including salt and sugar) in a liquid.

The patents contained in this subclass have been taken for the most part from class 99, Preserving, subclass 2, abolished in this order, and from various subclasses in class 23.

In *class 23, Chemistry* (Division 59), establish the following search note after the definition of subclass 233:

Note.—See class 99, FOODS AND BEVERAGES, subclass 220, for sterilization of foods by metal contact;

and establish the following search note after the definition of subclass 290:

Search Class—
99—FOODS AND BEVERAGES, subclass 238.

In *class 31, Dairy* (Division 2), change the definition of subclass 88 by inserting before the word "Methods" in the first line the word *Manipulative*, and adding the following search note:

Note.—For methods of making cheese involving other than manipulative steps, see class 99, FOODS AND BEVERAGES, subclasses 115–117;

and change the definition of subclass 89 by inserting before the word "Methods" in the first line the word *Manipulative*, and adding the following search notes:

Note.—For methods of making butter involving other than manipulative steps, see class 99, FOODS AND BEVERAGES, subclasses 119–121.

Note.—For methods of treating milk and cream involving other than manipulative steps, see class 99, FOODS AND BEVERAGES, subclasses 91, and intervening subclasses, 151, 188–195, 200–202, and 212.

In *class 53, Domestic Cooking Vessels* (Division 1), establish the following subclasses:

15 Cookers
16 With canning.
17 Agitating.
18 Continuous.
19 Sealed can processors
20 Processes.
21 Processes.

The patents contained in these subclasses have been taken for the most part from class 99, Preserving, subclasses 2, 8, and 11, abolished in this order.

In *class 119, Animal Husbandry* (Division 2), abolish the search note after the definition of subclass 44, and establish the following note in lieu thereof:

Note.—See class 99, FOODS AND BEVERAGES, subclass 262, for egg preserving apparatus combined with pan turners, and egg turners per se used in preserving eggs.

In *class 126, Stoves and Furnaces* (Division 19), establish the following search notes after the definition of subclass 272:

Note.—See class 53, DOMESTIC COOKING VESSELS, subclasses 15–21.

Note.—See class 99, FOODS AND BEVERAGES, subclass 214.

In *class 202, Distillation* (Division 64), change the definition of subclass 76 by adding:

and other than beverages. If the distillation product is modified to make a beverage, it is not placed here.

Note.—For beverages, see appropriate subclasses in class 99, FOODS AND BEVERAGES.

In *class 99, Preserving* (Division 63), abolish the following subclasses:

18 Disinfecting apparatus
19 Candle holders.
12 Wood saturation.

The patents formerly contained in these subclasses have been placed for the most part in class 21, Preserving and Disinfecting, established in this order.

Establish, in Division 63, the following class and subclasses:

Class 21 Preserving and Disinfecting.
1 Miscellaneous.
18 Disinfecting apparatus
19 Candle holders.
12 Wood saturation.

The patents contained in this class have been taken for the most part from class 99, Preserving, subclasses 12, 18, and 19, abolished in this order.

In *class 99, Preserving* (Division 63), change the title of the class to read class 99, Foods and Beverages, abolish the existing subclass titles, and establish in lieu thereof the subclasses indicated in the new loose leaves now being printed for insertion in the Manual of Classification, and the definitions which will appear in Bulletin 65.

(Lists of subclass titles and the definitions may be seen in the Search Room and in the Classification Division, Room 3616, pending publication.)

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 7, 1936

[VOL. 402. No. 1]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 365,822. THE SHERWIN-WILLIAMS CO., Cleveland, Ohio. Filed June 5, 1935.

For Silicate, Purified Clay, China Clay, and Enamel Frit.

Claims use since 1898.

Ser. No. 370,311. PHIL KLEIN, New York, N. Y. Filed Oct. 12, 1935.

The term "Never Wet" is disclaimed apart from the mark.

For All Kinds of Fur Skins.

Claims use since 1929.

CLASS 2

Receptacles

Ser. No. 371,798. WHITE METAL MANUFACTURING COMPANY, Hoboken, N. J. Filed Nov. 20, 1935.

For Metal Collapsible Tubes.

Claims use since October, 1933.

Ser. No. 372,006. ELGIN AMERICAN COMPANY, Elgin, Ill. Filed Nov. 26, 1935.

THINSIE

For Vanity Cases, Rouge Boxes, Compact Boxes, and Powder Containers, All Empty and Made in Whole or in Part of Base Metal.

Claims use since Oct. 19, 1935.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 364,396. NORTON COMPANY, Worcester, Mass. Filed April 30, 1935.

LITHO BRADE

For Abrasive Grain Used for Graining Lithographic Plates.

Claims use since Apr. 17, 1935.

Ser. No. 369,220. DINET AND DELFOSSE, Chicago, Ill. Filed Sept. 12, 1935.

DUANE'S
SUPERFATTED SULPHUR SOAP
DINET AND DELFOSSE

The words "Sulphur Soap" are disclaimed apart from the mark.
For Chemically Treated Soaps.
Claims use since Oct. 5, 1934.

Ser. No. 369,221. DINET AND DELFOSSE, Chicago, Ill. Filed Sept. 12, 1935.

DUANE'S
SUPERFATTED SOAP
DINET & DELFOSSE

The word "Soap" is disclaimed apart from the mark.
For Chemically Treated Soaps.
Claims use since Feb. 5, 1915.

Ser. No. 370,338. FRANCIS G. CLARK, doing business as Clark Products Company, Lompoc, Calif. Filed Oct. 14, 1935.

CLARCO

For Scouring Powder—Namely, a Cleansing and Polishing Preparation for General Household Use.
Claims use since Apr. 1, 1935.

Ser. No. 370,928. CHARLES BEAHM, doing business as Laborlite Company, Portland, Oreg. Filed Oct. 28, 1935.

LABORLITE

For Cleanser, Cleaning, and Washing Compound Which Is a Soap Saver and Has Incidental Water Softening Properties.
Claims use since Aug. 29, 1929.

Ser. No. 371,446. OTTO EUGEN SCHNEIDER, doing business as Otto Eugen Schniche Co., Hanover, N. H. Filed Nov. 11, 1935.

MOTOR
Schmi's

For Wax for Use on Skis, Shoes, and the Like.
Claims use since May 15, 1935.

Ser. No. 371,729. COMFORT MANUFACTURING COMPANY, doing business as Craig-Martin, Chicago, Ill. Filed Nov. 19, 1935.

CRAIG-MARTIN

For Soaps and Shaving Creams.
Claims use since Nov. 5, 1930.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 352,564. WESTERN AUTO SUPPLY AGENCY OF LOS ANGELES, Los Angeles, Calif. Filed June 11, 1934.

SUPREME

For Radiator Liquid Solder.
Claims use since Mar. 3, 1934.

Ser. No. 358,464. CLAUDE O. WRIGHT, doing business as Crescent Pharmacal Company, Macon, Mo. Filed Nov. 20, 1934.

For Liquid Antiseptic.
Claims use since Dec. 1, 1920.

Ser. No. 366,257. HERB JUICE-PROC COMPANY, Danville, Va. Filed June 5, 1935.

The drawing is lined for red and yellow.
For Laxative Tonic.
Claims use since Jan. 31, 1935.

Ser. No. 367,042. SUBSTANCE S PRODUCTS, INC., San Francisco, Calif. Filed July 6, 1935.

No claim is made to the representation of a label apart from the mark. The drawing is lined for brown, yellow, and gold.
For Cosmetics—Namely, Shampoo and Salve.
Claims use since June 24, 1935.

Ser. No. 369,054. GENERAL DENTAL GOODS CO., doing business as General Dental Goods, Inc., Worcester, Mass. Filed Sept. 6, 1935.

No claim is made to the representation of the container for the goods.
For Preparation for Use as a Mouth Wash or Gargle.
Claims use since Aug. 20, 1935.

Ser. No. 370,003. DR. D. JAYNE & SON, INC., Philadelphia, Pa. Filed Oct. 4, 1935. Under 10-year proviso.

The portrait and signature are those of Dr. D. Jayne, deceased. The words "Philadelphia, Pa., U. S. A." are disclaimed apart from the mark.

Claims use since 1852.

Ser. No. 370,225. THE OLIVE TABLET COMPANY, Columbus, Ohio. Filed Oct. 10, 1935.

DR. EDWARD'S
TRADE
OLIVE
MARK
TABLETS

The words "Dr. Edward's", "Olive", "Tablets", and "Trade Mark" are disclaimed apart from the mark.
For Olive Colored Tablets for Use as a Laxative.
Claims use since Sept. 26, 1935.

Ser. No. 370,527. ROBERT P. SCHERER, doing business as Gelatin Products Company, Detroit, Mich. Filed Oct. 18, 1935.

RED BAND

The drawing is lined for red.
For Carbon Disulphide in Capsule Form.
Claims use since August, 1935.

Ser. No. 370,539. JAMES H. BERRMAN, doing business as The Stillman Company, Aurora, Ill. Filed Oct. 19, 1935.

ACTONE

For Preparation Having Germicidal and Astringent Properties and Used for Treatment of Skin Diseases, Including Acne.
Claims use since Sept. 10, 1935.

Ser. No. 370,692. Battle Creek Brown, Inc., Battle Creek, Mich. Filed Oct. 22, 1936.

BonKora

For Tonics for Stimulating the Appetite and Promoting Gastric Digestion and Tonic Laxatives.
Claims use since Feb. 1, 1936.

Ser. No. 370,704. Franklin Mineral Products Company, Franklin, N. C. Filed Oct. 26, 1936.

ALSIBRONZ

For Micaceous Powders for Use as Paint Pigments, Paper Fillers, as an Ingredient for Dentifrices, as a Textile Parting Powder to Eliminate Static, as a Parting Material in the Manufacture of Pneumatic Rubber Tires, and Other Uses.
Claims use since September, 1933.

Ser. No. 370,748. American Aniline Products, Inc., New York, N. Y. Filed Oct. 24, 1936.

CELATINT

For Dyestuffs for Acetate Silks and Other Artificial Silks.
Claims use since Oct. 4, 1923.

Ser. No. 370,825. James Charles Daniel Bustard, Rusholme, England. Filed Oct. 26, 1936.

RUMARI

For Medicine for Internal Human Use in the Treatment of Stomachic Complaints.
Claims use since May 12, 1936.

Ser. No. 370,865. The Bayer Company, Inc., New York, N. Y. Filed Oct. 28, 1936.

CALIRAD

For Product for Improving the General Nutrition.
Claims use since Sept. 27, 1936.

Ser. No. 370,910. Winthrop Chemical Company, Inc., New York, N. Y. Filed Oct. 28, 1936.

Drisdol

For Vitamin D Preparation.
Claims use since Oct. 15, 1936.

Ser. No. 370,941. Eric Coupey, New York, N. Y. Filed Oct. 29, 1936.

NAWAH

For Natural and Synthetic Essential Oils Suitable for Perfuming Purposes.
Claims use since March, 1927.

Ser. No. 371,040. Bilabs Gesellschaft mit beschraenkter Haftung, Chemnitz, Germany. Filed Nov. 1, 1936.

Orlon

For Chemical Dye Assistant, Softening Preparation, Thread and Fibre Penetrating Preparation, Smoothing Preparation, and Finishing Preparation for Use in the Treatment of Textile Fabrics and Leather in the Course of Their Manufacture.
Claims use since May 26, 1936.

Ser. No. 371,050. Bilabs Gesellschaft mit beschraenkter Haftung, Chemnitz, Germany. Filed Nov. 1, 1936.

Autowa

For Chemical Dye Assistant, Softening Preparation, Thread and Fibre Penetrating Preparation, Smoothing Preparation, and Finishing Preparation for Use in the Treatment of Textile Fabrics and Leather in the Course of Their Manufacture.
Claims use since May 22, 1936.

Ser. No. 371,060. Io-Dow Chemical Company, Inc., Long Beach, Calif. Filed Nov. 1, 1936.

Io-Dow

For Iodine, Potassium Iodide, and Other Iodine Containing Compounds.
Claims use since October, 1934.

Ser. No. 371,102. Milton S. Jorgensen, doing business as Jorgensen & Company, Los Angeles, Calif. Filed Nov. 2, 1936.

BLACK J

For Insecticides and Fungicides.
Claims use since Apr. 15, 1932.

Ser. No. 371,126. Vieux-Chalet, Inc., doing business as Prince de Chalet, Inc., Culver City, Calif. Filed Nov. 4, 1936.

LOST ORCHID

No claim is made to the word "Orchid" apart from the mark.
For Perfumes.
Claims use since Oct. 7, 1936.

Ser. No. 371,134. The William A. Webster Co., Memphis, Tenn. Filed Nov. 3, 1936.

HOUSE OF LORD'S

For Dental Cream, After Shaving Lotion, Shampoo, Tooth Powder, Talcum Powder, Toilet Water, Cold Cream, Vanishing Cream, and Perfume.
Claims use since Sept. 3, 1936.

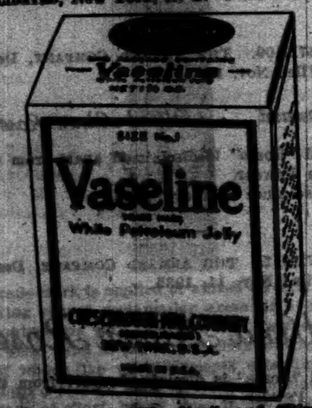
Ser. No. 371,208. Jarice Products Association, Inc., New York, N. Y. Filed Nov. 4, 1936.

Jarice

For Antiseptic, Astringent Cream, Bleach Cream, Beauty Cream, Cold Cream, Cleansing Cream, Clarifying Cream, Refreshing Cream, Vanishing Cream, Clarifying Astringent, Dry Rouge, Liquid Rouge, Face Bleaches, Face Packs, Skin Whitener in Liquid, Cream or Solid Form, Eyebrow and Eyelash Grower, Eye Cream, Astringent Pencils, Chemical Preparations for the Restoration of Natural and Eyebrows, Hand Lotions, Skin Lotions, After Shaving Lotions, Pomades, Face Powders, Talcum Powders, Body Powders, Dusting Powders, Sachets, Hair Salves, Hair Mixtures, Dandruff Preparations, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Hair Dressings, Brilliantines, Bath Salts, Smelling Salts, Lip Salves, Dentrifices, Tooth Powders, Mouth Washes, Deodorants, Tooth Pastes, Depilatories, Nail Powders, Nail Polishes, Nail Creams, Nail Enamels, White Enamel Salve, Camphor Creams, Foot Powders, Corn Salves, Plasters, Disinfectants, Bay Rum, Perfumes, and Toilet Waters.
Claims use since Oct. 19, 1936.

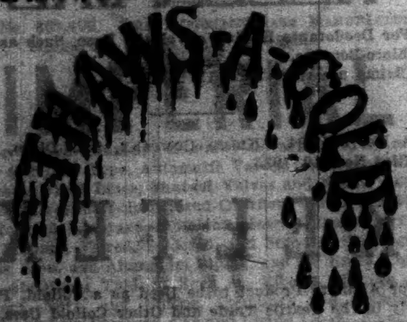
Ser. No. 371,218. Alpheus E. Jones, Wheeling, W. Va. Filed Nov. 5, 1936.

NATURZELP



For Compound Indicated as an Aid in the Treatment of Constipation, Sluggish Kidneys, Sluggish Liver, and Acidosis, and a General Tonic for the Human Constitution.
Claims use since Apr. 1, 1936.

Ser. No. 371,301. Consolidated Manufacturing Company, Consolidated, New York, N. Y. Filed Nov. 5, 1936.



Excepting the words "Vaseline", "Blue Seal", and applicant's name, all wording is disclaimed apart from the mark. No claim is made to the representation of a cap. In actual use the lettering and border design appear in white upon a background of blue.
For Petroleum Jelly.
Claims use since Oct 10, 1935.

Ser. No. 371,252. Consolidated Manufacturing Company, Consolidated, New York, N. Y. Filed Nov. 2, 1936.

All wording except "Vaseline", and "Blue Seal", and applicant's name is disclaimed apart from the mark. No claim is made to the representation of a carton. In actual use the printing upon the carton is in blue.
For Petroleum Jelly.
Claims use since Oct 10, 1935.

Ser. No. 371,255. Alcubo Company, Schenectady, N. Y. Filed Nov. 7, 1936.

For Insulant.
Claims use since Oct. 26, 1936.

Ser. No. 371,311. ROSEMARY LEE GROFF, Reidsville, N. C. Filed Nov. 7, 1935.

GROFF'S

LIN-LIME

The word "Lime" is disclaimed apart from the mark.
For Salve for External Application in Treating Burns, Cuts, Sores, and Surface Skin Irritations.
Claims use since Mar. 12, 1935.

Ser. No. 371,347. FRANCIS U. KAHLE, doing business as Ru-Mari Laboratories, New York, N. Y. Filed Nov. 8, 1935.

RU-MARI

For Medicinal Preparation for Treatment of Rheumatism.
Claims use since Aug. 27, 1935.

Ser. No. 371,400. THE ARMAND COMPANY, Des Moines, Iowa. Filed Nov. 11, 1935.

Armand *Wind Blown Roses*

The word "Roses" is disclaimed apart from the mark.
For Face Powder.
Claims use since February, 1935.

Ser. No. 371,411. THE ARMAND COMPANY, Des Moines, Iowa. Filed Nov. 11, 1935.

Wind Blown Roses

The word "Roses" is disclaimed apart from the mark.
For Face Powder.
Claims use since February, 1935.

Ser. No. 371,592. CHAS. D. FARMER, doing business as Kleenaire Kemikils, Detroit, Mich. Filed Nov. 15, 1935.

KLEENAIRE

For Deodorants Having a Volatile Base, Such as Paradichloro-Benzene.
Claims use since Nov. 11, 1931.

Ser. No. 371,694. KELCO COMPANY, San Diego, Calif. Filed Nov. 18, 1935.

KELTEX

For Alginate Product to be Used as a Colloid, Particularly in the Textile Trade and Other Colloid Uses, such as in Printing Pastes and in Boiler Compounds.
Claims use since Oct. 4, 1935.

Ser. No. 371,903. LAWRENCE, TRUMBOWER, New York, N. Y. Filed Nov. 18, 1935.

DYKIL

For Perfumes.
Claims use since Nov. 1, 1935.

Ser. No. 371,724. EUGE BALDWIN, Brunswick, Ga. Filed Nov. 19, 1935.

CARBODINE

For Antiseptic, Analgesic, Germicidal, Non-irritating Salve, Ointment, and Liquid Solutions, for External Use in the Treatment of Skin Diseases, Abrasions, Inflammations, Sunburns, Burns, Insect Bites, Sprains, Boils, Earache, Chapped Hands and Lips, Piles, Pimples and Pneumonia, Cold in Head and Catarrh, Sore Throat, Hemorrhoids and Allied Rectal Conditions, and for Use as a Dressing in Proctological Work.
Claims use since May 25, 1932.

Ser. No. 371,744. THE THEBOM COMPANY, INC., New York, N. Y. Filed Nov. 19, 1935.

Nailtone

For Nail Polish, Nourishing Cream, and Massage Cream.
Claims use since Dec. 14, 1934.

CLASS 9

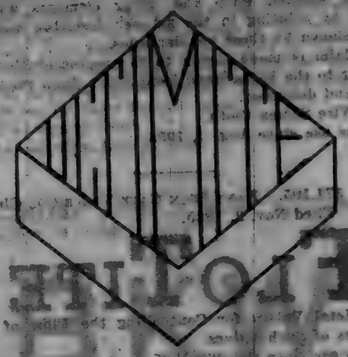
Explosives, Firearms, Equipments, and Projectiles

Ser. No. 367,121. [illegible] ARMS & CYCLE WORKS, Fitchburg, Mass. Filed July 10, 1935.

"Hammer No Hammer"

No claim is made to the representation of a revolver apart from the mark.
For Rifles, Shotguns, Pistols, and Revolvers.
Claims use since June 2, 1899.

CLASS 12



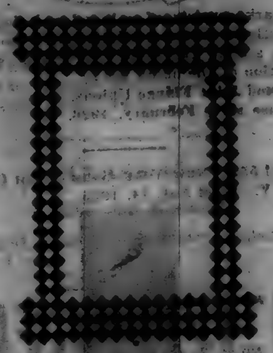
Construction Materials

Ser. No. 369,449. KOOPERATIVA FÖRBUNDET FÖRENING u. p. a., Stockholm, Sweden. Filed Sept. 28, 1935.

ISOFLEX

For Thermal Insulating Material.
Claims use since Jan. 5, 1935.

Ser. No. 370,825. UNITED PAVING BLOCK CORPORATION OF AMERICA, New York, N. Y. Filed Oct. 28, 1935.



For Paving Blocks.
Claims use since Feb. 1, 1925.

Ser. No. 371,026. GLOBE ROOFING PRODUCTS CO. INC., Chicago, Ill. Filed Oct. 31, 1935.

BEACON

For Asphalt Composition Roofing and Building Papers.
Claims use since April, 1934.

Ser. No. 371,251. GRAND RAPIDS FURNITURE COMPANY, Grand Rapids, Mich. Filed Nov. 4, 1935.

For Plaster and Lime.
Claims use since Sept. 9, 1935.

Ser. No. 371,472. OWENS-ILLINOIS GLASS COMPANY, Toledo, Ohio. Filed Nov. 12, 1935.

ROKFLOS

For Insulation Used as a Construction Material for Heat and Sound Insulation in Houses and Other Buildings and Constructions.
Claims use since December, 1931.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 363,868. EDWIN C. KNOWLES, doing business as Seal-All Clip Company, Flint, Mich. Filed Apr. 10, 1935.

SEAL-ALL CLIPS

The word "Clips" and the illustration of clips are disclaimed apart from the mark.
For Shingle Clips.
Claims use since Feb. 15, 1904.

Ser. No. 366,881. NEW YORK WIRE CLOTH COMPANY, New York, N. Y. Filed June 29, 1935.

The trade-mark is applied or affixed directly to the goods by printing spaced rectangular areas of a color, namely white, contrasting with the color of the screen cloth, upon a background band in the screen cloth which consists of a group of ribbon-like warp elements extending along and adjacent to a selvage edge of the screen cloth. The several groups of short, heavy lines in the drawing indicate selected warp and filling elements which are colored by printing in the manner described and to the extent shown by these heavier lines.
No claim is made herein to the representation of the goods or to the background band apart from the mark as shown and described.
For Wire Screen Cloth.
Claims use since Mar. 15, 1926.

Ser. No. 369,406. THE IMPERIAL BRASS MANUFACTURING CO., Chicago, Ill. Filed Sept. 17, 1935.

IMPERIAL

For Valves—Namely, Manually Operated Valves of the Plug and Disc Type, Automatic Valves for Control in All Types of Fluid Lines, Shut-off Valves and Needle Valves; Flush Valves, Self-closing and Overflow Valves for Water, Waste, and Sewerage Plumbing, Soap Dispensers, Tanks and Fittings, Flared, Soldered, and Standard Fittings for Brass, Iron, and Aluminum Piping, and for Brass, Copper, and Aluminum Tubing; Such as, Elbows, Nipples, Connectors, Nuts, and Unions, Couplings and Clamps for High and Low Pressure, Gas and Liquid Lines; Float Controls; Filters, Strainers, and Dehydrators for Steam, Gas,

Refrigeration, and Liquid Lines; Door Handles, Clamps for Piping, Brackets, Push Plates, Guard Bars, Railings, Name Plates, Metal Numerals and Letters, Nuts and Bolts, Door Stops and Holders; Hose Connections and Couplings, Nozzle Tips, and Gasoline Strainers.

Claims use since Jan. 26, 1935.

Ser. No. 370,182. NEW YORK WIRE CLOTH COMPANY, New York, N. Y. Filed Oct. 9, 1935.

The trade-mark is applied or affixed directly to the goods by printing spaced rhomb-shaped areas of a color—namely, blue, contrasting with the color of the screen cloth, upon a background band in the screen cloth which consists of a group of ribbon-like warp elements extending along and adjacent to a selvage edge of the screen cloth. The several groups of short, heavy lines in the drawing indicate selected warp and filling elements which are colored by printing in the manner described and to the extent shown by these heavier lines.

No claim is made herein to the representation of the goods or to the background band apart from the mark as shown and described.

For Wire Screen Cloth.

Claims use since Aug. 1, 1933.

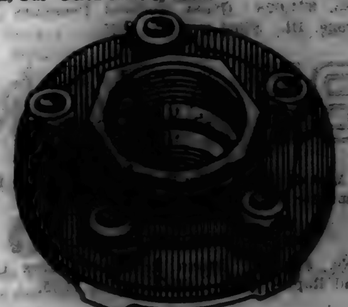
Ser. No. 370,193. NEW YORK WIRE CLOTH COMPANY, New York, N. Y. Filed Oct. 9, 1935.

The trade-mark is applied or affixed directly to the goods by printing spaced rhomb-shaped areas of a color—namely, yellow, contrasting with the color of the screen cloth, upon a background band in the screen cloth which consists of a group of ribbon-like warp elements extending along and adjacent to a selvage edge of the screen cloth. The several groups of short, heavy lines in the drawing indicate selected warp and filling elements which are colored by printing in the manner described and to the extent shown by these heavier lines.

No claim is made herein to the representation of the goods or to the background band apart from the mark as shown and described.

For Wire Screen Cloth.

Claims use since Aug. 1, 1933.



Ser. No. 371,105. KEMP LEAK GATE VALVE CO., Cleveland, Ohio. Filed Nov. 2, 1935.

FLOTITE

For Metal Valves for Controlling the Flow of Fluids and Parts of Such Valves.

Claims use since Oct. 28, 1935.

Ser. No. 371,206. STANLEY G. FLAGG & CO., INC., Philadelphia, Pa. Filed Nov. 5, 1935.

Trade-mark consists of a broad and circular band applied directly to a design of the cloth so as to extend completely around the same. No claim is made to the representation of the globe per se.

For Ground Joint Plunge Unions.

Claims use since February, 1933.

Ser. No. 371,552. NEW YORK WIRE CLOTH COMPANY, New York, N. Y. Filed Nov. 14, 1935.

No claim is made herein to the representation of goods or to the background band apart from the mark as shown and described. The trademark is applied or affixed directly to the goods by printing spaced rhomb-shaped areas

of a color contrasting with the color of the screen cloth, directly upon a background band in the screen cloth which consists of a group of ribbon-like warp elements extending along and adjacent to a selvage edge of the screen cloth. The several groups of short, heavy lines in the drawing indicate selected warp and filling elements which are colored by printing in the manner described and to the extent shown by these heavier lines.

For Wire Screen Cloth.

Claims use since Aug. 1, 1933.

Ser. No. 371,836. ROBERT H. WAGER, New York, N. Y. Filed Nov. 21, 1935.

B.K.W.

For Inverted Valve Check Valves.

Claims use since March, 1935.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 371,092. FEDERATED METALS CORPORATION, New York, N. Y. Filed Nov. 2, 1935.

FMC

For Nonferrous Metals, Metal Alloys, and Metal Products—Namely, of Aluminum, Antimony, Arsenic, Copper, Lead, Tin, and Zinc, in Bars, Forgings, Ingots, Pigs, Rods, Slabs, Wires, and Castings in the Rough.

Claims use since July 1, 1924.

CLASS 15

Oils and Greases

Ser. No. 368,963. SUN OIL COMPANY, Philadelphia, Pa. Filed Sept. 3, 1935.

TRANSEP

For Lubricating Oils and Lubricating Greases.

Claims use since Aug. 27, 1935.

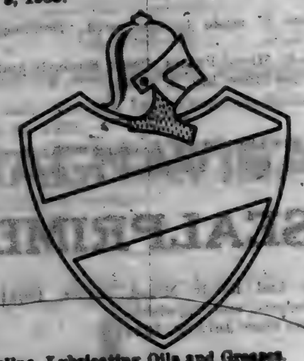
Ser. No. 370,007. MERCRAF OIL REFINERIES, INC., Detroit, Mich. Filed Oct. 5, 1935.

mercraf

For Lubricating Oils and Greases.

Claims use since Dec. 5, 1934.

462 O. G.—2



Ser. No. 370,008. MERCRAF OIL REFINERIES, INC., Detroit, Mich. Filed Oct. 5, 1935.

For Lubricating Oils and Greases.

Claims use since Dec. 13, 1934.

Ser. No. 370,190. FARO OIL COMPANY, Milwaukee, Wis. Filed Oct. 9, 1935.

For Gasoline, Lubricating Oils and Greases.

Claims use since Apr. 1, 1933.

Ser. No. 371,567. WARREN QUINLAN COMPANY, New York, N. Y. Filed Nov. 14, 1935.

DEESLUBE

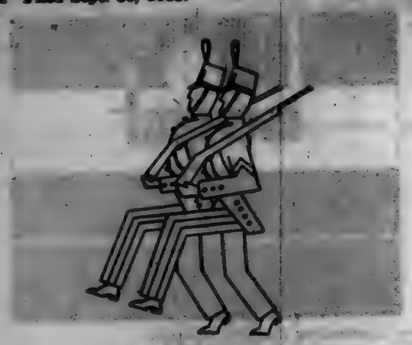
For Lubricating Oil and Lubricating Oil Compound Particularly Suited and Adapted to Diesel Engines.

Claims use since Oct. 22, 1935.

CLASS 16

Paints and Painters' Materials

Ser. No. 350,220. S. C. JOHNSON & SON, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis., a corporation of Wisconsin. Filed Mar. 21, 1932.



The drawing is lined for yellow.

For Wax for Coating and Polishing Wood, Metal, and Other Surfaces.

Claims use since Jan. 21, 1931.

Ser. No. 369,849. Jewel Paint and Varnish Co., Chicago, Ill. Filed Sept. 30, 1935.

DOUBLEQUICK

No claim is made to the word "Doublequick" apart from the mark.
For Ready Mixed Paints, Paint Enamels and Varnishes.
Claims use since Jan. 2, 1935.

Ser. No. 372,112. The Patterson-Sargent Company, Cleveland, Ohio. Filed Nov. 19, 1935.

SEALPRIME

For Dry and Ready Mixed Paints, Paint Enamels, Stains, Lacquers, and Varnishes.
Claims use since July 26, 1934.

CLASS 20

Linoleum and Oiled Cloth

Ser. No. 372,044. Cincinnati Mills Incorporated, Cincinnati, Ohio. Filed Nov. 27, 1935.

COMPOCORK

109,539. VARNISH. Registered April 11, 1916. KEYSTONE VARNISH CO., New York, N. Y. Renewed April 11, 1936, to Keystone Varnish Company, Brooklyn, N. Y., a corporation of New York.

109,545. UNDERWEAR—VIZ., MEN'S AND BOYS' UNION SUITS MADE OF TEXTILE OR KNITTED MATERIALS. Registered April 11, 1916. ROBERT REIS & Co., New York, N. Y., a corporation of New York. Renewed April 11, 1936.

109,547. CHILDREN'S AND INFANTS' SHOES OF LEATHER AND COMBINATION OF LEATHER AND FABRICS. SCHOENHUT, ROO. & Co. Renewed April 11, 1936, to Abraham Wehane, Chicago, Ill., assignee.

109,560. PRIMERS AND FILLERS. Registered April 11, 1916. KEYSTONE VARNISH CO., New York, N. Y. Renewed April 11, 1936, to Keystone Varnish Company, Brooklyn, N. Y., a corporation of New York.

109,609. SOAP. Registered April 11, 1916. THE ANDREW JERGENS CO., Cincinnati, Ohio, a corporation of Ohio. Renewed April 11, 1936.

109,672. CUTTING-TORCHES, WELDING-TORCHES, EXPANSION-TANKS, HANDLES FOR CUTTING AND WELDING APPARATUS. K-G WELDING & CUTTING COMPANY, Inc., New York, N. Y., a corporation of Delaware. Renewed April 11, 1936.

109,674. READY-MIXED AND PASTE PAINT. Registered April 11, 1916. KEYSTONE VARNISH CO., New York, N. Y. Renewed April 11, 1936, to Keystone Varnish Company, Brooklyn, N. Y., a corporation of New York.

109,687. A LAXATIVE. Registered April 11, 1916. VITO A. PETRARO, New York, N. Y. Renewed April 11, 1936.

109,721. AN ANTISEPTIC, DISINFECTANT, DEODORIZER, AND BLEACH. Registered April 18, 1916. THE FOOD CHEMICAL CO., Dayton, Ohio. Renewed April 18, 1936, to Hooker Products Corporation, New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

109,783. SINK, BATH, AND BASIN STOPPERS, PLUGS, BUMPER FORCE CUPS, AND HAND-CUPS. Registered April 18, 1916. SCHACHT RUBBER MFG. CO., Huntington, Ind., a corporation of Indiana. Renewed April 18, 1936.

109,807. SILK UNDERWEAR—VIZ., LADIES' BODICES, CORSET-COVERS, COMBINATIONS, CHEMISE, GOWNS, AND PETTICOATS. Registered April 18, 1916. HARRY A. WILMUS, New York, N. Y. Renewed April 18, 1936.

109,837. SILK PIECE GOODS. Registered April 18, 1916. H. R. MALLINSON & CO. Renewed April 18, 1936, to H. R. Mallinson & Company, Inc., New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

109,838. SILK PIECE GOODS. Registered April 18, 1916. H. R. MALLINSON & CO. Renewed April 18, 1936, to H. R. Mallinson & Company, Inc., New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

109,863. CHEESE AND BUTTER. Registered April 18, 1916. GALLOWAY-WEST CO. Renewed April 18, 1936, to Galloway-West Company, Inc., Fond du Lac, Wis., a corporation of Delaware, assignee by mesne assignments.

109,947. DOOR-CHECKS AND DOOR-SPRINGS. Registered April 25, 1916. NORTON DOOR CHECK CO., Chicago, Ill. Renewed April 25, 1936, to The Yale & Towne Manufacturing Company, New York, N. Y., a corporation of Connecticut, assignee.

109,970. GRAPE-JUICE. Registered April 25, 1916. THE WELCH GRAPE JUICE COMPANY, Westfield, N. Y., a corporation of New York. Renewed April 25, 1936.

110,078. DENTIFRICES. Registered May 2, 1916. THE PEPSODENT COMPANY. Renewed May 2, 1936, to The Pepsodent Co., Chicago, Ill., a corporation of Illinois, assignee.

110,115. BUTTER. Registered May 2, 1916. BEATRICE CREAMERY COMPANY. Renewed May 2, 1936, to Beatrice Creamery Company, Chicago, Ill., a corporation of Delaware, assignee.

110,152. BOLT AND NUT AND RIVET FORGING MACHINES AND WIRE-NAIL MACHINERY. Registered May 9, 1916. THE NATIONAL MACHINERY CO., Tiffin, Ohio, a corporation of Ohio. Renewed May 9, 1936.

110,188. FERTILIZERS. Registered May 9, 1916. F. S. ROYSTER GUANO CO., Norfolk, Va., a corporation of Virginia. Renewed May 9, 1936.

110,196. ROUGH LUMBER, COMMON LUMBER DRESSED ON ONE SIDE ONLY, AND DRESSED LUMBER. Registered May 9, 1916. ARKANSAS SOFT PINE BUREAU, Little Rock, Arkansas, a voluntary association. Renewed May 9, 1936.

LABELS

REGISTERED JANUARY 7, 1936

46,940.—*Title:* "ITALIAN COOK" AN AMERICAN BRAND. For Salad Oil Which Is a Product Highly Refined from Oil Produced Only from Various Types of Vegetable Seed, and Does Not Contain Olive Oil. ASAHI REFINING CORPORATION, Brooklyn, N. Y. Published December 2, 1935.

46,941.—*Title:* PEACOCK. For Buckwheat and Wheat Flour. ALBERS BROS. MILLING CO., Portland, Oreg., San Francisco, Oakland, Los Angeles, etc., Calif., and Seattle, Wash. Published August 25, 1934.

46,942.—*Title:* VERDENT VALLEY BUTTER. For Butter. M. AUCHINCLOCK & BRO., INC., Newark, N. J. Published November 20, 1935.

46,943.—*Title:* BEECH-NUT HONEY NOUGAT. For Honey Nougats. BEECH-NUT PACKING COMPANY, Canajoharie, N. Y. Published November 21, 1935.

46,944.—*Title:* BEECH-NUT ANISE DROPS. For Anise Drops. BEECH-NUT PACKING COMPANY, Canajoharie, N. Y. Published November 20, 1935.

46,945.—*Title:* BEECH-NUT LIME DROPS. For Lime Drops. BEECH-NUT PACKING COMPANY, Canajoharie, N. Y. Published December 6, 1935.

46,946.—*Title:* OUR FAVORITE. For Salad Dressing. BLUE BIRD SPECIALTY CO., Dallas, Fort Worth, and Houston, Tex. Published December 5, 1935.

46,947.—*Title:* BORDEN'S FERNCREST BRAND FINEST QUALITY GUARANTEED WHITE EGGS. For Eggs. BORDEN'S FARM PRODUCTS COMPANY, INC., New York, N. Y. Published September 9, 1935.

46,948.—*Title:* BURGESS TWIN-SIX LANTERN. For Electric Lanterns. BURGESS BATTERY COMPANY, Freeport, Ill. Published November 28, 1935.

46,949.—*Title:* COLLINGBOURNE'S HEATHER TWEED SPORTS APPAREL WOOL ART. 622 ¼ OZ. COLOR, STYLE, QUALITY. For Apparel Wool for the Making of Wearing Apparel. COLLINGBOURNE MILLS, INC., doing business as Dexter, Collingbourne's Virginia Snow Studios, Japalik Co., and Berkshire & Becket Silk Co., Elgin, Ill. Published August 15, 1933.

46,950.—*Title:* COLLINGBOURNE'S SUPER VALUE MERCERIZED CORDELLE. ART. 850, SIZE 80, 4-PLY. For Mercerized Cordelle. COLLINGBOURNE MILLS, INC., doing business as Collingbourne's Virginia Snow Studios, Japalik Co., and Berkshire & Becket Silk Co., Elgin, Ill. Published October 15, 1935.

46,951.—*Title:* DAIRYLEA SPRAY PROCESS DRIED SKIM MILK. For Skim Milk. DAIRYMEN'S LEAGUE CO-OPERATIVE ASSOCIATION, INC., Utica and New York, N. Y. Published June 15, 1932.

46,952.—*Title:* TO ECONOMIZE GALVANIZE AT ENTERPRISE. For Metalware. ENTERPRISE GALVANIZING COMPANY, Philadelphia, Pa. Published September 14, 1934.

46,953.—*Title:* JOHNSON'S FLOOR VARNISH. For Floor Varnish. S. C. JOHNSON & SON, INC., Racine, Wis. Published November 15, 1935.

46,954.—*Title:* JOHNSON'S PRIMA PRIME. For First Coater Paint. S. C. JOHNSON & SON, INC., Racine, Wis. Published November 15, 1935.

46,955.—*Title:* JOHNSON'S 70 VARNISH. For Varnish. S. C. JOHNSON & SON, INC., Racine, Wis. Published November 15, 1935.

46,956.—*Title:* JOSÉ LOPEZ. For Cigars. JOSÉ LOPEZ, New York, N. Y. Published November 30, 1935.

46,957.—*Title:* TOP ROW. For Whiskey. LOS ANGELES BREWING CO., Los Angeles Calif. Published September 18, 1935.

46,958.—*Title:* MOTHERS HOME MADE BREAD. For Bread. MOTHER'S HOME MADE FOOD, INC., New Orleans, La. Published October 4, 1935.

46,959.—*Title:* UNIVERSAL BATTERY CLIPS. For Battery Clips. MUELLER ELECTRIC COMPANY, Cleveland, Ohio. Published December 1, 1935.

46,960.—*Title:* ONE STAR. For Fresh Oranges. MURPHY RANCH, Whittier, Calif. Published July 17, 1935.

46,961.—*Title:* SUBLIME. For Fresh Lemons. MURPHY RANCH, Whittier, Calif. Published January 1, 1932.

46,962.—*Title:* PINE TAR SHAMPOO. For Pine Tar Shampoo. MORTON G. NEUMANN, doing business as Valmor Products Company, Chicago, Ill. Published May 14, 1935.

46,963.—*Title:* FOOT POWDER. For Foot Powder. MORTON G. NEUMANN, doing business as Valmor Products Company, Chicago, Ill. Published May 14, 1935.

46,964.—*Title:* MADAM JONES VEGETABLE COMPOUND. For a Vegetable Compound. MORTON G. NEUMANN, doing business as Valmor Products Company, Chicago, Ill. Published May 14, 1935.

46,965.—*Title:* VALMOR HEADACHE TABLETS. For Headache Tablets. MORTON G. NEUMANN, doing business as Valmor Products Company, Chicago, Ill. Published May 14, 1935.

46,966.—*Title:* OLE'S. For Chili Con Carne. OLE'S CHILI PRODUCTS, Chicago, Ill. Published June 15, 1935.

46,967.—*Title:* GAVIOTA, THE ALL SEASON FERTILIZER. For a Fertilizer. PACIFIC GUANO COMPANY, San Francisco, Calif. Published September 25, 1935.

46,968.—*Title:* MELLO-TOAST. For Bread. POLLOCK PAPER & BOX COMPANY, Dallas, Tex. Published July 23, 1935.

46,969.—*Title:* ON-A-DOOR ON-A-CHAIR IN-THE-HOUSE EVERYWHERE. For Basket Ball Paraphernalia. SCHARING, INC., Omaha, Nebr. Published November 30, 1935.

46,970.—*Title:* DOANBROOK. For Blended Whiskey. SIEGFRIED LOEWENTHAL COMPANY, Cleveland, Ohio. Published November 15, 1935.

46,971.—*Title:* 2-X. For Champagne Type Beer. SOUTHERN BREWING COMPANY, Houston, Tex. Published October 2, 1935.

46,972.—*Title:* STANDARD FRESH BOURBON BLEND PURE COFFEE. For Coffee. STANDARD COFFEE COMPANY, INCORPORATED, New Orleans, La. Published May 30, 1935.

46,973.—*Title:* CARDINAL BRAND COFFEE. For Coffee. G. H. WHITEBAU & SONS GROCER CO., St. Louis, Mo. Published October 28, 1935.

PRINTS

REGISTERED JANUARY 7, 1936

15,545.—*Title:* WHERE YOUR DOLLARS ARE BIG DOLLARS. For Radios. BOYLE FURNITURE CO., INC., Ogden, Utah. Published September 30, 1934.

15,546.—*Title:* EATON'S HIGHLAND LINEN WRITING PAPERS. For Writing Paper. EATON PAPER CORPORATION, Pittsfield, Mass. Published October 28, 1935.

15,547.—*Title:* CIRC-AIR. For Tempering Furnaces. INDUSTRIAL HEATING EQUIPMENT COMPANY, Detroit, Mich. Published December 3, 1935.

15,548.—*Title:* DIRECT-READING FREEZEMETER. For Hydrometers. KIMBLE GLASS COMPANY, Vineland, N. J. Published November 19, 1935.

15,549.—*Title:* RED TOP PRIVATE STOCK WHISKEY. For Whiskey. MAJESTIC WINE & LIQUOR CORPORATION, New York, N. Y. Published November 1, 1935.

15,550.—*Title:* RED TOP PRIVATE STOCK WHISKEY. For Whiskey. MAJESTIC WINE & LIQUOR CORPORATION, New York, N. Y. Published November 1, 1935.

15,551.—*Title:* THE IDEAL GIFT . . . . MARKWELL FASTENER. For Fasteners. MARKWELL MANUFACTURING COMPANY, INC., New York, N. Y. Published November 29, 1935.

15,552.—*Title:* NUTRENA, THE EGG-PRODUCING FEED FOR POULTRY. For Poultry Feed. NUTRENA MILLS, INC., Kansas City, Mo. Published November 30, 1935.

15,553.—*Title:* A TRUE STORY OF MY OWN EXPERIENCE. For a Hair Tonic and Scalp Treatment Preparation. GEORGE S. PAUL, doing business as Melo-Chroma Company, Salina, Kans. Published October 17, 1935.

REISSUES

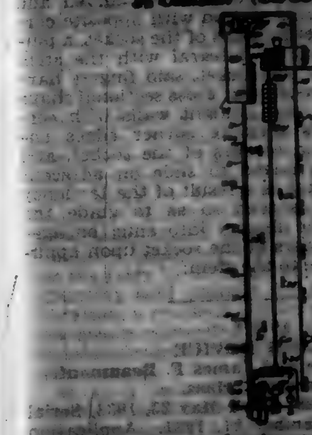
JANUARY 7, 1936

19,294
TREATMENT OF MOTOR FUEL

Wayne L. Benedict, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

No Drawing. Original No. 2,014,982, dated September 17, 1935, Serial No. 711,455, February 14, 1934. Application for reissue November 21, 1935, Serial No. 50,626

16 Claims. (Cl. 44—9)



6. Motor fuel comprising cracked gasoline containing a relatively small amount of the reaction product formed by the admixture of a wood tar inhibitor and an alkyl amine.

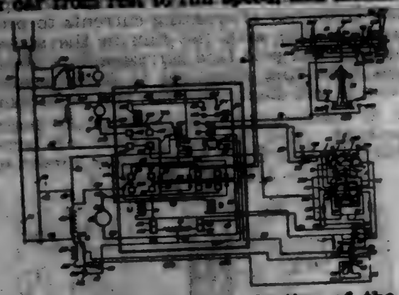
19,295
ELEVATOR

Charles E. Ellis, Jr., Mishawah, N. J., assignor to Westinghouse Electric Elevator Company, Chicago, Ill., a corporation of Illinois

Original No. 1,979,579, dated November 6, 1934, Serial No. 644,176, November 24, 1932. Application for reissue March 5, 1935, Serial No. 10,662

24 Claims. (Cl. 187—29)

1. In an elevator having a car operable past a plurality of floors, an auxiliary device, a motor for operating the said device in accordance with the movements of the car, means responsive to operation of the car for starting said motor in operation, means responsive to movement of the device a predetermined distance for stopping the motor, and means responsive to a reversing operation of the car for reversing said motor.



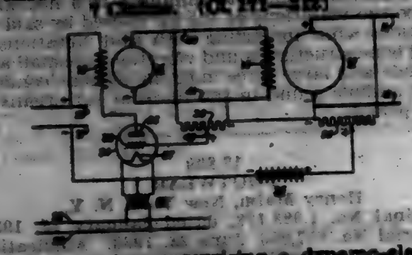
19,296
ELECTRIC ELEVATOR SYSTEM

Graham R. Grosvenor, New York, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a corporation of New Jersey

Original application May 23, 1932, Serial No. 613,604. Divided and application October 1, 1935, Serial No. 43,613, Patent No. 1,982,220, dated June 14, 1937. This application for reissue June 22, 1936, Serial No. 86,269

73 Claims. (Cl. 187—29)

1. An elevator system comprising an elevator car, a plurality of landings including at least one intermediate landing, means for bringing the elevator car from rest to full speed, and means for



automatically initiating a reduction of the elevator car speed at different distances from any one of said landings.

19,297
REGULATOR COMPENSATOR

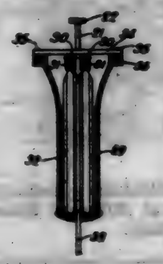
Finn H. Gulliksen, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania

Original No. 1,969,194, dated May 16, 1933, Serial No. 563,532, October 12, 1931. Application for reissue December 27, 1934, Serial No. 759,417

7 Claims. (Cl. 171—252)

1. In a system comprising a dynamo-electric machine, means for supplying an exciting current thereto, and a voltage regulator comprising an electronic tube adapted to control said current and a circuit for impressing upon said tube a control potential determined by the machine voltage, the combination of means for introducing into said control circuit a machine-excitation-determined potential which causes the regulator to impart to the machine a rising voltage-with-load characteristic.

19,298
VIBRATION INSTRUMENT FOR BONE AUDITION



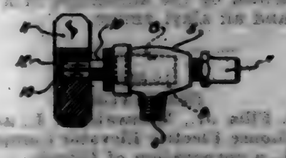
Frederick W. Kranz, Fort Wayne, Ind., assignor, by mesne assignments, to Sonotone Corporation, New York, N. Y., a corporation of New York

Original No. 1,949,752, dated June 9, 1925, Serial No. 622,822, March 29, 1932. Application for reissue July 1, 1932, Serial No. 622,699

1 Claim. (Cl. 179—107)

In a bone audition vibrating apparatus for translating sound-frequency alternating currents into hearing-inducing mechanical vibrations impressed to hearing-inducing bone structure of a

person, a magnetic core structure having a pole face for producing a continuous magnetic field flux concentrated in an air space adjoining said pole face, an elastic diaphragm bar having an intermediate portion disposed adjacent said pole face, means for clamping the ends of said diaphragm bar on the opposite sides of the intermediate portion thereof relatively to said core structure, means including windings for applying sound-frequency alternating currents to produce in combination with the flux in the air space adjoining said pole face corresponding vibratory forces imparting vibrations to the intermediate portion of said diaphragm bar, and contact means

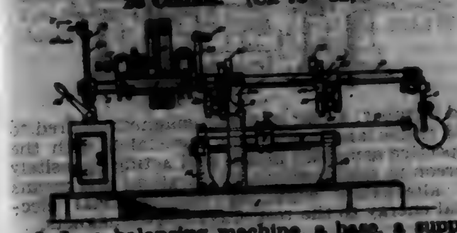


actuated by the intermediate portion of said diaphragm bar for mechanically coupling the intermediate portion of said diaphragm bar to hearing-inducing bone structure of a person and transmitting hearing-inducing vibratory forces to said bone structure, the stiffness of said diaphragm bar being sufficiently large and the area of said diaphragm bar in contact with the air being sufficiently small to minimize to a negligible value the vibrations of the air caused by said vibrations while imparting with said vibrations to said bone structure sound vibrations of small amplitude and large force inducting by bone conduction audible sound in the internal ear organs of the person.

19,809
FOOTWEAR
Henry Malm, New York, N. Y.
Original No. 1,983,123, dated January 15, 1935, Serial No. 677,963, June 28, 1933. Application for reissue March 16, 1935, Serial No. 11,512
6 Claims. (Cl. 36—7.6)

4. A sandal-type half over-shoe including a sole, an upper adapted to cover the sides and toe of a shoe and open in the instep arch area above the sides, an abbreviated shank adapted to cover the lower part of the shoe shank extending rearwardly and upwardly from the sole and integral with the upper, and a single elastic retaining strap spanning the instep space opposite the shank and being integral at its opposite ends with the rear portions of the opposite sides of the upper just rearwardly of the meeting of the shank with the sole, said strap constituting with the corresponding parts of the sides and the shank a circumferentially continuous portion adapted in its upper part to extend only over the forward instep arch area and in its lower part fitting the lower shank area and adjoining side parts of the shoe well forward of the heel.

19,810
GAS COCK
Eugene E. Meany, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a corporation of Wisconsin
Original No. 1,996,154, dated April 2, 1935, Serial No. 733,829, July 5, 1934. Application for reissue November 11, 1935, Serial No. 49,318
4 Claims. (Cl. 251—53)



4. In combination with a rotatable member having a stem projecting therefrom and a handle to turn the same, the handle having a socket of non-circular shape and comprising curved and straight walls in cross section with opposite corners defined by meeting walls of the socket, a plurality of spring fingers integral with the stem and insertable into the socket, said fingers having a composite non-circular cross sectional shape comprising curved and straight walls with certain meeting walls forming corner edges engageable in the said corners of the socket, and having surfaces arranged to slide on adjacent surfaces of the socket as a result of the tendency of said fingers to spread so as to guide the corner edges of the fingers into snug engagement with said corners of the socket upon application of the handle to the stem.

19,811
MIXING DEVICE
George D. Moore and James F. Beaumont, Worcester, Mass.
Original No. 1,919,929, dated May 23, 1933, Serial No. 542,994, September 21, 1931. Application for reissue March 23, 1935, Serial No. 12,724
5 Claims. (Cl. 48—180)

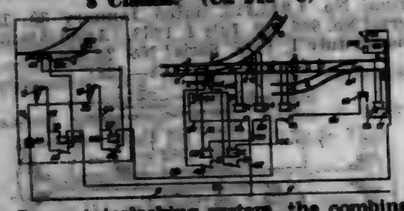
1. An attachment for a carburetor comprising a conduit extending from the carburetor into the intake manifold, said conduit having an annular transverse flat flange at the end thereof extending inwardly substantially at right angles with the axis of said conduit, a lining for the conduit spaced inwardly from the wall thereof and extending at the end nearly but not quite to said flange, and means for introducing external air into the conduit behind the lining, whereby the flange will project the air current radially inwardly into the air-and-fuel stream and force the air to be mixed with the fuel mixture passing through the conduit.

19,812
BALANCING MACHINE
Amos F. Mayer, Minneapolis, Minn., and Francis T. MacDonough, deceased, late of Madison, Wis., by Precision Balancing Machine Company, East Claire, Wis., assignee, by mesne assignments
Original No. 1,812,353, dated June 30, 1931, Serial No. 710,595, May 2, 1924. Renewed October 21, 1927. Application for reissue February 5, 1932, Serial No. 591,996½
26 Claims. (Cl. 73—51)

1. In a balancing machine, a base, a support connected to said base to oscillate and to revolvably carry, a test body, means to rotate the body, retaining means on said support, means mounted on said base for exerting pressure on said retaining means and for gradually releasing said pressure, and resilient frictional means interposed between said retaining means and pressure exerting means, whereby said support may be frictionally retained against oscillation, or said friction may be gradually reduced to permit said support to oscillate while said body is rotating.

4. In a balancing machine, an oscillatable support for a revolving test body, a graduated oscillation amplitude indicator, means including a frictionless element operatively connecting said indicator to said support, and means for adjusting a connection relative to said frictionless element operative to vary the ratio between the oscillatory movements of said support and the movements shown by said indicator.

9. In a balancing machine, a base, a support for the body to be balanced, means on said base mounting said support for substantially pivotal vibration, a resilient cantilever on said base, flexible means connected to said cantilever, and adjustable means connecting said flexible means and said support.



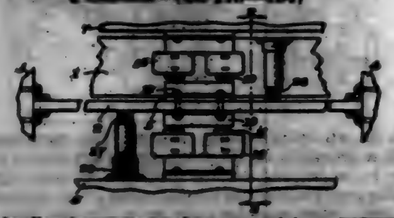
24. In a balancing machine, a frame for rotatably supporting a test body and mounted for vibration about a pivot, a headstock with a revolvable shaft having means for applying balancing correction and mounted on said frame coaxially with the test body, and flexible means for applying tangential forces between said shaft and said test body whereby said body may be revolved by said shaft.

19,813
CAKE PLATE
Erich O. Stendel, Chicago, Ill.
Original No. 1,979,811, dated November 6, 1934, Serial No. 643,644, November 21, 1932. Application for reissue June 29, 1935, Serial No. 29,694
9 Claims. (Cl. 65—15)

1. A device of the kind described comprised of a plate, said plate having a portion between its center and edge formed to provide a substantially endless projection extending laterally of the plane of one side of said plate, said plate being formed to provide a plurality of projections extending laterally of the plane of the other side of said plate which are of a length to provide supports for said plate, the material surrounding said plurality of projections being in the same plane.

19,814
INTERLOCKING SYSTEM FOR RAILROADS
Sedgwick N. Wight, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Original No. 1,894,181, dated September 22, 1931, Serial No. 379,176, July 18, 1929. Application for reissue September 9, 1933, Serial No. 692,437
8 Claims. (Cl. 246—3)

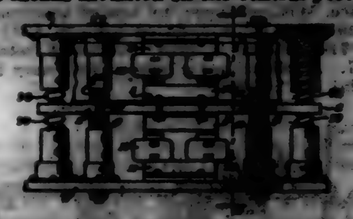
2. In an interlocking system, the combination with a plurality of levers in an interlocking tower free to be moved to any position at any time, a traffic controlling device for each lever controlled by such lever and located at a distant way station, a circuit controlled by one of said levers for controlling a particular traffic controlling device including contacts controlled by other and conflicting traffic controlling devices closed only when such other conflicting traffic controlling devices are in their non-conflicting positions, and means included in series in said circuit at a point in said interlocking tower for indicating at said tower the flow of current through said particular traffic controlling device and thereby indicating if any of said conflicting traffic controlling devices are in a conflicting position.



19,815
INTERCHANGEABLE CONTAINER FREIGHT CAR
Graham C. Woodruff, Bronxville, N. Y., assignor to The I. C. L. Corporation, a corporation of Delaware
Original No. 1,754,451, dated April 15, 1930, Serial No. 272,471, April 24, 1928. Application for reissue April 12, 1932, Serial No. 605,104
8 Claims. (Cl. 105—366)

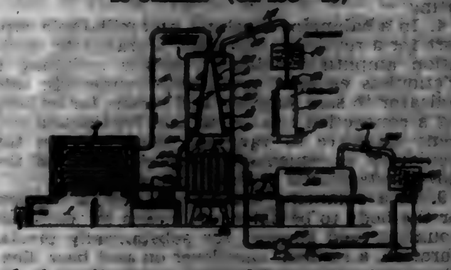
6. In a car of the class described, the combination with a car underframe, of a plurality of bulkheads extending from side to side of the underframe and dividing the car into a plurality of container compartments, each open at its ends to form doorways at opposite sides of the car, posts extending upwardly at the sides of the underframe and connected to and forming stiffening members for the ends of the bulkheads and also forming jambs at the opposite sides of the door-

ways, swinging side sections at opposite sides of the car forming doors for closing the doorways, said sections being hinged at their lower edges to swing upwardly between the posts and downwardly flush with the floors of the compartments to serve as gangways at an elevation to allow a container lift truck to travel over a let down side section onto the bottom of a container compartment beneath the bottom of a container therein, and coacting locking means on the side sections and posts to lock the side sections in closed position.



19,816
ELECTROMAGNETIC VIBRATING APPARATUS
Hugh E. Warrbach and Clyde H. Kenald, Magna, Utah
Original No. 1,945,015, dated January 30, 1934, Serial No. 620,348, July 1, 1932. Application for reissue July 1, 1935, Serial No. 29,266
4 Claims. (Cl. 172—126)

1. A vibratory apparatus comprising: a frame; an elongated resilient vibratory member mounted on said frame at its ends so as to permit vibration of the intermediate portion of said member in a direction perpendicular to the length thereof; operated means secured to said intermediate portion of said vibratory member; two separate non-polarized armature means mounted on said intermediate portion of said vibratory member at opposite sides of said member in the direction of vibration thereof; a pair of electromagnets secured to said frame and operatively associated with the respective armature means and acting oppositely thereon in said direction of vibration; and means for alternately supplying unidirectional energy to the respective electromagnets.



19,817
ELECTROMAGNETIC VIBRATING APPARATUS
Hugh E. Warrbach and Clyde H. Kenald, Magna, Utah
Original No. 1,945,015, dated January 30, 1934, Serial No. 620,348, July 1, 1932. Reissue No. 19,816, dated January 7, 1936, Serial No. 29,266, July 1, 1935. Divided and this application for reissue October 7, 1935, Serial No. 45,892
2 Claims. (Cl. 172—126)

1. A vibratory apparatus comprising: a frame structure; an elongated rigid vibratory member resiliently disposed on said frame structure and adapted for vibratory motion in a direction transverse to the length thereof, said vibratory member being resiliently engaged by resilient supporting means secured to said frame structure at opposite sides of the central portion of said vibratory member; two separate non-polarized armature means mounted on the central portion of

said member; a pair of electromagnets secured to said frame and operatively associated with the respective armature means and acting oppositely thereon in said direction of vibration; and means for alternately supplying unidirectional electrical energy to the respective electromagnets.

19,818
PROCESS FOR TREATING HYDROCARBONS
Lester Kirschbraun, Lincoln, N. J., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Original No. 1,924,215, dated September 26, 1933, Serial No. 550,943, November 1, 1922. Renewed November 25, 1930. Application for reissue September 15, 1933, Serial No. 692,572
19 Claims. (Cl. 196—49)

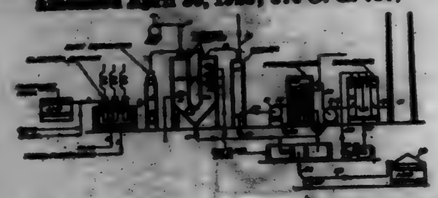
1. A continuous process for cracking hydrocarbon oil, consisting in raising the oil to a cracking temperature while flowing in a restricted stream through a heating zone, in delivering the heated oil to an enlarged reaction zone, through which the oil is caused to flow downwardly and undergo substantial vaporization, in causing vapors released from the oil during the downward flow of the oil to rise in an annular stream through said reaction zone, while out of contact with the downflowing oil, in collecting condensate separated from the vapors rising in said annular stream and in removing the same from said reaction zone, without permitting the same to contact with unvaporized oil therein, and in returning such condensate to said heating zone, in taking off uncondensed vapors from said reaction zone and in subjecting the same to condensation, and in collecting the resulting distillate;

PATENTS
GRANTED JANUARY 7, 1936

2,026,516
TONG
John B. Clermont and Richard K. Hertel, Los Angeles, Calif., assignors to Byron-Jackson Co., Los Angeles, Calif., a corporation of Delaware
Application April 26, 1934, Serial No. 723,736
5 Claims. (Cl. 81—99)

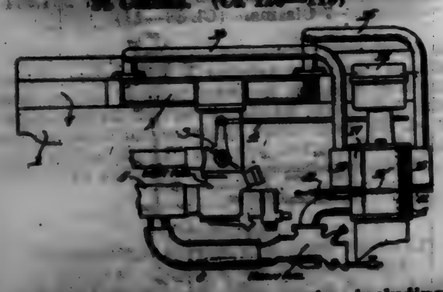
1. A pipe tong comprising a handle having a head rigid therewith, said head having a pair of oppositely disposed prongs forming a constantly open receiving socket for receiving the pipe, an arcuate jaw pivoted to one prong, having two bearing points for engaging the pipe separated from each other circumferentially, and engaging the side of the pipe on the pivot side of a diametrical line through the pipe, the opposite prong having a smooth wedge face inclined so as to engage the pipe with a wedging action when the handle is swung forward, spring means for urging the outer bearing point of the jaw against the pipe, and a stop engaged by the arcuate jaw and cooperating with the spring means to hold the arcuate jaw in a position to maintain the receiving socket open.

2,026,517
ANTIOXIDANT
Albert M. Clifford, [illegible], Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 11, 1932, Serial No. 598,201
12 Claims. (Cl. 12—33)



1. A method of preserving rubber which comprises treating the same with the reaction product of an amino derivative of a diphenylene oxide and an aliphatic aldehyde.

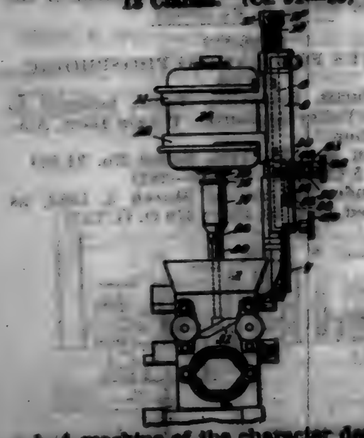
2,026,518
TRIGGER MOTOR
Richard C. Overstreet, United States Army, Norfolk, Va.
Application October 4, 1934, Serial No. 744,631
2 Claims. (Cl. 81—57)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a trigger motor, a housing, a guide in one end of the housing, a plunger in the housing comprising a bolt and a nut threaded thereon, the bolt slidably and non-rotatably mounted in the guide, a spring normally urging the plunger in one direction, a cable connected to the bolt and adapted to retract the plunger, a bell-crank lever pivotally mounted in the other end of the housing, a link having a relatively rotatable connection with the nut and a pivotal and sliding connection with the lever, a trigger pivotally carried by the lever, a spring carried by the lever and normally moving the trigger away from the lever, and means for limiting movement of the trigger under action of its spring.

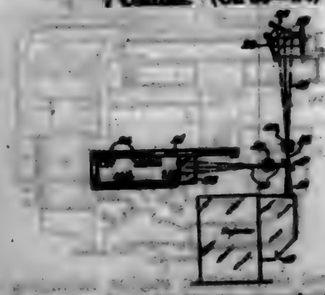
2,026,519
APPARATUS FOR MAKING PHOSPHORIC ACID
Harry A. Curtis, Knoxville, Tenn., assignor to Tennessee Valley Authority, Wilson Dam, Ala., a corporation
Application May 15, 1935, Serial No. 21,564
5 Claims. (Cl. 23—163)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An apparatus for the combined oxidation and hydration of elemental phosphorus comprising the combination of a combined oxidizer-hydrator comprising an enclosed U-shaped chamber, a burner at top of one column of chamber, means for maintaining aqueous spray throughout the lower portion of said column of chamber, means for maintaining aqueous spray thruout the other column of the chamber; a vapor line from top of last mentioned column of the U-shaped chamber to top of vertical cooling chamber; a vertical cooling chamber with means for admitting air at top; means for propelling vapors thru the oxidizer-hydrator and vapor cooler so that a pressure, substantially equal to the prevailing atmospheric pressure, is maintained at the vapor outlet of the furnace; and means for withdrawing liquid separating from the bottom of the oxidizer-hydrator and vapor cooler, respectively.



2,026,520
INTERNAL COMBUSTION ENGINE
Joseph Roy Davis, Clarksburg, W. Va.
Application July 3, 1929, Serial No. 376,311
24 Claims. (Cl. 123—119)

1. An internal combustion engine including a cylinder, an admission manifold, a throttle valve, a valve for controlling the admission of gases from



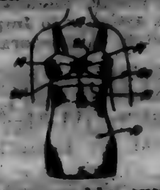
the manifold to the cylinder, and means for causing a controllable quantity of the gases in the admission manifold to flow away from the cylinder.

2,026,521
MACHINE FOR COATING STRIPS OF LUMBER
Irvin F. Dittmar, Williamsport, Pa., assignor to The Cremar Co., Williamsport, Pa., a corporation of Pennsylvania
Application December 7, 1929, Serial No. 324,250
Renewed December 12, 1934
13 Claims. (Cl. 91—46)

1. A machine of the character described comprising a receptacle for applying semi-liquid to a strip in its passage therethrough, a shaft rigidly supported and extending up above the receptacle, a frame oscillating on said shaft, brackets carried by the frame and extending inwardly over the receptacle, a motor mounted on said brackets and having its shaft extending into the receptacle, a pressure member carried by the lower end of the shaft, an arm rigidly carried by the rigidly supported shaft and extending outwardly beyond the frame, a hand screw carried by the outer end of the arm and screwed into a pivoted member carried by the frame whereby the frame can be swung on the shaft for moving the pressure member to or from the strip in its passage through the receptacle.

2,026,522
STOCK QUOTATION PROJECTING DEVICE
August D. Stiess, New York, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York
Application April 16, 1929, Serial No. 354,934
7 Claims. (Cl. 88—24)

1. In a stock quotation projecting machine having a ticker adapted to mark and discharge tape with reading matter readable longitudinally of the tape, the combination with a pair of independent and separated elongated narrow daylight display screens, of a projecting device removed from said screens through which device the marked tape passes, said device including a source of light, and elongated light aperture along which the tape passes to receive the light rays from said source of light and form images of the markings on said tape, means for splitting said light rays into two subordinate beams after passing through said tape, and sets of reflectors so arranged as to direct said last-named beams toward and onto said screens respectively so as to produce erect and unreversed images on each screen movable and readable longitudinally of such screen.



2,026,523
APPARATUS FOR PACKING
Fred G. Fear, Hillside, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application October 22, 1930, Serial No. 490,681
2 Claims. (Cl. 226—82)

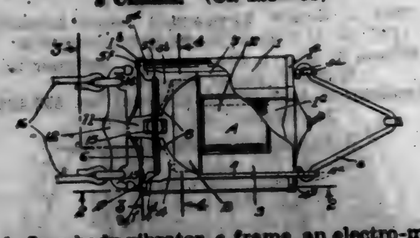
2. In a vacuumizing and closing machine for filled friction top containers, the combination of concentric heads or chucks, the outer head being hollow and annular and having means for engaging the top edge of the container body and forming a vacuum chamber in conjunction therewith, said outer head having a perforated neck and shaft bearing, means for engaging said neck, means for reciprocating said engaging means to lift the head or to apply the same to the container edge with a sealing pressure, a pressure shaft slidably mounted in said bearing and tightly fitting within said neck and fixed to the inner head, and an exhaust pipe for withdrawing air from within the outer head, said shaft being movable to actuate the inner head to apply a sealing friction cover to the exhausted container body.

2,026,524
GARMENT
Maude C. Fitzhugh, Los Angeles, Calif.
Application September 18, 1933, Serial No. 689,990
2 Claims. (Cl. 2—39)

1. In an undergarment, the combination of: a body garment adapted to encircle the torso of the wearer; and a brassière comprising joined bust-receiving portions and a band at the lower edge of said brassière, said band being adapted to lie in close contact with the body of the wearer immediately beneath the bust; the upper front of the body garment being attached to the brassière above the said band and between the bust-receiving portions, in movably overlapping relation, whereby the band of said brassière may move with the body and relatively to said body garment.

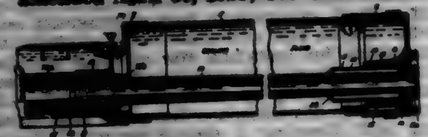
2,026,525
BOTTLE CARRIER
Charles Korte, Teaneck, N. J., assignor to Lowe Paper Company, Ridgefield, N. J., a corporation of New Jersey
Application June 16, 1931, Serial No. 544,794
11 Claims. (Cl. 229—15)

1. A combined display and carrier receptacle comprising a relatively long oblong body of sheet material folded on transverse lines equally spaced from the ends thereof, the material between said lines forming the bottom of the receptacle, and the remaining two portions of the material forming front and rear walls for the receptacle, and another oblong body of sheet material encircling and attached to one of said walls and cooperating with the same to provide end walls for the receptacle and forming an open top receptacle having extended front and rear walls, said front wall having two transverse scores therein, permitting the same to be folded downwardly and under the bottom of the receptacle to display the contents of the receptacle.



2,026,526
PRETZEL FORMING MACHINE
Harrison S. Gipe, York, Pa., assignor to Quinlan Pretzel Co. Inc., Reading, Pa., a corporation of Pennsylvania
Application June 21, 1933, Serial No. 676,855
18 Claims. (Cl. 107—8)

1. In a pretzel forming machine, a forming unit comprising a base plate, means carried by the base plate to pick up and support a dough string in inverted U-form, a twister unit positioned to engage the depending ends of the supported U-form, means to move the unit as an entirety, means incident upon the movement to rotate the twister unit, means further actuated by the movement of the unit to fold the twister member to bring the free ends of the dough string into engagement with the bow of the U, and means to pretrim the ends of the dough string



to proper length to coincide with the U part when so engaged.

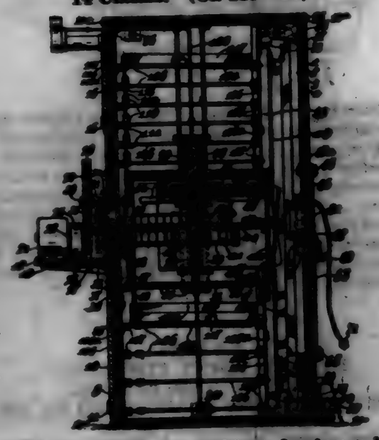
2,026,527
BODY VIBRATOR
Robert R. Gossett, Los Angeles, Calif.
Application June 25, 1932, Serial No. 619,195
Renewed March 25, 1935
5 Claims. (Cl. 128—63)

1. In a body vibrator, a frame, an electro-magnet mounted at one end thereof, a laminated leaf spring mounted at the opposite end thereof and supported at its ends on said frame, an armature operatively mounted on said spring and positioned between said electro-magnet and said spring, a support for said armature secured to said spring and extending past said frame and provided with a bifurcated end, and a strap secured to the bifurcated end of said support.

2,026,528
PACKED JOINT FOR GUNS
Samuel G. Green, Gray, Ga.
Application November 23, 1931, Serial No. 576,819
5 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A sleeve for fluid cooled reciprocating gun barrels embodying a tubular member, inturned ends on the tubular member adapted to engage a gun barrel, and ports spaced about the sleeve and inclined at an angle other than 90° to the longitudinal axis of the gun barrel, the inclination of all ports being in the same direction.

2,026,529
COMBINED INK WELL AND BOTTLE
Carey G. Gregory, Los Angeles, Calif.
Application May 28, 1934, Serial No. 728,026
15 Claims. (Cl. 120—59)

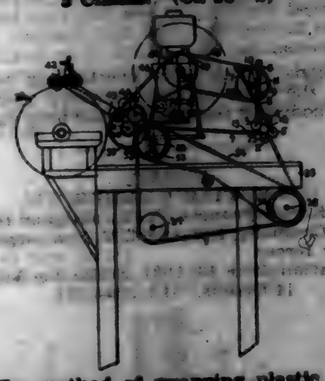


1. In a device of the class described, a container forming an ink receiver, a pen receiving

reservoir constituted by a tubular member extending at an acute angle to the base of said receiver and projecting through one wall of said receiver, and a main reservoir for ink mounted

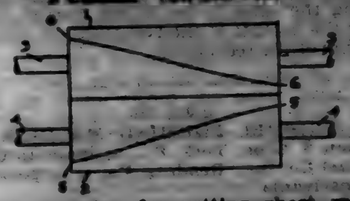
in inverted position in said container and maintained in a predetermined position above the bottom of said container by abutment with the inclined wall of said pen receiving reservoir.

2,026,530
INCUBATOR
Wilson T. Hager, Erwinna, Pa., assignor to Willet V. Hager, Erwinna, Pa.
Application July 22, 1931, Serial No. 552,426
14 Claims. (Cl. 119—37)



1. In an incubator, a cabinet having a hatching space with means therein for supporting egg trays in tiers, said cabinet having intake air vents at the bottom and outlet air vents adjacent the top, means for agitating the air and directing it from the back to the front of the cabinet, and means for causing an undulating course of the air centrally of said space from the back to the front and directing it centrifugally to all portions of the hatching space and maintaining a uniform distribution thereof.

2,026,531
PROPELLENT POWDER
George C. Hale and Donald R. Cameron, Dover, N. J.
No Drawing. Application March 29, 1934, Serial No. 716,515
2 Claims. (Cl. 52—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



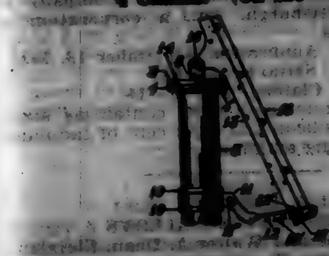
1. A propellent powder consisting of nitrocellulose, trinitrotoluene and triacetin two to ten per cent.

2,026,532
METHOD AND APPARATUS FOR WRAPPING CYLINDRICAL ARTICLES
Albertus Hendrik Haupt, Somerset West, Union of South Africa, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
Application March 31, 1934, Serial No. 718,496
In Great Britain April 1, 1933
5 Claims. (Cl. 93—8)

1. The method of wrapping plastic explosive material which comprises arranging the material in a longitudinally extended series of individual cylinders with the cylinders spaced the one from the other, and with individual wrapping sheets interspersed among the cylinders, feeding the thus-arranged assembly forward and arresting the forward travel of each cylinder in turn, confining the cylinder and imparting rotation thereto, feeding the wrapping sheet that is immediately behind such cylinder into contact with the under side thereof, turning the edge of such sheet upward about such cylinder and into confinement therewith, and continuing the rotation of such cylinder while so confined until it is wrapped.

2,026,533
APPARATUS FOR CUTTING PAPER OR OTHER MATERIAL
Albertus Hendrik Haupt, Somerset West, Union of South Africa, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
Application August 7, 1934, Serial No. 739,630
In Great Britain August 12, 1933
5 Claims. (Cl. 164—68)

4. An apparatus for cutting sheet material obliquely into pieces of predetermined length, which comprises a pair of rotatable axially parallel cylinders, the first of which is provided with a peripheral, helical knife the angle of inclination of which is equal to the angle at which it is desired to cut said paper, while the second of said cylinders is provided with a cooperating, peripheral, helical knife the angle of inclination of which is slightly greater than that of the helical knife of the first cylinder, the cooperation of the respective helical knives being such that rotation



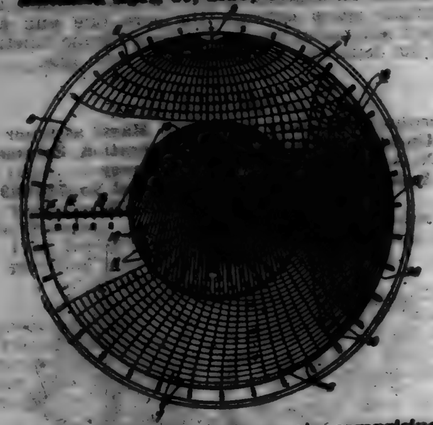
imparted directly to the first cylinder causes the second cylinder to rotate at a slightly greater speed.

1,984,134
TRUCK
William C. Hedgcock, Wilmette, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 31, 1931, Serial No. 553,185
12 Claims. (Cl. 105—182)

1. In a car truck, the combination of a side frame having a bolster opening, and having pedestals spaced to guide a journal box therebetween, a journal box disposed between said pedestals and having spring seats thereon below the journal box collar, spring seats on said side frame adjacent said pedestals and substantially at axle level, springs between said journal box and side frame and disposed on opposite sides of said journal box, a bolster extending into said bolster opening, and springs supporting said bolster on said side frame, said last named springs having a different period of oscillation from said first named springs.

2,026,535
LADDER MOUNT
Thomas Hooker, Wilmington, Del.
Application April 1, 1932, Serial No. 602,995
4 Claims. (Cl. 280—6)

1. A ladder mount comprising a circular supporting column, a sleeve rotatably mounted on said column, a ladder pivotally secured to said rotatable sleeve, and means for removably securing the lower end of said ladder to said column, said means comprising a collar, means for limiting the raising and lowering of said collar without restricting its rotative movement, and rigid means for connecting the ladder to the collar.

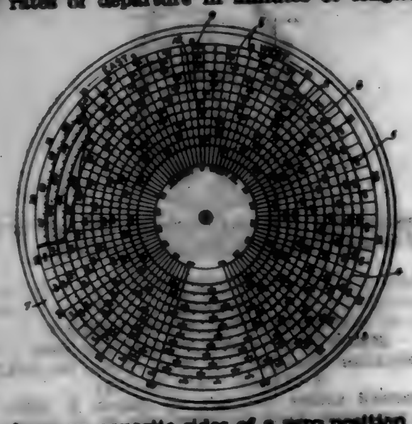


2,026,536
HANDLE FOR PAILS
John M. Rothensall, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application March 2, 1934, Serial No. 713,538
3 Claims. (Cl. 220—57)

2. A handle for pails, comprising a curved wire bail and a sheet metal hand guard substantially conforming in curvature to the bail and having a portion disposed beneath the latter for the entire length of the guard, the side edges of the guard intermediate its end portions being rolled into upwardly and inwardly extending beads to reenforce the bail and the guard against deformation during use, the end portions of said beads

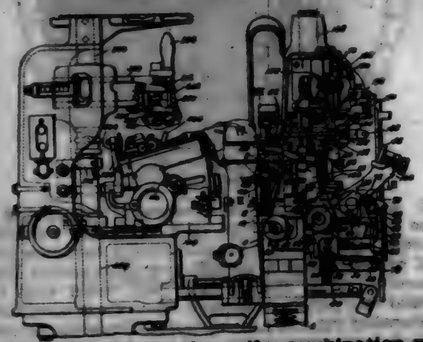
merging into portions engaging the top of the bail to secure the bail and guard together.

2,026,537
NAVIGATIONAL INSTRUMENT
Henry M. Jessen, United States Navy
Application December 16, 1932, Serial No. 647,712
6 Claims. (Cl. 72—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



3. A navigational instrument, comprising a base and a transparent disk rotatably mounted thereon, there being on said disk a compass rose and on said base a plurality of convergent lines spaced at equal angles from each other with the medial one passing through the axis of said disk, a plurality of spirally disposed lines about said axis intersecting said convergent lines and a plurality of lines spaced at equal angles radiating from said axis, the said rose and three sets of lines being conjointly usable to determine the wind direction and wind velocity when the air speeds and the angles of drift on two different courses flown are known.

2,026,538
NOON INTERVAL CALCULATOR
Henry M. Jessen, United States Navy
Application June 6, 1934, Serial No. 729,258
3 Claims. (Cl. 235—84)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A computing instrument, comprising a base having thereon a spiral graduated in logarithmic angular intervals that represent local apparent hour angles at intervals of 1 minute and subdivided into intervals of 5 seconds, the linear distances between any two adjacent like unit division marks being substantially constant, and

a transparent disk rotatably mounted on said base with its center at the origin of the spiral, said disk bearing spaced radial lines representing rates of departure in minutes of longitude

per hour on opposite sides of a zero position, the angular space between the zero line and any other said radial line being a logarithmic function of the departure represented by such line.

2,026,539
LASTING MACHINE
Bernhardt Jorgensen, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application March 5, 1934, Serial No. 714,669
28 Claims. (Cl. 12—12)

1. In a lasting machine, the combination with toe-lasting mechanism, of a support for a last and shoe movable in directions lengthwise of the shoe, clamping means arranged to engage the heel-end face of the shoe and to determine by such engagement the position of the toe-end face of the last relatively to the toe-lasting mechanism, a spring for moving said support to carry the last and shoe toward said clamping means, and mechanism for holding said support initially retracted against the resistance of said spring and for releasing it to the action of the spring.

2,026,540
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,677
1 Claim. (Cl. 75—1)

An aluminum base alloy containing from about 4 to 12 per cent of copper, from about 0.05 to 1.5 per cent of cadmium, and between about 0.1 and 10 per cent of lead, 0.05 and 1.5 per cent of bismuth, and 0.05 and 2 per cent of thallium, the balance being aluminum.

2,026,541
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,679
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 0.5 to 4 per cent of magnesium, from about 0.5 to 4 per cent of silicon, and from about 1 to 4 per cent each of lead and bismuth, the balance being aluminum.

2,026,542
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,680
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing about 12 per cent of silicon, and about 4 per cent of lead, the balance being aluminum.

2,026,543
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,681
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing about 12 per cent of silicon and 4 per cent of cadmium, the balance being aluminum.

2,026,544
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,682
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing about 12.5 per cent of silicon, 0.2 per cent of nickel, 1.15 per cent of magnesium, 0.5 per cent of copper, and 3 per cent of lead, the balance being aluminum.

2,026,545
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,683
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing about 9.5 per cent of zinc, 2.5 per cent of copper, 1.5 per cent of magnesium, 0.5 per cent of manganese, and 4 per cent of lead, the balance being aluminum.

2,026,546
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,684
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing about 1 per cent each of bismuth and thallium, the balance being aluminum.

2,026,547
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,685
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing about 6.0 per cent of copper, about 0.1 per cent of tin and about 1.0 per cent of lead, the balance being aluminum.

2,026,548
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,687
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 2 to about 7 per cent of copper, from about 0.2 to 2 per cent of magnesium, from about 0.1 to about 1 per cent of manganese, from about 0.1 to about 10 per cent of lead, and from about 0.05 to about 10 per cent of bismuth, the balance being aluminum.

2,026,549
FREE CUTTING ALLOYS
Walter A. Dean and Charles G. Jancura, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,688
2 Claims. (Cl. 75—1)

1. An aluminum-copper alloy containing from about 2 per cent to about 12 per cent of copper and from about 0.05 per cent to 10 per cent of lead, the balance being aluminum.

2,026,550
FREE CUTTING ALLOYS
Walter A. Dean and Charles G. Jancura, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,689
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing about 4.4 per cent of copper, about 0.5 per cent of silicon, about 0.6 per cent of manganese and about 2.8 per cent of lead, the balance being aluminum.

2,026,551
FREE CUTTING ALLOYS
William L. Fink, Oakmont, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application September 18, 1933, Serial No. 689,691
2 Claims. (Cl. 75—1)

1. An aluminum-copper alloy containing from about 5 per cent to about 12 per cent of copper and between about 0.05 per cent and 1.5 per cent of cadmium, the balance being aluminum.

2,026,552
FREE CUTTING ALLOYS
Howard L. Hopkins, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Original application September 18, 1933, Serial No. 689,690. Divided and this application October 13, 1934, Serial No. 748,214
4 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 3 to 5.5 per cent of copper, from about 0.25 to 1.5 per cent of manganese, from about 0.25 to 2 per cent of silicon, and a total of between about 0.05 and 1.5 per cent of the free machining elements bismuth and cadmium, the balance being aluminum.

2,026,553
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Original application September 18, 1933, Serial No. 689,677. Divided and this application May 3, 1935, Serial No. 19,696
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 4 per cent to about 12 per cent of copper, from about 0.05 per cent to 1.5 per cent of cadmium, and from about 0.05 per cent to about 1.5 per cent of bismuth, the balance being aluminum.

2,026,554
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Original application September 18, 1933, Serial No. 689,677. Divided and this application May 3, 1935, Serial No. 19,695
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 4 per cent to about 12 per cent of copper, from about 0.05 per cent to 1.5 per cent of cadmium and from about 0.1 per cent to 10 per cent lead, the balance being aluminum.

2,026,555
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Original application September 18, 1933, Serial No. 689,677. Divided and this application May 3, 1935, Serial No. 19,696
2 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 4 to 12 per cent of copper, from about 0.05

to 1.5 per cent of cadmium, from about 0.1 to 10 per cent of lead, and from about 0.05 to 1.5 per cent of bismuth, the balance being aluminum.

2,026,536
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Original application September 13, 1932, Serial No. 633,806. Divided and this application May 3, 1935, Serial No. 19,697
4 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 3 to 15 per cent of silicon, from about 1.5 to 6 per cent of cadmium and from about 0.05 to 10 per cent of lead, the balance being aluminum.

2,026,537
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application May 3, 1935, Serial No. 19,624
4 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 3 to 15 per cent of silicon, from about 0.05 to 10 per cent of lead and from about 1.5 to 6 per cent of bismuth, the balance being aluminum.

2,026,538
FREE CUTTING ALLOYS
Louis W. Kempf and Walter A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application May 3, 1935, Serial No. 19,669
4 Claims. (Cl. 75—1)

1. An aluminum base alloy containing from about 3 to 15 per cent of silicon, from about 0.05 to 10 per cent of lead, at least about 1.5 per cent of cadmium and at least about 1.5 per cent of bismuth, the total amount of cadmium and bismuth being between 3 and 10 per cent, the balance being aluminum.

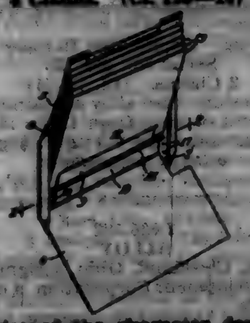
GAME
Leonard B. Krell, Sterling, Ill.
Application October 5, 1934, Serial No. 747,333
8 Claims. (Cl. 273—93)

1. As an article of manufacture, a game device provided with a top wall having a game field pictured thereon, a movable member on said top wall, stationary indications disposed at intervals along the path of travel of said member, said member having an opening therein, which opening can be disposed opposite any one of said indications, by movement of said member and its opening bodily, a rotary disk below said wall, suitable indications in fixed position on said disk, and means for causing the disk to spin freely, so that it is free to rotate and stop of its own accord, to prevent picking of a play, the indications on the disk being observable one at a time through said opening, depending upon the position of the latter.

2,026,581
CLAW BAR
John Therne Lane, Los Angeles, Calif.
Application July 25, 1934, Serial No. 736,286
12 Claims. (Cl. 254—94)



1. A claw bar or the like including a lever arm, a fulcrum head rigidly secured thereto, said fulcrum head being formed with a pair of substantially parallel vertically alined arms, a pair of gripping jaws disposed between said arms and projecting forwardly thereof in immediate in-

wedge members between which a V-shaped throat occurs, a fixed pivot for said wedge members so that they may swing vertically with relation to the head, said gripping jaws being capable of lateral movement with relation to each other and their pivotal axis, a fulcrum point occurring between the contiguous faces of said gripping jaws at a point intermediate their lengths and between the fixed pivot and the apex of the throat

whereby the jaws may swing laterally to narrow and widen the V-shaped throat between their forward ends, and means whereby downward swinging movement of the lever arm and the fulcrum head in an effort to produce a prying action by the outer ends of said gripping jaws will apply lateral force against the portions of the gripping jaws in advance of said fulcrum point tending to force said jaws together and reduce the angle of the V-shaped throat.

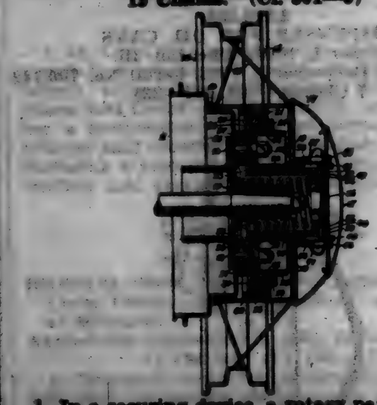
2,026,582
CARD INDEX AND THE LIKE
Frederick H. Leveridge, Coldwater, Mich., and Edwin H. Smythe, Evanston, Ill.; Gabrielle L. Clark and Herman L. Leveridge, trustees under the will of said Frederick H. Leveridge, deceased
Application July 15, 1932, Serial No. 622,160
4 Claims. (Cl. 129—16)

2. A device of the character described comprising a plurality of card-like elements adapted to receive legends or the like and means for mounting said elements comprising a support having a back portion and holding members detachably receiving said elements including spring members individual to said elements tending to yieldingly swing them against the back portion.

2,026,583
PROCESS OF CHANGING THE SOLUBILITY OF MIXED ESTERS OF CELLULOSE AND THE PRODUCT RESULTING THEREFROM
Carl J. Malm and Claude L. Fletcher, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application July 17, 1931, Serial No. 551,548
21 Claims. (Cl. 260—102)

1. A process of partially de-esterifying acetone soluble cellulose acetate-propionate the acyl content of which comprises at least 15% propionyl which comprises treating it with a hydrolyzing agent and terminating the hydrolysis before the total acyl content of the acetate has been reduced to less than 37%.

2,026,584
METHOD OF LIBERATING FIBERS
Joseph A. Manahan, Boston, Mass.
No Drawing. Application January 11, 1935, Serial No. 1,252
19 Claims. (Cl. 92—9)



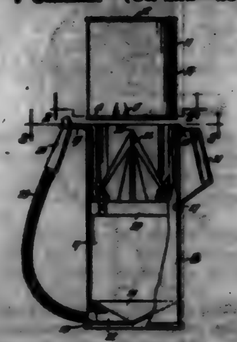
1. That method of liberating plant fiber from connective tissue which comprises treating the raw material with water containing an emulsifying agent, thereafter treating the material with a water solution of a mild alkaline salt, rinsing the material, and treating the material with a softening agent prior to spinning.

2,026,585
TRIM PANEL ASSEMBLY
William Marshall, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application September 29, 1933, Serial No. 691,641
6 Claims. (Cl. 45—138)

1. A trim panel comprising a non-metallic backing sheet, a fabric covering for said sheet, an ornamental riser strip interposed between said fabric and sheet at the outer face of the latter, parallel lines of stitching extending along the opposite longitudinal edges of the riser for securing said fabric to the backing sheet, said riser strip having a preformed continuous groove in its outer face, and a line of stitching for securing the riser to the backing sheet and housed within said groove beneath said fabric.

2,026,586
SECURING DEVICE
Thomas C. McVeagh, Honolulu, Territory of Hawaii
Application March 31, 1934, Serial No. 718,461
19 Claims. (Cl. 301—9)

1. In a securing device, a rotary part, a second part fixed on the rotary part to rotate therewith, a securing part engageable with the second part



for rotation therewith and axial movement with respect thereto, a third part engageable with the second part to prevent axial movement of the third part with respect thereto, said securing part being engageable with the third part by the axial movement of the securing part in one direction into a securing position to secure the third part to rotate with the rotary part, and resilient means to retain said securing part in its securing position, and yieldable to allow said securing part to be moved to a releasing position, for the purpose of detaching said third part, and in combination, means operable to move said securing part against the action of the resilient means into its releasing position, and to retain it in said position, for the aforesaid purpose.

2,026,587
JOINT FOR ELECTRIC CABLES
Fred C. Meyer, Paterson, and George E. Moffitt, East Paterson, N. J., assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J., a corporation of New Jersey
Application December 18, 1933, Serial No. 703,593
3 Claims. (Cl. 247—8)

1. A joint for high tension electric cables of the type in which the insulated cable conductors are laid in a pipe filled with oil under high pressure in which the conductors and their insulation are submerged, comprising in combination an enclosing joint casing, joint sleeves aligned with the adjacent ends of the cable pipes, a barrier plate attached to the inner end of each joint sleeve, thimbles in said barrier plates for receiving and supporting the insulated cable conductors which are to be joined within said casing, a coupling sleeve at each end of the joint surrounding the ajacent ends of said joint sleeves and cable pipes, said joint casing overlapping the said joint sleeves, a ring attached to each end of the joint casing, a ring on each cable pipe and movable longitudinally thereof, packing intermediate the ends of the coupling sleeves and said rings, and bolts for drawing the pipe rings and coupling sleeves toward the joint casing rings to provide a fluid tight connection between the cable pipes and the said joint sleeves.

2,026,588
DISPENSER FOR OIL CANS
Elmer L. Nall, Wheaton, Ill.
Application December 2, 1933, Serial No. 700,743
7 Claims. (Cl. 221—83)

1. A dispenser for opening containers filled with a liquid and for dispensing said liquid, comprising a holder for said container and the liquid to be dispensed, a cutter secured within said holder adapted to open a wall of said container, a wall of said dispenser being formed with key elements corresponding with like elements in said container to exclude containers lacking said elements.

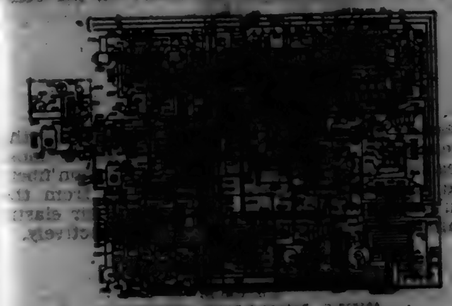
2,026,589
ALLOY
Roy E. Paine, Cleveland, Ohio, assignor to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application October 4, 1933, Serial No. 692,128
2 Claims. (Cl. 75—1)

1. A magnesium-base alloy containing from about 0.5 per cent to about 23.0 per cent of lead and from about 1.0 per cent to about 10.0 per cent of cadmium, the balance being magnesium.

2,026,590
ALLOY
Roy E. Paine, Cleveland, Ohio, assignor to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application October 4, 1933, Serial No. 692,129
2 Claims. (Cl. 75—1)

1. A magnesium-base alloy containing from 0.5 to 22.0 per cent of lead and from 1.0 to 15.0 per cent of aluminum, the balance being magnesium.

2,026,591
ALLOY
Roy E. Paine, Cleveland, Ohio, assignor to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application October 4, 1933, Serial No. 692,135
2 Claims. (Cl. 75—1)



1. A magnesium-base alloy containing from 0.5 to 22.0 per cent of lead, from 1.0 to 15.0 per cent of aluminum, and from 1.0 to 15.0 per cent of tin, the balance being magnesium.

2,026,592
ALLOY
Roy E. Paine, Cleveland, Ohio, assignor to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application October 4, 1933, Serial No. 692,136
2 Claims. (Cl. 75—1)

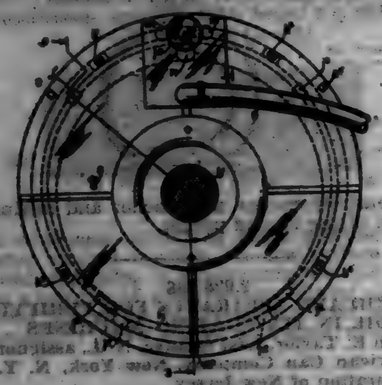
1. A magnesium-base alloy containing 0.5 to 22.0 per cent of lead, 1.0 to 15.0 per cent of aluminum, 0.1 to 1.0 per cent of manganese and 0.1 to 2.0 per cent of calcium, the balance being magnesium.

2,026,593
SYSTEM FOR THE REMOTE OPERATION OF POWER PLANTS
Erick Pearson, Minneapolis, Minn.
Application March 21, 1931, Serial No. 524,426
22 Claims. (Cl. 290—4)

6. A control system for a prime mover-generator unit and a source of operating fluid for said prime mover, including a gate for controlling the flow of said fluid to said prime mover, means for moving said gate, manually and automatically controlled operating means for controlling the actuation of said prime mover and said moving means, said a circuit including remote control means for selecting one of said operating means to control the actuation of said prime mover and moving means.

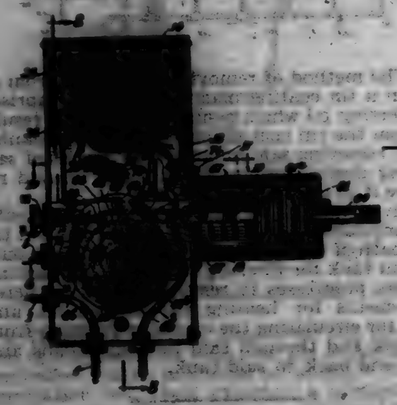
10. A control system for a prime mover-generator unit connected to a line, and a source of operating fluid for said prime mover, including a gate for controlling the flow of said fluid to said prime mover, a speed governor driven with said prime mover, means controlled by said speed governor for moving said gate, and means responsive to the amount of fluid in said source for limiting the degree of opening of said gate proportionately to the amount of fluid available at said source.

23. A control system for a prime mover-generator unit and a line connectable to said generator, including means for controlling the supply of energy to said prime mover, a circuit breaker for connecting said generator to said line, and means for effecting the opening of said circuit breaker and including means for operating said controlling means to slowly reduce the flow of energy to said prime mover to below a predetermined rate prior to opening said circuit breaker.



2,026,594
FLOORING MATERIAL AND METHOD OF MAKING SAME
Herman William Bleiler, Bridgewater, Mass.
No Drawing. Application May 4, 1931, Serial No. 535,082
3 Claims. (Cl. 154—60)

1. A method of laminating a plurality of sheets consisting in preheating each of the sheets, applying an asphalt emulsion to the surfaces to be united and pressing said sheets together without further heating, the preheating being sufficient to evaporate substantially all of the water of the emulsion and to produce a weld between the pressed sheets.

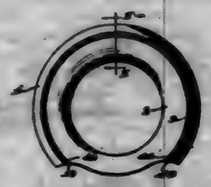


2,026,595
VEHICLE BRAKE
Clifford H. Rogers, Portland, Oreg., assignor of twenty-four per cent to John Kaufman and twenty-four per cent to J. K. Carr, both of Portland, Oreg.
Application July 22, 1931, Serial No. 552,719
10 Claims. (Cl. 188—60)

1. In vehicle braking mechanism, a brake element of the pump type, a closed conduit joining the discharge side of said brake element to the intake side thereof, a single intake port arranged on the intake side of said brake element and a plurality of discharge ports arranged in spaced relation along the discharge side of said element, a plurality of by-passes discharging into

said conduit, and a restricting orifice operatively arranged in certain of said branches, thereby adapted to regulate the resistance to flow thru said branches.

2,026,596
AUTOMATIC CONTROLLING DEVICE
John D. Rose, Bangor, Maine
Application May 26, 1926, Serial No. 111,469
32 Claims. (Cl. 219—20)



1. In a controlling apparatus, in combination, a switch, a mechanical motor for operating said switch, escapement mechanism interposed between said motor and said switch, means including a temperature-responsive element for controlling said escapement mechanism, and means including a pressure-responsive element for controlling said escapement mechanism.

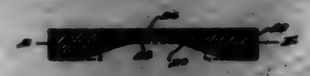
1,025,577
TIRE COVER
Reuben M. Short, Detroit, Mich., assignor to Lyon Cover Company, Detroit, Mich., a corporation of Michigan
Application September 9, 1933, Serial No. 688,257
11 Claims. (Cl. 150—54)

1. Tire cover construction comprising tread and side wall protecting portions, an anchor substantially coextensive with said portions and having an offset marginal extending at an acute angle with one of said portions to provide a cir-

cumferential pocket, and a coextensive strip of molding cooperating with the cover to substan-

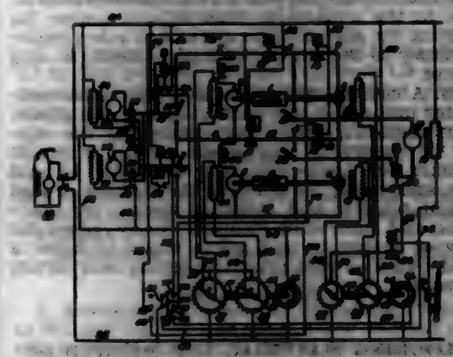
tially entirely enclose said anchor and having a portion fitting in said pocket.

2,026,598
METHOD AND APPARATUS FOR PURIFYING OIL IN TIN COATING MACHINES
William E. Taylor, East Orange, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application July 27, 1929, Serial No. 381,659
10 Claims. (Cl. 91—70.2)



1. The method of removing impurities from oil used in a tin coating machine, which comprises, transferring oil which contains impurities resulting from the tin coating operation, to a cleaning device, removing said impurities by means of said cleaning device, heating the purified oil and returning it to said coating machine.

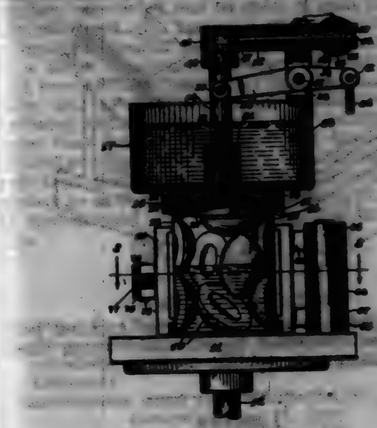
9. An apparatus for coating sheet metal with tin, comprising a tank for containing molten tin and a bath of oil upon the molten tin, means outside said tank for filtering said oil as the tinning of sheets progresses to remove impurities therefrom, means for heating the filtered oil, and means for circulating the oil under pressure from said tank and through said filtering means and heater and back to said tank.



2,026,569
LEAF SPRING
William H. Wallace, Detroit, Mich.
Application September 4, 1931, Serial No. 561,184
3 Claims. (Cl. 267—47)

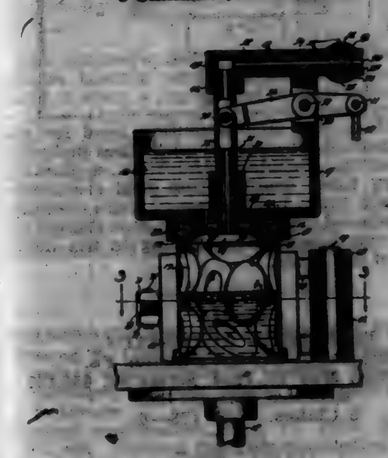
1. A spring leaf having a cross-section the tension side of which is substantially flat and the compression side of which has a concavity which is formed by a longitudinal groove the sides of which are divergent toward the compression side of the leaf and which is symmetrically positioned with respect to the edges of the leaf, the portions of said compression side that are adjacent to the edges of the leaf being substantially flat and parallel with said tension side, the central portion of said concavity extending across the neutral axis and into the tension area of the section, and the compression portion of the cross-section of the leaf being of such area and so arranged in relation to the neutral axis that, for a given working deflection of the leaf, the total stress to which the fibers on the tension side of the neutral axis are subjected shall be maintained substantially at a minimum to support the load producing the deflection and bear substantially the same relation to the tensile strength of the cross-sectional area in tension, that the total stress in the fibers on the com-

pression side of the neutral axis bears to the strength in compression of the cross-sectional area that is in compression, and the tension fibers and compression fibers most remote from the neutral axis will not be stressed to their elastic limits in tension and compression respectively.



2,026,580
WELL DRILLING SYSTEM
Nathan Wildinson, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application June 28, 1933, Serial No. 678,215
Renewed February 13, 1935
22 Claims. (Cl. 255—19)

4. A well drilling rig comprising means for hoisting selected parts of the rig, means for drilling, an electric motor, mechanism operable to selectively connect said electric motor either with said hoisting means or with said drilling means, a pair of electric generators of different capacities, prime mover means arranged to drive said generators, and means for connecting said motor to the generator of larger capacity when said hoisting means is operable and to the generator of smaller capacity when said drilling means is operable, and for permitting variation of the speed of said motor in its hoist and drill driving operations independently of the speed of operation of said prime mover means.

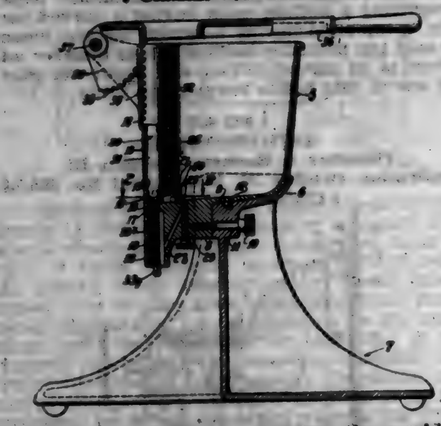


2,026,581
METHOD OF CANNING
John M. Young, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application September 8, 1933, Serial No. 688,833
8 Claims. (Cl. 226—116)

1. The method of canning and protecting open-end containers against collapse while under high vacuum, which comprises partially covering and holding against outward movement the greater part of the outside cylindrical part of the container to prevent atmospheric pressure from coming in contact with the enveloped part thereof

while supporting its interior wall adjacent its open end.

2,026,582
APPARATUS FOR CANNING
John M. Young, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application January 7, 1931, Serial No. 507,999
6 Claims. (Cl. 226—116)



1. Apparatus for canning under vacuum, comprising in combination: a vacuum head connected with a source of vacuum, means for controlling said vacuum, means for supporting a partially filled can to be vacuumized in operative relation to said head, a syrup tank communicating with said vacuum head, a valve member mounted in said head for controlling the supply of syrup to said can, and means pivotally mounted on said can supporting means and movable into and out of engagement with the side walls of said can to support the latter against collapse when the vacuum is drawn, said pivotally mounted means substantially conforming to the cross-sectional configuration of the can when in can engaging position.

2,026,603
ETCHING PROCESS
Robert A. Zarse, West Allis, Wis.
Application April 25, 1933, Serial No. 667,895
3 Claims. (Cl. 41—42)

2. A process of etching metal printing forms having enamel coatings on the surface to be etched, consisting in introducing the said forms into a mixture of a solution containing approximately one gallon of chloride of iron and approximately three ounces of sodium chloride.

2,026,604
EMULSIFYING APPARATUS
Terris H. Alfreds, Park Ridge, Ill., assignor to Herbert J. Tayler, Park Ridge, Ill.
Application October 6, 1934, Serial No. 747,155
7 Claims. (Cl. 99—3)

1. In an emulsifying apparatus, the combination of a cylinder for receiving the material to be emulsified, means providing an aperture in communication with said cylinder, a plunger relatively movable with respect to said aperture and having a projecting end part of a different diameter extending into said aperture and coacting therewith in forming an annular emulsifying passage, and means for causing a relative movement between said means and said plunger to extrude the material in said cylinder through said passage.

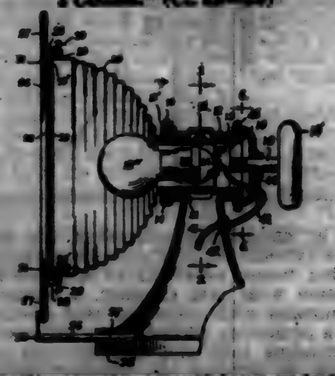
2,026,605
METHOD FOR WORKING AND TREATING METALS
Frank L. Antisell, Wilkinsburg, Pa., assignor to Copperweld Steel Company, Glassport, Pa., a corporation of Pennsylvania
Application January 9, 1933, Serial No. 650,913
9 Claims. (Cl. 148—11.5)

2. A method of making a coherent, integral mass of metal from a series of layers thereof including the steps of successively compacting portions of each layer to refine the grain structure thereof, leaving the intermediate portions in their original coarse-grained state to anchor the

layers together, and annealing the layers whereby the intrusive effect of the compacted portions

extends to adjacent layers wiping out boundaries therebetween and uniting the layers.

2,026,606
MEANS FOR MAKING OPHTHALMIC LENSES



William Bausch, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application March 31, 1932, Serial No. 603,541
4 Claims. (Cl. 49—53.1)

1. Apparatus for making ophthalmic lenses comprising a bottom mold having a curved surface, a top mold having a curved surface, means on said top mold for holding a lens member adjacent to its curved surface and means for moving one of said molds towards the other.

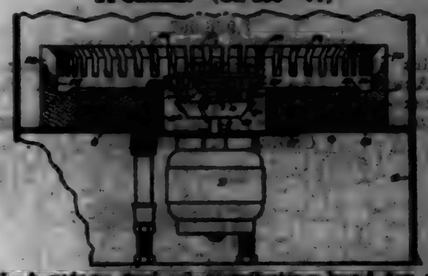
2,026,607
ASTIGMOMETER

Theodore A. Bennett, Chicago, Ill.
Application October 28, 1933, Serial No. 695,744
3 Claims. (Cl. 88—39)

1. An astigmometer comprising a pedestal having a bearing thereon, a bushing journalled in said bearing for rotative movement, a reflector carried by said bushing rotatable therewith, and having an open side, illuminating means within said reflector, a transparent chart arranged over said open side, and indicating means for indicating the angular position of said chart.

2,026,608
ROOF CONSTRUCTION

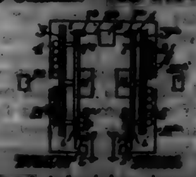
Salvator S. Calafati, New York, N. Y., assignor of three-fourths to Salvator S. Calafati, Jr., and one-fourth to John M. Cole, both of New York, N. Y.
Application July 6, 1933, Serial No. 679,996
7 Claims. (Cl. 189—6)



1. The method of building roofs which consists in securing pieces of insulating board to a suitable support and in overlapping, shingle-like relation, the lower edges of the insulating board being spaced away from the upper surface of the next lower piece of insulation board, applying a coat-

ing of impervious material to the exposed portions of the insulation board, and forcing some of said coating material into said space.

2,026,609
OIL BURNER

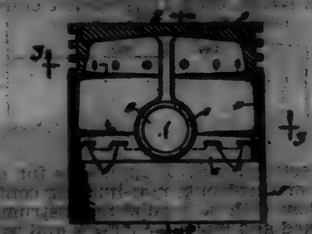


John W. Cannon, Plainfield, N. J.
Application June 18, 1932, Serial No. 618,008
14 Claims. (Cl. 158—77)

1. A rotary fuel oil distributing head for use with furnaces of the character described including an oil receiving receptacle and a fan, a plurality of delivery tubes leading from said receptacle, each of said tubes having one or more openings therein disposed intermediate the ends thereof for reducing the danger of breathing to the delivery ends of the tubes.

2,026,610
TELEVISION APPARATUS

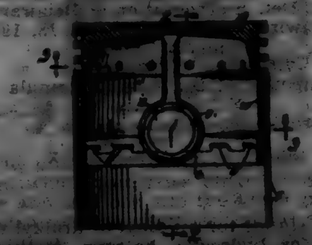
Aloysius J. Cawley, Pittston, Pa.
Application May 22, 1934, Serial No. 726,127
Renewed May 24, 1935
3 Claims. (Cl. 178—6)



1. A combined television transmitter and receiver consisting of a motor, optical means for forming an image, a rotatable element in the plane of said image operatively connected to said motor to be rotated thereby, a group of photoelectric cells and a group of glow lamps carried on said rotatable element and being rotatable in said image plane thereby, said image plane being of the order of magnitude of said rotatable element, a transmitting conductor connected to

one terminal of each of said photoelectric cells, a receiving conductor connected to one terminal of each of said lamps, a plurality of contact brushes connected one to each of said photoelectric cells and said lamps, a commutator capable of making contact with but one of said brushes at a time, a transmission circuit connected to said transmitting conductor and to said commutator and a receiving circuit connected to said receiving conductor and to said commutator in order that said photoelectric cells shall be intermittently connected to said transmission circuit and that said lamps shall be alternately connected to said receiving circuit that images may be transmitted and received in the same image area.

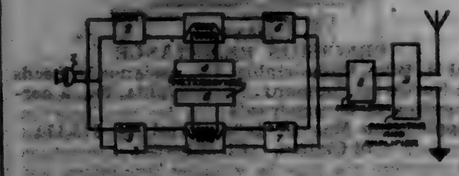
2,026,611
COMPOSITE PISTON



Theron F. Chase, Detroit, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 15, 1933, Serial No. 666,249
Renewed May 27, 1935
1 Claim. (Cl. 309—16)

In a composite piston, a circumferentially continuous bearing sleeve of open running sheet metal or alloy, a cast shaped body of a light metal or alloy which has a higher temperature coefficient of expansion than the metal or alloy of which the bearing sleeve is made and whose open end embeds said into the bearing sleeve, a ring which is seated within the bearing sleeve and secured to it between its ends and spaced approximately horizontal projections on the ring and embedded in the cup shaped body.

2,026,612
MANUFACTURE OF COMPOSITE PISTONS

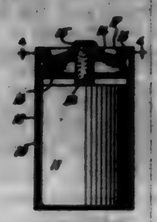


Theron F. Chase, Detroit, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Original application April 13, 1933, Serial No. 665,969, [illegible] and this application September 15, 1933, Serial No. 689,324.
1 Claim. (Cl. 29—156.4)

That method of forming a composite piston which includes, producing a skirt or bearing sleeve of a wear resisting metal having a relatively low temperature coefficient of expansion, securing to the skirt or bearing sleeve interiorly thereof and between its ends a ring on which sleeve are provided substantially horizontal, inwardly directed projections, heating the skirt or bearing sleeve and the ring to such a temperature that the outer surface of the head or body will contact tightly circumferentially with the inner surface of the skirt or bearing sleeve and the inner surface of the ring when the piston cools to ordinary engine operating temperatures, and casting into the interior of the skirt or bearing sleeve and the ring while they are at the mentioned temperature, a head or body of a light metal or alloy which has a relatively high temperature coefficient of expansion so as to embed therein the projections on the ring.

2,026,613
SECRECY SYSTEM

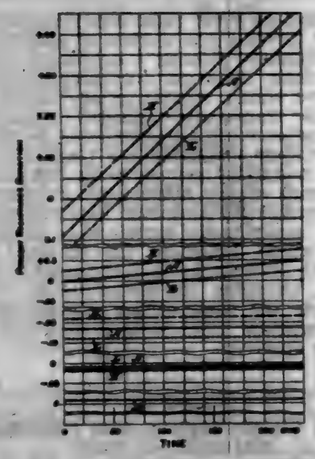
Henri Chrétien and Raymond Villeon, Paris, France, assignors to Compagnie Generale de Telegraphie Sans Fil, Paris, France, a corporation of France
Application August 1, 1933, Serial No. 683,134
In France August 12, 1932
2 Claims. (Cl. 179—1.5)



1. Method of secret radio communication consisting of dividing the modulator spectrum into several channels, filtering a determined band in each of these channels, separately transposing the filtered bands, separating new bands determined after transposition, combining these latter bands, modulating the transmission by the combined spectrum, changing the frequency of the received modulated transmission, selecting different bands of the modulating frequency and carrier wave in the spectrum resulting from the changing, applying the carrier wave to the other selected bands, detecting the obtained bands, eliminating undesirable parts of these bands after detection, changing the frequency in order to reconstitute the parts of the original spectrum and recombining these parts in order to obtain the entire spectrum.

2,026,614
PAVING COMPOSITION AND PROCESS OF PRODUCING SAME

Joseph H. Cornelison, Birmingham, Ala., assignor to Alabama Asphaltic Limestone Company, Birmingham, Ala., a corporation of Alabama
No Drawing. Application January 8, 1934, Serial No. 705,733
7 Claims. (Cl. 106—31)

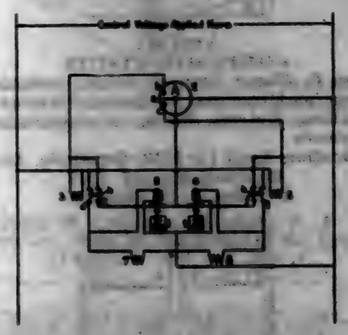


1. The process of producing a cold laid paving mixture of the character described, which comprises adding to crushed rock asphalt a volatile solvent for bitumen in an amount merely sufficient to soften the hard native asphalt in the rock asphalt and facilitate the fluxing of this native asphalt with the asphalt in the bonding medium, adding an aqueous asphalt emulsion and agitating said materials in a mixture until a homogeneous mixture results.

2,026,615
DRY CELL
Peter Corigliano, St. Albans, and Louis Flatzman, Brooklyn, N. Y., assignors to Bright Star Battery Company, Hoboken, N. J., a corporation of New York
Application March 2, 1933, Serial No. 656,222
2 Claims. (Cl. 136—133)

1. A dry cell comprising a metal cup containing a cartridge having a centrally arranged electrode, and a continuous metal cover having a rigid sealing connection between its periphery and the rim of said cup, said cover and electrode being in electrical contact with each other and said cover being insulated from said cup.

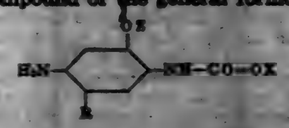
2,026,616
PRECISION RESISTANCE
Paul H. Dike, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 27, 1933, Serial No. 673,171
14 Claims. (Cl. 201—67)



1. An unsealed precision resistor comprising a resistance conductor having low temperature coefficient, and means for reducing the changes of resistance of said conductor due to variations of humidity comprising a covering consisting of a mixture of natural vegetable fibre and animal fibre.

5. An unsealed precision resistor comprising a fabricated corrodible resistance conductor, having a temperature coefficient less than 500×10^{-6}, and having a covering of natural vegetable fibre, the whole impregnated with a chemically neutral wax, such as ceresin.

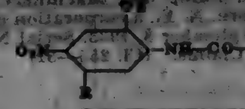
8. An unsealed precision resistor comprising a resistance conductor of corrodible material having a temperature coefficient less than 500×10^{-6} and means for substantially eliminating permanent drift from the nominal value of said resistor comprising an enamel coating on said resistance conductor.



2,026,617
MEANS FOR PREVENTING ARCING OF THE CONTACTS OF ELECTRICAL REGULATING INSTRUMENTS
Milton Eaton, Shawinigan Falls, Quebec, Canada
Application April 8, 1931, Serial No. 528,558
8 Claims. (Cl. 175—275)

1. In electrical control apparatus for effecting a floating or throttling, non-hunting control, the combination with a regulating instrument including fixed and moving contacts and with electrical apparatus controlled thereby and with primary means electrically connected between said elements to make and break the powering circuit of said controlled apparatus; of a timing device and a holding circuit for said primary means controlled by said timing device and adapted, upon closure of the circuit by said primary means, to shunt the regulating instrument contacts thereby to avoid arcing thereat when the moving contact is making imperfect contact with either of the fixed contacts and, through the instrumentality of said primary means, to hold the circuit through the controlled apparatus for a period of time determined by the timing device irrespective of the controlled condition and the resulting relation of the regulating instrument contacts.

2,026,618
ESTERS OF N-P-AMINOARYL-CARBAMIC ACIDS AND PROCESS OF PRODUCING THE SAME
Robert E. Etzelmiller, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 18, 1934, Serial No. 735,819
7 Claims. (Cl. 260—165)

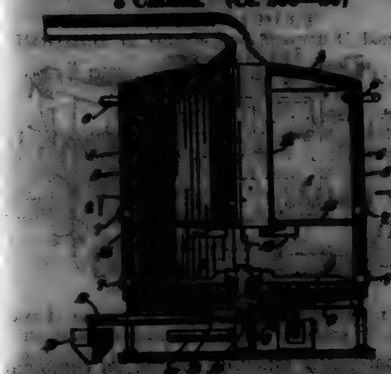


1. A compound of the general formula

wherein X stands for an alkyl or aralkyl radical, R stands for hydrogen, halogen, methyl or a lower alkoxy group, and Z stands for methyl or ethyl.

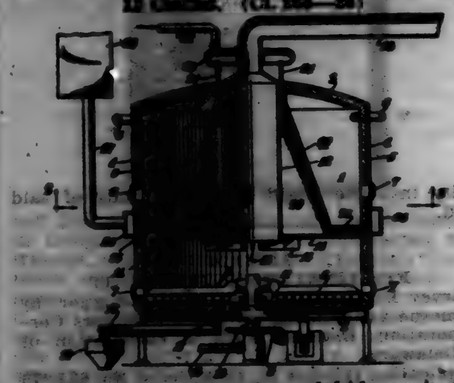
PROCESS FOR PRODUCING N-P-AMINO-ARYL-CARBAMIC ACIDS
Robert Eugene Etzelmiller, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 18, 1934, Serial No. 735,820
9 Claims. (Cl. 260—165)

5. A compound of the general formula



wherein X stands for an alkyl or aralkyl radical, R stands for a lower alkyl or alkoxy group, and Z stands for a lower alkyl group.

2,026,619
LAST MANUFACTURE
Sidney J. Finn, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 11, 1930, Serial No. 502,185
23 Claims. (Cl. 12—142)



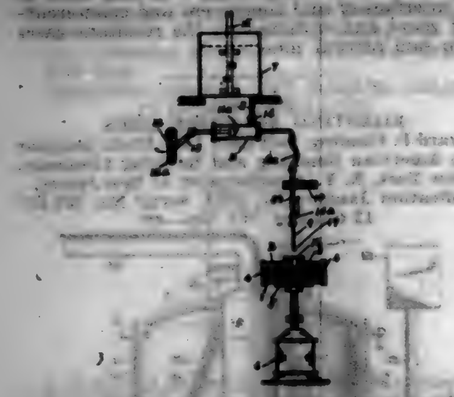
1. That improvement in methods of making lasts which consists in distorting a readily deformable pattern of a regular last, and reproducing a last having a portion corresponding in shape to the distorted pattern and another portion corresponding in shape to the regular last.

2,026,620
ROASTING SULPHIDE ORES
Edward P. Flemlng, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application July 18, 1933, Serial No. 681,062
8 Claims. (Cl. 266—20)

1. The process of roasting sulphide ore in suspension which comprises tangentially introducing air and said ore into the upper portion of a preheated roasting chamber thereby establishing a concurrent roasting zone, progressively increasing the peripheral velocity of said air and ore as it descends within said chamber thereby to deposit the solids close to the outer periphery of the chamber, establishing a countercurrent roasting zone by introducing additional air into the lower portion of said chamber in countercurrent flow to the descending ore particles thereby establishing a neutral zone at the interface of said concurrent and countercurrent zones and withdrawing the resultant gases from said neutral zone.

2,026,621
ROASTING SULPHIDE ORES
Edward P. Flemlng, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application January 31, 1934, Serial No. 708,187
12 Claims. (Cl. 266—20)

1. The process of roasting sulphide ore in suspension which comprises tangentially introducing air and said ore into the upper portion of a preheated roasting chamber thereby establishing a concurrent roasting zone, progressively increasing the peripheral velocity of said air and ore as it descends within said chamber thereby to deposit the solids close to the outer periphery of the chamber, establishing a countercurrent roasting zone by introducing additional air into the lower portion of said chamber in countercurrent flow to the descending ore particles thereby establishing a neutral zone at the interface of said concurrent and countercurrent zones and withdrawing the resultant gases from said neutral zone.



2,026,622
VAT DYESTUFF PASTE AND PROCESS FOR PRODUCING THE SAME
Maurice H. Fleysher and James Ogilvie, Buffalo, N. Y., assignors to National Aniline & Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application May 11, 1932, Serial No. 610,704
24 Claims. (Cl. 260—41)

22. In the process of producing a pigment by dissolving a vat dyestuff in sulfuric acid and drowning the mass in water, the improvement which comprises using substantially boiling water as the drowning medium.

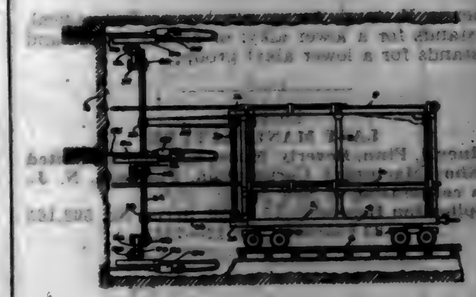
2,026,624
MANUFACTURE OF EARTHENWARE
Wesley B. Flower, East Liverpool, Ohio
Application October 16, 1934, Serial No. 748,845
16 Claims. (Cl. 25—39)

14. In the production of ceramic-ware, the herein described method which comprises supplying a mixture of ceramic material in an excess of liquid, agitating said supply mixture, rotating a substantially closed, liquid permeable mold, feeding said fluid mixture from said agitated

supply and into the cavity of said rotating mold, and drawing liquid from the mixture in said mold

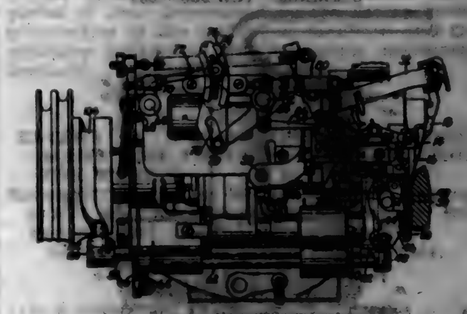
cavity into the liquid permeable body of said mold.

2,026,625
RESILIENT MOUNTING UNIT
Harvey D. Geyer, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 26, 1933, Serial No. 695,275
6 Claims. (Cl. 248—23)



6. In combination, a support, a member supported thereby, a yielding mounting unit connecting said member to said support, said unit comprising: a metal housing fixed to said support and having a central aperture in its upper wall, a metal head within said housing and having a shank projecting upwardly through said aperture in spaced relation therewith and fixed to said supported member, and a resilient rubber block substantially dome-shaped when in non-distorted condition and having its larger end extending upwardly and bonded by vulcanization to said metal housing and having its smaller end extending downwardly and bonded to said metal head, said dome-shaped block yieldably sustaining said supported member by tension in the sloping walls thereof.

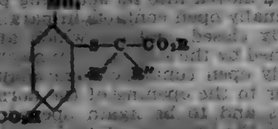
2,026,626
CONTAINER
Paul M. Gilfillan, Chicago, Ill., assignor to Shellmar Products Company, Chicago, Ill., a corporation of Delaware
Application July 16, 1934, Serial No. 735,286
5 Claims. (Cl. 206—44)



2. A container of the type described, comprising a cardboard backing member, a transparent cellulose facing member, and a resilient insert suitably scored and folded to produce two outer ridges of inverted V formation for defining the shape of the container and an intermediate compartment for receiving an article to be packaged.

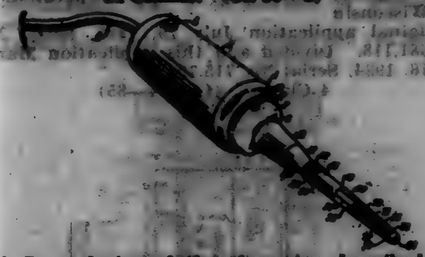
2,026,627
PORTABLE DRILLING RIG
George H. Gilman, Newark, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a corporation of Virginia
Application September 8, 1932, Serial No. 632,554
6 Claims. (Cl. 255—61)

1. In a portable drilling rig, a wheeled carriage, standards rigidly attached to said carriage at one end thereof, arms arranged in vertical pairs and adjustably carried by said standards, said arms swingable to horizontal planes, a vertical tool carrying bar adjustably carried by each pair of said arms, and horizontal tool carrying bars adjustably carried by said vertical tool carrying bars.



2,026,628
MACHINE FOR EDGESETTING AND CHANNELING SOLES
John B. Hadaway, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 22, 1933, Serial No. 672,160
20 Claims. (Cl. 12—13)

1. A channeling machine having, in combination, sole positioning devices, an intermittently moved channel knife, a trimming knife operated to make a complete reciprocation between successive cutting movements of the channel knife, and a sticker point operated independently of the trimming knife and in different time relation.

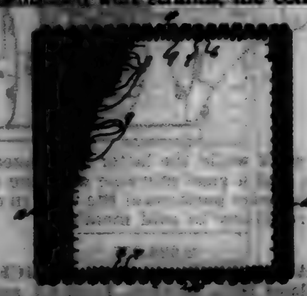


2,026,629
DYESTUFF INTERMEDIATE
Norman Bolton Haddock, Blackley, Frank Lodge, Manchester, and Robert Robinson, Oxford, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application December 19, 1933, Serial No. 703,154. In Great Britain December 20, 1932.
7 Claims. (Cl. 260—165)

5. An organic compound which in the form of its free acid corresponds to the formula

wherein R, R' and R'' individually represent hydrogen or an alkyl, aryl or aralkyl group.

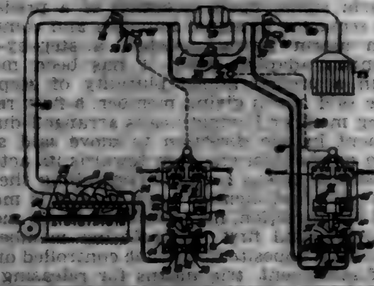
2,026,630
SHEARING DEVICE
Artie B. Harris, Kansas City, Mo.
Application June 19, 1933, Serial No. 676,597
21 Claims. (Cl. 30—1)



1. In a device of the character described, a guard support, a toothed guard on the support, a cutter including a flexible helical ribbon rotatable within the guard and having teeth cooperating with the teeth of the guard, and means rotatably mounted in the guard support for rotating the cutter.

2,026,631
EGG PRODUCT
Benjamin R. Harris and Marvin C. Reynolds, Chicago, Ill.
No Drawing. Application January 11, 1934, Serial No. 706,178
9 Claims. (Cl. 99—11)

1. A composition consisting essentially of oat material and a proportion of a relatively high molecular weight fatty acid ester of a polyglycerol, said ester containing at least one free hydroxy group in the polyglycerol nucleus.

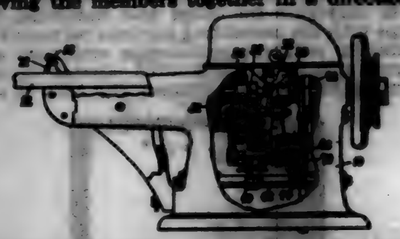


2,026,632
POT CLOTH
Ralf L. Hartwell, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a corporation of Delaware
Application December 12, 1932, Serial No. 702,199
2 Claims. (Cl. 15—226)

1. A pot-cloth comprising a soft fabric backing layer consisting of warp strands of soft cotton yarn of relatively large diameter and unusually spaced weft strands of relatively small diameter knitted transversely across said cotton warp strands, an abrasive forward layer consisting of warp strands with a crimping of ribbon-like metallic material about the same, spaced weft strands knitted transversely across said second mentioned warp strands and their metallic crimping to segregate the latter into individual coil groups with the connecting portions between longitudinally adjacent coil groups embraced and gripped in and by the knitted stitches of said second mentioned weft strands, the coils of said

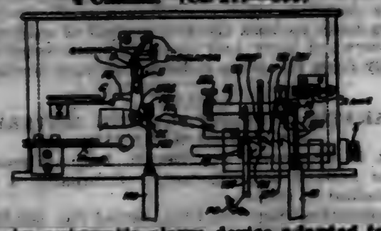
coil groups being of relatively large diameter in comparison to said second mentioned warp strands, and stitching extending through the opposite side margins of said layers to unite the same into a unitary fabric, said soft warp strands of the backing layer providing a resilient cushioning body to back the coil groups of said abrasive forward layer and to project the same outwardly from the warp strands carrying the same.

2,026,633
APPARATUS FOR SEPARATING MATERIALS BY FLUID STREAMS
Mack E. Haworth, Pittsburgh, Pa., assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application May 26, 1931, Serial No. 540,959
15 Claims. (Cl. 209—302)



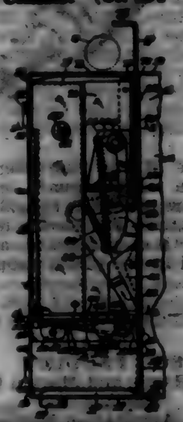
4. In a system for separating materials by fluid streams, the combination with a bed for supporting material to be separated, of means for maintaining substantially constant the buoyancy of air flow through said bed, regulating mechanism comprising an electrically operated damper, a motor for controlling said damper, and air pressure responsive mechanism responsive to the velocity head of the air flowing through said deck for automatically controlling said motor.

2,026,634
MACHINE FOR OPERATING UPON SHOE PARTS
George Hamilton, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 29, 1932, Serial No. 649,856
In Great Britain January 7, 1932
13 Claims. (Cl. 12—31)



1. A machine for operating upon shoe parts comprising hammer and anvil members, means

for causing relative movement between the members to produce pressure applying operations upon work presented between the members, means for moving the members together in a direction to



feed the work while the latter is engaged by said members, and a gage movable with the members for locating edge portions of the work in operative position relatively to said members.

2,024,635
AUTOMATIC ALARM DEVICE
Sidney Claud Hills, London, England, assignor to Radio Corporation of America, a corporation of Delaware
Application February 7, 1933, Serial No. 655,809
In Great Britain February 11, 1932
4 Claims. (Cl. 177—353)

4. An automatic alarm device adapted to give an alarm signal upon reception of a predetermined sequence of signal impulses and comprising an alarm giving member, a step-by-step mechanism adapted when it has been moved through a predetermined plurality of steps to actuate said alarm giving member, a first reciprocating member having means arranged during movement in one direction to move said step-by-step mechanism one step towards its actuating position, means for time controlling the action of said first member each time it is moved in said one direction, first electromagnetic means for moving said first reciprocating member in the direction opposite to its time controlled direction of movement, trip means for releasing the step-by-step mechanism to permit it to return to its initial position, a second reciprocating member, means for time controlling the action of said last member each time it is moved in one direction, said second reciprocating member being adapted at the end of a predetermined distance of time controlled movement to complete the circuit of said first electromagnetic means, a maintaining circuit for said first electromagnetic means, said maintaining circuit being closed automatically upon energization of said first electromagnetic means, a second electromagnetic means for moving said second reciprocating member in a direction opposite to its time controlled direction, a relay actuated by received signals for breaking the circuit of said second electromagnetic means when a signal is received, means actuated by the second reciprocating member after time controlled movement thereof exceeding a predetermined distance greater than said first predetermined distance for breaking said maintaining circuit and releasing said trip means, means for opening said maintaining circuit during movement of said second reciprocating member in a direction opposite to said time controlled movement, and means actuated by said first reciprocating member after time controlled movement exceeding a predetermined distance for independently releasing said trip means, said alarm giving member being adapted to be energized through relay contacts which are normally held open, the energizing winding of said relay being in series with normally closed contacts adapted to be opened by the step-by-step mechanism when moved into its actuating position, a pair of normally open contacts in parallel with the normally closed contacts which are adapted to be opened by the step-by-step mechanism, said normally open contacts being adapted to be closed prior to the opening of the normally closed contacts and to be again opened sufficiently long after the opening of said normally closed contacts to permit said step-by-step mechanism being released in the event of a too long duration of the final impulse substantially as described.

2,024,636
COIN CONTROLLED VENDING MACHINE
Samuel N. Hepp, Waukesha, and Paul Drath, West Allis, Wis., assignors to Gabbie-Hepp Company, West Allis, Wis., a corporation of Wisconsin
Original application July 19, 1932, Serial No. 623,113. Divided and this application March 16, 1934, Serial No. 715,794
4 Claims. (Cl. 194—65)

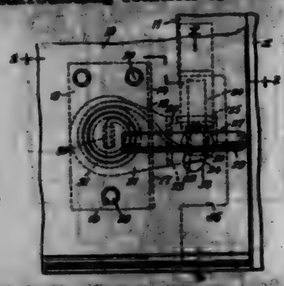
1. In a dispenser, the combination of article-delivery means including a swingably mounted member having a coin abutment, a movably mounted coin-driver, a second coin abutment between which and said first-named abutment a coin is urged and passed by said coin-driver to rock said swingably mounted member on an article-delivery stroke, and means controlled by the article-delivery means to prevent repeated operation of said article-delivery means by the same coin.

2,024,637
PROCESS FOR PRODUCING PIGMENTS OF THE INDANTHRONE SERIES
Frank Willard Johnson, Passaic, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 20, 1932, Serial No. 648,189
10 Claims. (Cl. 260—53)

1. In a process of producing vat colors of the indanthrone series, the step which comprises treating a sulfuric acid solution of a compound of the indanthrone series with a soluble cycloaliphatic compound under such temperature conditions that the sulfuric acid is substantially inert.

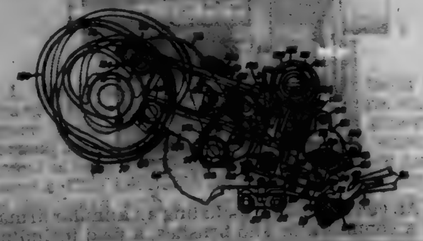
2,024,638
SCOURING IMPLEMENT
Russell R. Kingman, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a corporation of Delaware
Application May 7, 1935, Serial No. 20,516
6 Claims. (Cl. 51—181)

1. A scouring implement, comprising a foraminous resilient body, a metallic mesh enveloping portions of the surface area of said body, the marginal edge portions of said mesh being imbedded and bound within the mass of said body.



2,024,639
WORK CHUCK
Walter S. Klay and Daniel Gurney, Waynesboro, Pa., assignors to Landis Tool Company, Waynesboro, Pa., a corporation of Pennsylvania
Application July 16, 1934, Serial No. 734,545
5 Claims. (Cl. 279—41)

1. A work chuck comprising a plate adapted to be secured to a work spindle, a ring secured to said plate, said ring having a plurality of spaced forwardly extending prongs each of said prongs having a work engaging pin extending radially inwardly and adapted to engage the periphery of the work, a disk positioned within said ring, a plunger for operating said disk, said disk having a diameter slightly greater than the inner diameter of the said ring and a pair of rings secured to the face of said first-named ring, said pair of rings having stop bars secured between them, said bars extending into the chuck and serving as means for positioning the work axially in the chuck.

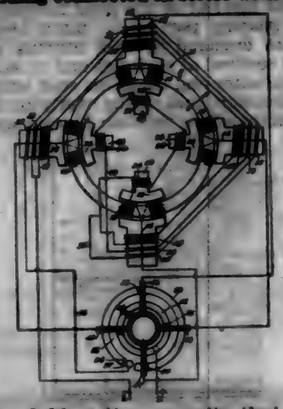


2,024,640
HOOD CATCH
Thomas T. Lapin, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application April 17, 1935, Serial No. 16,841
5 Claims. (Cl. 292—256)

1. Automobile hood fastening means for engaging a keeper disposed upon a fixed part in the location to the end of the hood, comprising a sheet metal mounting plate member adapted to be secured to the interior of the hood having a pressed out pivot bearing portion, a catch lever having an aperture engaged by said bearing portion, a coil spring secured at its inner end to said bearing portion, the outer end engaging said lever to press it in one direction, said spring overlying said catch lever in surrounding relation to said aperture to

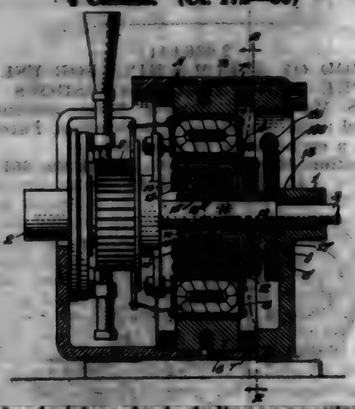
retain said catch lever in engagement with said bearing portion, a handle secured to said lever, said catch lever adapted to be depressed in closing the hood and to spring upwardly to engage said keeper under the pressure of said spring means, the effective spring movement of said catch lever being from a point below its point of engagement with the keeper to a point above said point of engagement.

2,024,641
METHOD OF AND MACHINE FOR USE IN THE MANUFACTURE OF SHOES
Lester S. Macdonald, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application March 20, 1933, Serial No. 661,844
41 Claims. (Cl. 12—10)



1. In a lasting machine, a member for laying the margin of an upper over an insole on a last, and means for moving said member inwardly over the insole, said member being arranged to apply to the upper and the insole an adhesive fastening to hold the upper in lasted position.

2,024,642
ELECTRIC MOTOR
James Mannix, Trenton, N. J.
Application July 15, 1934, Serial No. 734,922
5 Claims. (Cl. 172—278)

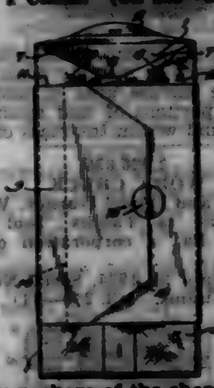


1. An electric motor comprising an annular armature, a commutator and brushes, a field including two sections one within said armature and the other outside of and concentric with the armature, each section including field cores and windings connected in series with said armature, and two corrective windings inductively related to one of said field sections, one corrective winding connected in circuit with the windings of the

inner and outer field sections and the other corrective winding connected in series with the wind-

ings of the field section opposite that to which the corrective windings are inductively related.

2,026,642
FIELD MOUNTING FOR DYNAMO-ELECTRIC MACHINES
James Mannix, Trenton, N. J.
Application July 13, 1934, Serial No. 734,823
4 Claims. (Cl. 171—36)



1. An electric motor including an annular armature, a commutator and brushes, a field including two sections one within the armature and one outside and concentric with the armature, and means mounting said inner field section for free movement along its axis to permit automatic alinement of its magnetic center with the magnetic centers of said outer section and said armature.

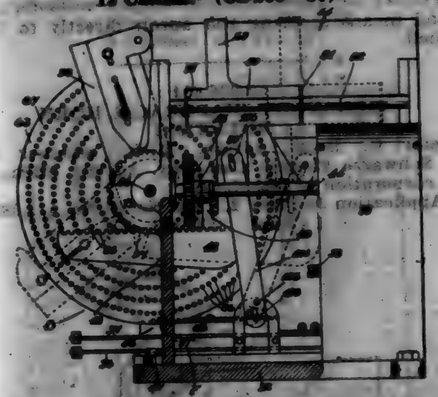
2,026,644
BRUSH HOLDER
Roy C. Meniaith, Elkhart, Ind.
Application July 10, 1933, Serial No. 20,701
1 Claim. (Cl. 171—324)

In a brush holder of the class described, a stationary supporting stud, a brush holder provided with a pair of legs, each of said legs being provided with a notch adjacent one end thereof, said notches being formed on the side of the legs and in reverse relation to each other, and said notches being adapted for successive engagement with said supporting stud from the side of the latter, a brush mounted upon said holder, and spring means for maintaining said holder in juxtaposition on said supporting stud and for urging said brush and holder into yielding relation with a commutator.

2,026,645
LAUNDRY PACKAGE
Leland E. Moss, Chicago, Ill.
Application November 18, 1933, Serial No. 702,497
1 Claim. (Cl. 223—57)

A laundry package of the character described, comprising a semi-flexible oblong board about which a shirt is adapted to be folded with the sleeve and shoulder portions thereof overlapping at the rear of said board, a thin flexible wrapping strip separate from the board and folded around the sides of the folded shirt, said wrapping strip being provided at its upper edge with a notch to accommodate the neck band of the shirt, means for securing the free ends of the wrapping strip together to form a tubular container of a length sufficient only to hold the overlapped sleeve and shoulder portions of the shirt in folded condition independently of pins or the like, and allowing portions of said shirt to project above and below said tubular container.

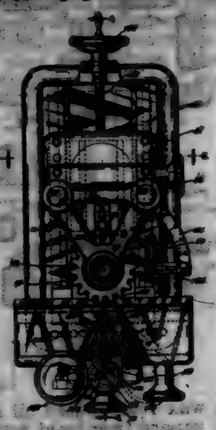
2,026,646
CAP FOR COLLAPSIBLE TUBES AND THE LIKE
Joseph Z. Mull, Sr., Philadelphia, and Herbert MacIlvain, Upper Darby Township, Delaware County, Pa.
Application May 11, 1935, Serial No. 21,436
3 Claims. (Cl. 221—46)



3. A closure of the type described comprising a body having an attaching section provided with an axial extension, said extension having a transverse circular recess substantially at right angles to the axis of the body, said body having a flow passage, and the extension a discharge orifice, a circular valve having means whereby it is rotatably and slidably mounted in the recess for effecting flow passage through the device, and vice versa, said means for rotating the valve means

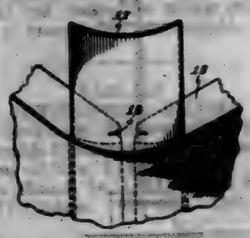
2,026,647
PRODUCTION OF HALOGENATED INDANTHRENES
James Ogilvie, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a corporation of New York
No Drawing. Application May 2, 1934, Serial No. 723,488
12 Claims. (Cl. 260—31)

10. In the halogenation of an indanthrene, the improvement which comprises forming a suspension of an indanthrene in a chlorbenzene, and reacting a halogen selected from the group consisting of chlorine and bromine with said indanthrene.



2,026,648
TIMER
Alvin O. Olshaw, St. Paul, Minn., assignor to National Traffic Signal Company, St. Paul, Minn., a corporation of Minnesota
Application July 14, 1928, Serial No. 292,824
15 Claims. (Cl. 200—38)

2. A timer comprising, an electric switch adapted to close a circuit for a street signal, a timer disc, switch operating lugs carried by said timer disc in a manner to be rotated to operate said switch, means for slidably supporting each of said lugs radially, means for adjusting one of said lugs circumferentially to change the operating position of the same, means for driving said timer disc, and means for varying the rotative speed of said timer disc.

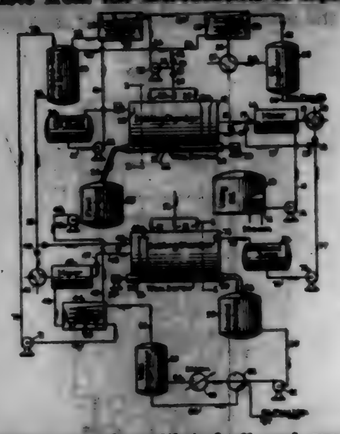


2,026,649
GEAR TESTING MACHINE
Carl G. Olson, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a corporation of Illinois
Application November 22, 1933, Serial No. 699,178
16 Claims. (Cl. 33—174)

1. A gear testing machine including a base, a work supporting frame slidably supported on said base, an indicator support slidable transversely of said work support, an indicator mechanism on said indicator support including a contactor for engaging the teeth of a supported gear, means movable with said indicator support having a friction surface, a cylindrical member corresponding in diameter with the diameter of the base circle of the gear to be tested and rotatable as a unit with the gear to be supported, a mounting for said cylinder member, and pressure applying means for maintaining frictional contact between said cylindrical member and said friction surface, said latter means acting on the periphery of said cylindrical member at a point diametrically opposite the point of engagement of said cylindrical

member with said friction surface to thereby prevent the transmission of pressure to the work support.

2,026,650
WOOD JOINT AND CORNER CONSTRUCTION
Rudolph F. Conrad, Chicago, Ill.
Application January 5, 1935, Serial No. 541
3 Claims. (Cl. 20—92)



1. The process of forming a corner bend in a board which consists in cutting a groove on the inner surface of the board, which groove is formed to provide surfaces which abut when the board is bent inwardly along such groove and to leave a thin bendable layer on the outer surface of the board with a space between said bendable layer and the body of the board, filling said space with a flexible reinforcing element for the thin bendable layer of the board, and then bending the board inwardly along the groove and securing together the meeting surfaces of the groove.

2,026,651
DEWAXING
Donald E. Payne, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application August 31, 1931, Serial No. 560,333
12 Claims. (Cl. 196—18)

2. In apparatus of the class described, an enclosed horizontal settling chamber, means for introducing a wax bearing oil and a vaporizable liquid at one end of said settling chamber, means in said chamber for confining the agitation of the liquids to said end of the settling chamber whereby the liquids in the remainder of the settling chamber are substantially quiescent, means for removing a wax slurry from the base of said chamber, means at the end of the cham-

ber remote from the introduction of liquids for

withdrawing wax-free diluted oil and means for withdrawing vapors from said settling chamber.

2,026,652

HIGH FREQUENCY TRANSMITTER

Maurice Ponte, Paris, France, assignor to Compagnie Generale de Telegraphie Sans Fil, Paris, France, a corporation of France

Application November 13, 1933, Serial No. 697,776

In France January 11, 1933

5 Claims. (Cl. 250—11)

1. Short wave transmitter comprising, in combination an oscillation generator, a radiating dissymmetrical aerial located at a level different from that at which said oscillation generator is located, the level difference being of the order of several of the transmitted wavelengths, a feeder interconnecting the generator and the aerial comprising a lead connected to the aerial and a screen surrounding said lead, and means to prevent the closure on the screen of the lines of force from the aerial whereby radiation from said screen is suppressed.

2,026,653

RADIATOR SHUTTER

James F. Raleigh, River Forest, Ill., assignor to Pines Winterfront Company, Chicago, Ill., a corporation of Delaware

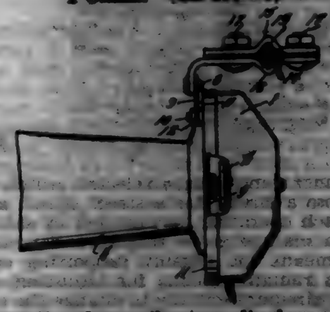
Application October 3, 1931, Serial No. 567,777

14 Claims. (Cl. 155—73)

3. In a radiator shutter, in combination, a series of shutters having pintles, a bearing strip of fibrous material having openings in which the pintles are rotatably supported, and sheet metal members completely enclosing and supporting said strip, said members being perforated to permit the pintles to enter the openings in the bearing strip and prevent contact of the pintles with the metal members.

11. In combination, a radiator shutter comprising a frame, shutters mounted therein, an apron extending downwardly from the frame, a radiator shell adapted to surround said shutter,

and means securing the apron directly to the shell.



2,026,654

VIBRATORY DIAPHRAGM HORN MOUNTING

Peter C. Reek, Adrian, Mich., assignor to Schwarze Electric Company, Adrian, Mich., a corporation of Michigan

Application January 5, 1928, Serial No. 415,660

1 Claim. (Cl. 171—5)

A mounting for a vibratory diaphragm type of horn having a housing part providing a flange, a pair of spaced bolts through the flange within the diameter and adjacent the periphery thereof to assemble the diaphragm therewith, said mounting consisting of a single freely flexible spring leaf extending radially from and in a plane transversely of the axis of the diaphragm, said leaf providing a pair of spaced openings through which the bolts extend, means coacting with said bolts to rigidly secure one end of the leaf to said horn, and a rigid bracket member rigidly fixed with the remote end of said leaf.

2,026,655

CAR HEATER

Herbert C. Rice, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

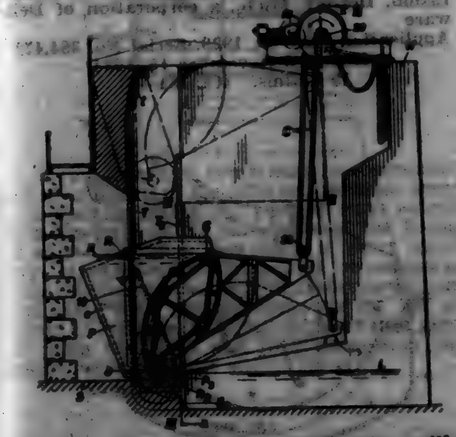
Application March 11, 1933, Serial No. 660,916

6 Claims. (Cl. 257—137)

2. In a heater, a casing, a plurality of radiator elements therein, a plurality of air propelling means between the radiating elements for causing air to circulate through the radiators, a common motor for actuating the air propelling

means and a plurality of independent air inlets and outlets on corresponding sides of the radiating elements whereby air is drawn through one of the radiator elements and forced through the other.

2,026,656



SLUICE WEIR

Karl Schön, Wansleben, Germany, assignor to firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany

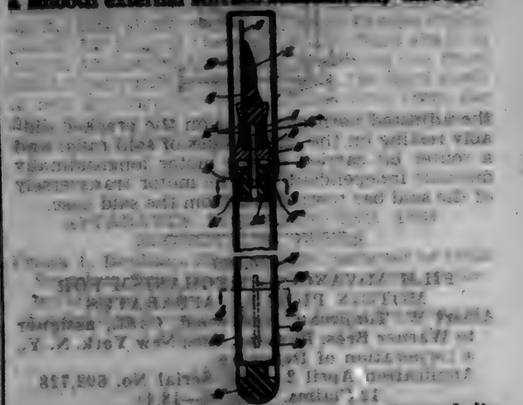
Application August 24, 1933, Serial No. 741,244

In Germany August 30, 1932

3 Claims. (Cl. 61—36)

1. In a sluice weir the combination with a sluice of the type adapted to obliquely descend in a substantially vertical path of movement into its operative position, of upright walls laterally enclosing the sluice, a knife edge bearing formed at the base of the sluice and allowing the latter to be tilted, while resting on said bearing, through a relatively large angle, actuating arms formed at the body of the sluice and projecting therefrom at substantially right angles, and guiding and operating means cooperatively intervening the ends of the sluice and of the said actuating arms.

2,026,657



FOUNTAIN PEN

John C. Sherman, Gorham, Maine

Application January 18, 1934, Serial No. 707,118

1 Claim. (Cl. 120—43)

In a fountain pen, the combination of a head and portion in the form of a socket, a plug having an ink-feeding channel received in said socket, a nib to which said channel leads projecting from said head and portion and held in place by said plug, a holder removably secured to said head and portion and together therewith defining a hollow, a rigid ink container located within said holder and having an outlet end portion adjacent to said head and, a solid plug of resiliently compressible

tubing of material tightly engaged in said outlet end portion and having a bore therethrough commensurate with its depth through which ink may flow, and an open-ended nipple projecting from said head end portion and resiliently wedged in the bore of said plug and making an ink-tight fit therein at its external surface, said nipple having a smooth external surface substantially throughout of gradually diminishing taper toward its plug-engaging end, making pressure contact with the wall of said bore substantially throughout the wall area surrounding said nipple, and being adapted to conduct the ink from said container to the ink-feeding channel in said first-named plug and said ink container being removable by mere pulling it away from said nipple.

2,026,658

AUTOMOBILE FRAME

Donald W. Sherman, Shorewood, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York

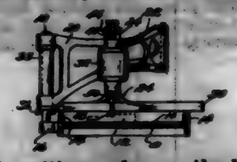
Application March 16, 1934, Serial No. 715,819

12 Claims. (Cl. 280—106)

1. An automobile frame adapted for independent mounting of rear wheels by means of coil springs in the manner described comprising, a pair of side bars, an auxiliary rail for each side bar attached at its forward end to the side bar at a point substantially forward of the center line of the rear wheels and extending rearwardly therefrom, said side bars and the corresponding auxiliary rails being relatively separated laterally, a seat for a coil spring disposed in the space therebetween, and suitable cross bars connecting said side bars.

2,026,659

ROUTING MACHINE



Thomas L. Siebenthaler, Kansas City, Mo.

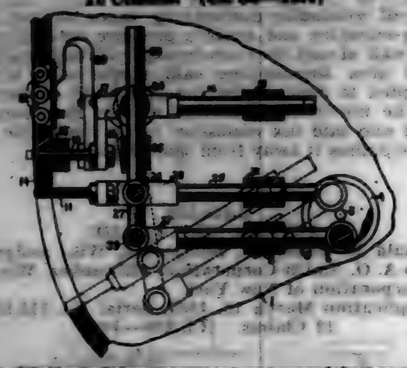
Application April 23, 1934, Serial No. 721,491

2 Claims. (Cl. 90—15)

1. A routing machine of the kind described, comprising, a base; a plurality of rails on the base having upper edges in a common plane parallel to the plane of said base; a standard at one corner of said base; a plurality of pivotally inter-

connected arms mounted on said standard for movement thereabout; a bracket pivotally carried by the outermost arm; a motor mounted for vertical rectilinear movement on the said bracket; means for moving and holding said motor in

the adjusted position; a bar on the bracket slidably resting on the upper edges of said rails; and a router bit carried by the motor longitudinally movable independently of the motor transversely of the said bar toward and from the said base.



2,026,660

FILM ADVANCING MECHANISM FOR MOTION PICTURE APPARATUS

Albert W. Tendreau, Hollywood, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y., a corporation of Delaware

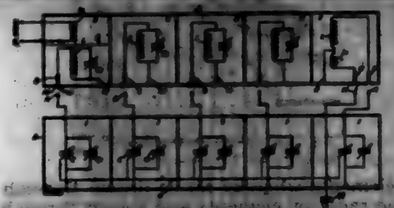
Application April 2, 1932, Serial No. 602,728

12 Claims. (Cl. 88—18.4)

3. Motion picture apparatus comprising a pressure pad for the film, a register pin member, a U shaped spring between said pad and said member and fastened to one thereof and in sliding engagement with the other thereof, and means for operating said pin member.

12. Intermittent film mechanism comprising the combination of an eccentric, a connecting rod connected thereto, a bearing support providing a fixed pivot point for an intermediate portion of said connecting rod, a claw member operatively connected to said connecting rod and adapted to support claws, a register pin rod, a link having one end portion thereof operatively connected with said register pin rod, and the other end portion thereof operatively connected with said claw member, and means providing a fixed pivot point support for an intermediate portion of said link.

2,026,661



TUNING MEANS

Bertram Trevor, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

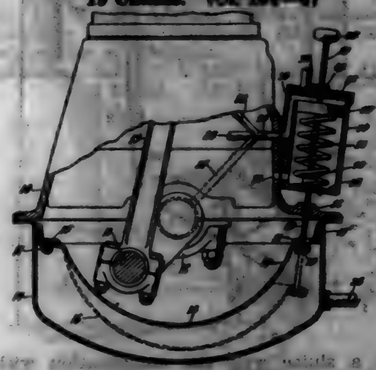
Application April 30, 1932, Serial No. 608,250

9 Claims. (Cl. 250—24)

1. A radio receiver for receiving signals over a wide band of frequencies comprising a plurality of individually shielded thermionic stages and tuning means interconnecting the stages comprising, a shielded coupling inductance for each stage, an individual equalling capacity for each inductance and contained within the shield, a

shielded tuning unit having separate compartments containing a main tuning capacity for each inductance and an equalizing capacity for each tuning capacity.

2,026,662



LUBRICATING SYSTEM

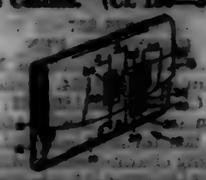
James B. Watson, Detroit, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application May 20, 1930, Serial No. 454,475

Renewed November 15, 1934

19 Claims. (Cl. 184—6)

1. In an engine: means, including a movable pan, for initially splash-lubricating relatively moving parts; means for feeding a lubricant under pressure to said parts; and means, responsive to a predetermined pressure, for varying the position of said splash pan.



2,026,663

LADY'S HAND BAG

Morris Wunsthal, New York, N. Y.

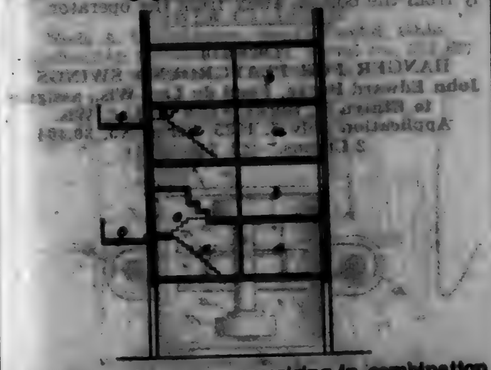
Application October 23, 1934, Serial No. 749,297

6 Claims. (Cl. 150—24)

1. A receptacle comprising a plurality of relatively movable walls, a keeper secured to one of said walls and projecting laterally with respect to another of said walls, said keeper having an opening therein, and a pin slidably mounted on said last mentioned wall and movable into projected position to said opening in the keeper for

releasably locking said walls in closed position, said pin having a cover which engages said keeper when the pin is moved to projected position whereby opening of said cover is prevented until the pin is moved out of said opening to retracted position.

2,026,664



ROW OF HOUSES WITH DISPLACED GANGWAYS

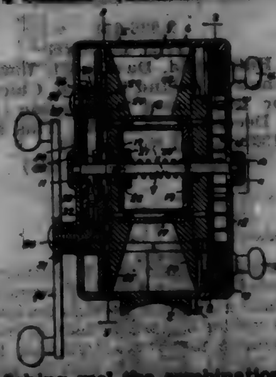
Hermann Bartling, Bielefeld, Germany

Application December 10, 1931, Serial No. 580,175

In Germany February 11, 1931

3 Claims. (Cl. 20—1)

1. A row of houses, comprising in combination with the stories and the different dwellings therein, continuous street-like passage ways extending horizontally at the outer sides of the houses, one at the height of two thirds of every second story, staircases connecting said passage ways to the different stories and in unobstructed communication with the passage ways for the admission of light and ventilation for the stair cases, and main staircases and lifts connecting said passage ways with the street.



2,026,665

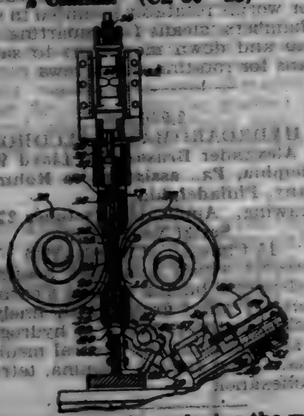
REEL

Charles Black Bender, San Diego, Calif.

Application April 11, 1935, Serial No. 15,597

4 Claims. (Cl. 242—84.3)

1. In a fishing reel the combination of a line spool, a shaft on which said spool is mounted, a spring adapted when unwinding to rotate said spool in a direction to draw in the line, said spring having one end secured to said shaft, a sleeve slidably mounted on said shaft, interengaging clutch means on said spool and one end of said sleeve for placing said sleeve and spool in driving engagement one with the other, a spring device yieldably retaining said interengaging clutch means unreleased, a pinion on the end of the sleeve remote from said clutch means, a gear fixed on one end of said shaft, a fixed shaft, a gear on the fixed shaft in mesh with said pinion, a pinion on the fixed shaft in mesh with the gear on the first shaft, and cam slot and roller clutch means for placing the gear on the fixed shaft in driven engagement with the pinion on the fixed shaft upon rotation of the gear on the fixed shaft in one direction for transmitting drive from the first shaft to the reel for rotating said reel in a direction to draw in the line.



2,026,666

APPARATUS FOR REDUCING AND ELONGATING TUBES

Frank L. Benham, Shelby, Ohio, assignor to Ohio Seamless Tube Company, Shelby, Ohio, a corporation of Ohio

Application January 15, 1934, Serial No. 706,616

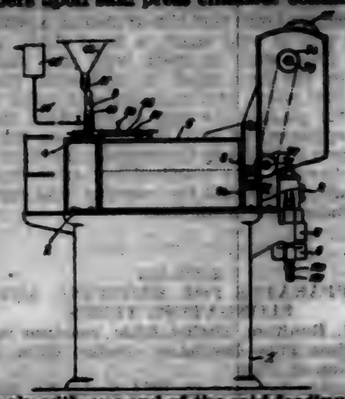
2 Claims. (Cl. 80—13)

1. In an apparatus for reducing the wall thickness and elongating a tubular metal blank having means for feeding the blank longitudinally and for subjecting opposite sides of the blank to reducing pressures including a mandrel within a blank and pressure rolls acting upon opposite sides of the exterior of the blank causing the blank to bulge laterally away from the mandrel, the combination therewith of guides mounted to engage opposite sides of the blank between said pressure rolls, means for reciprocating said guides in a straight line path toward and from each other and into and out of engagement with the blank as it is fed longitudinally to cause said guides alternately to limit and permit bulging of the blank, and adjustable means for changing the limits of movement of said guides with relation to said mandrel.

2,026,667

MACHINE FOR PREPARING PASTES

Mario Braibanti and Giuseppe Braibanti, Milan, Italy



Application January 19, 1934, Serial No. 706,977

In Italy January 12, 1933

6 Claims. (Cl. 107—14)

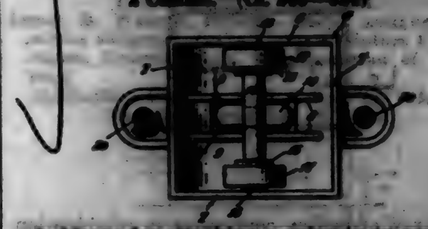
1. A machine for preparing alimentary drawn or extruded paste from kneaded paste, having pressing and extruding means for drawing or extruding the paste, comprising a press chamber, a draw plate forming the bottom of said press

chamber, feeding means for receiving kneaded paste mass and passing the same to the pressing and extruding means, a plurality of cylindrical chambers upon said press chamber communicating freely with one end of the said feeding means, screws or worms rotatably mounted in said cylindrical chambers, means for imparting a reciprocating up and down movement to said screws, and means for rotating said screws.

2,026,068
HYDROAROMATIC ALCOHOL
Herman Alexander Bruson and Lloyd W. Covert, Philadelphia, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa.
No Drawing. Application October 27, 1934, Serial No. 750,279
15 Claims. (Cl. 260—153)

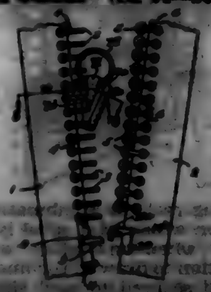
1. A process which comprises heating a tertiary alkyl-phenol having at least 6 carbon atoms in the tertiary alkyl group, with finely divided active nickel, in the presence of hydrogen under pressure in a substantially neutral medium.

9. Alpha, alpha, gamma, gamma, tetramethylbutylcyclohexanol.



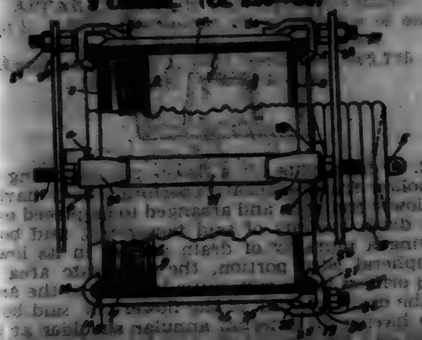
2,026,069
WINDOW SHADE
Richard C. Enck, Yonkers, N. Y.
Application September 17, 1934, Serial No. 745,670
5 Claims. (Cl. 160—16)

1. A shade comprising a plurality of horizontal inter-connected slats, means supporting the upper end of said shade, cords fixed adjacent the sides of said shade at the top and in front thereof, said cords extending down in front of, under the bottom of and up in back of said shade and being extended through the top of the shade in front thereof in position to be pulled to roll the shade upwardly from the bottom away from the operator.



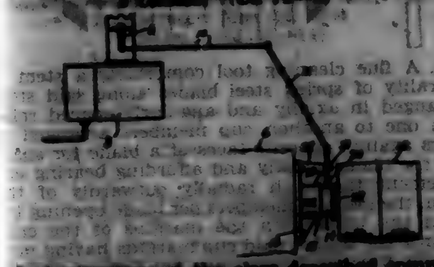
2. A shade comprising a plurality of horizontal inter-connected slats, a head strip to which one end of said shade is attached and forming therewith a passageway, cords fixed within said passageway near the ends thereof and extending down in front, under the bottom and up in back of said shade and into said passageway, one of said cords running through said passageway and both cords emerging in substantially from the same end of the passageway in front of the shade in position to be pulled to roll the shade upwardly from the bottom away from the operator.

2,026,070
HANGER FOR PLAYGROUND SWINGS
John Edward Burke, Fond du Lac, Wis., assignor to Ethlyn M. Burke, Fond du Lac, Wis.
Application July 6, 1934, Serial No. 734,604
2 Claims. (Cl. 248—324)



1. Means for attaching a swing to an overhead support comprising a hanger box having a seat to engage the support and a clamping element having a complemental seat for holding the box assembled with the support, said box having spaced partitions formed intermediate the ends thereof to form oil reservoirs with a slot therebetween, and a hanger comprising an inverted U-shape member having enlarged free ends terminating in trunnions extending laterally therefrom, said trunnions being provided with antifriction means adapted to be positioned in said reservoirs, and a depending arm disposed intermediate the sides of said hanger and formed integrally therewith and having a closed eye at its free end extending through said slot and below said hanger box.

2,026,071
METAL LACING
Emery E. Butterfield, Davenport, Iowa, assignor of one-half to Leland K. Ford, Chicago, Ill.
Refiled for abandoned application Serial No. 154,596, December 15, 1926. This application May 4, 1932, Serial No. 609,242
5 Claims. (Cl. 24—205)

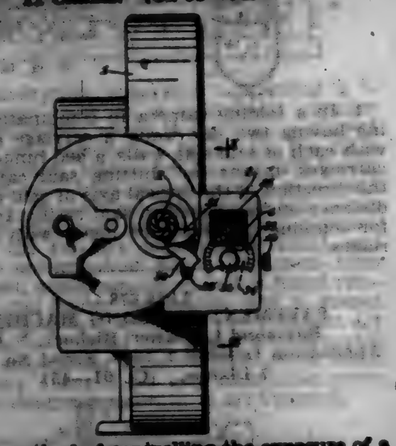


1. In a device of the class described, two pieces of fabric having opposing edges, interlacing fasteners comprising a series of rings secured to one of said edges and a series of spherical members secured to the other edge, said rings and spherical members being offset on one side of the opening between said edges, an isolated ring fastened on one of the pieces of fabric at one end of said series of rings and a slip beyond the same, a hook member on the other piece of fabric at the end of said series of spherical members for engagement with said isolated ring, and a slide operable on said series of fasteners and on said isolated ring and hook member.

2,026,072
POWER CYLINDER
Niels A. Christensen, South Euclid, Ohio
Application October 31, 1931, Serial No. 572,437
9 Claims. (Cl. 230—55)

1. The combination with a cylinder and closure plate therefor, of relatively wide transversely arcuated straps extending longitudinally of the cylinder conforming to the curvature thereof and closely engaging the same and having fastening means at opposite ends engaging the closure plate and end of the cylinder for clamping the closure plate on the cylinder and for protecting the cylinder from damage.

2,026,073
PULLEY ATTACHMENT
Abel De Land, West Salem, N. Y.
Application August 12, 1934, Serial No. 739,933
2 Claims. (Cl. 74—4)

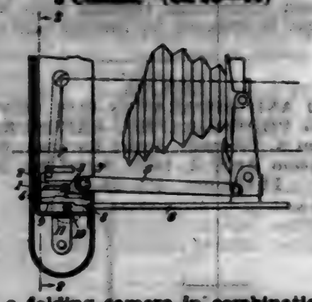


1. A structure of the class described comprising an adapter including an attaching disk, a tubular bearing carried thereby, a shaft mounted for rotation in said bearing, a pulley attached to one end of said shaft, governor means located on the interior of said pulley, a thrust sleeve slidably mounted on said bearing, said governor means surrounding said thrust sleeve, a lever attached to said adapter and adapted for connection with a carburetor throttle valve, and the lower end portion of said lever being constructed for cooperation with the adjacent end of said thrust sleeve.

2,026,074
PRESSURE STILL HEADER
Homer H. Edwards, Richmond, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
Original application June 28, 1921, Serial No. 547,956, now Patent No. 1,966,923, dated February 20, 1934. Divided and this application January 19, 1934, Serial No. 707,062
6 Claims. (Cl. 285—39)

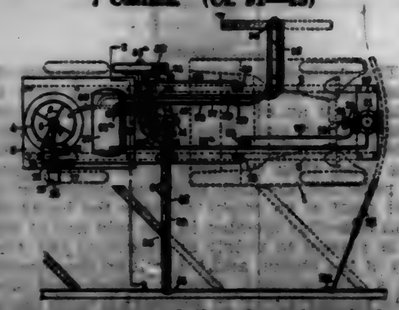
1. A fitting of the type described comprising an arcuate bend having a tangential threaded portion, wrench centering means on said bend opposite to and coaxial with said threaded portion and a nut for said threaded portion provided with spaced projections thereon with which a wrench may be engaged for turning said nut.

2,026,075
METHOD AND APPARATUS FOR CONTROLLING PHOTOGRAPHIC EXPOSURES
William A. Edwards, Santa Barbara, Calif.
Application April 2, 1935, Serial No. 14,247.
11 Claims. (Cl. 95—64)



1. The method of controlling the exposure of a photographic emulsion in accordance with the luminosity of an object in a scene to be photographed, which comprises: variably illuminating a reflective member with light from a controllable source other than the scene to be photographed, said reflective member being positioned in the line of sight of an object whereby the luminosity of said reflective member in the said line of sight may be caused to visibly approximate the luminosity of the object, and controlling the exposure given a photographic film on which said scene is to be photographed in accordance with the variation in illumination used on said reflective member.

2,026,676
TREATMENT OF SOY BEANS
Lowell D. Gill, Decatur, Ill., assignor to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware
No Drawing. Application October 23, 1933, Serial No. 694,844
6 Claims. (Cl. 99—11)



1. The process of removing objectionable flavor from soy beans in whole or in broken pieces, which comprises imparting to them an increased moisture content without extracting the solubles therefrom, then initially subjecting the beans to a temperature substantially higher than the boiling point of water and sufficiently high to remove the natural flavor but without scorching the beans; the time of said last named treatment being sufficiently long to remove substantially all of said flavor and reducing the temperature for final drying before said increased moisture content is eliminated.

2,026,677
FOLDING CAMERA
Leo Goldhammer, Munich, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application September 16, 1934, Serial No. 743,451
In Germany September 12, 1933
3 Claims. (Cl. 95—44)

1. In a folding camera in combination a casing having two side walls, a carriage connected with each of said side walls, a bed hinged to said carriages, means for shifting said carriages in the direction of the optical axis of said camera, a distance meter located in said casing and means for coupling said distance meter with said carriages.

2,026,678
PAVEMENT MARKING MACHINE
Raymond L. Hefner, Hickory, N. C.
Application October 2, 1933, Serial No. 691,837
7 Claims. (Cl. 91—45)

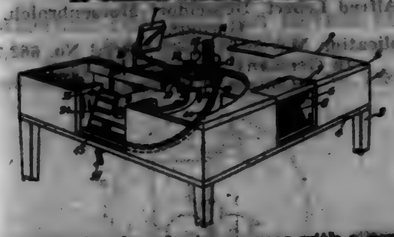
1. An apparatus of the class described comprising a chassis adapted for movement over the surface to be marked, an arm extending laterally from said chassis, paint applying means suspended from said arm and movable therealong and means actuated by forward movement of said chassis for causing lateral movement of said paint applying means along said arm.

2,026,679
FLOWERPOT DRAIN PLUG
Pattie Higgins, San Antonio, Tex.
Application July 19, 1935, Serial No. 32,196
2 Claims. (Cl. 47—34)

2. A drain plug for a flower pot consisting of, a hollow frusto-conical imperforate body having its lower end open and arranged to be placed over the drain opening of said flower pot, said body having a plurality of drain orifices in its lower peripheral edge portion, the aggregate area of said orifices being substantially equal to the area of the drain opening of the flower pot, said body also having an external annular shoulder at its lower end, the upper end of said shoulder extending above the orifices, whereby the pressure of the soil within the flower pot is not directed against said orifices.

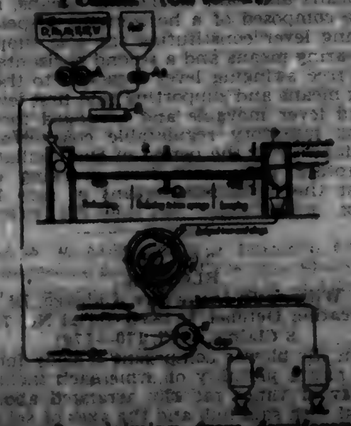
2,026,680
FLUE CLEANER
Erik W. Jacobson, Chicago, Ill., assignor of one-half to Carl F. Nelson, Chicago, Ill.
Application December 17, 1934, Serial No. 757,708
4 Claims. (Cl. 15—242)

1. A flue cleaning tool comprising a stem, a plurality of spring steel blades along said stem arranged in axially and angularly spaced relation one to another, cup members arranged in pairs against opposite faces of a blade for spacing the blade axially and affording bearing engagement therewith radially outwardly of the stem, the two cup members per blade opening toward the blade with the margins of the cups against the blades, said cup margins having outwardly directed flanges with the flanges slightly curved in axial section providing bending surfaces for the blades and with the free margins of the flanges spaced from the blades to permit flexing of the blade ends in use.



2,026,681
MEASURING DEVICE
Peter A. Jamieson, Chicago, Ill.
Application October 2, 1933, Serial No. 691,752
10 Claims. (Cl. 221—36)

1. In a dispensing device, a container and a plurality of dispensing members associated therewith, said dispensing members having a variety of different volumetric capacities, said dispensing members being positioned adjacent one end of the container and including spacing portions



normally engaging the inner face at the end of the container, said dispensing members being pivoted for rotation about axes generally perpendicular to the end of the container.

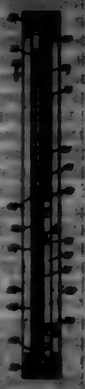
2,026,682
APPARATUS FOR PLAYING GAMES
Oren L. Jeffries, Columbus, Ohio, assignor of one-half to L. J. Brown, Columbus, Ohio
Application May 1, 1933, Serial No. 668,725
15 Claims. (Cl. 273—144)

1. Apparatus for playing games with a number of chips having proper indicia thereon, which comprises means for receiving said chips and delivering them into a plurality of members adapted to conduct the chips to the proper players, said members being so disposed that none of the players can see or gain access to the chips disposed therein, and means for releasing chips from said members to the players.

2,026,683
TREATING FERRIFEROUS ORES
Friedrich Johannsen, Magdeburg, Germany, assignor to firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany
Application April 10, 1934, Serial No. 17,585
In Germany May 23, 1934
1 Claim. (Cl. 75—14)

Process of reclaiming from ferriferous raw materials ironlike compact metals reducible at higher temperatures than iron, which comprises causing a charge of the raw materials, mixed with reducing agents, to pass through a metallurgical furnace, agitating the charge therein and preheating it up to temperatures, at which the iron compounds of the material are converted into iron sponge—ranging from 800–900 centigrade, causing the charge to be further preheated up to temperatures, ranging from about 900–1400 centigrade, at which—while the companion metal compounds remain unreduced—the sponge iron is about to lump,—causing a current of oxidising gases to react with the preheated charge, whereby a proportion of iron of the sponge is burnt and additional heat is produced, sufficient for accomplishing the lumping of the iron of the sponge and for producing from the iron oxides and the slag forming constituents of the ore, which are fluxible by iron oxide, slags containing the companion metal compounds and iron oxides and being sufficiently liquid as to separate from the lumping iron, causing the iron oxides of said slags to be re-converted into lumped iron, while the companion metal compounds remain therein unreduced, and causing said slags and lumped iron to jointly leave the furnace and to be subsequently separated from each other.

2,026,684
DEMONSTRATION APPARATUS
Carl Edvard Johansson, Detroit, Mich.
Application October 18, 1933, Serial No. 694,077
11 Claims. (Cl. 35—19)



1. Demonstration apparatus comprising a U shaped metal member, a cylindrical member which normally fits snugly in the same, a support for one of said members, a holder for the other of said members, means for moving said holder toward and away from said support to cause said members to fit together periodically and hence frictionally grip each other when the temperatures of the two are substantially equal, and follow the movement of said holder away from said support, and means operating in timed relation with said holder for heating said U shaped member at intervals, when the two members are disengaged, to expand the same, whereby said members frictionally slide on each other when subsequently engaged but grip each other when the initial relative temperatures are restored.

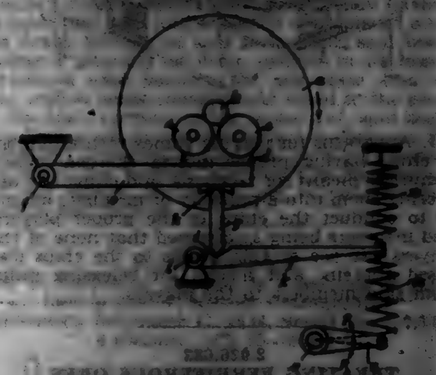
2,026,685
SASH AND WINDOW FRAME
Godwin E. Johnson, New York, N. Y.
Application April 19, 1934, Serial No. 721,415
2 Claims. (Cl. 20—11)

1. In a sash and window frame the combination of a jamb for each vertical member of the window frame forming a sash pocket therewith, each jamb having an opening, a parting strip for each jamb, each slidably supported in said frame at the opposite sides of said parting strip, L shaped rubbers in each jamb at the upper and lower ends of its opening, each rubber comprising a horizontal member and a vertical member, a

stenchable cover for shell opening, a ribbed at the upper and lower ends of each cover, a parting strip member integral with each cover and projecting beyond the ends thereof, a projecting portion at the ends of each cover over the rabbet thereof, each cover when in closed position having its projecting portions seated in the horizontal members of the rabbet of the jamb adjacent thereto, the projecting portions of the parting strip member seated in the vertical members of the rabbets of the jamb and screws extending through the projecting portions of the cover and secured to the jambs.

2,026,636
BOLT
Arthur A. Kirby, New York, N. Y.
Application June 30, 1934, Serial No. 733,220
1 Claim. (Cl. 85—2.4)

A bolt of the nature described, comprising a shell having an outer wood screw thread and an inner machine screw thread, a split portion at one end of the said shell, the inner walls of the said shell being tapered at the said end, a screw adapted to enter the shell from the opposite end, and engage the inner thread, and a split washer on the screw abutting the unsplit shell and and the screw head for the purpose specified, the length of the screw being no longer than the combined length of the unsplit portion of the shell and the length of the washer.

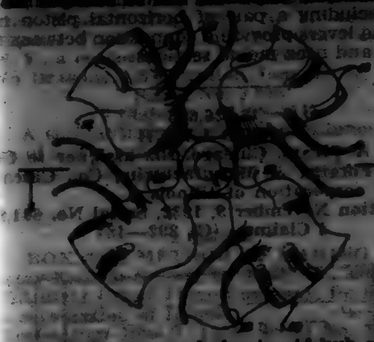


2,026,637
COMBINED FREIGHT AND TANK VEHICLE
Judge P. Lawrenson, Houston, Tex.
Application September 26, 1933, Serial No. 691,625
1 Claim. (Cl. 280—5)

A truck comprising a frame having side members formed of channel irons provided with upper and lower horizontal flanges, a body having a floor on the frame and having sides, carrier wheels on which the frame is mounted, an underslung tank of approximately the same width as that to the frame and located between the front and rear wheels and having longitudinal side flanges which are secured to the lower flanges of the frame, vertical sleeves between said upper

additionally support the load on the floor and in the tank underneath standards whose lower ends are fitted into the sleeves and to which the sides of the body are secured.

2,026,638
BALANCING MACHINE
Alfred Lebert, Duesseldorf-Obercassel, Germany
Application March 30, 1932, Serial No. 602,731
In Germany September 27, 1930
2 Claims. (Cl. 73—61)

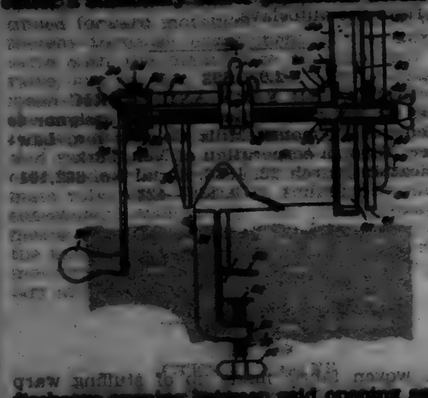


1. A balancing machine for determining the dynamic unbalance of a rotary body, comprising bearing means [illegible] means for driving said bearing means, a lever [illegible] means, a lever [illegible] said bearing means and said conditioning means, said leverage composed of a horizontally disposed free swinging lever constituting the sole support for the bearing means and a second horizontally disposed free swinging lever connected to the conditioning means and supporting said first lever, and a third lever movable and arranged for transmitting pulsatory regulatable counterforces in accordance with the period of the oscillations of said rotary body, said lever exerting directly against the conditioning means of said bearing means.

2,026,639
BLOWER
William H. Lebender, Chicago, Ill.
Application October 3, 1930, Serial No. 767,235
6 Claims. (Cl. 170—170)

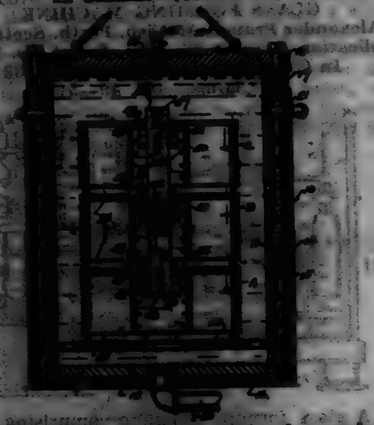
1. An air blower comprising a body including a hub and a plurality of arms each including a plurality of vanes radially arranged about and integral with said hub and the arms of said vanes extending substantially parallel relative to each other and to the axis of said body, each of said

arms having an opening therethrough [illegible] an air [illegible] and [illegible] being radially arranged about said hub and providing an air fan at one axial end of the latter.



2,026,640
PRESSURE CONTROLLING DEVICE FOR GASOLINE PUMPS
David McCormick, Dunmore, Pa.
Application August 15, 1934, Serial No. 739,975
9 Claims. (Cl. 121—38)

1. In a liquid dispensing installation, including a pump, a source of liquid supply, and a discharge line for the liquid, a dynamic column device comprising a tube between the discharge line and the suction side of the pump, said tube being formed with a coiled portion to accommodate the overflow liquid, a valve means attached to one end of the tube to control the flow of liquid thereto and separate valve means at the other end of the tube to control the flow of said liquid to the pump.



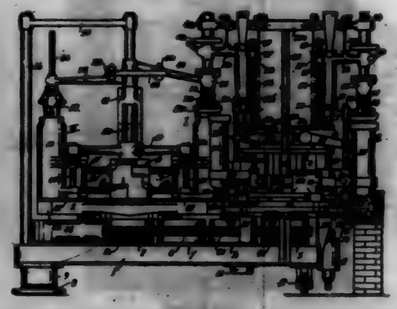
2,026,641
COMBINED SLICER, SHREDDER, AND DICER
Michael W. McArdle and Ivar Jeppesen, Chicago, Ill., assignors to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application March 28, [illegible] Serial No. [illegible]
3 Claims. (Cl. [illegible])

1. In a [illegible] rotary cutter, means for driving the cutter, a hopper provided with a discharge opening in close proximity to the cutter, and means for feeding the material in the hopper through said discharge opening and into said cutter, the combination [illegible]

discharge opening between said opening and the last mentioned rotary cutter comprising a lattice of cutter blades forming a plurality of extrusion openings, and a pressure plate carried on said feeding means, the plate having a ruled surface for entry into said extrusion openings to force the material therethrough.

2,026,642
PRESSING APPARATUS
William C. McDaniel, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application May 31, 1932, Serial No. 614,469
11 Claims. (Cl. 18—17)

11. In combination in apparatus for producing laminated sheet glass, an autoclave within which the laminated sheets are adapted to be subjected to heat and pressure, a plurality of containers for holding the laminated sheets within said autoclave, said containers being supported directly one upon the other and each comprising an imperforate vertical side wall, a plurality of spaced parallel, substantially rigid horizontal supporting members arranged within the container and upon the tops of which the laminated sheets are stood on edge and a wire netting disposed beneath said supporting members and forming the bottom of



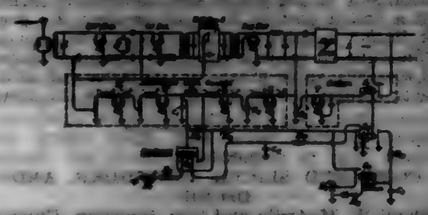
said container, means carried by certain of the containers and engaging other of said containers for aligning the same and for maintaining them in proper position relative to one another, means for detachably connecting the containers together, and means for lifting the containers vertically as a unit to place them within or remove them from the autoclave.

2,026,693
COMPOUND YARN AND FABRIC
Charles E. McLean, Methuen, Mass., assignor to Patchogue-Plymouth Mills Corporation, Lawrence, Mass., a corporation of New York
Application March 22, 1932, Serial No. 600,101
2 Claims. (Cl. 139—420)

1. A woven fabric made up of stuffing warp threads made of paper, holding warp threads made of twisted textile fibers; and a set of parallel top filling threads and a set of parallel bottom filling threads each of such filling threads being made up of a hard twisted core formed of a plurality of strands of paper slock roving twisted together and a covering of relatively thick, loosely twisted short fibers spirally coiled around such core, the filling yarn threads being longer than the core threads and being sufficiently bent by the warp threads to force the spiral covering to the top and bottom surfaces whereby relatively little of the core is exposed.

2,026,694
GLASS FORMING MACHINE
Alexander Francis McNish, Perth, Scotland
Application October 26, 1934, Serial No. 750,037
In Great Britain November 1, 1933
21 Claims. (Cl. 49—5)

1. A glass forming machine comprising a rotary blank mould table, suction blank moulds on said table, means for oscillating said table through part of a circle to move one mould on the table from a gathering position to a transfer position and to simultaneously return another mould on the table from a transfer position to a gathering position, a plurality of finishing moulds, means for transferring the charges from the blank moulds to the finishing moulds and means for imparting a to-and-fro movement to the blank moulds at the gathering position.

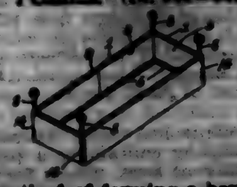


21. In a glassware forming machine, a partible neck mould including a pair of sections movable toward and away from each other along a straight line, means for imparting movement to the sections including a pair of horizontal piston motors, and levers providing connection between the motors and neck mould sections.

2,026,695
HOOD LATCH
Norton A. Mears, Chicago, Ill., assignor to Chicago Forging & Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application November 9, 1932, Serial No. 641,971
4 Claims. (Cl. 292—48)

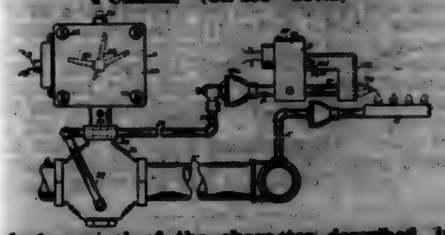
1. In an automobile hood closure having a lower edge terminating at one end at an elevation appreciably above that of the opposite end to provide a long end and a short end for said closure, means for securing the lower edge of said hood in closed position comprising a latch member adjacent to the lower edge of the hood at the short end thereof, a latch operating rock shaft extending inwardly of the hood from said short end, a second latch member adjacent to the lower edge of the hood at the long end thereof, a second latch operating rock shaft extending inwardly of the hood from said long end of the hood, said rock shafts being operatively connected respectively to the first and second mentioned latch members, and a single latch operating means positioned on said closure intermediate said latch members, and operatively connected to both of said rock shafts.

2,026,696
SIGNALING SYSTEM
Doren Mitchell, Round Brook, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application December 29, 1933, Serial No. 704,357
25 Claims. (Cl. 178—44)



1. In a system for the reception of signals, including a receiver and means responsive to the reception and non-reception of distinctive energy for governing the receiver, the method of transmission control which consists in adjusting the gain of the receiver while the governing energy is being received in accordance with the intensity of said energy, and in the absence of said energy maintaining said gain at the value last established for a time not in excess of a predetermined period.

2,026,697
PREVENTION OF OXIDATION
Sidney Blacher, New York, N. Y., assignor to Mosher Foundation Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application January 28, 1935, Serial No. 2,576
7 Claims. (Cl. 99—11)



2. A substantially solid food substance in the form of discrete masses carrying a dust of protective antioxidative material on the surfaces thereof.

2,026,698
BOX AND METHOD OF MAKING IT
Gustav Reuben Nelson, De Kalb, Ill., assignor to Wurlitzer Grand Piano Company, De Kalb, Ill., a corporation of Illinois
Application June 7, 1934, Serial No. 729,435
7 Claims. (Cl. 144—309)

7. The method of forming a box corner which includes joining two adjacent box sides with a layer of flexible material, while spacing the adjacent edges of the box sides sufficiently far from each other to permit them to be bent, with the flexible material, to form a box corner, applying an adhesive to the face of the flexible material and to the ends of the box sides, positioning a heated forming member in the said space and adjacent said adhesive, bending the flexible material and moving the adjacent side members to their desired final position or angle, thereafter withdrawing the heated forming member, and positioning a permanent backing member in the space previously occupied by said heating member, while the adhesive is still soft.

2,026,699
THERMAL-ELECTRIC CONTROL
Howard W. Partlow, Utica, N. Y., assignor to The Partlow Corporation, New Hartford, Conn., a corporation of New York
Application May 6, 1935, Serial No. 19,929
4 Claims. (Cl. 158—117.1)

1. A control of the character described, including a source of fuel supply, a main burner, a pilot burner in lighting relation to the main burner and connected to the source of fuel supply of the main burner, a main valve normally biased toward closed position for controlling the fuel supply to the main burner, an auxiliary valve for controlling the supply of fuel to the pilot which upon movement in one direction opens said main valve, manually operable means, means connecting the manual means and the auxiliary valve to initially open said auxiliary valve when the manual means is moved a predetermined distance in one direction, tensioned latch means to retard further opening movement of said manual means until the pilot is ignited and thermo-magnetic means operable by said pilot to move said latch means out of the path of said manual means, whereby to permit continued forward movement of the manual means thereby to cause engagement of the auxiliary valve with the main valve to open said main valve, and to also cause said thermo-magnetic means to effect movement of the latch means into the return path of the manual means to prevent retrograde movement thereof and the closing of said valves, said auxiliary valve being formed to close under the normal closing movement of the main valve upon failure of the burners and the subsequent cooling of the thermo-magnetic means and withdrawal of the latch means from the path of the manual means to permit reverse movement thereof and the closing of said auxiliary and main valves.

2,026,700
UTENSIL COVER
Herman H. Pearl, Garden City, N. Y.
Application June 26, 1933, Serial No. 677,963
6 Claims. (Cl. 53—1)

1. A culinary container comprising a vessel and a cover, a bead on the cover, a bead on the vessel, the vessel bead having a recess, a spring plate within said recess extending normally beyond the vessel bead and adapted to be pressed inwardly of the vessel bead by the cover bead when the same is applied to the vessel, said spring plate being adapted to engage the inner part of the cover bead when the cover has been applied to the vessel.

2,026,701
UTENSIL COVER
Herman H. Pearl, Floral Park, N. Y.
Application March 26, 1935, Serial No. 13,166
9 Claims. (Cl. 53—8)

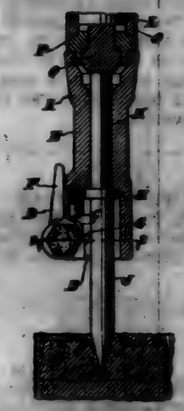
1. A cover for vessels, having a knob for the cover, a headed stem engaging the bore of the knob and having at its other end upset flanges extending beyond the knob and having flattened sides in proximity to the flanges, and a plate adjacent said cover having projections engaging the knob after passing through holes in the cover, said plate abutting the upset flanges of the stem and said plate having a central opening of the same configuration as the configuration of the flattened end of the stem.

2,026,702

COAL-CUTTING MACHINE

Richard Franklin Pescod and Henry Reginald Hornsby, Birtley, and George William Newell Harrison, Low Fell, England, assignors to Anderson, Boyes & Company Limited, Motherwell, Lanarkshire, Scotland, a company of Great Britain

Application September 19, 1935, Serial No. 40,984
In Great Britain February 28, 1934
2 Claims. (Cl. 262—30)



1. The combination with a coal-cutting machine of the chain-cutter type having a cutter-chain driving-sprocket of a cutting-sweeping device comprising an impeller constituted by a plurality of blades and a blade-carrying chain confined to move in an elliptical path which is disposed obliquely of the axis of the cutter-chain driving-sprocket, so that the blades descend as they enter the zone of accumulation of the cuttings and ascend as they leave said zone to throw the cuttings forcibly upon and along the parapet of cuttings disposed in the wake of said machine and parallel with the line of cut.

2,026,703

BEARING FOR STEEL RETAINERS

Arthur E. Peters, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey

Application September 8, 1932, Serial No. 632,128
1 Claim. (Cl. 308—21)

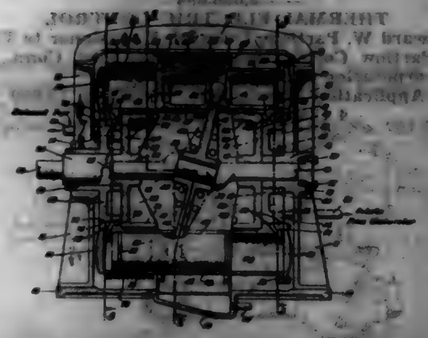
A bearing for a retaining member, comprising a pair of supports spaced to receive the member therebetween, bushings threaded into the supports and having recesses opening from the inner ends of the bushings, an imperforate pivot pin for the retaining member extending with its ends into the recesses and being of less length than the distance between the outer extremities of the recesses to permit of endwise movement of the pin in the recesses, and shoulders on the bushings frictionally engaging the outer sides of the supports to retain the bushings

2,026,705

VALVE

Gregory A. Pabst, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia

Application July 26, 1934, Serial No. 736,794
9 Claims. (Cl. 50—13)



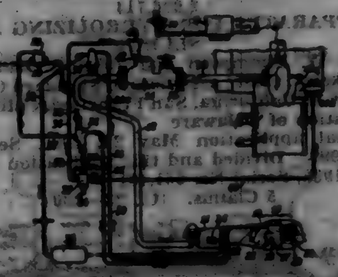
1. A motor-controlled valve assembly which comprises a housing containing a pair of diaphragms of different areas, means for admitting a fluid under pressure into the housing between the diaphragms, a spring-pressed stem operatively connected to the diaphragms, a second housing, a valve and seat in said second housing, said valve and seat being in contact when the device is inoperative, and a spring-pressed stem connected to said valve and in position to be moved by said first stem, the spring acting on the stem connected to said diaphragms being stronger than the spring acting on the stem connected to said valve.

2,026,706

COMBUSTION ENGINE

Theodore Pratt, Glen Cove, N. Y.

Application November 21, 1931, Serial No. 576,518
20 Claims. (Cl. 123—43)



7. A combustion engine including in combination, a rotatable wheel member having a series of cylinders arranged around the periphery thereof, and a stationary valve ring fitted within said wheel, said valve ring having a gas receiving recess therein adapted to supply combustible gas to said cylinders as they pass thereover, a second valve ring having a firing recess therein, firing means in said firing recess for originally igniting a continuous firing medium in said recess which in turn ignites the gases in each cylinder as they pass successively over the same

2,026,707

LOCOMOTIVE

Montague H. Roberts, Englewood, N. J., assignor to Franklin Railway Supply Company, New York, N. Y., a corporation of Delaware

Application May 14, 1932, Serial No. 611,210
4 Claims. (Cl. 105—43)

1. In a locomotive, the combination of a main driving engine, a booster motor, a main throttle valve for controlling the supply of steam to said engine and to said motor, booster controlling mechanism including a throttle valve therefor, and slip control mechanism for the engine, and for the motor including a slip control valve for said engine, an actuating device for closing the booster throttle, and a common controlling means for said device and said slip control valve.

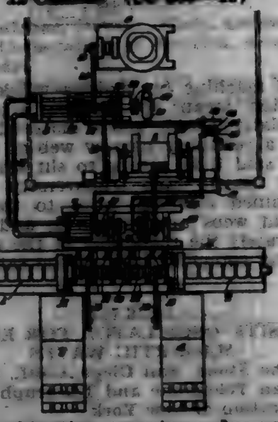
2,026,708

WALL ORNAMENT

Joseph Rubin, Brooklyn, N. Y., assignor to Rubin & Deutsche, New York, N. Y., a copartnership consisting of said Joseph Rubin and Otto H. Deutsche

Application April 21, 1934, Serial No. 721,498
3 Claims. (Cl. 41—22)

1. A wall ornament simulating a figure in bed, said ornament comprising a relatively deep frame having a glass near the front of the frame, a back near the back of the frame and spaced from the glass, and a figure therebetween, said figure comprising a molded head and fabric materials overlying a part of the molded head



and tensioned up or folded to produce a natural appearance of depth, and a bed cover simulation overlying a part of said figure and extending over a substantial part of the frame area.

2,026,709

POWER SWIVEL FOR WELL DRILLING

Walde Sheldon, South Norwalk, Conn.

Application November 28, 1932, Serial No. 644,978
12 Claims. (Cl. 255—19)

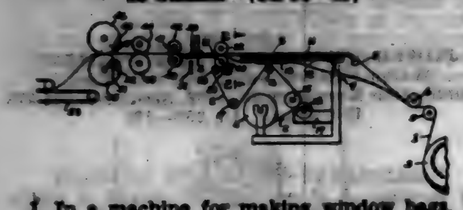
4. In combination, a rotary, draw-works and an engine, direct drive mechanical connections from the engine to the draw-works and variable speed reversible hydraulic drive transmission from the engine to the rotary, means for selectively governing said two driving trains and a controllable drive between rotary and draw-works.

2,026,710

SIGNAL LIGHT FOR MOTOR VEHICLES

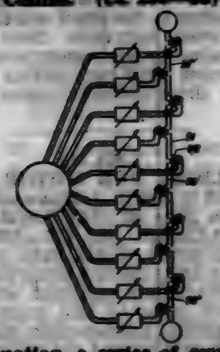
Harold O. Smith, Indianapolis, Ind.

Application June 26, 1933, Serial No. 678,511
3 Claims. (Cl. 177—329)



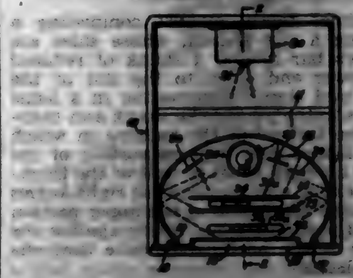
1. In a direction signal light for motor vehicles, a light front having inwardly disposed arrow head pointer light openings which are at the right and left sides of said front, respectively, with their points substantially meeting at the center and flaring toward the rear of each arrow head, leaving a space above and a space below

said points between the outer rear ends of said arrow heads and a light opening in one of said



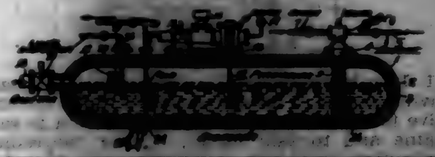
spaces substantially in vertical alignment with said arrow points.

2,026,711
METHOD OF AND APPARATUS FOR MAKING WINDOW BAGS
Harold Smithwick, Scarsdale, N. Y., and Peter Halbe, Cranford, N. J., assignors, by mesne assignments, to Bemis, Inc., a corporation of Delaware
Application May 4, 1931, Serial No. 539,344
15 Claims. (Cl. 93—19)



1. In a machine for making window bags, in combination, means for forming a partial tube from a relatively wide web of material, means for applying a relatively narrow web of material to complete said tube, means to slit smoothly said relatively narrow web transversely thereof at predetermined intervals prior to the point at which said webs are combined, and means to sever serrately the remainder of the tube transversely and coincidently with the said slits.

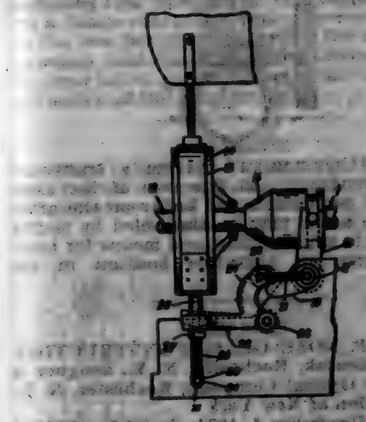
2,026,712
COMPOSITE OSCILLATOR FOR ELECTRO-MAGNETIC WAVES
John Stone Stone, San Diego, Calif., assignor to American Telephone and Telegraph Company, a corporation of New York
Application June 1, 1922, Serial No. 563,926
4 Claims. (Cl. 250—33)



1. In combination, a series of equal linear oscillators arranged lengthwise and consecutively along a common line, each oscillator being tuned to the same comparatively short wave-length, each oscillator lapping half-way past both consecutively adjacent oscillators in series, capacity areas connected to the end oscillators of the series, respective energy transmitting circuits connected with the oscillators, and phase adjusters in said circuits to keep said oscillators in the same phase.

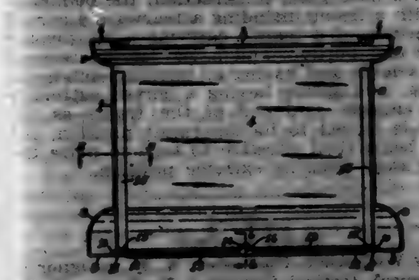
2,026,713
MEANS AND METHOD OF DISPLAYING PICTURES
Ivan Melville Turvilliger, Altadena, Calif.
Application June 15, 1934, Serial No. 731,077
9 Claims. (Cl. 40—132)

3. In a picture display means, in combination, a plurality of translucent picture panels arranged in a front to rear spaced relationship, a source of light behind all of said plates directing a part of its light forwardly through them, and means to reflect another part of the light from said source around the rearmost plate and upon a plate in advance of said rearmost plate.



2,026,714
APPARATUS FOR HYDROLIZING ACID SLUDGE
Harry W. Thompson and John T. Rutherford, Berkeley, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
Original application May 27, 1926, Serial No. 455,999. Divided and this application January 13, 1933, Serial No. 641,491
5 Claims. (Cl. 12—39)

1. An apparatus for hydrolyzing acid sludge, including a retort having a tar withdrawal means, and an inverted weir, between the tar withdrawal means and the main body of the retort, operative to permit the flow of a tar from substantially only the interface between the acid and tar layers within said retort to the tar withdrawal means, said inverted weir being disposed at least as high as approximately the center of said retort.



2,026,715
EXTERNAL CONTRACTING BRAKE
Ralph S. Tyler, Cleveland Heights, and William M. Reichart, Cleveland, Ohio, assignors to The Chandler & Price Company, Cleveland, Ohio, a corporation of Ohio
Application February 26, 1932, Serial No. 595,339
2 Claims. (Cl. 188—77)

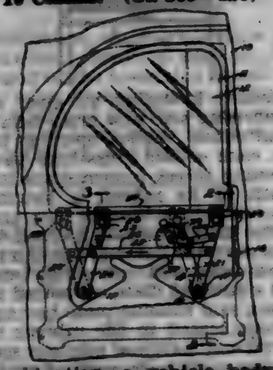
1. In a brake for a paper cutting machine or the like, a brake drum, a brake band encircling said drum having a lining adapted to engage the surface of said drum and a stem secured directly to and extending from one end of the band, said stem being tangential to said brake drum, a fixed element on said stem, a slidable collar on said stem, a coil spring mounted on said stem between

said fixed element and collar, means for tensioning said brake band including a lever having an arm operative to depress said collar and spring against said fixed element, and means for releasing said brake band, said last-named means including said lever and a spring for actuating said lever.

2,026,716
METAL CASKET
Walter E. Wallace and David Bell, Wayne County, Ind.
Application April 20, 1934, Serial No. 723,141
2 Claims. (Cl. 27—6)

1. A sheet metal burial casket comprising joined side and end walls including longitudinal outwardly extending bowed portions along their edges terminating in inwardly directed flanges having longitudinally extending beads therein, said flanges and bowed portions forming a pocket along said edges, a bottom plate associated with said flanges forming a base therewith and braces adjoining the junctures of said side and end walls extending upwardly along said walls bridging said pocket in spaced relation to the outwardly extending bowed portions and resting upon said beads thereby providing for the reception directly by said flanges of load stresses upon said walls and preventing collapse of the walls forming said pocket.

2,026,717
LAMINATED GLASS
George B. Watkins, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application April 20, 1928, Serial No. 273,781
Renewed November 6, 1933
2 Claims. (Cl. 49—81)

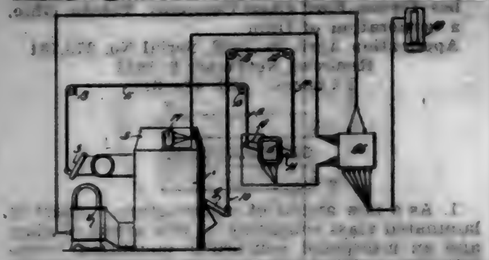


1. As a new article of manufacture, a sheet of laminated glass consisting of two sheets of glass and an interposed non-brittle membrane treated with a mixture of esters of phthalic acid.

2,026,718
ELECTRODEPOSITION OF METALS
Louis Weisberg and William B. Stoddard, Jr., New York, N. Y., assignors to Weisberg & Greenwald, Inc., New York, N. Y., a corporation of New York
No Drawing. Application March 30, 1935, Serial No. 13,913
22 Claims. (Cl. 204—14)

1. The method of electrodepositing nickel which comprises electrolyzing a solution containing a nickel salt from the group consisting of sulphates and chlorides, in the presence of an ammonium salt, a formate and formaldehyde.

2,026,719
WINDOW SUPPORT AND REGULATING DEVICE
Fred J. Westrope, Detroit, Mich., assignor to The Murray Corporation of America, a corporation of Delaware
Application November 20, 1933, Serial No. 698,747
10 Claims. (Cl. 268—126)



1. In combination, a vehicle body having a window opening, a window movable forwardly and rearwardly across said opening, a pair of arms pivoted at their lower ends below said window opening and near their upper ends to said window, means pivotally connecting the arms for united movement about their lower pivots to open and close the window, said arms constituting the sole support for the window.

2,026,720
CONTROL SYSTEM FOR HEATERS
Theodore A. Wetzel, Warrenton, Wis., assignor to Automatic Products Company, Milwaukee, Wis., a corporation of Wisconsin
Application December 29, 1932, Serial No. 647,369
8 Claims. (Cl. 236—11)

1. A heater control comprising a damper, a fan for circulating air through the heater, a

damper regulator, a room thermostat controlling the damper regulator, a thermostatic switch controlling the action of the fan, and a time limit

switch subject to the influence of fan operation and exercising a dominant control over the damper for closing the same when the fan is operated for a predetermined period.

1,986,711

WASHBOARD

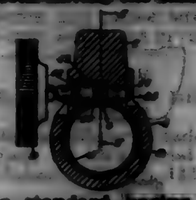
Harlan B. White, Bogalusa, La.

Application December 8, 1934, Serial No. 756,643

1 Claim. (Cl. 68—23)

A washboard including an open rectangular frame comprising side and cross bars each having a longitudinal rabbet opening inwardly of the frame, each of said cross bars having an inwardly opening recess intermediate its ends and in the path of its rabbet, a longitudinal bar mounted intermediate the side bars and connecting the cross bars, said longitudinal bar having beveled end portions passing through the rabbets of the cross bars and extending into said recesses, and a rubbing plate supported by the longitudinal bar, said rubbing plate having side marginal portions seated in the rabbets of the side members and end marginal portions seated in the rabbets of the cross bars, each of said end marginal portions being centrally clamped between a beveled end portion of the longitudinal bar and a wall of a cross bar rabbet.

2,026,722



MICROSCOPE

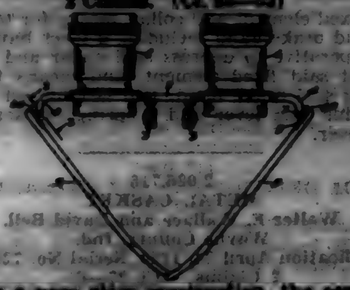
Andrew Wollensak, Rochester, N. Y., assignor to Wollensak Optical Company, Rochester, N. Y., a corporation of New York

Application December 4, 1934, Serial No. 755,968

4 Claims. (Cl. 88—39)

1. A microscope comprising a standard and a supporting sleeve integral therewith, a lens tube adjustably mounted in the supporting sleeve and having a series of transversely arranged serrations in its wall affording rack teeth, and operating means for the lens tube comprising an arbor, pinion teeth on the arbor engageable with said rack teeth on the lens tube, a reduced portion on the arbor on one side of said pinion teeth, a bearing in the standard for said reduced portion, a collar on said arbor on the other side of the pinion teeth having the same diameter as

the pinion, the standard having a transverse opening extending from one side of the same diameter as said pinion and collar on the arbor whereby the arbor may be assembled by sliding it endwise into said opening, and means for holding the arbor in operative position in the standard.



2,026,723

BINOCULAR NOSE GLASS CONSTRUCTION

Andrew Wollensak, Rochester, N. Y., assignor to Wollensak Optical Company, Rochester, N. Y., a corporation of New York

Application December 4, 1934, Serial No. 756,961

2 Claims. (Cl. 88—37)

1. In a nose glass construction, the combination with a frame including a rearwardly curved end portion, of a temple carrying a lug pivoted to said end portion, and a leaf spring secured to the temple and having an opening embracing said lug, said spring having a curved extremity which engages said end of the frame as the temple is moved to its outermost position, the spring being then effective to tend to move the temple away from its extreme position.

2,026,724

LENS MOUNT

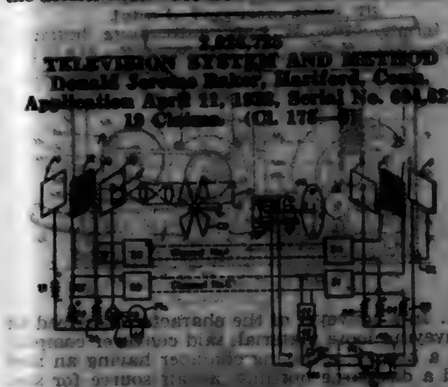
Andrew Wollensak, Rochester, N. Y., assignor to Wollensak Optical Company, Rochester, N. Y., a corporation of New York

Application January 14, 1935, Serial No. 1,001

3 Claims. (Cl. 88—57)

2. In a lens mount, the combination with a support having a vertical wall and a lens barrel

adjustable endwise of the support, yieldable instrumentalities located between said vertical wall and the lens barrel comprising acting and reacting of spring elements each having one end directly attached to said ring and extending thence away from thereby affording a series of free cantilevers yieldably press against the lens barrel, and an adjusting ring threaded on said support and having a flange engageable with a cooperating flange on the lens barrel for actuating the latter in one direction, said spring elements serving to actuate the lens barrel in the opposite direction against the action of the adjusting ring.



2,026,725

TELEVISION SYSTEM AND METHOD

Donald Jerome Bayer, Hartford, Conn.

Application April 12, 1932, Serial No. 604,822

19 Claims. (Cl. 178—7)

1. In a television system the combination of a transmitting station and a receiving station, a pair of transmission channels connecting said stations, each of said channels including a linear conductor arranged at both of said stations, means at said transmitting station for forming an image of an object to be transmitted, means for simultaneously impressing upon different linear portions of one of said transmission conductors current impulses corresponding in intensity to the light values of successive elementary areas of the image arranged in parallel lines crossing the image in one direction, means for simultaneously impressing upon different linear sections of the second transmitting conductor current impulses corresponding in intensity to the light values of successive elementary areas of the image arranged in parallel lines crossing the image at right angles to said first parallel lines, means for periodically interrupting the light rays forming said image, means at the receiving station including one of said receiving conductors for distributing the current impulses from one of said channels over an area in the same order in which said impulses were derived from said image, means including said second receiving conductor for distributing the current impulses from the second channel over a like superimposed area in the same order in which said impulses were derived from said image, and means controlled by the joint action of said two receiving conductors for translating said superimposed current impulses into corresponding light variations.

2,026,726

APPARATUS FOR TREATING ADHESIVES

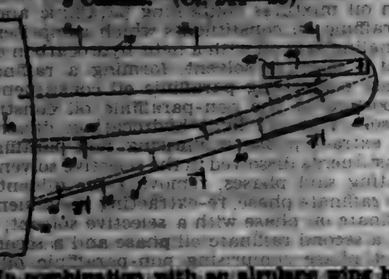
Charles A. Ball, Chicago, Ill., assignor to Chicago Bolting Company, Chicago, Ill., a corporation of Delaware

Application February 23, 1934, Serial No. 712,457

6 Claims. (Cl. 91—44)

1. Means for treating adhesive and the like for use in a bolt manufacturing machine, said means comprising a container adapted to receive a solution, means for positioning an adhesive sheet in said solution, and means adapted to withdraw said sheet from said solution at the termination of a predetermined period,

whereby the sheet may immediately be used, including a manually operable holding member and timing means operable in response to movement of said holding member downwardly toward the solution.



2,026,727

AIRFOIL CONSTRUCTION

George E. Barnhart, Pasadena, Calif.

Application March 25, 1933, Serial No. 662,748

9 Claims. (Cl. 244—39)

9. In combination with an airplane wing having a substantially fixed top surface: a plurality of flaps hinged in the underside of said wing and arranged so as to wash the air inwardly from the root of the wing and the tip of the wing toward the center of the wing when they are open; and means for operating said flaps.

2,026,728

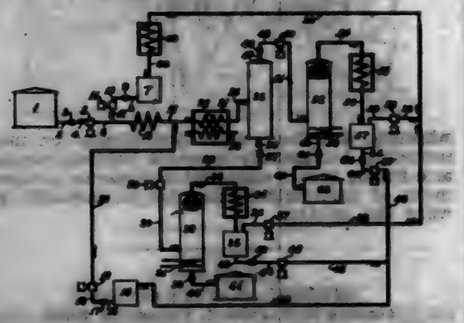
AIRFOIL CONSTRUCTION FOR AIRPLANES

George E. Barnhart, Pasadena, Calif.

Application March 25, 1933, Serial No. 662,747

2 Claims. (Cl. 244—39)

1. In combination with an airplane wing having a substantially fixed portion: flap means swingably mounted on the underside of said wing at the trailing edge thereof and extending substantially the full span of said wing; means for actuating said flap means; an auxiliary vane hinged to the under surface of said wing ahead of said flap means; and means for actuating said auxiliary vane, said flap means comprising a plurality of flaps having their leading edges positioned so as to wash the air stream from the root and tip of the wing toward an intermediate portion thereof.



2,026,720

PROCESS FOR PRODUCTION OF LUBRICATING OIL

Ulric B. Bray, Los Angeles, and Claude E. Swift, Glendale, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California

Application November 28, 1933, Serial No. 644,576

6 Claims. (Cl. 196—13)

1. A process for the fractionation of hydrocarbon oil mixtures containing paraffinic and non-paraffinic oil constituents which comprises commingling said oil with a light hydrocarbon diluent and a selective solvent, forming a raffinate oil phase comprising paraffinic oil constituents and a portion of the non-paraffinic oil constituents dissolved in the light hydrocarbon diluent and an extract phase comprising non-paraffinic oil constituents dissolved in the selective solvent, separating said phases, removing the diluent from the raffinate phase, re-extracting the diluent-free raffinate oil phase with a selective solvent, forming a second raffinate oil phase and a second extract phase comprising non-paraffinic oil fractions dissolved in the selective solvent and separating said second formed phases.

2,026,729

MANUFACTURE OF ARTIFICIAL FILAMENTS OR THREADS

Henry Dreyfus, London, England

No Drawing. Application January 4, 1929, Serial No. 330,496. In Great Britain January 23, 1928

5 Claims. (Cl. 18—54)

3. Process for the production of voluminous filaments of a cellular or tubular character, which comprises dissolving an organic derivative of cellulose in a solvent medium containing at least two volatile constituents whose boiling points differ by at least 40° C., at least one of which is itself a solvent for the cellulose derivative, the quantity of the lower boiling constituents being from about 50% to 75% of the total solvent medium employed, and dry spinning the solution at temperatures near to, but, at the most, not substantially exceeding the boiling points of the higher boiling constituents.

2,026,731

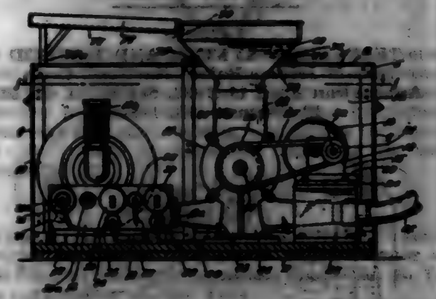
PROCESS FOR THE PRODUCTION OF UNSATURATED HYDROCARBONS FROM PARAFFINS

Henry Dreyfus, London, England

No Drawing. Application March 10, 1933, Serial No. 661,587. In Great Britain April 23, 1932

6 Claims. (Cl. 196—170)

1. Process for the manufacture from saturated hydrocarbons of boiling point below 150° C. of hydrocarbons containing a lower percentage of hydrogen, comprising heating said saturated hydrocarbons in the gaseous phase at temperatures between 360 and 600° C. in the presence of liquid or semi-liquid compositions containing more than 80% free carbon in a finely divided form.



2,026,732

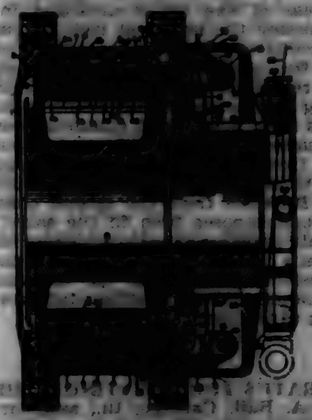
PNEUMATIC CONVEYER

Joseph A. Farley, West Hartford, Conn.

Application July 19, 1932, Serial No. 623,126

5 Claims. (Cl. 302—66)

1. In a conveyer of the character described for conveying loose material, said conveyer comprising a hopper, a mixing chamber having an inlet and a discharge opening, an air source for supplying a current of air thru said mixing chamber, an opening from said hopper into said mixing chamber and means for supplying said material into said mixing chamber, a breaker plate in said mixing chamber for breaking and agitating the air current therethru, and baffle plates located before the discharge opening in said mixing chamber for further agitation of air currents.



2,026,733

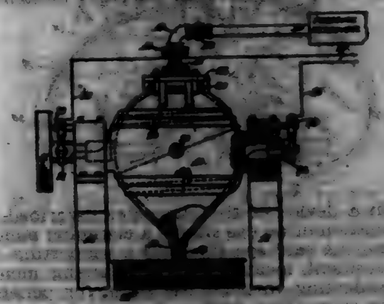
FRICTION CLUTCH

Gustave Fast, Annapolis, Md., assignor to Gustave Fast Engineering Corporation, Annapolis, Md., a corporation of Maryland

Application October 5, 1932, Serial No. 636,515

26 Claims. (Cl. 192—69)

1. In a device of the class described a driving member, a driven member, a set of elastic friction elements associated with said driving member, a set of elastic friction elements associated with said driven member and adapted to cooperate with said first mentioned set to set up elastic stresses therein, one set of said friction elements being provided with friction surfaces of semi-plastic material, and means for causing the friction elements of said first set to engage the friction elements of said second set to establish said elastic stresses, certain of said elements being subjected only to expanding forces and other of said elements being subjected only to compressing forces.



2,026,734

APPARATUS FOR PUFFING CEREALS

John L. Ferguson, Joliet, Ill.

Original application May 24, 1930, Serial No. 454,515. Divided and this application April 22, 1931, Serial No. 531,939

2 Claims. (Cl. 99—8)

1. In an apparatus for puffing grains, an enclosed chamber, means for raising the pressure in said chamber, means for suddenly opening said chamber whereby the grains under pressure in said chamber are expelled therefrom and are thereby puffed, and means for insuring the existence of substantially the same pressure differential on the last grains expelled from said chamber as on the first grains expelled therefrom.

2,026,735

TREATMENT OF TEXTILE FIBERS

Augustus H. Gill, Belmont, Mass., assignor to The Gill Corporation, Cambridge, Mass., a corporation of Delaware

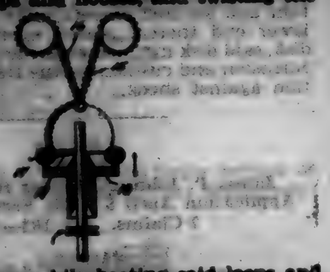
No Drawing. Application October 18, 1932, Serial No. 638,043

8 Claims. (Cl. 91—6)

1. A process of preparing for textile fiber treatment a fatty acid oil associated with linoleic acid, which comprises selectively hydrogenating said oil to a stage where substantially only the linoleic acid has been largely transformed into oleic acid, thereby substantially preserving the fluidity of the oil for fiber treatment while largely eliminating therefrom a constituent that tends to gum on the fiber.

2,026,736

PROCESS FOR THE MANUFACTURE OF WOOLLY THREADS



Wolfgang Gruber, Bayrhamme, Germany, assignor to Dr. Alexander Wacker Gesellschaft für Elektrochemische Industrie, G. m. b. H., Munich, Germany, a corporation of Germany

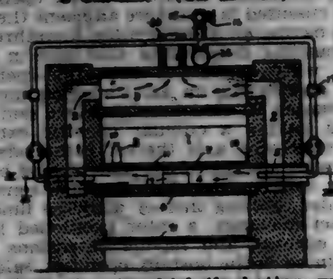
Application November 29, 1933, Serial No. 700,313

In Germany December 1, 1928

3 Claims. (Cl. 117—3)

1. Process of manufacturing woolly threads which comprises forming open threads of artificial silk into a plurality of bundles, twisting said bundles of threads together under unequal tension to form loops and nooses, and twisting the

whole into a yarn while beating said loops and nooses apart.



2,026,737

LEHR

Leon J. House, Sr., Point Marion, Pa., assignor to L. J. House Convex Glass Company, a corporation of Pennsylvania

Application June 2, 1934, Serial No. 728,739

5 Claims. (Cl. 49—47)

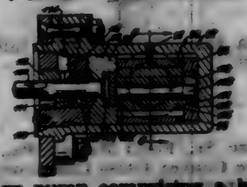
1. A muffle lear in which the bottom wall of the muffle chamber is of a material of relatively high heat penetrability and the side-walls and roof are of other material of relatively low heat penetrability, with means for causing flame to impinge upon the bottom wall and the products of combustion, flowing thence, to envelop the muffle chamber externally.

2,026,738

SALT SHAKER OR THE LIKE

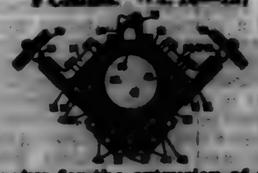
James W. Jennings, Providence, R. I.

Application December 28, 1934, Serial No. 758,453



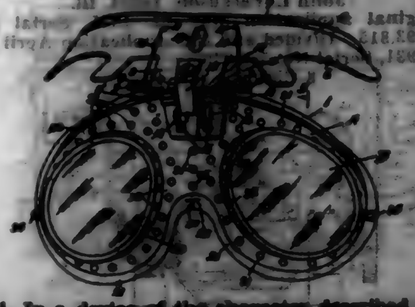
1 Claim. (Cl. 65—45)

A shaker comprising an imperforate metallic base having a tubular upstanding shoulder portion, said base having a relatively wide disk-like portion of appreciably greater diameter than the tubular shoulder portion with a narrow supporting flange at its periphery, said shoulder portion having a closed bottom, a flat relatively thin disk of non-corrosive cushioning material seated upon said bottom and approximately covering the same from side to side, and a globular hollow body of frangible material having dispensing perforations in the top thereof, said body having



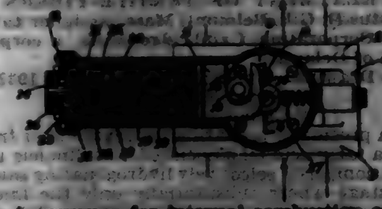
a relatively small depending neck provided with interfitting engagement with the shoulder portion and secured thereto, said neck having the lower end thereof seated upon the cushioning disk, said disk insulating the metallic base against corrosion and cushioning the frangible body portion against shock.

2,026,739
PUMP
James P. Johnson, Shaker Heights, Ohio
Application April 8, 1933, Serial No. 665,151
7 Claims. (Cl. 103—137)



1. A rotary pump comprising a housing having an axial bore therein closed at one end and provided with fluid inlet and outlet openings, a bushing mounted in said bore adjacent the closed end and having an axial opening therethrough, a second bushing mounted in said bore in spaced relation with respect to said first-mentioned bushing and having an axial opening therein, a liner mounted in said bore between said bushings and having a circular opening extending therethrough, the axis thereof being offset but parallel with respect to the axis of said bushing openings, said liner having openings connecting the circular opening thereof with the fluid inlet and outlet openings, a rotor positioned in said circular opening and having extensions rotatably mounted in the bushing openings, said rotor having an axial bore extending inwardly from the closed end of said housing and having a running engagement with the inner periphery of said liner between the fluid inlet and outlet openings, said rotor having longitudinal slots extending through the wall thereof in spaced, angular relation, blades slidably mounted in said slots and having their outer ends engageable with the inner periphery of said liner, a roller member positioned in the bore of said rotor and engageable with the inner ends of said blades for normally maintaining the latter in predetermined relation, a shaft connected to the closed end of said rotor and extending outwardly axially thereof beyond said housing, and detachable means closing the open end of said housing.

2,026,740
EXTRUSION APPARATUS
Edward Kinsella and Robert Jabez Ward, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application October 27, 1933, Serial No. 695,290
In Great Britain November 10, 1932
5 Claims. (Cl. 18—15)



1. Apparatus for the extrusion of sheets, films, foils and the like, said extrusion apparatus comprising a solid body of material having flat surfaces adapted to form a rigid support for plate-like members constituting the jaws of an extrusion slit, said body being formed with a longitudinal passage running along the length of said slit and communicating therewith through a series of smaller passages so as to feed the material to the whole of said slit.

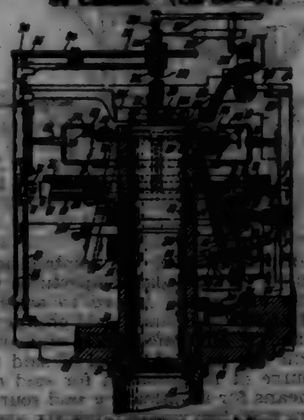
2,026,741
SHIELD
Earl E. Klotz, Bucyrus, Ohio
Application December 16, 1932, Serial No. 647,611
5 Claims. (Cl. 2—10)

1. In a device of the character described, the combination of an eye shield, a clamping member for securing said eye shield to a supporting surface, resilient means on said clamping member and projecting through the same for penetrating the supporting surface to assist in securing the clamp thereto, means for mounting said clamping member on said eye-shield, said means comprising a hinge slidably mounted upon the eye shield, and resilient means for continually biasing said hinge toward an open position irrespective of the extent to which the hinge is open.

2,026,742
GOVERNOR
Edward Kinnear, Sacramento, Calif.
Application September 22, 1931, Serial No. 564,371
9 Claims. (Cl. 137—153)

1. A governor for internal combustion engines comprising a vacuum responsive member, a valve connected with and operated by such member to control the flow of fuel to the engine, such valve comprising a casing having a passageway therethrough, a valve gate in the passageway, a central pivot for the gate, the opposite walls of the passageway for that portion of their length toward which the leading edge of the gate moves from open to closed position being formed with inwardly extending curved faces eccentric to the circular path of movement of the periphery of the gate which overhang the gate after it has made an initial movement toward closing position, the faces being so proportioned that the diminution of the open area of the passageway as the gate moves to closed position will be in substantially direct proportion to any reduction in the vacuum pull exerted on the vacuum responsive member.

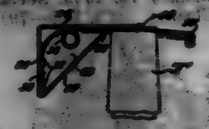
2,026,743
SPRAY NOZZLE
Clarence S. Kinder, San Diego, Calif.
Application November 26, 1934, Serial No. 754,725
6 Claims. (Cl. 299—154)



1. In a water spray nozzle, a hollow member provided with a relatively thin flat exit and with the side walls at right angles to the flat portion converging toward the exit end.

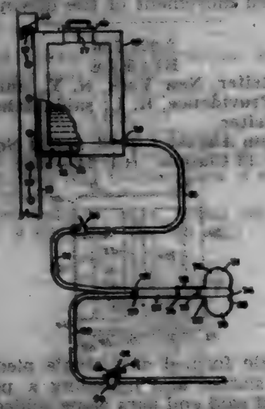
2,026,744
KNITTING MACHINE
Stephen W. Lippitt, Cleveland, Ohio
Application February 11, 1933, Serial No. 656,526
13 Claims. (Cl. 66—127)

1. In a knitting machine a yarn carrier comprising a double opposed hook, the free end of one member thereof extending beyond the end of the other and a latch finger disposed above said hook for retaining a thread within the looped portion of one of the hook members during the reciprocative movement of the yarn carrier.



2,026,745
KNITTING MACHINE
Edgar A. Harrid, Laconia, N. H.
Application November 5, 1932, Serial No. 641,571
20 Claims. (Cl. 66—51)

1. In a circular knitting machine, a needle cylinder composed of two parts hinged together and adapted to overlap, and means for relatively adjusting said parts to alter the effective circumference of said cylinder.

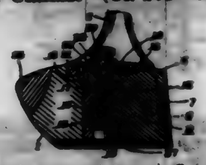


2,026,746
RACK
Guy S. Moore, Chester, N. H., assignor of one-half to Eugene S. Fraser, Lynn, Mass.
Application March 30, 1934, Serial No. 718,216
11 Claims. (Cl. 211—69)

1. A rack comprising base and shelf members, the shelf member being secured to said base member and having a laterally projecting edge, and a clip secured to one of said members, said clip comprising a strip of resilient material ar-

ranged yieldingly to engage the under surface of the laterally projecting edge of said shelf member.

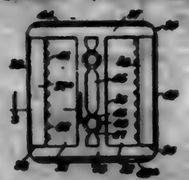
2,026,747
GRAVITY THERMAL DILATOR
William P. B. Nemnich, North Arlington, N. J.
Application March 16, 1935, Serial No. 11,577
2 Claims. (Cl. 128—345)



1. An applicator for a thermal dilator, said applicator having in combination, a body-portion formed of semi-hard rubber, a rounded end on said body-portion, a removable expansible member, a neck-portion on said removable expansible member, said neck-portion snugly engaging the body-portion of said applicator, bilateral extensions on said expansible member, a pocket formed between said bilateral extensions, said pocket being adapted to cooperate with the rounded end of said body-portion, an inlet for said applicator, and an outlet for said applicator, said inlet and said outlet comprising ducts formed in the rubber body-portion of said applicator.

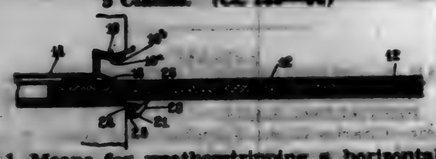
2,026,748
AR-N-(NITRO-PHENYL)-TETRAHYDRO-NAPHTHYLAMINES AND PROCESS OF PREPARING SAME
Henry Charles Olpin, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 25, 1929, Serial No. 334,856. In Great Britain March 12, 1928
5 Claims. (Cl. 260—136)

1. Process for the production of new dyestuffs, comprising condensing a compound selected from the group consisting of ar-tetrahydro-α- and β-naphthylamines and their mono-alkyl and mono-acetyl nuclear substitution derivatives with a nitrated aromatic compound of the benzene series containing at least one labile halogen atom.



5. Ar-N-(nitro-phenyl)-tetrahydro-naphthylamine.

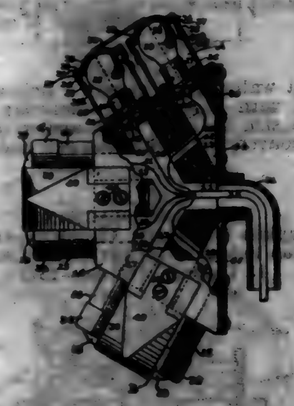
2,026,749
GOLF CLUB
Ray Foster, Grayslake, Ill.
Application February 10, 1933, Serial No. 656,196
7 Claims. (Cl. 273—79)



1. A golf club comprising a f...d head having a recess therein, a driving face arranged in the recess, a horizontal axis upon which the driving face is mounted, means for shifting the face to various angles, means for operating said last named means, and locking means for holding the manually operated means in place and preventing unauthorized movement of the driving face.

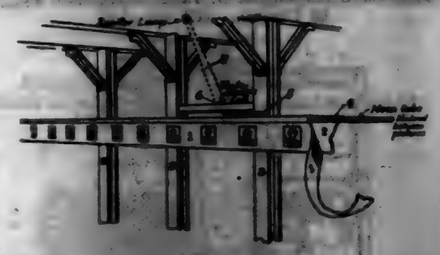
2,026,750
BUCKLE
Daniel I. Reiter, New York, N. Y., and James H. Arthur, Providence, R. I.; said Arthur assignor to said Reiter
Application August 2, 1933, Serial No. 683,294
12 Claims. (Cl. 24—186)

1. A buckle formed of a single piece of sheet metal and slotted and including a pair of end bars, each of said end bars being folded under on itself to provide two parallel and coextensive thicknesses of material and strap-engaging teeth projecting from the under thickness, said teeth being rigid and blunt and arranged inwardly of the outermost end edges of the end bars to engage but not to pierce a strap sliding in the slots of the buckle.



2,026,751
WINDOW
George A. Robbins, Hilliar Township, Knox County, Ohio
Application October 18, 1934, Serial No. 748,772
5 Claims. (Cl. 189—64)

1. Means for weatherstripping a horizontally sliding window pane including a hollow vertical member secured on the building in which the window slides and a trough-like sheet metal member having one leg to engage said hollow vertical member, with its other leg engaging said pane.



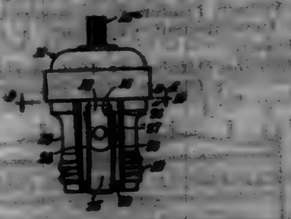
2,026,752
MOTOR VEHICLE SIGNAL
Frank Esch, Los Angeles, Calif.
Application June 1, 1935, Serial No. 24,519
3 Claims. (Cl. 177—329)

3. A vehicle signal device comprising a signal unit made up of a pair of electric lamp bulb and two-light penetrating receptacles arranged side by side and an electric lamp bulb in each said receptacle and a separate light penetrating dome covering the same light projecting end of each of said pair of receptacles and a two-light pene-

trating cover over contiguous sides of said domes of said pair of receptacles adapted to cause the light projections through said domes from said pair of lamp receptacles to project as separate light beams.

2,026,753
DISPLAY DEVICE
Leon W. Rosenthal and Jerome S. Meyer, New York, N. Y.
Application February 14, 1934, Serial No. 711,182
3 Claims. (Cl. 88—16)

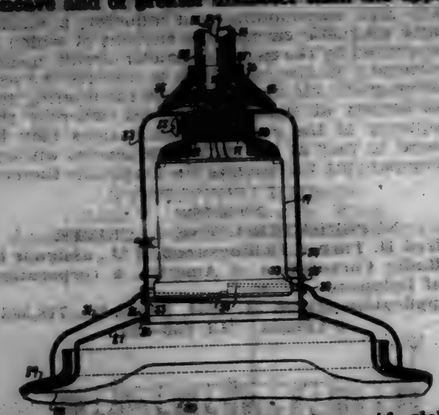
1. In a display system, the combination of a moving vehicle having spaced apertures therein, fixed display characters spaced to accord with the spacing of said apertures, said characters being positioned in alignment with said apertures and adjacent the path of travel of said vehicle, a single source of illumination for said characters, and means for illuminating said source with the frequency of the passing vehicle apertures.



2,026,754
MANIPULATION OF SHEET MATERIAL
Charles Ernest Stafford, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application January 26, 1934, Serial No. 708,596
In Great Britain February 8, 1933
18 Claims. (Cl. 154—65)

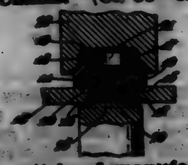
17. Apparatus for slitting foil of an organic material comprising a plurality of tension rods disposed parallel to each other, means to draw a length of foil over said tension rods, and at least one blunt instrument extending through the plane of the foil between the tension rods

so as to slit the foil as it is drawn past the instrument.



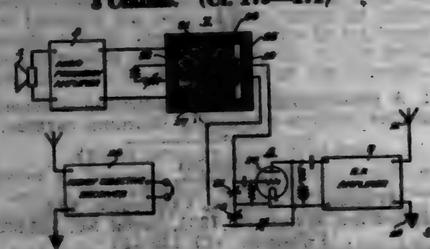
2,026,755
ELECTRICAL CONNECTION
Edgar R. Stine, Allentown, Pa., assignor of one-half to Albert A. Sinn, Allentown, Pa.
Application June 21, 1935, Serial No. 27,604
Renewed May 16, 1935
5 Claims. (Cl. 173—345)

1. An electrical connection device adapted to receive parallel contact tangs on another connection device, including contact springs to be engaged by said tangs, and means for interlocking said connection devices, including a separate spring latch adjacent and movable with respect to one of the contact springs in the tang-receiving device, and adapted to engage a recess in a tang when thrust into engagement with such spring, the arrangement being such that the interlocking means will be released upon a slight relative rotation of said contact devices about an axis parallel to and midway between said tangs.



2,026,756
LIGHTING FIXTURE
Morris R. Surfaro, Waterbury, Conn., assignor to The Chase Companies, Incorporated, Waterbury, Conn., a corporation
Application June 6, 1934, Serial No. 729,952
1 Claim. (Cl. 248—73)

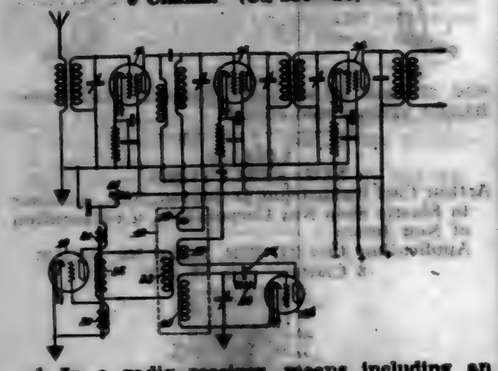
A lighting fixture including: a suspension-tube having an unthreaded portion, and a threaded lower end adjacent and below said unthreaded portion; an electric socket screw-threaded on the lower portion of said threaded lower end; a globe-hanger supported on the upper end of said socket; and a flange-member having a screw-threaded lower portion threadably engaging on the upper portion of said screw-threaded lower end, the lower face of said flange-member being concave and of greater diameter than the upper



end of said socket and clamping said globe-hanger against said socket.

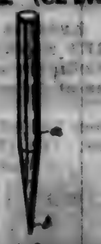
2,026,757
NUT STRUCTURE
Arthur Carl Swanstrom, Irvington, N. J., assignor to Elastic Stop Nut Corporation, a corporation of New Jersey
Application July 24, 1934, Serial No. 736,657
8 Claims. (Cl. 85—32)

1. As a new article of manufacture, a clinch nut having a body portion, a shank portion extending from said body portion and a riveting skirt portion on the free end of said shank portion, there being a surface engaging shoulder at the juncture of the body and shank portions of the nut, the outer surface of the shank portion having a decreasing taper in a direction away from the body portion of the nut, a bore through the nut, said bore being threaded in the body portion of the nut and being recessed adjacent to the face of the nut opposite said shank portion, and a locking washer secured against rotation in said recess.



2,026,758
SECRET SIGNALING
Alfred H. Turner, Collingwood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 21, 1932, Serial No. 648,192
3 Claims. (Cl. 178—171)

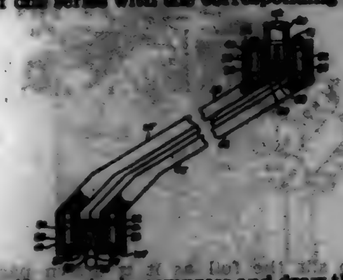
1. In combination, an oscillation generator provided with a frequency-determining inductor,



a substantially closed minor magnetic circuit, wherein losses at radio frequencies are substantially zero, surrounding said inductor, a second major magnetic circuit, one element of which is constituted by the minor magnetic circuit, means for causing unidirectional flux to traverse the second magnetic circuit and means for altering the flux density at signal-frequencies, whereby the frequency of the generated oscillations may be caused to vary at the signal frequencies without accompanying variation in the amplitude thereof.

2,026,759
SUPERHETERODYNE RECEIVER
Alfred H. Turner, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 31, 1934, Serial No. 718,363
9 Claims. (Cl. 250—20)

1. In a radio receiver, means including an oscillator for heterodyning an incoming amplitude modulated carrier wave, means including a second oscillator for cyclically varying the frequency of the first oscillator to provide a relatively wide frequency band heterodyned wave, and a sharply tuned intermediate frequency amplifier adapted to selectively accept a portion of the heterodyned wave which is in a substantially undistorted narrow frequency band including the amplitude modulation.

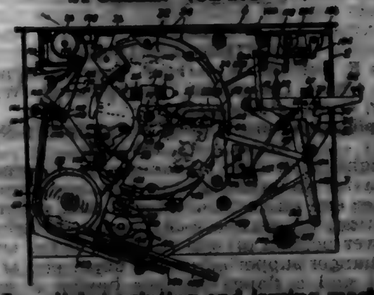


2,026,760
SOUND REPRODUCING OR RECORDING NEEDLE
Louis E. Turner, Chicago, Ill.
Application March 11, 1935, Serial No. 10,372
4 Claims. (Cl. 274—38)

1. A phonograph stylus comprising a record-engaging portion containing titanium carbide.

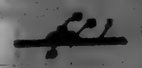
2,026,761
CORN PICKER
William E. Urschel, Valparaiso, Ind.
Application March 28, 1931, Serial No. 525,935
4 Claims. (Cl. 130—4)

1. In a corn picker, two series of bars having straight parallel sections, other sections at an angle therewith and parallel and sections extending angularly therein, rotatable members providing bearings for said end sections at equal radii from the axis of rotation thereof, means for rotating said members, such rotation causing planetary movement to each series of bars and intermeshing the said straight sections of the bars of one series with the corresponding sections



of the other series to compress and draw the stalks and husks of corn therebetween, the movement of the individual straight sections of the bars in each series being oblique to their longitudinal axis whereby such stalk and husk are moved obliquely thereto, and means for holding said two series of bars yieldingly in said intermeshing relation.

2,026,762
INSULATED SELF-BUOYANT FLOATING ROOF FOR TANKS
Jules Verner, Linden, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application October 22, 1930, Serial No. 490,735
6 Claims. (Cl. 220—26)



1. A floating deck seal for tanks comprising a plurality of individually bendable bristle-like members extending outwardly from the edge of the deck in close relation one to the other and forming a continuous ring.

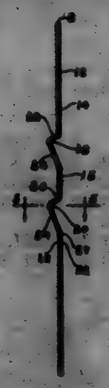
2,026,763
TICKET PRINTING AND ISSUING MACHINE
Christopher Frederick Webb, Hendon, England, assignor to Bell Punch Company, Limited, London, England
Application September 28, 1932, Serial No. 635,906
In Great Britain April 18, 1932
24 Claims. (Cl. 101—96)

1. In a ticket printing and issuing machine, a rotatable type member provided with a series of successively arranged printing elements, means for presenting to the type member a ticket to be printed, driving means for the type member, a plurality of keys, and mechanism controlled by actuation of a key to effect rotation of the type member by the driving means and printing of the ticket by a selected printing element, said mechanism including devices limiting the type member to a single rotation upon each actuation of a key.

2,026,764
MEANS FOR AND PROCESS OF HANDLING AND DISPLAYING FOOD PRODUCTS
Edward A. Weinel, Newark, N. J.
Application November 13, 1934, Serial No. 753,519
12 Claims. (Cl. 206—44)

1. Means for the handling of food products comprising a container of fibrous material having end closures, at least one of which is removable, said end closure including two plates of different diameter and each having a peripheral flange, the plates being fastened together in spaced relation and positioned so the flanges extend in opposite directions with a space between said flanges, said space being such as to receive the end of the container, a single mechanism for fastening said end enclosure to the container comprising locking members carried by the plate of smaller diameter, and means for moving said locking members to engage said container and located between said flanges by puncturing the walls of the container.

2,026,765
MOLDING PROCESS AND MOLDED ARTICLE
Watson H. Woodford, Bridgeport, Conn., assignor to Remington Arms Company, Inc., a corporation of Delaware
Application July 23, 1932, Serial No. 624,235
24 Claims. (Cl. 92—54)



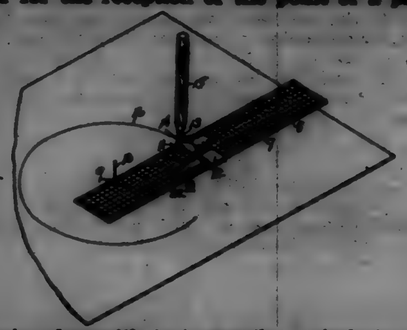
1. The method of making a shot shell wad which comprises the placing of a measured quantity of a fluid suspension of wad forming material in a tubular mold provided with lateral drainage perforations and an imperforated sleeve, and the removal of said sleeve at a rate determined by the rate of settling of said wad material in said mold.

3. The method of making a wad having a thick peripheral flange and a thin center which comprises charging a measured quantity of a suspension of wad forming materials into a mold in such a manner as to cause the suspension to revolve in said mold.

18. In the individual molding of shot shell wads, the method which comprises the addition to a fluid suspension of fibres of from 10% to 40% of sawdust, and the molding of the fiber sawdust mixture into shot shell wads which are coherent in use.

2,026,766
NONLIFTING HAIRPIN
John H. Adams, Seattle, Wash.
Application August 11, 1934, Serial No. 739,495
3 Claims. (Cl. 132—50)

1. A hair pin having a bow and a pair of legs, said legs having thereon a series of crimps extending in opposite directions from the legs and in the same plane as the pin, and a second series of crimps extending in one direction from the legs and in a plane perpendicular to said pin, whereby said pin is formed with one flat face.



2,026,767
METHOD OF MAKING COMPOSITION FRICTION ELEMENTS
John D. Alley, Pittsburgh, Pa., assignor to American Brakeblock Corporation, New York, N. Y., a corporation of New York
No Drawing. Original application August 22, 1929, Serial No. 387,518, now Patent No. 1,832,702, dated October 15, 1932. Divided and this application July 19, 1932, Serial No. 623,833
3 Claims. (Cl. 18—47.5)

1. The method of making a flexible composition friction element which consists in thoroughly mixing 12 parts of drying vegetable oil and 2.7 parts sulfur with 23 parts finely divided pyrobituminous material and 65 parts of short fibre asbestos, forming said mixture into shapes, and then curing said shapes in a baking oven without pressure for four to five hours at approximately 125° F. and then for five to six hours at approximately 300° F. to set the oil by sulfuration to bond the ingredients of the element.

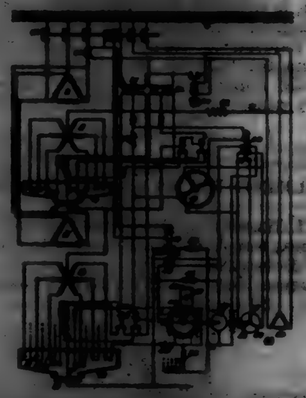
2,026,768
ATTACHMENT FOR RULERS
Meyer L. Aronson, Hartford, Conn., assignor of one-half to William Zacha, Hartford, Conn.
Application January 19, 1934, Serial No. 707,343
5 Claims. (Cl. 33—27)

2. A ruler attachment comprising a band fitted for sliding movement lengthwise along the ruler, said attachment having a hole positioned for

location outside of and adjacent the edge of the ruler for the reception of the point of a pencil

therein wherewith to transcribe a circle in connection with another hole in the ruler.

2,026,769
VALVE FOR SHOCK ABSORBERS
Ralph I. Bates, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 11, 1934, Serial No. 725,662
4 Claims. (Cl. 277—61)

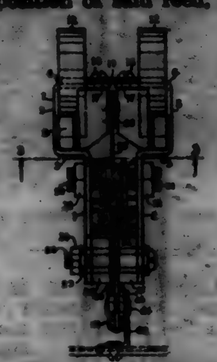


3. A fluid flow control device, comprising, in combination, a stationary tubular member, one end of which coaxially aligns with but is spaced from the port; a spring loaded, unbalanced valve normally closing the other end of said tubular member; an unbalanced valve slidably carried by the tubular member and normally closing the space between the one end of the said member and the port; and a spring yieldably urging the last mentioned valve into normal position and holding the tubular member in its proper position relatively to the port.

2,026,770
SIGNAL
George Wiley Bergmann, Evanston, Ill.
Application April 20, 1929, Serial No. 357,037
1 Claim. (Cl. 177—386)

The combination with a high tension outdoor electric system including supporting towers and a high tension conductor supported therefrom by high voltage insulators, of a visible discharge device of the class described comprising an elongated glass tube of small diameter filled with an inert gas and having a closed upper end, an electrode within the closed end of said tube free of mechanical or electrical connection to any part of said system, a socket for the open end of said tube sealing the same and having a second electrode projecting into said tube and spaced from said first electrode, said socket having an integral portion engaging about a major portion of the lateral periphery of said conductor and having a depending counterweight portion disposed below said conductor diametrically opposite said tube and of sufficient weight to position said socket in vertically extending position to support said tube in upright position above said conductor, said hook portion and socket providing direct electrical connection between said conductor and said second electrode.

2,026,771
ELECTRON DISCHARGE DEVICE CONTROL SYSTEM
Christen Brynhildsen, Baden, and Erwin Kurz, Ennetbaden, Switzerland, assignors to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a joint-stock company of Switzerland
Application November 25, 1933, Serial No. 699,899
In Germany December 17, 1932
10 Claims. (Cl. 175—363)



1. In an electric current converting system, an electric current line, a plurality of electron discharge devices serially connected across said line, a second electric current line connected with said devices, and means controlling one of said devices to cause simultaneous transfer of energy through said devices in both directions between said lines.

2,026,772
ELECTRICAL APPARATUS
Henry M. Brenzel, Chicago, Ill., assignor to Oak Manufacturing Company, Chicago, Ill.
Application June 24, 1933, Serial No. 677,263
5 Claims. (Cl. 175—363)

1. A heater comprising a magnetic field structure including a pair of opposed pole faces separated by an air gap, a pair of magnetizing coils for said field structure, one coil on each side of said air gap, a vertically disposed magnetizable reed adapted to vibrate in said air gap and to complete a magnetic circuit with one pole face, a pair of stationary contacts disposed on each side of said reed, a pair of movable contacts carried

by said reed cooperating with said stationary contacts, circuit connections whereby each cooperating pair of contacts controls a magnetizing coil for attracting the reed toward a pole face, said contacts and pole pieces being symmetrical with respect to said reed with said contacts open in vertical position of said reed, and means for

supporting said reed at one end thereof, said means including a resilient element having enough stiffness to support said reed vertically but having substantially no stiffness for impelling said reed along a horizontal axis whereby said reed tends to rest in one of its two extreme positions.

2,026,773
ELECTRICAL SWITCH
Henry M. Brenzel, Chicago, and Kenneth C. Allsen, Arlington Heights, Ill., assignors to Oak Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application March 27, 1935, Serial No. 12,564
11 Claims. (Cl. 200—11)

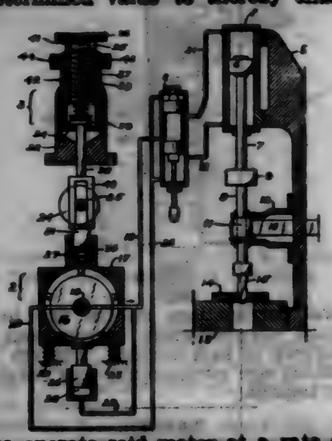
2. An electric switch comprising an insulating stator disk, a plurality of stationary contacts disposed thereon on the arc of a circle, a shaft rotatively mounted in said disk at the center of said circle, a rotor carried by said shaft, contacts carried by said rotor, a metal washer disposed adjacent said rotor, a finger integral with said washer extending toward said stator disk, and a stationary member carried by said stator having a slot into which said finger extends for defining the range of adjustment of said rotor.

2,026,774
METHOD OF MAKING A PIVOT BEARING
James H. Davis and John C. Lonsberg, Dayton, Ohio, assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 4, 1933, Serial No. 669,288
6 Claims. (Cl. 29—148.5)

1. The method of making a sliding pivot assembly, comprising: providing a pin member having a bearing surface including peripheral corrugations extending therearound, providing a metal bushing of sufficient internal diameter to slip endwise over said corrugated pin, inserting said pin within said bushing, and then permanently deforming said metal bushing upon said

peripheral corrugations on the pin to provide interfitting corresponding corrugations on the inner surface of said bushing, whereby said pin and bushing are permanently but rotatably assembled together.

2,026,775
PROCESS FOR SULPHATING THE NON-FERROUS METALS CONTAINED IN FERRUGINOUS SULPHIDE ORES OR ROASTS
Carl Paul Dolezek, Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y., a corporation of New York
Application September 5, 1933, Serial No. 688,355
In Germany November 14, 1930
11 Claims. (Cl. 75—12)



1. A process for sulphating the non-ferrous metals contained in pyritic ores comprising sulphides of ferrous and non-ferrous metals, which comprises charging the ore into a rotary tubular furnace and causing it to progress therethrough in one direction, subjecting the ore to roasting conditions at an early stage of its passage through the furnace, and maintaining the temperature of the ore at sulphating temperature for a substantial part of its passage while simultaneously introducing into the furnace gases of the sulphating zone a dust of a catalyst for the conversion of sulphur dioxide to sulphur trioxide, the ore and the resulting gases being caused to move through the furnace counter-currently to each other, at least a part of the air admitted into said furnace being introduced therewith by portions at points intermediate the charging and discharging ends thereof.

2,026,776
HYDRAULIC TRANSMISSION
James K. Douglas, Milwaukee, Wis., assignor to The Gilpar Company, Milwaukee, Wis., a corporation of Wisconsin
Application July 9, 1934, Serial No. 734,334
13 Claims. (Cl. 60—52)

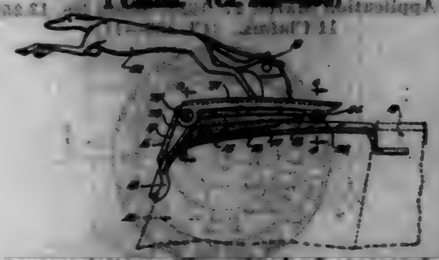
1. A hydraulic transmission, comprising a hydraulic motor, a variable displacement pump for supplying liquid to said motor and having an element movable to vary pump displacement and thereby vary the speed of said motor, fluid operated means responsive to pressure created by said pump for moving said element in a direction to increase pump delivery, a step for limiting

the movement of said element in said direction, and other means for moving said element in a direction to decrease pump delivery; said other means being yieldable under the action of said fluid operated means when pump pressure exceeds a predetermined value to thereby enable said

pump to operate said motor at a rate of speed limited by said stop and said other means being capable of moving said element against the action of said fluid operated means when pump pressure falls below said value to thereby cause said pump to operate said motor at a lower rate of speed.

2,024,777
AUTOMATIC VARIABLE SPEED TRANSMISSION
William H. Dumble, East Bakersfield, Calif., assignor of one-half to Ugo Antonglovanni, Bakersfield, Calif.
Application November 16, 1934, Serial No. 753,482
8 Claims. (Cl. 74—232)

1. A power transmission including a drive shaft and a power take-off including a fluid reservoir, a planetary gear system associating the shaft and the said take-off, a fluid pressure and circulating device controlling the drive reaction of said system on the take-off, adjustable means in said device to determine relative rotation between the shaft and the take-off, and governor means for automatically effecting a stoppage of the fluid circulation and thereby to cause to be made a direct drive connection between the shaft and the take-off and a direct drive means for directly combining the take-off and the said system.

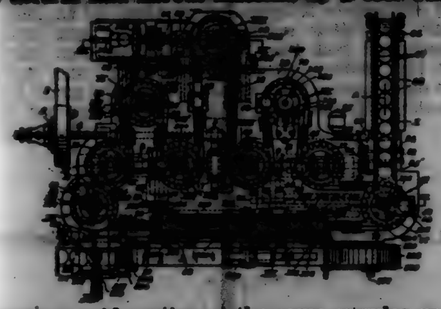


2,024,778
FISHING TOOL
William H. Dumble, Bakersfield, Calif., assignor of one-half to Samuel J. Checchi, Bakersfield, Calif.
Application February 8, 1935, Serial No. 6,571
5 Claims. (Cl. 294—86)

1. A fishing tool of the class described including a set of grabs, a driven head, means including a shell suppositively connecting said grabs and said head and including mechanism for closing the grabs and controlling the opening thereof, a non-shiftable gear means which is operative on said mechanism by said head without changing

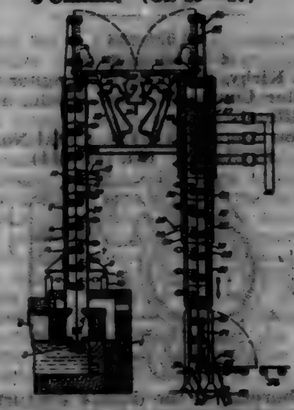
the direction of head rotation to secure either closing or opening of the grabs, and clutch means interposed yieldably between the shell and the gear means to connect or disconnect the gear means as to the shell.

2,024,779
AUTOMOBILE ACCESSORY
Stephen Faith and Samuel Klagsbrunn, Chicago, Ill., assignors to Faith Mfg. Co., Chicago, Ill., a corporation of Illinois
Application May 8, 1935, Serial No. 20,580
1 Claim. (Cl. 248—305)



In association with a standard ornament for an automobile, a supplemental ornament adapted to be mounted upon said standard ornament, comprising an upper portion in the form of a desired ornament, a base portion integral with said upper portion, said base portion having a substantially U-shaped transverse cross-section to enable it to fit over and conform to the upper part of said standard ornament, and means co-operating with said base portion and said standard ornament to secure said supplemental ornament on said standard ornament.

2,024,780
METHOD OF AND APPARATUS FOR PERFORMING MECHANICAL OPERATIONS ON MOVING WORK
George O. Frankel, Cudahy, Wis., assignor, by mesne assignments, to Sutherland Paper Company, Kalamazoo, Mich.
Application April 9, 1931, Serial No. 528,238
16 Claims. (Cl. 93—34)

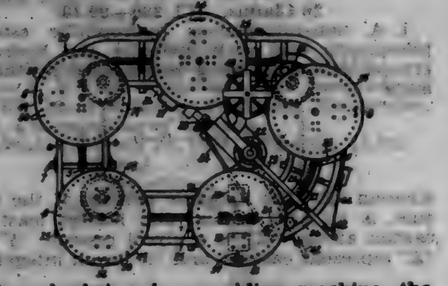


1. A method of making fibrous containers, comprising advancing a blank of fibrous material along a predetermined path which includes an arcuate portion, said arcuate portion being less

than 360° in extent, and operating upon the blank to deform said fibrous material by a tool which

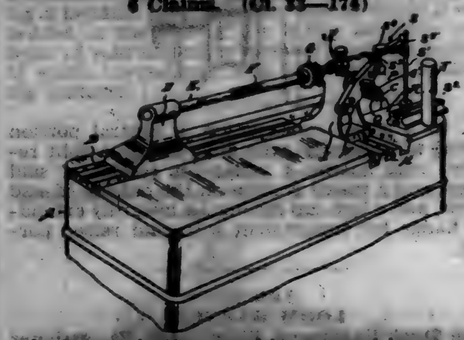
traverses said portion at the same angular speed as the blank.

2,024,781
VERTICAL GLASS ANNEALING LEER
Paul L. Geer, Pittsburgh, Pa., assignor to Amco, Incorporated, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 1, 1932, Serial No. 596,871
8 Claims. (Cl. 49—47)



1. A vertical tunnel apparatus for annealing sheet glass comprising an enveloping wall structure forming a vertical heating chamber, a series of conveying elements within said chamber adapted to engage sheet glass and lower it from the top to the bottom of said chamber, a transfer arm at the top of said chamber adapted in a horizontal position to receive sheet glass to be annealed, and means for actuating said arm to raise it to the vertical position to hold the glass in cooperative alinement with the conveying elements of said annealing apparatus.

2,024,782
CLAY HOMOGENIZING METHOD AND APPARATUS
Miner F. K. Geyelmeyer, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a corporation of Maryland
Application April 2, 1931, Serial No. 527,574
8 Claims. (Cl. 25—11)

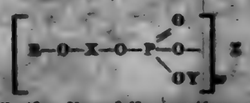


1. The method of conditioning clay for the production of ceramic ware comprising extruding it under pressure and simultaneously subjecting it to vibration in the direction of extrusion.

2,024,783
BASKET WEB ASSEMBLING MACHINE
Omer S. Hall, Paoli, Ind., assignor to The Edgerton Manufacturing Co., Plymouth, Ind.
Application July 27, 1934, Serial No. 737,147
3 Claims. (Cl. 1—13.6)

1. In a basket web assembling machine, the combination with an endless conveyor and a plurality of rails arranged in parallel relation to provide a circuitous track in a substantially horizontal plane, of a plurality of spaced strip receiving forms slidably mounted on said track and connected to said conveyor for movement therewith via a series of spaced stations where the forms are first loaded with strips, stapled together and finally discharge, means for actuating said conveyor at constant speed with an uninterrupted motion, a stapler at the stapling station adapted to travel with each form a short distance and then return to its normal position, and means for operating said stapler to staple the strips together while traveling with the form.

2,024,784
MACHINE FOR TESTING ACCURACY OF GEARS
Gustaf L. Hansen, Detroit, Mich., assignor to National Broach & Machine Company, Detroit, Mich., a corporation of Michigan
Application October 12, 1931, Serial No. 568,507
6 Claims. (Cl. 33—174)



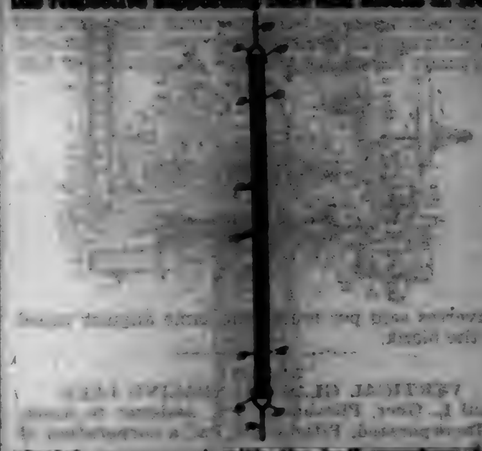
1. A gear testing machine comprising a support for rotatably mounting the gear to be tested, a truncated wedge for insertion between and into contact with adjacent teeth of said gear, the angle of divergence between opposite sides of said wedge corresponding with a predetermined pressure angle of the gear, a holder for said wedge rotatably mounted on said support permitting rotation of said wedge about an axis radial with respect to the gear, and means engaging

said holder for indicating rotational displacement of said wedge with respect to said support on engagement of same with successive teeth of the gear.

2,026,785
PHOSPHORIC ACID ESTERS OF FATTY ACID MONOGLYCERIDES
Benjamin R. Harris, Chicago, Ill.
No Drawing. Application January 5, 1934, Serial No. 705,825
26 Claims. (Cl. 260—99.16)

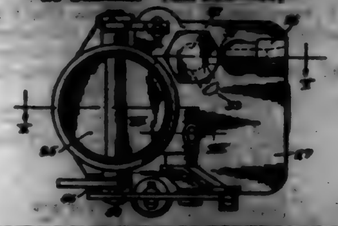
1. A non-nitrogenous hydrophilic ester of phosphoric acid with lipophile and hydrophile groups, said ester being represented by the formula

wherein "R", the lipophile portion of the molecule, is an acyl radical and has at least four carbon atoms, "X" is a glycol residue, "Y" and "Z" represent cations, and "w" is an integer.



2,026,786
HUB CAP MOUNTING
Harry J. Horn, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application August 2, 1934, Serial No. 738,356
8 Claims. (Cl. 301—108)

1. In a wheel construction, a central portion having an inwardly extending flange, a split resilient ring having a valley for receipt of said flange and a raised portion on the outside of said flange, and a hub cap having an inwardly extending flange for engagement with said raised portion.



2,026,787
LOOM HARNESS
John Jacob Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 14, 1934, Serial No. 711,452
10 Claims. (Cl. 139—91)

1. In a loom harness for supporting small groups of heddles, heddle supporting bars at the top and bottom thereof, a one piece ball member at the top and another one piece ball member at the bottom, each of said ball members having end portions engaging the end portions of the respective supporting bars and means in free

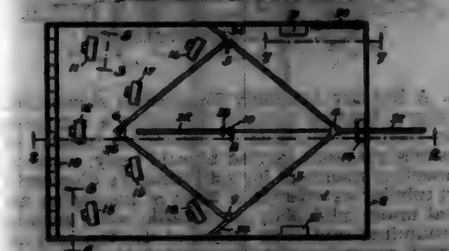
pivotal engagement with the ball members for connecting said ball members to the actuating straps.

2,026,788
CARBURETOR
Charles H. Kirby, Flint, Mich., assignor to Marvel Carburetor Company, Flint, Mich., a corporation of Illinois
Application August 12, 1929, Serial No. 385,497
15 Claims. (Cl. 261—41)

1. A carburetor of the double Venturi type including an inner venturi concentrically located to discharge into the throat of an outer venturi, said inner venturi having an annular fuel and air mixture discharge space formed by an applied sleeve the profile of which determines the effective capacity of the carburetor, means for supplying fuel under a gravity head to said discharge space and vacuum operated means for cutting off the supply of fuel at high suctions within the carburetor.

2,026,789
PISTON FOR INTERNAL COMBUSTION MOTORS
Elmer C. Long, Grosse Pointe Park, Mich.
Application September 9, 1932, Serial No. 632,826
3 Claims. (Cl. 309—11)

1. A piston having a head, a skirt, pin bosses separated from the skirt, said skirt being sep-



arated from the head except on one of its thrust sides, and a transversely disposed member connected at its ends to one side of respective pin bosses and having connection with the other thrust side of said skirt, said last mentioned thrust side being longitudinally slotted, and the skirt being circumferentially continuous from the slot for providing an approximate full cylinder bearing skirt.

2,026,790
ROTOR FOR HAMMER MILLS
Henry J. Manhoff, Wichita, Kans.
Application September 26, 1932, Serial No. 634,249
3 Claims. (Cl. 83—11)

1. A rotor for a hammer mill, comprising polygonal plates having aligned openings for the reception of a shaft, connections each passing removably and in a single length through all the plates and binding them together in a solid body, the plates having straight marginal edges forming marginal angles, said marginal angles being in alignment in alternating plates, to form spaces between alternating plates, and being out of alignment in adjoining plates, whereby the marginal angles of each plate will form spaced projections, extending beyond the marginal edges of adjoining plates, and hammers extended into said spaces and abutting at their inner ends against said edges, to hold the hammers rigid, the connections passing through the hammers and holding their inner ends in the aforesaid abutting relation, the thickness of the hammers being equal to the width of said spaces, and the marginal angles of the plates being sufficiently acute so as to form cutters, both of the features last enumerated cooperating to prevent material from being wound about the rotor, between the hammers.

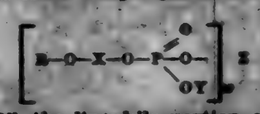
2,026,791
BASEBALL GAME
Joseph C. Mayer, Cleveland, Ohio
Application May 15, 1933, Serial No. 670,824
3 Claims. (Cl. 273—96)

1. A game apparatus comprising a base having a playing surface representing a baseball diamond, infielders' and outfielders' cages disposed to receive a ball manually propelled forward toward the home plate by an element in the hands of one player and manually struck back and returned by an element in the hands of another player, and a plurality of play cages disposed rearwardly of said outfielders' cages whereby when the latter player returns the ball it must clear said infielders' and outfielders' cages in order to lodge in one of said play cages to accomplish a predetermined play which depends upon the skill of the player, each of said infielders' and outfielders' cages comprising an element having a back wall, side walls, an open front, an open top and a plurality of hinged stops depending across said open front.

2,026,792
PORTABLE INCANDESCENT LAMP
Charles S. McGill, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a corporation of Indiana
Application March 21, 1935, Serial No. 12,176
2 Claims. (Cl. 240—54)

1. A mounting for a portable incandescent electric lamp, made of suitable resilient insulating material, comprising a holder provided with a recess shaped and proportioned to receive a lamp socket, having electrical contacts and means for making electrical connections thereto, a boss provided with a hole which communicates with the recess in said holder, for the passage of the electric conductors connected to the lamp socket, and a combined suspension hook and handle comprising a metallic core, the inner end of which is embedded in the wall of the holder and boss portions of said mounting member, and the portion of which beyond said boss is encased in insulating material.

2,026,793
PRESSURE REGULATOR
Garnet W. McKee, Rockford, Ill.
Application October 13, 1934, Serial No. 748,966
7 Claims. (Cl. 50—36)



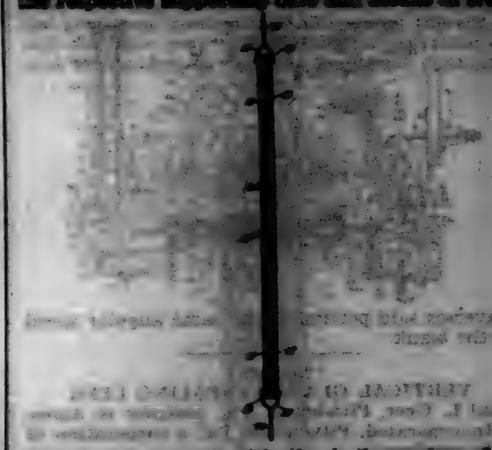
2. In a pressure regulator of the character described, the combination with a casing having

said holder for indicating rotational displacement of said wedge with respect to said support on engagement of same with successive teeth of the gear.

2,026,735
PHOSPHORIC ACID ESTERS OF FATTY ACID MONOGLYCERIDES
Benjamin R. Harris, Chicago, Ill.
No Drawing. Application January 9, 1934, Serial No. 705,826
24 Claims. (Cl. 260—99.19)

1. A non-nitrogenous hydrophilic ester of phosphoric acid with lipophile and hydrophile groups, said ester being represented by the formula

wherein "R", the lipophile portion of the molecule, is an acyl radical and has at least four carbon atoms, "X" is a glycol residue, "Y" and "Z" represent cations, and "n" is an integer.



2,026,736
HUB CAP MOUNTING
Harry J. Horn, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application August 2, 1934, Serial No. 738,154
8 Claims. (Cl. 301—108)

1. In a wheel construction, a central portion having an inwardly extending flange, a split resilient ring having a valley for receipt of said flange and a raised portion on the outside of said flange, and a hub cap having an inwardly extending flange for engagement with said raised portion.

2,026,737
LOOM HARNESS
John Jacob Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 16, 1934, Serial No. 711,483
19 Claims. (Cl. 139—87)

1. In a loom harness for supporting small groups of heddles, heddle supporting bars at the top and bottom thereof, a one piece ball member at the top and another one piece ball member at the bottom, each of said ball members having end portions engaging the end portions of the respective supporting bars and means in free

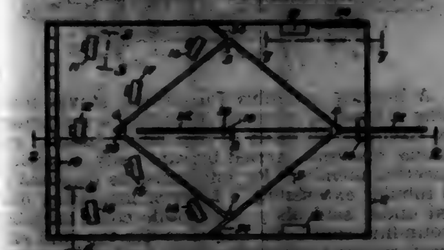
pivotal engagement with the ball members for connecting said ball members to the actuating straps.

2,026,738
CARBURETOR
Charles H. Kirby, Flint, Mich., assignor to Marvel Carburetor Company, Flint, Mich., a corporation of Illinois
Application August 12, 1933, Serial No. 684,497
16 Claims. (Cl. 261—41)

1. A carburetor of the double Venturi type including an inner venturi concentrically located to discharge into the throat of an outer venturi, said inner venturi having an annular fuel and air mixture discharge space formed by an applied sleeve the profile of which determines the effective capacity of the carburetor, means for supplying fuel under a gravity head to said discharge space and vacuum operated means for cutting off the supply of fuel at high suctions within the carburetor.

2,026,739
PISTON FOR INTERNAL COMBUSTION MOTORS
Elmer O. Lang, Grosse Pointe Park, Mich.
Application September 9, 1933, Serial No. 688,826
3 Claims. (Cl. 309—11)

1. A piston having a head, a skirt, pin bosses separated from the skirt, said skirt being sep-



arated from the head except on one of its thrust sides, and a transversely disposed member connected at its ends to one side of respective pin bosses and having connection with the other thrust side of said skirt, said last mentioned thrust side being longitudinally slotted, and the skirt being circumferentially continuous from the slot for providing an approximate full cylinder bearing skirt.

2,026,740
ROTOR FOR HAMMER MILLS
Harry J. Hankoff, Wichita, Kans.
Application September 26, 1933, Serial No. 691,949
3 Claims. (Cl. 83—11)

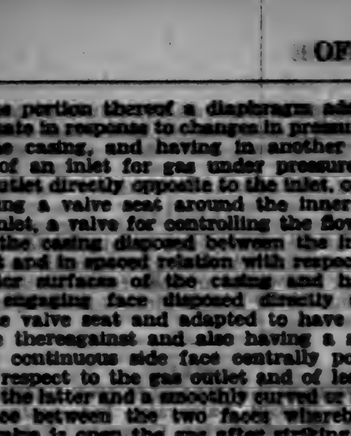
1. A rotor for a hammer mill, comprising polygonal plates having aligned openings for the reception of a shaft, connections each passing removably and in a single length through all the plates and binding them together in a solid body, the plates having straight marginal edges forming marginal angles, said marginal angles being in alignment in alternating plates, to form spaces between alternating plates, and being out of alignment in adjoining plates, whereby the marginal angles of each plate will form spaced projections, extending beyond the marginal edges of adjoining plates, and hammers extended into said spaces and abutting at their inner ends against said edges, to hold the hammers rigid, the connections passing through the hammers and holding their inner ends in the aforesaid abutting relation, the thickness of the hammers being equal to the width of said spaces, and the marginal angles of the plates being sufficiently acute so as to form corners, both of the features last enumerated cooperating to prevent material from being wound about the rotor, between the hammers.

2,026,741
BASEBALL GAME
Joseph C. Mayer, Cleveland, Ohio
Application May 15, 1933, Serial No. 670,824
3 Claims. (Cl. 273—26)

1. A game apparatus comprising a base having a playing surface representing a baseball diamond, infielders' and outfielders' cages disposed to receive a ball manually propelled forward toward the home plate by an element in the hands of one player and normally closed back and returned by an element in the hands of another player, and a plurality of play cages disposed rearwardly of said outfielders' cages whereby when the latter player returns the ball it must clear said infielders' and outfielders' cages in order to lodge in one of said play cages to accomplish a predetermined play which depends upon the skill of the player, each of said infielders' and outfielders' cages comprising an element having a back wall, side walls, an open front, an open top and a plurality of hinged stops depending across said open front.

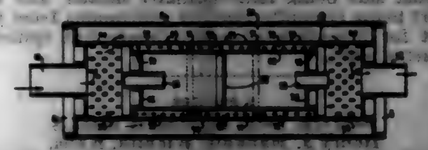
2,026,742
PORTABLE INCANDESCENT LAMP
Charles S. McGill, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a corporation of Indiana
Application March 21, 1935, Serial No. 12,176
2 Claims. (Cl. 240—54)

1. A mounting for a portable incandescent electric lamp, made of suitable resilient insulating material, comprising a holder provided with a recess shaped and proportioned to receive a lamp socket, having electrical contacts and means for making electrical connections thereto, a boss provided with a hole which communicates with the recess in said holder, for the passage of the electric conductors connected to the lamp socket, and a combined suspension hook and handle comprising a metallic core, the inner end of which is embedded in the wall of the holder and boss portions of said mounting member, and the portion of which beyond said boss is encased in insulating material.



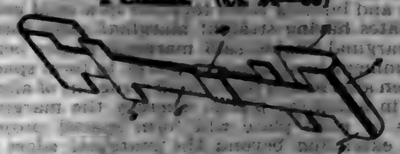
2,026,743
PRESSURE REGULATOR
Garnet W. Mekus, Rockford, Ill.
Application October 12, 1934, Serial No. 748,066
7 Claims. (Cl. 60—36)

2. In a pressure regulator of the character described, the combination with a casing having



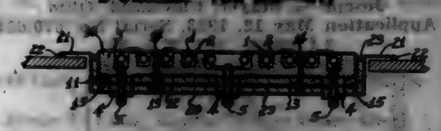
in one portion thereof a diaphragm adapted to fluctuate in response to changes in pressure within the casing, and having in another portion thereof an inlet for gas under pressure and a gas outlet directly opposite to the inlet, of means forming a valve seat around the inner end of the inlet, a valve for controlling the flow of gas into the casing disposed between the inlet and outlet and in spaced relation with respect to the interior surfaces of the casing and having a seat engaging face disposed directly opposite to the valve seat and adapted to have the gas strike thereagainst and also having a substantially continuous side face centrally positioned with respect to the gas outlet and of less width than the latter and a smoothly curved or rounded surface between the two faces whereby when the valve is open the gas after striking against the first mentioned face is caused to flow in a thin tubular stream around the side face of the valve and then to pass directly into the outlet with substantially no pressure loss and in such manner as to create adjacent to the inner end of the outlet a jet action which increases in magnitude as the rate of flow of gas into the outlet increases and effects a corresponding diminution or decrease of pressure of the gas in the casing, and a lever for moving the valve in response to fluctuation of the diaphragm to and from the valve seat in order to regulate or control the pressure of the gas flowing out of the casing via the outlet, fulcrumed centrally in the casing and having the valve connected to one end thereof and its other end connected to the diaphragm so that it operates to open the valve when the diaphragm fluctuates in one direction as the result of a decrease in pressure within the casing.

2,026,794
ELEVATOR
Leonard R. Neighbour, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application March 31, 1933, Serial No. 663,685
26 Claims. (Cl. 198—33)



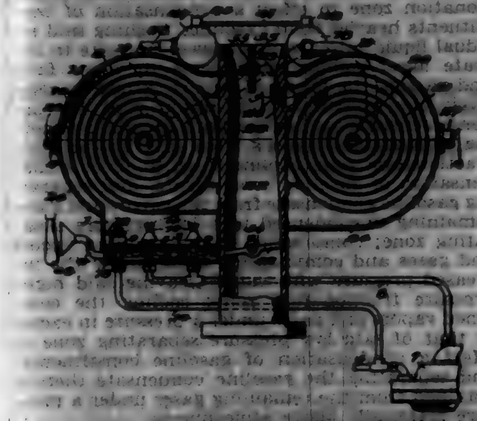
1. An inside elevator for grain and the like comprising a vertically disposed frame, a vertical series of buckets supported thereby, and a receiving hopper adapted to be pivotally connected at either side of the elevator frame adjacent the rear thereof and to be swingable from a position at either side thereof and rearwardly of the plane of the front face of said frame to a position in front of said plane to discharge grain into said buckets at the front of the elevator.

2,026,795
SILENCER
Sidney Oldberg, Detroit, Mich.
Application July 25, 1934, Serial No. 736,663
5 Claims. (Cl. 181—59)



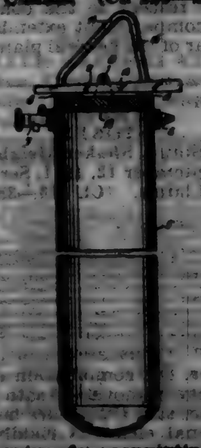
1. In a silencer, two nested casings, an inlet of less diameter than the innermost casing opening directly thereinto, an apertured diaphragm in the innermost casing remote from said inlet dividing the innermost casing longitudinally into an expansion chamber into which the inlet opens, and a resonance chamber in communication with the expansion chamber but otherwise closed, there being a communication from said expansion chamber into the volume between the casings, and an outlet for said volume remote from the aforesaid communication.

2,026,796
BOOK HOLDER AND MARKER
Perry C. Payne, St. Louis, Mo.
Application December 2, 1934, Serial No. 755,833
2 Claims. (Cl. 24—66)



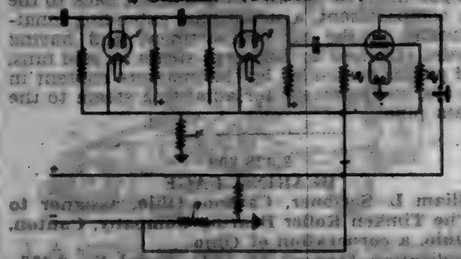
1. A device of the class described comprising a pair of members, each member having a shank terminating at its outer end in a cross head bent over upon itself, the inner ends being T-shaped and means for slidably connecting the shanks.

2,026,797
INCLOSED HEATING ELEMENT FOR ELECTRIC STOVES
Charles A. Pierson, Toledo, Ohio, assignor to The Standard Electric Stove Company, Toledo, Ohio, a corporation of Ohio
Application March 1, 1934, Serial No. 712,663
2 Claims. (Cl. 219—37)



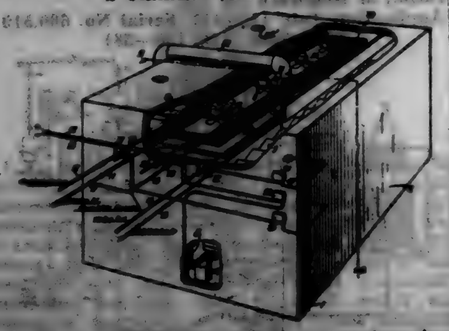
1. A heating assembly for electric stoves comprising a heating element including a refractory body having a plurality of depending tubular extensions, resistors carried by said body, electrical connecting members for said resistors disposed in said tubular extensions, a layer of insulating material under said body, a metallic cover member surrounding said body adjacent the top and side thereof, means cooperating with said cover member to position said layer of insulating material, and a cup-shaped bowl member for said heating element having a plurality of holes in the bottom thereof adapted to register with said depending tubular extensions whereby said element is maintained in centered relation to said bowl.

2,026,798
CARBURETOR
Charles M. Pogue, Norwood, Winnipeg, Manitoba, Canada
Application September 27, 1935, Serial No. 42,548
8 Claims. (Cl. 261—12)



1. A carburetor for internal combustion engines comprising a vaporizing chamber, means for vaporizing fuel therein, a vapor-heating chamber, a pump for pumping vapors from the vaporizing chamber into the vapor-heating chamber, a bypass for fuel vapors from the outlet side of said pump to the inlet side thereof, means for maintaining vapors in said vapor-heating chamber during normal operation of the carburetor under a predetermined pressure, a passage for atmospheric air adapted to communicate with the intake manifold of the engine and means for introducing vapors from said vapor-heating chamber into said atmospheric air passage.

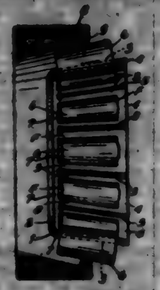
2,026,799
CONVERTER
Eugene L. Barnaud, New York, N. Y., assignor to Pure Carbonic Company of America, New York, N. Y., a corporation of Delaware
Application February 24, 1933, Serial No. 8,579
4 Claims. (Cl. 229—25)



1. An apparatus for converting solid carbon dioxide, comprising a container having an opening at one end with an inwardly directed flange surrounding the opening, a closure adapted to engage the flange and to form therewith a seal, wedging means for forcing the closure against the flange, and means carried by said wedging means for supporting the closure when it is released from the flange.

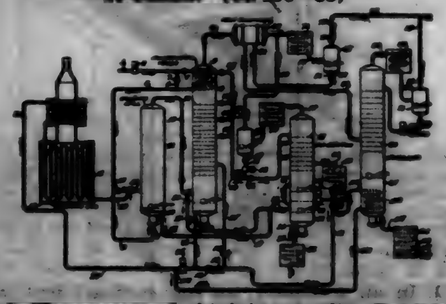
2,026,800
RECEIVER CIRCUIT ARRANGEMENT
Rudolf Rechnitzer, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application June 18, 1934, Serial No. 732,751
In Germany May 23, 1933
4 Claims. (Cl. 250—27)

1. In simplifying apparatus and the like provided with indirectly heated cathode and directly heated cathode type tubes the latter type being provided with at least one grid electrode, and wherein the energization of all the cathodes is started simultaneously, means for delaying the operation of a directly heated cathode type tube during the interval of time taken to heat the cathode of an indirectly heated type tube to substantially the normal operating value comprising means for applying a biasing potential to the grid electrode of the directly heated cathode type tube desired to be controlled which potential is of such value so as to render the tube substantially non-conductive at the beginning of the heating period of the cathodes of the tubes and means when the cathode of one of the indirectly heated cathode type tubes is energized sufficiently to allow normal plate current to flow through the tube for generating and impressing a bias potential upon the grid of the directly heated cathode type tube of such direction and magnitude as to render the first named bias ineffective and to place a normal operating bias upon the directly heated cathode type tube.



2,026,801
HUMIDITY AND TEMPERATURE CONTROL FOR INCUBATION
Hasen C. Ross, Junction City, Kans.
Application July 26, 1929, Serial No. 381,170
2 Claims. (Cl. 119—35)

1. In an incubator, an egg compartment, an air distributing compartment having communication with the upper and lower portions of the egg

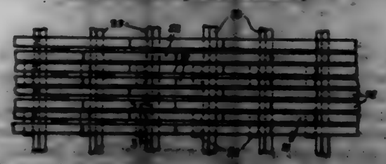


compartment whereby air is circulated from the distributing compartment through the egg compartment and returned to the distributing compartment, a series of heating coils in the air compartment in the form of a rectangular loop, cooling coils arranged longitudinally of the air compartment, means controlled by the temperature in the egg compartment for delivering heating medium to said heating coils, independent means controlled by the temperature in the egg compartment for delivering cooling medium to the cooling coils, a series of fans in the air compartment within said loop for circulating air from the egg compartment to the air compartment back to the egg compartment, a steam pipe extending longitudinally in the air compartment and having nozzles arranged to discharge steam on said fans, and means controlled by the moisture content in the egg compartment for admitting steam to the steam pipe.

2,026,902
BEARING CAGE
William L. Scribner, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application January 19, 1935, Serial No. 2,473
1 Claim. (Cl. 308—218)

A conical roller bearing cage of resilient metal comprising an integral small end ring, a sectional large end ring and conically disposed bridges connecting said integral end ring with the respective sections of said large end ring and forming roller pockets therewith, said sectional ring lying wholly in the same conical surface with said small end ring and said bridges.

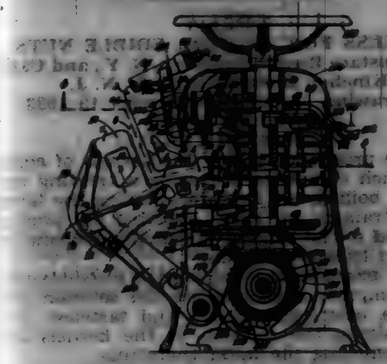
2,026,903
TREATMENT OF HYDROCARBON OIL
Victor Stapleton, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application July 15, 1933, Serial No. 680,519
10 Claims. (Cl. 196—58)



1. The process of obtaining gasoline from relatively high-boiling hydrocarbon oil which comprises: heating said oil to a cracking temperature while in transit through a heating zone, discharging the resultant products into a separating zone and separately removing vapors and residual liquid therefrom; passing at least a portion of said vapors through a high-pressure fractionation zone to effect a condensation of constituents heavier than gasoline; flashing said residual liquid into a zone of lower pressure to liberate lower-boiling constituents in vapor form and passing the liberated vapors through a relatively low-pressure fractionation zone to condense constituents heavier than gasoline; removing uncondensed vapors from said low-pressure fractionation zone, cooling them to effect a condensation of gasoline constituents, and separating gasoline condensate from the vapors and gases remaining uncondensed in a low-pressure separating zone; compressing said remaining vapors and gases and commingling them under the increased pressure with vapors leaving said high-pressure fractionation zone; cooling the combined vapors and gases under a pressure in excess of that of said low pressure separating zone to effect a condensation of gasoline constituents; and separating the gasoline condensate thereby obtained from the remaining gases under a pressure materially above atmospheric.

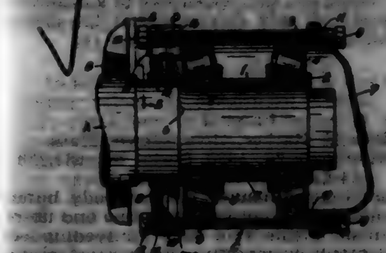
2,026,904
SINK
Percy Howard Sterling, Mount Lebanon, Pa.
Application August 3, 1934, Serial No. 738,336
6 Claims. (Cl. 4—127)

1. As a new article of manufacture, a sink comprising two washing compartments arranged one in the rear of another and each of a substantial size and depth sufficient to enable washing operations to be performed therein, a splash board arranged with respect to the compartments so that the rear compartment extends at least partially in the rear of the general plane of the splash board.



2,026,905
STOKER
Loyd H. Stowe, Shaker Heights, Ohio
Application September 13, 1931, Serial No. 562,426
2 Claims. (Cl. 110—29)

1. In a stoker, the combination of an inclined frame, a plurality of movable grate bars mounted upon said frame, said grate bars being composed of small sectional elements rigidly secured together both laterally and longitudinally with respect to each other, a plurality of stationary grate bars similarly composed of sectional elements, said stationary bars being alternately disposed with respect to said movable bars, and



means for slidably supporting said movable bars comprising members secured to said frame and positioned transversely with respect to said movable bars, and guide members mounted against said transverse members and bearing against said movable bars.

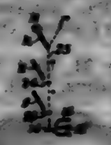
2,026,906
FRUIT PITTER
Albert E. Thompson, San Jose, Calif., assignor to Pacific Machinery Company, San Francisco, Calif., a corporation of California
Application June 16, 1932, Serial No. 617,609
18 Claims. (Cl. 146—23)

1. In a fruit pitter, the combination of an impaling blade providing a path through which the pit of the fruit travels as the flesh of the fruit is severed to the pit, the path being formed to provide a portion extending at an angle from another portion of the path, a pitting member located at the end of the path, pusher means located substantially at the turn in the path to engage the pit of the fruit through the cut formed in the flesh of the fruit and adapted to propel the fruit along the second portion of the path of the pit to locate the pit of the fruit in relation to the pitting means, means for actuating the pusher means, and means for actuating the pitting means in timed relation with the pusher means.

2,026,907
ROLLER BEARING AXLE
Henry H. Timken, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application January 6, 1934, Serial No. 705,875
12 Claims. (Cl. 115—196)

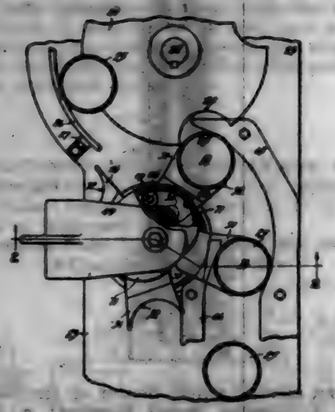
1. A cartridge comprising a cartridge having a longitudinal chamber provided at one end with an opening, a closure for said opening, said cartridge being provided alongside of said chamber with an outlet passageway leading from said chamber to said end of said cartridge, and a fusible closure mounted in said passageway.

2,026,908
SUCTION CLEANER
Harry B. White, Canton, Ohio, and Bernard C. Becker, York, Pa., assignors to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application July 31, 1931, Serial No. 554,570
11 Claims. (Cl. 15—6)



1. A suction cleaner, comprising suction producing means and means for agitating the surface covering to be cleaned, driving means, said suction producing means being operatively connected to said driving means, power transmitting means operatively connecting said driving means and said agitating means and including a clutch located in the drive between said suction producing means and said agitating means and comprising members disengageable by overload, and means responsive to the speed of said driving shaft for preventing reengagement of said clutch members.

2,026,909
ELECTRIC WATER HEATER
Sperry H. Winn, Seattle, Wash.
Application November 28, 1932, Serial No. 644,825
13 Claims. (Cl. 219—39)



1. In an electric water heater of the class described: a tubular metal housing; a tubular phenolitic condensation product lining in said housing; a phenolitic condensation product base in said housing; two terminal posts extending through said base and relatively insulated by said base, electric water heating coils electrically connected between said terminal posts and phenolitic condensation product tubes enclosing said coils said phenolitic condensation product tubes having openings at intervals in the walls thereof.

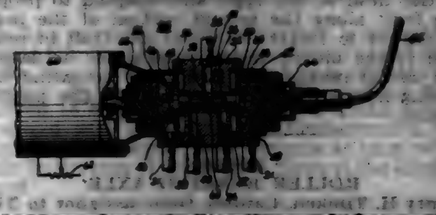
2,026,810
RAILWAY TRACK SWITCH CONTROLLING APPARATUS
Henry S. Young, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application March 31, 1935, Serial No. 12,125
5 Claims. (Cl. 246—219)

2. In combination, a stretch of railway track including a switch, a manually operable switch lever having a normal and a reverse position, a stick relay, a pick-up circuit for said stick relay controlled by traffic conditions in said stretch and which is normally open when said lever is in either the normal or the reverse position but which becomes closed if said lever is moved between its normal and reverse positions while said traffic conditions are suitable for said switch to be operated from one of its extreme positions to the other, a resistor, a stick circuit for said stick relay controlled by said traffic conditions independently of said lever and including said resistor for reducing the magnitude of the current in said stick circuit to a value suitable for retaining a front contact of said relay closed, and means controlled by said lever in its normal and reverse positions for operating said switch to its normal and reverse positions if and only if a front contact of said stick relay is closed.

2,026,811
CAN FEEDING MECHANISM
Nelle P. Bach, Geneva, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application November 2, 1932, Serial No. 640,995
6 Claims. (Cl. 198—32)

1. A can feeding mechanism for receiving cans from a rapidly moving can carrier, comprising a movable member adapted to move adjacent said carrier and at substantially the same speed of travel, can receiving pockets carried by said movable member for receiving the cans from said carrier and for retarding their travel by moving back relative to said member as the cans are advanced, and means for discharging said retarded cans from said feeding mechanism.

2,026,812
HYDROCARBON OIL TREATMENT
Edwin R. Birkhimer, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application March 26, 1930, Serial No. 663,243
17 Claims. (Cl. 196—13)



1. In the art of refining mineral oils, the process which comprises separating an oil containing paraffinic and naphthenic hydrocarbons into fractions respectively richer in paraffinic and naphthenic compounds by extracting said oil with acetophenone.

2,026,813
PROCESS FOR SALTING EDIBLE NUTS
James Eustace Bissell, Brooklyn, N. Y., and Carey Kinchen Bissell, Elizabeth, N. J.
No Drawing. Application October 19, 1933, Serial No. 694,223
8 Claims. (Cl. 99—11)

1. The process of salting the kernels of edible nuts which comprises preparing a treating medium by boiling rice in water, making the liquid saline, straining the same, applying the product so formed to the kernels and finally evaporating the water from the kernels.

7. The process of salting kernels of edible nuts which comprises preparing a saline solution containing a colorless, odorless and tasteless dextrin, applying the solution to the kernels and finally removing the water therefrom.

2,026,814
PROPELLER CONTROL MECHANISM
Frank W. Caldwell, West Hartford, and Kile Martin, Hartford, Conn., assignors, by mesne assignments, to United Aircraft Corporation, a corporation of Delaware
Application June 6, 1934, Serial No. 729,214
11 Claims. (Cl. 170—142)

1. Means for controlling the speed of an engine by changing the pitch of a propeller driven thereby comprising, in combination, means driven by the engine, means driven at a constant speed and means actuated by, and responsive to a difference in the speeds of, said driven means for changing the pitch of the propeller.

2,026,815
PENCIL
Frederic E. Barber, Georgetown, Mass.
Application July 26, 1933, Serial No. 682,238
24 Claims. (Cl. 120—48)

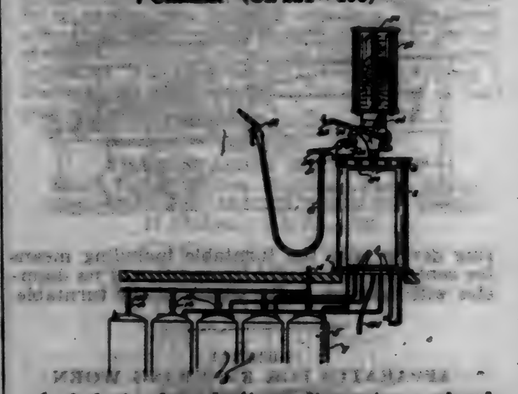
5. A pencil comprising a tubular body having a writing element projecting from one end thereof, mechanism within said body for feeding said writing element outwardly, and control means associated with said mechanism for maintaining the end of said writing element at a predetermined distance beyond the end of said body, said control means including a member having an end contemplates with and disposed within

the confines of the end of said writing element and arranged constantly to engage the writing surface as the writing progresses.

22. A writing element for use with a pencil of the class described, said writing element comprising an elongate lead having an axial bore extending from one end to the other.

2,026,816
SOAP PREPARATION
Heinrich Bertsch, Chemnitz, Germany, assignor, by mesne assignments, to American Hyalsol Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 2, 1933, Serial No. 692,869. In Germany October 6, 1932
20 Claims. (Cl. 87—8)

1. A soap composition for use in hard water comprising in combination essentially a water soluble soap and a water soluble salt of an acid sulphuric acid ester of a higher aliphatic alcohol in proportions which prevent precipitation of the soap during use in hard water.



7. A stable soap composition comprising in combination a water soluble soap and a water soluble salt of an acid sulphuric acid ester of lauryl alcohol.

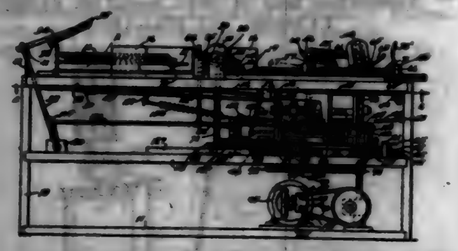
2,026,817
PROCESS FOR THE MAKING OF DYE BATHS AND PRINTING COLORS FOR NAPHTHOL DYEING
Heinrich Bertsch, Chemnitz, Germany, assignor to H. Th. Böhme, Aktiengesellschaft, Chemnitz, Germany, a corporation of Germany
No Drawing. Application July 8, 1933, Serial No. 679,556. In Germany July 9, 1932
9 Claims. (Cl. 8—6)

1. In a process of manufacturing dye baths and printing colors for naphthol dyeing, the step which comprises mixing a naphthol dye component with a dispersion agent containing an aliphatic higher molecular alcohol ester of an inorganic oxygen-containing acid selected from the group consisting of sulphuric and phosphoric acids, said ester containing at least one free hydroxyl group.

9. The process of increasing the dispersing power of a treatment liquid, which comprises mixing with the liquid a dispersion agent comprising a phosphated polyhydroxy alcohol of the fatty series, said phosphated product containing at least one free hydroxyl group.

2,026,818
LIQUID DISPENSING DEVICE
William H. Beasley, Oregon City, Oreg.
Application May 14, 1935, Serial No. 21,382
7 Claims. (Cl. 221—100)

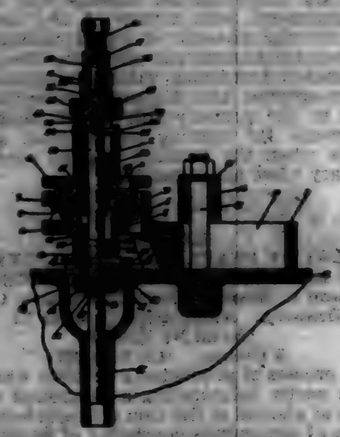
1. A device for selectively dispensing a plurality of liquids, the combination of liquid retention means, a plurality of secondary valves arranged in a common path and each connected to a fluid retention means, a movable supporting element, a primary valve carried thereby and movable to engagement with either of the secondary valves for the passage of liquid through both, operating mechanism for operating the primary and selected secondary valve simultaneously, a liquid measuring and dispensing receptacle connected to the primary valve, and compressible fluid means for ejecting liquids from such receptacle when the primary and its cooperating secondary valve are closed.



2,026,819
PROCESS OF PREPARING A CATALYST FOR THE REDUCTION OF SULPHUR DIOXIDE
Maitland C. Boswell, Toronto, Ontario, Canada
No Drawing. Application October 27, 1932, Serial No. 639,782
1 Claim. (Cl. 23—231)

1. A process of producing a catalyst which consists in partly dehydrating a compound or compounds of a metal of the iron group, selected from a group of compounds consisting of hydrated sulphides, and a mixture of hydrated sulphides with hydroxides or oxides, in the absence of air, subjecting the partly dehydrated material to the action of oxygen to increase its susceptibility to the action of sulphur dioxide; subjecting it to the action of sulphur dioxide at more than room temperature; and finally subjecting the material to the action of hydrogen and sulphur dioxide at a higher temperature than that of the previous treatment with sulphur dioxide.

2,026,820
AUTOMATIC PHONOGRAPH
Ray B. Bryant, Dallas, Tex.
Application September 29, 1926, Serial No. 494,997
9 Claims. (Cl. 274—16)



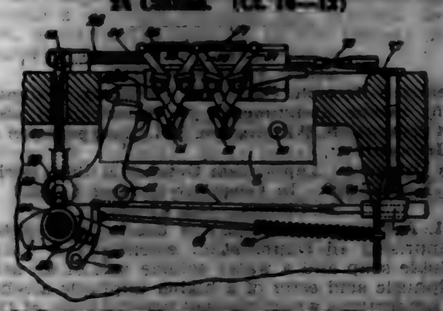
7. In a sound reproducing apparatus, a rotatable turntable, a plurality of records of different diameters arranged in a stack, a transferring device for receiving a record from the stack for delivery to the turntable, means for positioning the record irrespective of its diameter at a common point for delivery to the transferring device, means for dislodging the record from the stack

into said device, and automatically operated means for ejecting the record from the transfer-

ring device onto the turntable including means for centering the record irrespective of its diameter with relation to the center of the turntable.

2,026,221
APPARATUS FOR RENEWING WORN VALVE SEATS
Charles H. Cleveland, Charles A. Heine, and John T. Allison, Minneapolis, Minn.
Application September 30, 1931, Serial No. 565,980
11 Claims. (Cl. 90—13.5)

11. In a tool of the class described, a supporting sleeve, a universal support therefor comprising a bracket adapted to be secured to a face of an engine block, a hollow spindle mounted for rotation in said sleeve, a cutting element supported on the lower end of said spindle, a feed rod mounted in said spindle and non-rotatable with respect thereto, and means movably mounted on the feed rod and operatively engaging said spindle, and whereby the latter may be axially moved with respect to said feed rod to thereby feed the cutting element into the work.



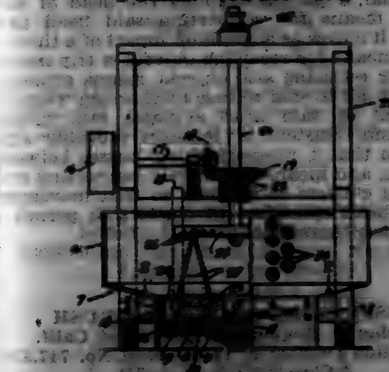
2,026,222
SPARK PLUG
Isaac Earl Close, Oakland, Calif.
Application May 5, 1934, Serial No. 724,091
7 Claims. (Cl. 123—169)

1. In a spark plug adapted for use with an internal combustion engine and including as parts thereof an insulator and a shell enveloping a portion of said insulator and an element of heat-conducting material interposed between said insulator and said shell so as to be in direct contact with the block of said engine, whereby heat

transmitted to said insulator will be effectively dissipated to said block.

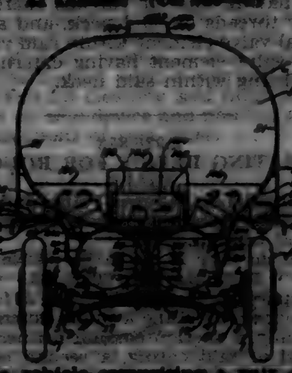
2,026,223
BOLT MAKING MACHINE
William L. Close, Tiffin, Ohio, assignor to The National Machinery Company, Tiffin, Ohio, a corporation of Ohio
Application March 30, 1934, Serial No. 718,122
24 Claims. (Cl. 10—12)

1. In combination, a plurality of dies arranged in a straight line, a reciprocating slide carrying a plurality of tools arranged to coact with said dies to work upon blanks held therein, transfer mechanism, and means for moving said mechanism to transfer blanks from the first die to the second and from the second to the third during the time the tools carried by said slide are spaced from said dies, for holding said mechanism stationary during the time the tools are in engagement with the blanks in said dies, and for moving said mechanism on its return travel from the third and second dies to the second and first dies, respectively, after said tools have begun to move out of engagement with the blanks.



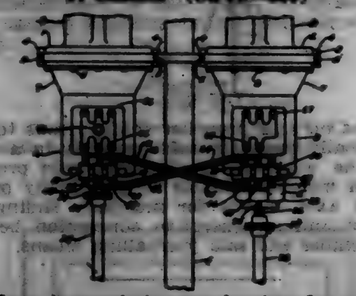
2,026,224
CABLE CLAMP
Ellis W. Cooper, Los Angeles, Calif.
Application June 23, 1934, Serial No. 732,168
7 Claims. (Cl. 24—135)

1. A cable clamp for use on a cable of a given diameter including, two plate members, one member having a groove of inwardly diminishing cross



section for partially receiving a cable, said groove having substantially flat cable engaging walls pitched at a comparatively small angle with respect to one another, the groove being so proportioned with respect to the diameter of the cable that the cable cannot engage the bottom wall of the groove and has a portion projecting from the mouth of the groove, the other member being adapted to engage the portion of the cable projecting from the groove, and means for forcing the members toward one another to wedge the cable in the groove.

2,026,225
DEVICE FOR MILLING AND SEPARATING ORES
John H. Dooner, Los Angeles, Calif.
Application February 10, 1934, Serial No. 711,037
1 Claim. (Cl. 209—191)

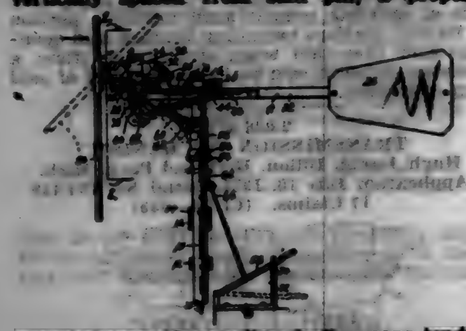


In a device for milling and separating ore, a tank, an annular mortar with perpendicular cylindrical sides and an inwardly sloping bottom forming a channel extending around the bottom of said tank, radial grooves in the upper surface of the bottom of said mortar, pestle-sleds, means to increase the weight of said sleds, drag rakes attached to said sleds, and means to impel said sleds around said channel and over pieces of ore fed to said mortar.

2,026,226
TRANSMISSION TANK VEHICLE
Hugh Joseph Dillon, Highland Park, Mich.
Application March 26, 1934, Serial No. 717,554
21 Claims. (Cl. 180—5)

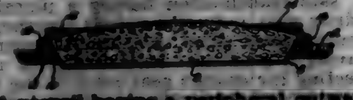
20. In a vehicle comprising a pair of engines provided with inclined cylinders, the combination of a tank provided with a cab compartment, said tank having its lower side extended to form a beam structure extending longitudinally at the lower side of said tank and its cab compartment and between the inclined cylinders of said pair of engines, the lower side of said cab compartment being provided with openings therein to receive the inclined cylinders, said lower side of said cab compartment having a portion of its wall portions extending between said openings and over said beam structure to form a walkway between said inclined cylinders of said pair of engines.

2,026,227
TRANSMISSION MECHANISM
Hugh Joseph Dillon, Highland Park, Mich.
Application July 19, 1934, Serial No. 735,459
17 Claims. (Cl. 74—325)



1. In a transmission mechanism for a vehicle having a pair of engines and driving mechanism, the combination of a transmission suitably mounted and operatively connected with one of the engines and the driving mechanism of the vehicle, said transmission having a plurality of under drive gear reduction speeds together with an overdrive gear speed, said transmission further having a gear shift mechanism for manually selecting the desired gear ratio of the transmission, a second transmission suitably mounted and operatively connected with the other of the engines and the driving mechanism of the vehicle, said second transmission having gear shift mechanism together with a number of under drive gear reduction speeds equal in number to the under drive gear reduction speeds of said first mentioned transmission, a free wheeling mechanism suitably mounted and operatively interposed between said second transmission and the driving mechanism of the vehicle, and means operatively connecting the gear shift mechanism of said first mentioned transmission with the gear shift mechanism of said second transmission to permit automatic operation of the gear shift mechanism of said second transmission when the gear shift mechanism of said first mentioned gear mechanism is manually operated, to shift the under drive gear reduction speeds thereof, the over drive gear of said first mentioned transmission being shiftable by the manual gear shift mechanism of said first mentioned transmission without effecting any shifting of gear ratios in said second transmission to enable the vehicle to be driven by one only of said pair of engines and with the over drive gear speed of said first mentioned transmission when said free wheeling mechanism is providing free wheeling operation.

2,026,228
WIND DRIVEN GENERATOR STRUCTURE
William G. Burns, Clarinda, Iowa
Application April 16, 1935, Serial No. 16,179
13 Claims. (Cl. 290—55)



8. In a wind driven generator structure, a frame pivoted on a vertical axis, a vane for main-

taining said frame in a predetermined position relative to the direction of the wind, a horizontal pivot pin supported by said frame, propeller shaft journalling means mounted on said pivot pin, a propeller shaft journalled therein and vertically spaced from said pin, a propeller

mounted on said propeller shaft, means tending to normally maintain said propeller in a vertical plane, a generator driven by said propeller shaft, a member slidable longitudinally of said vertical axis, means for manually sliding said member and an operative connection between said member and said journalling means.

2,026,529
FIR FAN
Flora Ellinger, Milwaukee, Wis.
Application February 15, 1935, Serial No. 6,636
5 Claims. (Cl. 53—6)

1. A utensil having a peripheral outwardly directed, downwardly inclined, relatively wide, plane surfaced flange at its upper edge, and a trough depending from the outer edge of said flange.

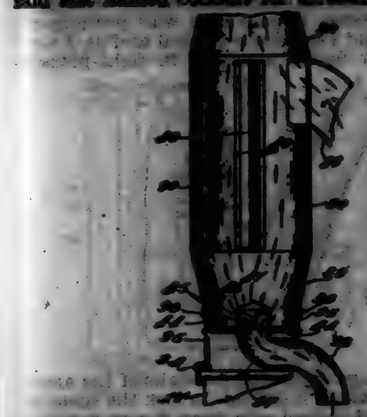
2,026,530
CASEMENT WINDOW SCREEN
Harry H. Everhard, Canton, Ohio
Application June 15, 1933, Serial No. 27,007
2 Claims. (Cl. 160—14)

1. In a metal casement window frame, clip means detachably mounted on said casement frame, and means on a screen frame for detachably locking the screen frame to said clip means.

2,026,531
TARGET GAME
Steve Graf, Detroit, Mich.
Application May 14, 1934, Serial No. 725,562
3 Claims. (Cl. 273—101)

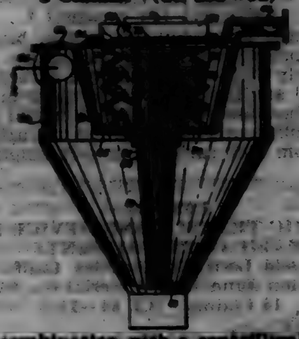
1. In a target formed to resemble an egg-laying animal, a part resembling the head of said animal, means for supporting said head part whereby it moves as a result of impact of a thrown missile, means for receiving objects, a trip mechanism for releasing said objects, means connecting said head to said release mechanism whereby movement of said head actuates said release mechanism, clusters of feathers movably supported so that a released object passes between the same, and means operatively connecting said head and clusters of feathers so that movement of said head spreads said clusters to permit a ball to pass therebetween.

2,026,532
DISPENSING FOUNTAIN BRUSH
Weldon D. Henderson, Hollywood, Calif.
Application October 9, 1934, Serial No. 747,530
4 Claims. (Cl. 15—124)



1. The combination of a collapsible tube and a shaving brush, said collapsible tube including a neck having external and internal threads thereon, said brush including a bristle portion and a head, said head having an external valve member rigidly secured thereto, said external valve member having interior threads thereon fitting the outer threads on said neck, and a rotatable cylindrical valve element within said valve member, said valve element having external threads thereon fitting within said neck.

2,026,533
SEPARATING DEVICE FOR ROUGHAGE MILLS
John Holland-Lois, Crown Point, Ind., assignor to The Lois Manufacturing Company, a corporation of Indiana
Application May 21, 1932, Serial No. 613,754
5 Claims. (Cl. 209—144)

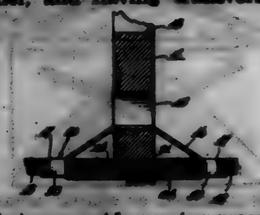


1. A separating mechanism for a forage preparing device comprising a single elongated cylindrical casing, a suction conduit connected to the upper end of said casing, a second conduit for discharging the material tangentially into the upper end of said casing, vertically extending spaced apart baffles secured to the inner wall of said casing, a conduit located in the axial center

adjacent the lower portion of said casing, and a deflector mounted adjacent the upper end of said last named conduit for directing a blast of

air outwardly toward the cylindrical walls and against the baffles of said casing for separating the lighter material from the heavier material.

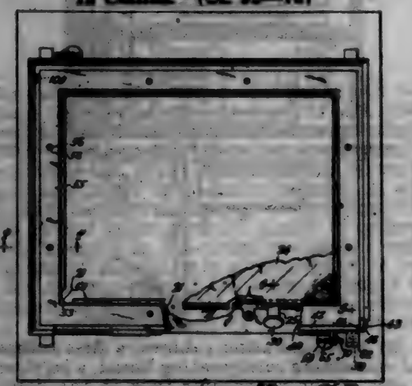
2,026,534
SEPARATING APPARATUS
Ludwig F. Kelly, Montrose, N. J.
Application July 22, 1932, Serial No. 624,673
8 Claims. (Cl. 183—61)



1. In combination with a centrifugal separator removing solids from fluids, a filter interposed in the fluid outlet of said separator, fluid conveying means in said separator facing at one end a section of said filter and discharging towards the outlet for said solids at its other end, and means propelling the fluid in said means away from said filter and applying suction to said section.

7. In combination with a corrugated filter, a suction device for cleaning said filter, and a suction nozzle on said device and notched to register with corrugations of said filter.

2,026,535
BUILDING CONSTRUCTION FABRICATING DEVICE
Joseph A. Irwin, Cleveland, Ohio
Application October 12, 1933, Serial No. 693,126
12 Claims. (Cl. 72—115)



1. A device of the character described, the combination with a support, of a panel, securing means passing about said support, and transversely of the thickness of said panel at spaced points and to the outer side of said panel, and extending along the outer surface of said panel, said securing means being operable to secure said

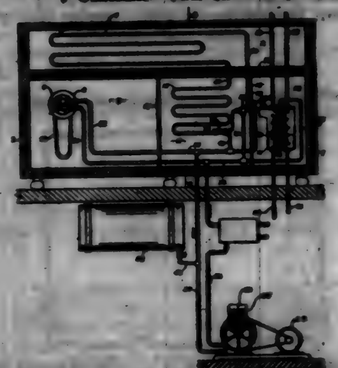
panel to said support; and shielding means having a base portion lying beneath said securing means where they pass along the outer surface of said panel, and having transverse portions

interposed between said securing means and said panel to the points where said securing means pass transversely of said panel, to protect said panel against injurious contact with said securing means.

2,026,536
NEGATIVE HOLDER
Harry C. Jones, New York, N. Y.
Application December 1, 1933, Serial No. 700,620
15 Claims. (Cl. 95—76)

1. In a negative holder for photographic printing by vacuum-produced contact between a negative and a sensitized surface, an inner frame having an outer inwardly inclined surface, a sheet of transparent material adapted to carry the negative and supported by said frame, means for sealing the sheet to the frame, an outer frame arranged to rest on the inclined surface of the inner frame, means carried by the outer frame for sealing said outer frame to the sensitized surface, means for sealing the outer frame to the inclined surface of the inner frame, an inwardly extending member on the outer frame adapted to support the sensitized surface on the application of vacuum to the holder, yieldable clamps for holding the frames together, and means cooperating with the clamps for adjusting the height of said member relatively to the sheet.

2,026,537
ENVELOPE
George H. Kennedy, Jr., Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a corporation of Maine
Application October 11, 1933, Serial No. 693,163
2 Claims. (Cl. 229—69)



1. An envelope having corresponding areas of its seal flap and rear wall gummed or coated with an adhesive of a type adapted to adhere to itself upon the application of pressure alone, said envelope having spaced lines of folding, one to

permit folding of the seal flap without registration of the gummed or coated areas and the other

to bring said gummed or coated areas into register.

2,026,526
REFRIGERATING MEANS AND METHOD
Edward C. Koepke, Cleveland, Ohio, assignor to The Bishop & Babcock Sales Company, Cleveland, Ohio, a corporation of Ohio
Application June 10, 1931, Serial No. 543,254
7 Claims. (Cl. 62—161)

1. In a refrigerating cabinet, a first compartment containing refrigerating liquid, a refrigerating unit of the evaporator type in the liquid, a second compartment, a refrigerator unit of the expansion type comprising a refrigerating conduit in the second compartment, an expansion valve device the operation of which is controlled by temperature alone, the device comprising a thermally responsive means disposed in thermally responsive proximity to said conduit and controlling the supply of refrigerant to the conduit to maintain the conduit at substantially a constant temperature, and a pump for pumping liquid refrigerant to and for withdrawing evaporated refrigerant from each unit independently whereby the temperature of one compartment may be maintained independently of that of the other, the temperature control expansion valve device deriving its controlling temperature from a portion of the conduit in the second compartment and adjustable to vary the temperature of the conduit independently of the temperature of the liquid in the first compartment and to maintain the temperature of the conduit higher than that of the liquid.

2,026,529
TEAKETTLE SPOUT
Richard F. Krause, Massillon, Ohio, assignor to The Enterprise Aluminum Company, Massillon, Ohio, a corporation of Ohio
Application April 2, 1932, Serial No. 602,779
1 Claim. (Cl. 53—6)

A vessel having wall portions of uniform thin gauge metal, a spout therefor having a peripheral attaching flange provided with a plurality of rivet studs and a second attaching flange, said rivet studs and said second attaching flange extending through apertures in said thin wall portions of said vessel, said rivet studs headed and said second attaching flange arranged in tight-pressed

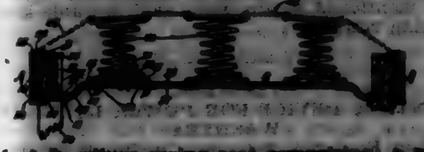
frictional engagement with the walls of the aperture through which it extends to lock the spout to the vessel, said second attaching flange projecting beyond the inner surface of the vessel wall and the heads of said rivet studs upward the entire periphery of the aperture.

2,026,540
PRODUCTION OF CARBON BISULPHIDE
Michael J. Lasky, Fort Worth, Tex.
No Drawing. Application March 30, 1934, Serial No. 716,581
15 Claims. (Cl. 23—206)

1. A process for producing carbon bisulphide which comprises mixing together finely divided carbon, finely divided sulphur and carbon bisulphide liquid and heating such mixture in a container in the absence of free oxygen to a temperature sufficiently high to form carbon bisulphide from such carbon and such sulphur.

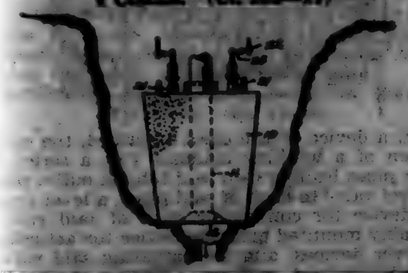
2,026,561
ELECTRIC TRANSLATING DEVICE FOR MUSICAL INSTRUMENTS
Arnold Lesti, Los Angeles, Calif.
Application June 8, 1933, Serial No. 25,166
14 Claims. (Cl. 84—1)

1. The combination, in steel stringed musical instruments, of a plurality of wire coils, iron cores contained within the said coils each having a face of equal distance to the strings, means for sending a direct current through the coils to produce a series of magnetized zones, in each steel string, with reversed magnetic polarity for adjacent zones whereby induced currents are established in the coils when the strings are vibrated, means for disconnecting the direct current, means for amplifying the induced currents and of translating them into sounds.



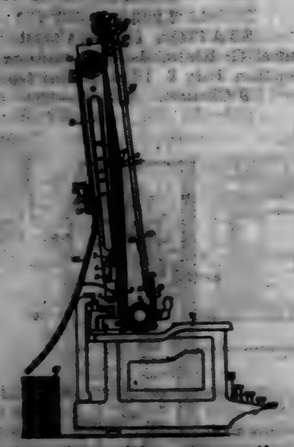
2,026,562
GAS ANALYSER APPARATUS
Maryan P. Matuszak, Pittsburgh, Pa., assignor to Fisher Scientific Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 11, 1932, Serial No. 638,128
7 Claims. (Cl. 23—254)

1. Gas analysis apparatus framework comprising two rigid vertical frame members spaced from each other, a plurality of individual unitary supporting members carried by said frame members and each provided with a horizontally extending analytical element-supporting platform, said supporting members being arranged in alignment and rigidly connected together by removable con-



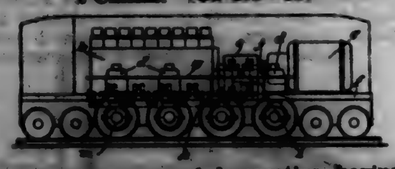
necting means adapted to permit the introduction or removal of units according to need, slide members carried by the frame members for adjustment vertically thereof and adapted to be locked in adjusted position, and means connecting the end units to said slide members.

2,026,563
FURNITURE SPRING SEAT
Charles C. Mentzer, Buffalo, N. Y.
Application June 14, 1933, Serial No. 675,144
4 Claims. (Cl. 155—179)



1. A furniture spring seat comprising: a main frame; a pressure flange secured to said frame; a bar adapted to support a person's weight; a pair of lateral guides connected with said flange and embracing opposite edges of said bar; and an overload spring resiliently urging said bar toward said flange.

2,026,564
MEANS FOR CONTROLLING WELLS
James L. Monahan, San Antonio, Tex.
Application May 26, 1934, Serial No. 727,444
4 Claims. (Cl. 166—15)



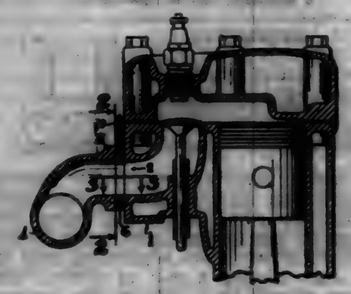
1. A well flow controlling device comprising, a body having sufficient weight to hold it in place at the top of the well against the flowing pressure thereof and having a central vertical passage therethrough for the well fluid, and means in the body for closing off said passage, the body having additional passages for conducting a fluid through said body into the well for equalizing the pressure of the well fluid.

2,026,845
TYPEWRITER ATTACHMENT
William C. Fiddler, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a corporation of Ohio
Application January 2, 1935, Serial No. 251
17 Claims. (Cl. 197—126)

1. In combination with a typewriter, an attachment therefor adapted to support and guide a plurality of strips of paper having spaced aligning holes therein to the typewriter comprising a frame having an upper bar, a spring operated drum on said upper bar, a guide member on said bar, a slide member including a transverse bar slidable in said guide member, means to connect the slide member to the drum and means comprising spaced pins on said slide member to engage the leading ends of the strips of paper by engagement with the spaced aligning holes whereby the strips may be kept in alignment during the feeding thereof.

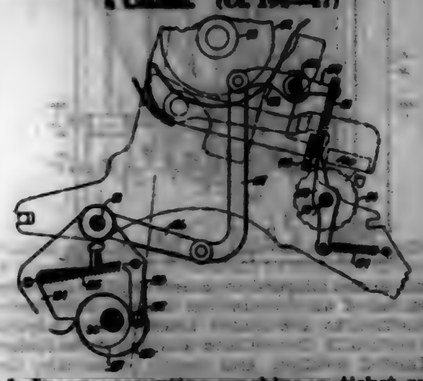
2,026,846
LOCOMOTIVE
Gustav Fleischer, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Augsburg, Germany, a corporation of Germany
Application February 11, 1933, Serial No. 656,394
In Germany February 27, 1932
2 Claims. (Cl. 105—35)

2. An engine powered locomotive having an engine, generator and motors accommodated in a comparatively small space and comprising a pair of spaced longitudinal side frame members, a plurality of driven axles supporting said members and each having a pair of driving wheels, the driving wheels on a side of the locomotive being closely spaced apart, an internal combustion engine positioned longitudinally between said frame members directly above and extending across a plurality of said driven axles and having its lower portion extending down between the frame members and between the upper portions of the driving wheels, a pair of vertical electric motors for each driven axle provided above the ends of the axles at opposite sides of the locomotive, and



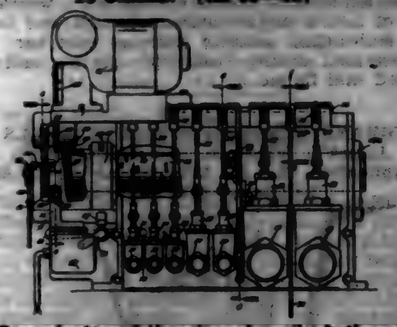
an electric generator driven by said engine for energizing said motors, said generator being mounted on said members longitudinally of the engine and having its shaft vertically spaced above the engine shaft and in driving connection therewith.

2,026,947
STATION INDICATOR
Samuel G. Richards, Des Moines, Iowa
Application July 9, 1934, Serial No. 734,592
9 Claims. (Cl. 40—88)



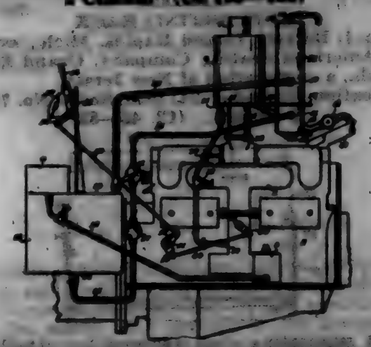
3. In a station indicator, the combination of a frame, a flexible apron, means for supporting the apron within the frame, a series of spaced apart stop devices fixed to the apron, a stop device carried by the frame, means for advancing the apron, and means actuated by said apron advancing means for moving the apron to position where the stop devices on the apron will, during the further advance of the apron, engage and be held by the stop device on the frame.

2,026,948
COOLING MEANS FOR INTERNAL COMBUSTION ENGINES
Ernest W. Ruber, San Francisco, Calif.
Application August 19, 1933, Serial No. 685,869
8 Claims. (Cl. 123—171)



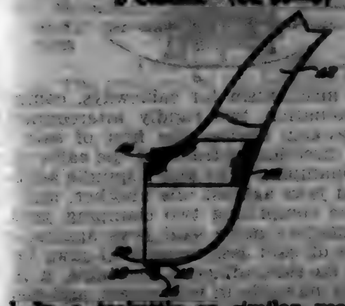
1. In an engine of the internal combustion type, a cylinder block having exhaust ports therein, an exhaust manifold secured to the block in spaced relation thereto, an elongated metal plate of high thermal conductivity interposed between and in contact with said block and manifold and provided with openings registering with said exhaust ports.

2,026,949
CASH REGISTER
Herman F. Sedgebury, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Original application September 22, 1926, Serial No. 137,604, now Patent No. 1,957,471, dated May 8, 1934. Divided and this application October 12, 1932, Serial No. 638,263
4 Claims. (Cl. 194—47)



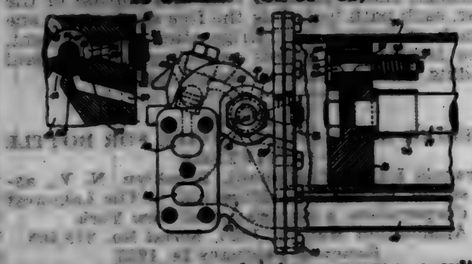
1. In an accounting machine, a ticket severing mechanism comprising a stationary knife, a movable knife, means for urging the movable knife toward the stationary knife, means for retracting the movable knife and thereby storing energy in the first mentioned means and additional means for further storing energy in said first mentioned means while said movable knife is being retracted.

2,026,950
CONTROL DEVICE FOR POWER LAUNDRY WASHERS
Paul Frederick Schaum, Cincinnati, Ohio
Application June 24, 1933, Serial No. 676,282
13 Claims. (Cl. 68—18)



1. In a device of the class described, the combination of a washing machine tub, a series of supply pipes leading into said tub, an outlet pipe, a control valve in each of said pipes, a lever actuated device for controlling each of said valves, a movably mounted program device for actuating said lever devices, and for actuating said valves in predetermined sequence, driving means for actuating said program device, manually actuated supporting means for moving said program device into and out of operative relation with said driving means and said lever devices, means for locking the program supporting means in operative position, and means automatically operated for releasing said locking means when the program device has completed its movement.

2,026,951
FUEL OIL GASIFYING DEVICE FOR COMBUSTION ENGINES
McLennan C. Stolz, Albany, Oreg., assignor to Stolz Mfg. Co., Portland, Oreg., a corporation of Oregon
Application February 5, 1934, Serial No. 709,900
2 Claims. (Cl. 123—122)



1. In apparatus of the class described, the combination with the exhaust manifold of a combustion engine, a heating chamber disposed in said exhaust manifold directly in the path of the exhaust gases, said chamber having a conical base with an opening at the apex thereof, a conduit integral with the base of the chamber and extending at a substantially sharp inclination therefrom, said conduit having a cut out portion therein, an auxiliary fuel oil reservoir disposed adjacent to and in vertical alignment with the heating chamber, the conduit passing through the lower portion of the reservoir with the cut out portion communicating with the interior of said reservoir, a pipe connected to and communicating with the interior of the heating chamber at the top thereof and leading to the intake manifold of the combustion engine, said pipe adapted to deliver the gases from within the heating chamber to the intake manifold, means for automatically controlling the rate of flow of said gases, and hydrostatic means responsive to the pressure created within said heating chamber for controlling the flow of fuel oil into said chamber and for conducting the resultant gases under substantially uniform pressure from said chamber to said intake manifold.

2,026,952
SPOUT ATTACHMENT FOR VESSELS
James N. Smith, Westfield, N. J., assignor, by mesne assignments, to The Enterprise Aluminum Company, a corporation of Ohio
Application July 29, 1932, Serial No. 626,056
3 Claims. (Cl. 53—6)

1. In a teakettle or similar vessel, a spout having a peripheral attaching flange extending outwardly around the sides and bottom of the base portion thereof and inwardly across the top of said base portion, said outwardly and inwardly extending portions of said flange both provided with means for attaching the spout to the vessel.

2,026,953
LIFTING MECHANISM
Ralph E. Smith, Galion, Ohio, assignor to The Galion Metallic Vault Company, Galion, Ohio, a corporation of Ohio
Application December 12, 1931, Serial No. 581,292
23 Claims. (Cl. 60—52)

1. In a hoisting mechanism, a pump, a cylinder having a head, a piston in said cylinder, said head having a valve chamber with an inlet from the cylinder, a check valve therein and an outlet into the cylinder and an inlet from the pump and a single valve to close the inlets and the outlet.

2,026,954
GASKET WITH INTEGRAL MOLDED FLANGE
Benjamin J. Victor, Oak Park, Ill., assignor to Victor Manufacturing & Gasket Company, Chicago, Ill., a corporation of Illinois
Application September 25, 1933, Serial No. 691,477
1 Claim. (Cl. 288—1)

A gasket, comprising sheets of compressed impregnated asbestos, an intermediate metal reinforcing layer therebetween, integral projections in the metal layer penetrating the asbestos, the gasket having cylinder and water openings therein, a substantial portion of the gasket area being densified by compression and leaving ribs of less density and greater resiliency than the compressed portion about said openings.

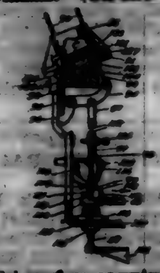
2,026,955
APPARATUS FOR PRECOOLING REFRIGERATOR CARS
Henry T. Wikle, San Francisco, Calif.
Application September 24, 1934, Serial No. 744,571
1 Claim. (Cl. 62—94)

Apparatus for pre-cooling a refrigerator car having a central lading compartment and a refrigerating compartment at each end thereof communicating therewith at the top and bottom, the lading being arranged in two stacks with a vacant space between them in the center of the car, each stack being of less height than the interior of the car and having longitudinal air spaces extending through it communicating at one end with the lower portion of the refrigerating compartment and at the other end with said central vacant space, comprising removable horizontal baffles closing off said longitudinal spaces from the free space above the lading; a removable apertured vertical baffle between the top of each

stack of lading and the ceiling of the car; and removable fans positioned upon the lading, one in line with the aperture of each vertical baffle, said fans and said baffles causing air to circulate

through closed paths in each end portion of the car, each path including the free space above one stack of lading, one refrigerating compartment, the longitudinal spaces extending through said lading, and the central vacant space.

2,026,256



TIMING AND SAFETY DEVICE FOR BOTTLE CONVEYERS

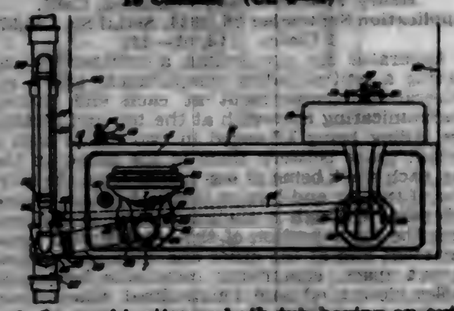
Francis Edgar Youngdahl, Brooklyn, N. Y., assignor, by mesne assignments, to The Lakewood Corporation, a corporation of New York

Application May 21, 1928, Serial No. 279,466

Renewed February 24, 1933

20 Claims. (Cl. 226—52.1)

1. In a machine for capping containers, the combination with means for feeding containers, of mechanism for feeding and heating heat plastic caps for the containers, and means actuated by the containers in said container feeding means for controlling the feed of the caps in said mechanism, said cap feed controlling means including a yieldingly supported plate adapted to engage each container successively, and said container feeding means including a plurality of conveyers angularly disposed with respect to each other, a transfer device for moving the containers from one conveyer to the other and into engagement with said plate.



2,026,257

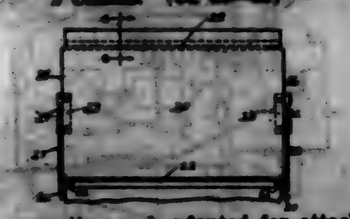
COMBINATION PLUMBING FIXTURE

Arthur H. Zimmerman, Hammond, Ind.

Application June 9, 1933, Serial No. 725,643

10 Claims. (Cl. 4—3)

1. In combination, a bath tub having an outer front wall and an inner front wall in proximity thereto, a water-closet mounted in raised position on said outer front wall, a lavatory mounted in raised position on said outer front wall, and plumbing connections for said water-closet and lavatory disposed behind said outer front wall and between said outer and inner front walls.



2,026,258

SUPPORTING RACK

Glenn J. Barrett, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey

Application December 24, 1934, Serial No. 758,537

2 Claims. (Cl. 45—89)

1. A supporting rack adapted for attachment to an angularly disposed support comprising a pair of arms pivotally connected at one end intermediate the ends of the support and a cross member pivotally connected adjacent the free ends of the arms whereby the arms may be folded upwardly parallel with the ends of the support and the cross member thereafter folded downwardly behind and against the under side of the upper edge of the support.

2,026,259

SHEET METAL NUT AND PROCESS OF MAKING SAME

Edward C. Baynes, Birmingham, Mich.

Application May 13, 1932, Serial No. 670,869

2 Claims. (Cl. 10—86)

1. The process of producing sheet metal nuts comprising draw punching a relatively long sheet metal blank having its width only slightly greater than the outside diameter of the threaded portion of the finished nut, said draw punching operation forming a flanged opening, forcing additional metal toward and into said flange longitudinally of the blank, thereby lengthening said flange, and internally threading said flange.

2,026,260

GRIP MECHANISM FOR CABLEWAYS

Carl Bentler, Cologne-Lindenthal, Germany

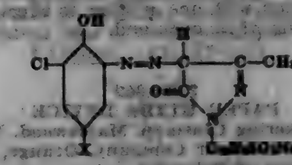
Application June 16, 1933, Serial No. 675,693

In Germany June 17, 1932

3 Claims. (Cl. 104—182)

1. A grip mechanism for cableways, comprising in combination two rigidly interconnected traction rope grip devices the first of said devices in the direction of travel of the cable comprising two clamping jaws and a spindle adapted to move said jaws against one another, and the second device comprising two clamping jaws, a spindle adapted to move said jaws against one another, one of said last mentioned jaws being recessed on its side adjacent the cable, a liner longitudinally movable in said recess, and means in said recess moving said liner towards the cable and gripping the same.

2,026,261



PYRAZOLONE AZO DYES AND THEIR PRODUCTION

Walther Benade, Dessau in Anhalt, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application September 26, 1933, Serial No. 691,051. In Germany December 7, 1932

6 Claims. (Cl. 260—44.4)

1. The azo dyes corresponding to the general formula

wherein *x* means hydrogen, alkyl, —NO₂ or chlorine, said dyes forming in the dry state dark powders soluble in water and dyeing wool according to the single bath process in the presence of a chrome mordant orange to red tints having a good fastness for washing and fulling and a very good fastness to the action of light.

2,026,262

PREPARATION OF TITANIUM PIGMENTS

Joseph Blumenfeld, Paris, France, and Max Mayer, Karlsbad, Czechoslovakia, assignors to Krebs Pigment & Color Corporation, Newark, N. J., a corporation of Delaware

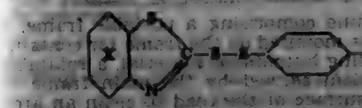
No Drawing. Application May 15, 1930, Serial No. 452,818

13 Claims. (Cl. 134—78)

4. A calcined composition for use as a pigment comprising titanium dioxide having an oxide of one of the elements selected from the group of elements consisting of cerium, thorium and zirconium within its pores.

10. In a process for the production of a titanium pigment the steps of suspending particles of titanium dioxide in a solution of a compound of one of the elements cerium, thorium and zirconium, treating said suspension to precipitate an oxide of one of said elements in the presence of said titanium dioxide and calcining said mixture.

2,026,263



MERCAPTOBENZOTHIAZYL-ARYLDISULPHIDES

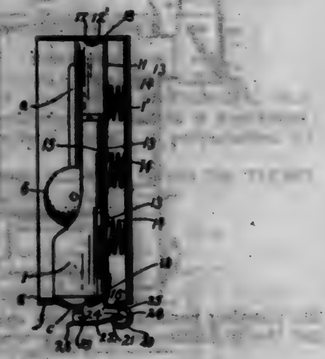
Max Bögemann, Cologne-Mülheim, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a corporation of Germany

No Drawing. Application February 20, 1934, Serial No. 711,169. In Germany February 24, 1933

4 Claims. (Cl. 260—16)

1. The products of the formula

wherein the nucleus marked X may be substituted by halogen atoms, alkyl-, nitro- or alkoxy groups, said products being yellow crystalline compounds, and being valuable accelerators for natural rubber as well as for artificial rubber-like masses.



2,026,264

CABINET FOR COLLAPSIBLE TUBES

Edward Cairns, Montclair, N. J.

Application February 11, 1935, Serial No. 5,969

2 Claims. (Cl. 221—89)

1. In a dispensing device for collapsible tubes, the combination comprising a main casing adapted to be attached to a suitable support and a tube carrier member resiliently supported within said casing, a substantially spherical compression member mounted in said casing to one side of said carrier member and adapted to co-operate therewith to effect a squeezing action upon a collapsible tube interposed therebetween, and means for causing said compression member and said carrier member to effect the progressive collapse of a tube so inserted therebetween.

2,026,265

METHOD OF PRODUCING A CELLULOSE PRODUCT

John Campbell and Robert G. Quinn, Glens Falls, N. Y., assignors to International Paper Company, New York, N. Y., a corporation of New York

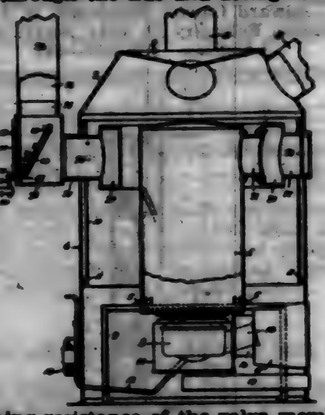
No Drawing. Application January 29, 1934, Serial No. 707,843

8 Claims. (Cl. 92—28)

1. The process for the manufacture of a cellulosic bulking agent comprising the steps of comminuting regenerated cellulose scrap, treating said comminuted cellulose to remove impurities and drying the so treated cellulose at a temperature below which cellulosic decomposition products are formed.

2,026,266

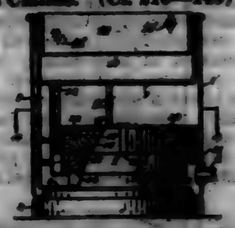
THERMOSTATICALLY ADJUSTED DRAFT REGULATOR



Lee S. Chadwick, Shaker Heights Village, Marc Resek, Cleveland Heights, and John A. Dahlstrom, Bay Village, Ohio, assignors to Perfection Stove Company, Cleveland, Ohio, a corporation of Ohio

Application July 3, 1934, Serial No. 733,616

20 Claims. (Cl. 236—45)

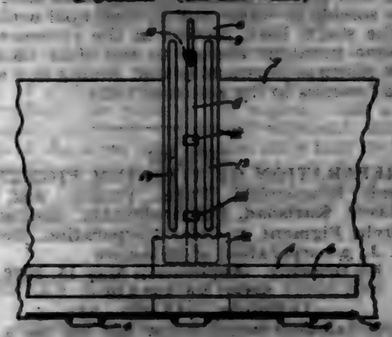


1. In combination with the flue of a combustion apparatus having an opening for admitting air, a movable valve member for controlling the admission of air through said opening, and means controlling the action of said member, the same tending to maintain the valve member closed in opposition to the flue draft and including a fiery

mostat subjected to the temperature of the gases passing through the flue and acting to increase

the opening resistance of the valve member under the influence of a rising temperature.

2,026,907
OIL FILTER FOR RESTAURANTS
Charles A. Compton, Menlo Park, Calif.
Application October 29, 1934, Serial No. 750,563
3 Claims. (Cl. 210—149)



1. An oil filter comprising an outer casing, an inner casing for filtering the oil, a temporary oil receiving receptacle disposed at the top of the outer casing, a conduit leading from the receptacle and communicating with the bottom of the inner casing, filtering means disposed in the inner casing and being removable through the top of the inner casing, and means for holding the filtering means in place and bearing against the receptacle.

2,026,908
ONE-HANDED LIP STICK
Edward S. Cornell, Jr., Larchmont, N. Y.
Application March 15, 1932, Serial No. 598,711
2 Claims. (Cl. 206—56)

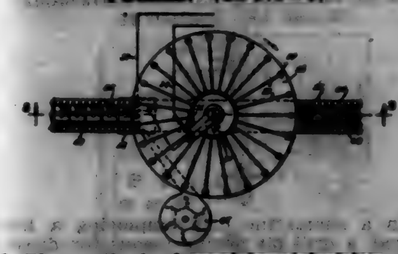
1. In a receptacle, the combination of an outer casing open at one end, a carrier member for the article to be dispensed located within the casing, an operating member located within the casing for propelling the end of the article to be dispensed without the limits of the casing and for returning such article to a point within the casing, shutter means mounted at the open end of the casing, said shutter means including a plurality of shutter elements mounted in pivotal relation to one another, and common means coordinated with said operating member for individually and successively engaging said shutter elements to move the same into vertically superposed relation with one another to effect opening of the casing at its open end.

2,026,909
PAPER GUIDE DEVICE
Loring Pickering Cressman, Maplewood, N. J., assignor to Gardner Company, Orange, N. J., a corporation of Delaware
Application October 2, 1935, Serial No. 43,144
1 Claim. (Cl. 197—127)

The combination with a cylindrical rotary platen of a paper guide comprising a support, a normally curved leaf spring, means to adjustably secure the spring to said support whereby in one adjusted position said spring is flattened against said support in tangential relation to said platen, and in another adjusted position of said spring an end thereof is in engagement with the platen at a point offset from the plane of said tangential relation, said point being determined by the tendency of said spring to assume its curved condition.

2,026,570
TRAFFIC STRIPE MACHINE
Samuel J. Dalton, Jackson, Miss.
Application April 15, 1935, Serial No. 16,686
2 Claims. (Cl. 91—1)

1. A machine comprising a portable frame, a tank or kettle mounted on the frame for containing and heating bituminous material, a rotatable brush or broom carried by the main frame to engage the surface of the road to clean an area of the surface of said road, a pump connected to the tank or kettle to obtain bituminous material therefrom, a discharge nozzle connected to the pump and arranged rearwardly of the brush and in close proximity to the surface of the road to apply the bituminous material in

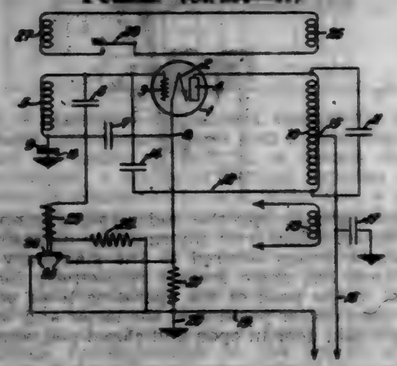


strip formation to the surface of the road, means carried by the frame to apply to the surface of the road within the bituminous material an aggregate or mineral material, and a spreader carried by the main frame to even the aggregate or mineral material deposited on the surface of the road, a roller carried by the main frame and acting as a wheel therefor and to compress the materials deposited on the surface of the road.

2,026,571
COLLAPSIBLE CRATE
Arthur N. Dedmon, Milan, Tenn.
Application May 2, 1935, Serial No. 19,463
4 Claims. (Cl. 217—37)

1. A crate of the class described composed of two sets of strips arranged at right angles to each other with one set passing across the central portions of the other set, the strips being scored transversely for permitting the end portions of the strips to be folded upwardly to provide the sides and end parts of the crate, cross bars connected with the ends of one set of strips, cross bars connected to the other set of strips adjacent their ends, the ends of the two sets of cross bars overlapping when the crate is set up and removable pins passing through said overlapping ends for holding the crate in set-up condition.

2,026,573
TELEVISION RECEIVING METHOD AND APPARATUS
Lee de Forest, Hollywood, Calif., assignor to American Television Laboratories, Inc., a corporation of Delaware
Application April 24, 1931, Serial No. 533,464
4 Claims. (Cl. 178—6)



1. The method of receiving television signals which comprises electrically imposing a patent image of the received electrically transmitted pictures on a moving film in a two-dimensional pattern through the medium of the electric discharge and immediately passing the film through a motion picture projector at motion picture speed of travel of the film so that the receipt of the picture and the projection thereof are substantially coincident.

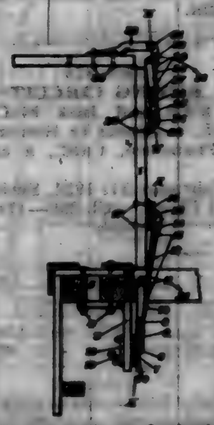
2,026,572
METHOD FOR SOFTENING BLEACHED AND DYED RUSCUS
John M. Dent, Jacksonville, Fla.
No Drawing. Application October 2, 1934, Serial No. 746,625
10 Claims. (Cl. 99—1)

2. The method of softening dyed ruscus, comprising submerging the same in an emulsified solution of water-soluble sulphonated vegetable oils, glycerine, and vegetable gums, and subsequently drying.

14. A composition for softening dyed ruscus, comprising an emulsified solution of a water-soluble sulphonated vegetable oil, glycerine, and a vegetable gum.

2,026,574
KEYING CIRCUIT
William W. Eitel and Jack McCullough, San Bruno, Calif., assignors to Heintz & Kaufman, Ltd., San Francisco, Calif., a corporation of Nevada
Application February 27, 1934, Serial No. 713,107
1 Claim. (Cl. 284—17)

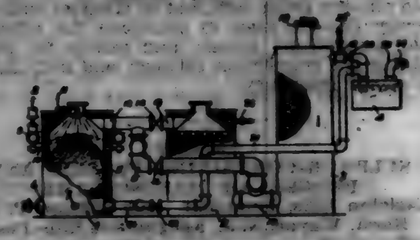
In an oscillator system having a thermionic tube, a tuned-grid circuit and a tuned-plate circuit connected thereto and adapted to produce oscillations in said tube by virtue of the internal feedback of said tube, means for neutralizing said feed-back to stop said oscillation, an inductance coupled to said grid circuit, a second inductance coupled to said plate circuit, said inductances being in series, the coupling of said inductances to said circuits being sufficient to transfer sufficient energy therebetween to overcome the effect of said neutralizing means, and means for interrupting the connection between said inductances at signal frequency.



2,026,575
SULPHUR-CONTAINING PLASTIC AND PROCESS OF MAKING SAME
Carleton Ellis, Montclair, and William P. ter Horst, Wayne, N. J., assignors to Ellis-Foster Company, a corporation of New Jersey
No Drawing. Application October 15, 1931, Serial No. 569,112
22 Claims. (Cl. 106—22)

1. The plastic materials as described, containing the reaction product of glycerol dichlorhydrin and an alkali polysulphide, said reaction product being soluble in a restricted number of organic solvents.

2,026,576
SELF-LOCKING DOOR OPERATING MECHANISM
Hjalmar Erickson, Bessemer Township, Gogebic County, Mich.
Application December 12, 1933, Serial No. 702,970
2 Claims. (Cl. 268—61)

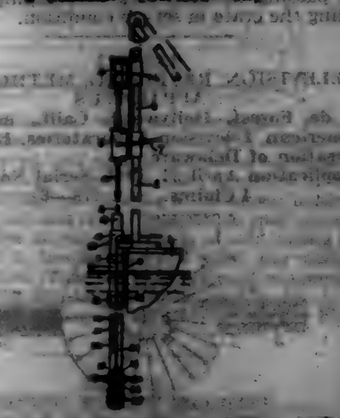


1. In an operating and locking mechanism for doors, an angle bracket adapted to have one arm fixed to a stationary support, a bearing bracket

adjustably mounted on the other arm, a bearing bracket secured to a door hinged to the stationary support, an operating lever having one end pivotally connected with the first mentioned bearing bracket, a link having one end pivotally connected with the second mentioned bearing

bracket and its opposite end pivotally connected to the operating lever intermediate its ends, and separate means secured to the stationary support and the angle bracket respectively for disposal in the path of the operating lever beyond the dead center position of the latter and link to secure said door in open and closed positions.

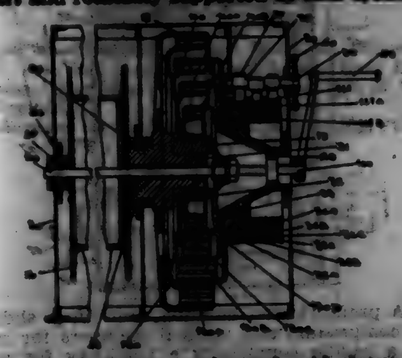
2,034,277
MANUFACTURE OF CARBURETED WATER GAS WITH HEAVY OIL
Owen B. Evans, Philadelphia, Pa., assignor to The United Gas Improvement Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 21, 1931, Serial No. 510,120
5 Claims. (Cl. 48—206)



2. A process of manufacturing carbureted water gas which includes the following steps: air blasting an ignited fuel bed, burning the blast gases with secondary air introduced marginally adjacent the upper edge of the fuel bed, and dividing the flow of the blast gases and passing them in two streams through two heat exchange vessels thereby controlling the amount of heat stored in each vessel; introducing steam and oil to said fuel bed and vaporizing the oil and carbureting the blue water gas by the heat stored adjacent the upper part of the fuel bed, leading the water gas and the oil vapors so produced in by-pass relation to one of said heat exchange vessels, fixing the oil vapors by the heat stored in the other of said heat exchange vessels, and leading off the gas; and making a back run through the fuel bed with steam passed through the by-passed heat exchange vessel and heated by the remaining portion of the heat recovered from the blast gases.

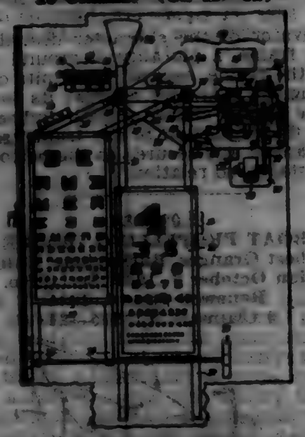
2,033,975
METHOD OF MAKING BRAKE DRUMS
Warren H. Farr, Detroit, Mich., assignor to Kelsey Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 14, 1932, Serial No. 617,600
5 Claims. (Cl. 29—148.5)

5. The method of making composite brake drums which consists in casting a braking surface onto the outer periphery of an annularly ribbed mounting plate, and thereafter forming spaced radial ribs across at least one of said annular ribs.



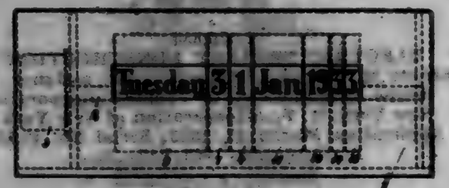
2,034,570
SUBMARINE DRILL
Hugh John Ferguson, Vancouver, British Columbia, Canada
Application January 30, 1934, Serial No. 709,577
In Canada May 11, 1933
3 Claims. (Cl. 255—61)

3. In a submarine drill employing a hollow drill rod, a drill bit having means for directing a stream of water supplied through the drill rod to impinge upon the face of the work cut by the drill bit, a tubular enclosing member for the drill bit adapted to rest on the sea floor, said tubular member having a side opening adjacent its lower end and means for adjusting the position of said opening with respect to said lower end.



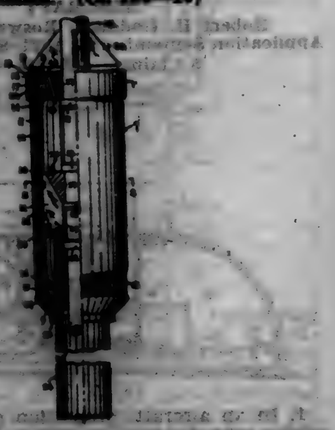
2,033,980
TRANSMISSION GEAR
Erhard A. M. Flodberg, Appelviken, Stockholm, and Alrik Björklund, Gothenburg, Sweden; said Björklund assignor to said Flodberg
Application July 25, 1933, Serial No. 680,816
In Sweden July 6, 1932
12 Claims. (Cl. 74—330)
(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)

1. A transmission gear comprising a central gear shaft, a rotary driving member and a rotary driven member coaxial thereto, bowl-shaped gear wheels, the larger enclosing the smaller ones, said gear wheels intermeshing in pairs for rotating said driven member, two of said gear wheels being concentric to the central gear shaft, while the other gear wheels are eccentric thereto, a cylindrical member concentric to said central gear shaft, a sleeve secured to said central gear shaft and rotatably supported by said cylindrical



member, the outer surface of said sleeve being eccentric to said central gear shaft and forming a journal bearing for said eccentric gear wheels and all said concentric gear wheels and eccentric gear wheels surrounding said sleeve within their bowls having the radial middle planes of all their toothed rims substantially coinciding with the radial middle planes of the concentric bearing surface as well as of the eccentric bearing surface of said sleeve.

2,033,981
CHART DISPLAY APPARATUS
Frederick Geiger, Drexel Hill, Pa., assignor to Wall & Cohn, Philadelphia, Pa., a corporation of Pennsylvania
Application June 15, 1932, Serial No. 617,615
10 Claims. (Cl. 40—52)



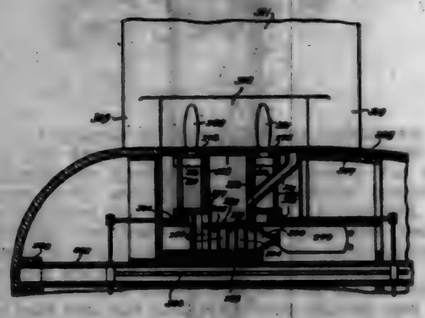
1. In chart display apparatus, a housing, a multiplicity of charts with means for yieldingly maintaining them in a normal position of concealment in the housing; and mechanism for moving the charts from the position of concealment for display at an opening in the front of the housing, including a rotor, selector means whereby the charts may be individually connected to the rotor, means for holding the charts in the display position, and means automatically operative as a new chart is brought into display position, to actuate the holding means for release of the previously displayed chart.

2,033,983
AUTOMATIC CALENDAR
Agne Emile Herbert Gerrundsson, Stockholm, Sweden
Application July 7, 1934, Serial No. 734,111
In Sweden July 15, 1933
7 Claims. (Cl. 40—112)

1. A calendar mechanism comprising a rotatable indicator of dates and a rotatable indicator of names of months, a month shifting mechanism, a source of driving impulses intermittently connected to said indicators, a differential gear having a sun wheel, connected to said indicator of dates, a second sun wheel or register wheel controlling said month shifting mechanism, a planetary wheel determining by its position corresponding positions of said register wheel, and means for moving said planetary wheel at the beginning of every month in a position corresponding to the length of said month, locking the planetary wheel there and releasing it at the end of the month.

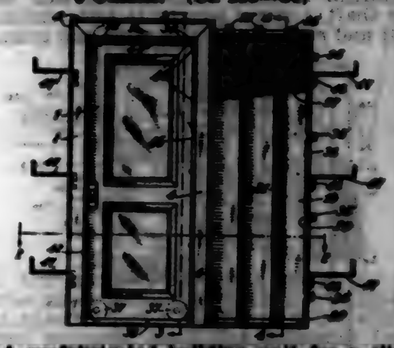
2,033,983
WELL PACKER
Charles F. Gillespie, Houston, Tex., assignor of one-fourth to John R. Turnbull and one-fourth to Richard A. Irwin, Harris County, Tex.
Application March 1, 1935, Serial No. 10,225
6 Claims. (Cl. 166—10)

1. A packer for wells including a lower head, a connection to support said head, an upper head spaced from said lower head, an actuating pipe passing through said heads, packing to seal between said heads and an outer pipe, a tapered mandrel carried by said actuating pipe and positioned between said heads, a plurality of wedge blocks supported on said lower head and adapted to be engaged by said mandrel to be expanded by downward movement thereof, a groove in the



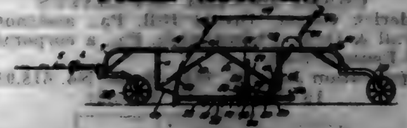
periphery of said wedge blocks, spring members within said groove and attached to some of said blocks, said spring members extending to adjacent blocks and adapted to bridge the gap between said blocks as they are expanded, a plurality of spring strips extending longitudinally of said packer and anchored at their ends to said heads, overlapping bevelled edges on said spring strips adapted to maintain contact as they are expanded by said wedge blocks, and a rubber sleeve surrounding said spring strips and attached at either end to said heads.

2,026,524
ELECTRIC TROLLEY CONSTRUCTION
Ernest M. Glasgow, Totowa, N. J., assignor, by mesne assignments, to Fosdrall Corporation, New York, N. Y., a corporation of New York
Application March 22, 1935, Serial No. 12,536
11 Claims. (Cl. 247—3)



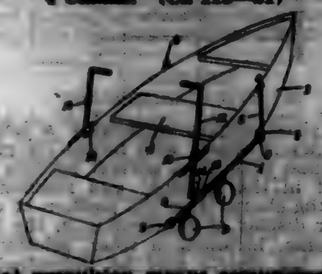
1. In an electric trolley construction, an insulating member, bus bars mounted on said insulating member, complementary conduit members having margins secured to the margin of said insulating member and side walls spaced from said bus bars and terminating in inwardly directed flanges spaced apart to form a slot.

2,026,525
AIRCRAFT
Robert H. Goddard, Roswell, N. Mex.
Application September 23, 1931, Serial No. 564,503
4 Claims. (Cl. 244—35)



1. In an aircraft, propulsion apparatus comprising propeller blades projecting from the fuselage, and turbine blades associated therewith and driving said propeller blades and being located near the periphery of the fuselage which is circular in cross section whereby the turbine blades travel in a circle nearly as large in diameter as the propeller blades, there being direct drive connection between said separate sets of blades and the turbine being housed in the fuselage for reduction of parasite resistance.

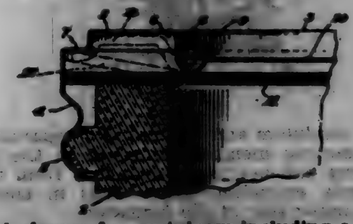
2,026,526
BUILDING UNIT
William L. Goslin, Caldwell, N. J., and Milton Brodsky, Bronx, N. Y.; said Goslin assignor to said Brodsky
Application April 1, 1932, Serial No. 602,416
6 Claims. (Cl. 189—34)



4. A prefabricated building unit for a sliding door comprising, end vertical members for said unit, a saddle comprising a trackway for said door and extending the full width of said unit between said end vertical members, a top plate extending the full width of said unit, and door trim around the door opening; said vertical members, said saddle, said top plate, and said door trim, being permanently secured together to comprise a fabricated unit.

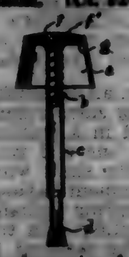
2,026,527
CULTIVATING IMPLEMENT
Leo Clyde Gossett, Fairmount, Ind.
Application February 14, 1935, Serial No. 6,586
1 Claim. (Cl. 97—237)

A cultivator of the character described comprising a frame, a plurality of ground engaging units on the frame, each of said units consisting of an angular plate serrated at its lower edge to provide ground engaging teeth and secured by its other flange portion to the frame, said units being arranged and secured to the bottom of the frame in staggered relation.



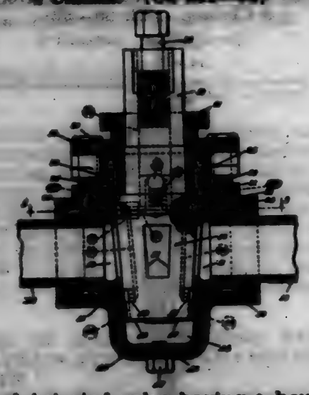
2,026,528
BOAT PROPELLING DEVICE
Albert Grangee, Burlingame, Calif.
Application October 7, 1933, Serial No. 692,590
Renewed June 4, 1935
4 Claims. (Cl. 115—31)

1. Boat propulsion means comprising a shaft extending lengthwise of and mounted on a boat



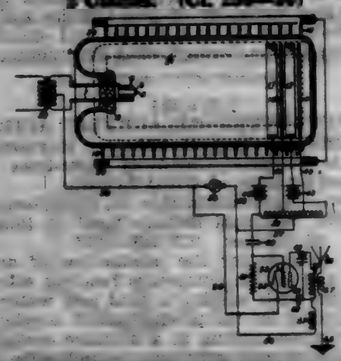
alongside and adjacent the bottom thereof, a sleeve slidable on the shaft, means to reciprocate said sleeve, paddle elements depending and supported from the sleeve, the latter being nonturnable on the shaft, and means applied to the shaft to rotate said shaft and the sleeve as a unit so that the elements are turned outwardly and raised a predetermined distance.

2,026,529
CUSHION-FIT CAP
Daniel M. Gray and John J. Williams, Wheeling, W. Va., assignors to Hazel-Atlas Glass Company, Wheeling, W. Va., a corporation of West Virginia
Application December 20, 1932, Serial No. 648,124
3 Claims. (Cl. 215—43)



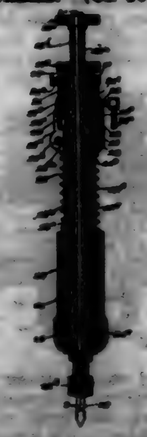
1. A closure for containers including a top and a threaded skirt, a liner within the closure, an annular downwardly projecting bead formed in the top of the closure and of a smaller diameter than the inner diameter of the mouth of the container, and an annular downwardly projecting shoulder in the top of the closure and of a diameter greater than the outer diameter of the mouth of the container, the bottom of the bead being in a lower plane than the shoulder, whereby the bead first engages the liner to force an outer annular portion of the liner upwardly against said shoulder.

2,026,530
SCREW-CAP OR COVER WITH BRUSH
Alexander Gross, Berlin, Germany
Application January 23, 1933, Serial No. 653,113
In Germany November 11, 1932
1 Claim. (Cl. 91—67.5)



A device of the character described, comprising a flanged cap-like body, a boss integral with and depending centrally from the inner surface of the flanged body and having an external screw-thread, a brush, a handle for carrying the brush including a hollow metal tube having the inner end internally threaded for engagement with the boss, an apertured annular sealing member inserted within the flanged body and about the boss, the inner end of the tube being flared outwardly so that when the tube is screwed tight the flared end will firmly engage the sealing member and a cementitious material acting to bind the handle to the boss to prevent accidental relative movement between the handle and the boss and also prevent admission of the liquid contents of the container to the cementitious material.

2,026,531
SELECTIVE CHANNEL CLEANING AND LUBRICATING SYSTEM FOR LUBRICATED VALVES
Jaye C. Hann, Manhattan Beach, Calif.
Application August 31, 1933, Serial No. 684,237
4 Claims. (Cl. 251—93)



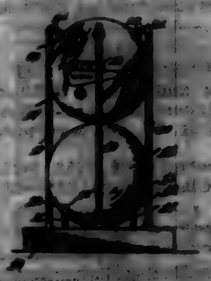
1. In a lubricated valve having a housing and a rotary plug, lubricant channels on the plug, means for supplying lubricant to the channels through the plug, there being a well on the housing in communication with the channels, means providing an openable outlet in the well, means for forcing a fluid through selected channels into the well and through the outlet, and check valves preventing flow from the selected channels into other of the channels.

2,026,532
HIGH FREQUENCY GENERATOR
Ralph M. Heintz, Palo Alto, Calif., assignor to Heintz & Kaufman, Ltd., San Francisco, Calif., a corporation of Nevada
Application November 11, 1931, Serial No. 574,360
2 Claims. (Cl. 250—36)

1. A high frequency generator comprising means for establishing a rotating field of relatively low frequency, means for directing a beam of cathode rays through said field, whereby said beam is deflected in a closed two-dimensional path, a solid anode positioned to receive the deflected beam, a foraminated anode having alternate bars positioned to intercept said beam and spaces through which the beam may pass to said first mentioned anode to deliver charges to said anodes alternately, secondary anodes positioned to receive electrons liberated from said primary anodes by bombardment, an output circuit and means for additively delivering the energy received by said primary and secondary anodes to said output circuit.

2,026,253
STYLUS MOUNTING FOR REPRODUCING AND ENGRAVING MACHINES
Peter M. Heuhen, Racine, Wis., assignor to George Gorton Machine Company, Racine, Wis., a corporation of Wisconsin
Application October 2, 1935, Serial No. 43,575
8 Claims. (Cl. 90—62)

8. A mounting for a tracing stylus, comprising, a suitable support; a longitudinally slidable barrel providing a transverse spring abutment; a tracer stylus arranged longitudinally of and carried by said barrel and providing a transverse spring abutment; a screw threaded connection between said barrel and said spindle and normally locking the same together against relative movements, for feeding longitudinally as a unit, said connection embodying means for relatively adjusting and setting said spindle longitudinally of the barrel; means for feeding said barrel and stylus as a unit longitudinally toward and from a pattern; and an expansion spring arranged longitudinally of said spindle and acting longitudinally on said barrel and spindle in opposite directions through said abutments.



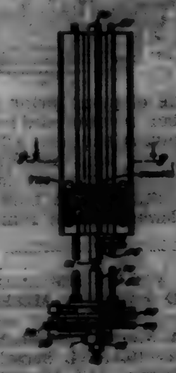
2,026,294
MANUFACTURE OF ACRYLIC ACID
Rowland Hill, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application May 14, 1934, Serial No. 725,853. In Great Britain April 13, 1933
11 Claims. (Cl. 260—112)

1. In a process for the production of acrylic acid the step which comprises heating ethylene cyanohydrin with sulphuric acid and water.

10. A process for the production of acrylic acid which comprises adding to a mixture containing an antioxidant and ethylene cyanohydrin concentrated sulphuric acid, the mixture being cooled and stirred during the addition, adding water to the resulting mixture, heating until the reaction is initiated, stopping the input of heat until the vigorous evolution of exothermic heat has subsided, and subsequently heating the reaction mixture until the reaction is substantially complete.

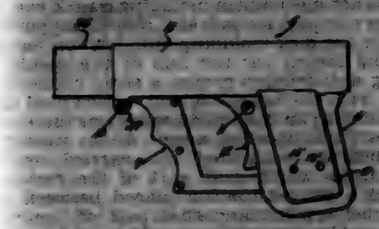
2,026,295
INCLINOMETER
Clair W. Hudlow, Washington, D. C.
Application August 21, 1934, Serial No. 740,823
5 Claims. (Cl. 33—206)

1. An inclinometer having a base, a series of comparatively short upright supporting members attached thereto and having ball bearings extending from their upper ends, a ball-shaped pendulum adapted to rest in contact with the bearings, a ball-shaped indicator mounted in frictional contact with the pendulum directly



over the pendulum and a series of comparatively long supporting members attached to the base and having ball bearings protruding from their downwardly extending upper ends in contact with the upper side of the indicator.

2,026,296
SEMIAUTOMATIC NONBACKING AUTOMOBILE BRAKE
Otis B. Hunt, Croydon, Pa.
Application July 28, 1933, Serial No. 682,282
4 Claims. (Cl. 192—4)



1. In combination, an automobile transmission mechanism, a casing surrounding the transmission shaft and held in a stationary position, a segment pivoted at one end within said casing and coacting with the shaft when in its operative position, said segment having a keeper notch at the free end, a spring actuated catch within the casing and coacting with the keeper notch to normally hold the segment in its operative position, a roller mounted in a groove in the concave surface of the segment, said groove tapering in the direction opposite the normal direction of rotation of the shaft, said roller being located in the larger end of the groove when the shaft is revolving in its normal direction but tending to move toward the smaller end of the groove when the shaft is reversed to prevent retrograde movement of said shaft, and a bell crank lever journalled in the casing and having one arm positioned for coaction with the catch to disengage the latter from the segment and the other arm being positioned in the path of travel of the reverse shifting rod of the transmission mechanism whereby said bell crank lever will be actuated when it is desired to operate the transmission shaft in a reverse direction.

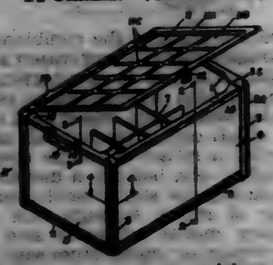
2,026,297
REELING DEVICE FOR TAG FORMING MACHINES
Hans Brunsher, New York, N. Y., assignor to Millis Patent Holding Co. Inc., New York, N. Y., a corporation of New York
Original application August 30, 1931, Serial No. 560,662, now Patent No. 1,961,417, dated March 20, 1934. Divided and this application May 12, 1932, Serial No. 610,516
1 Claim. (Cl. 242—158)

A reel mounting and feed controlling mechanism comprising a rotatable spindle, a driving gear secured to the spindle and formed with mutilated portions, a driving spindle engaging the gear and formed with a mutilated portion whereby the spindle is rotated intermittently, a plate on the spindle, a feed screw journaled in the plate, means to impart rotation to the screw, a split reel positioning unit on the screw, and means to urge the split portions against the screw.

2,026,298
TOY PISTOL
Gunval M. Jensvold and Henry De Wenl, Chicago, Ill.
Application July 15, 1933, Serial No. 680,530
15 Claims. (Cl. 124—12)

1. A toy pistol of the character described comprising a body including a pistol grip and a tubular portion, a second body including a projectile receiving and guiding barrel and a trunnion, said barrel having a portion slidably supported for axial movement within said tubular portion and said frame having a portion slidably supported within said pistol grip, a ball retainer mounted in said barrel and trigger operated spring powered impeller means having a portion moving in said barrel and in said ball retainer to strike and project a ball located in said barrel.

2,026,299
PROCESS OF RETOUCHING PHOTOGRAPHIC FILMS OR PLATES
Karl Kipphan, Dessau, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application November 28, 1931, Serial No. 577,297
In Germany November 26, 1930
6 Claims. (Cl. 95—5)

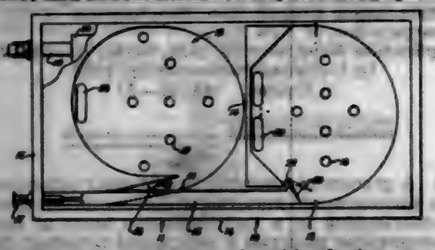


1. A process of applying brightening retouches to a photographic material which comprises finely distributing in a light sensitive layer of said photographic material a compound resisting the photographic baths and diminishing the transparency to light of said layer, and partly clearing said layer by a chemical reagent in conformity with parts of a picture produced in said layer that shall receive a greater transparency.

2,026,300
METHOD OF MANUFACTURING REFINED PULP FROM STRAW OF GRAMINACEOUS PLANTS
Kenjo Kodama, Fukui, Japan
No Drawing. Application June 2, 1934, Serial No. 24,778. In Japan October 19, 1934
4 Claims. (Cl. 92—9)

1. Method of manufacturing refined pulp from straw of graminaceous plants, which consists in digesting straw of graminaceous plants in an acidic solution containing acidic sodium sulphate and hydrogen chloride obtained by adding sulphuric acid to sea-water or brine so that decomposition may take place in part of pectin substance and other impure matters; then digesting the same in caustic soda solution to dissolve the remaining impurities and thus separating and collecting cellulose.

2,026,301
SHIPPING CASE
James M. Lasko and Glen G. Fairchild, Toledo, Ohio
Application October 7, 1932, Serial No. 637,675
14 Claims. (Cl. 217—12)



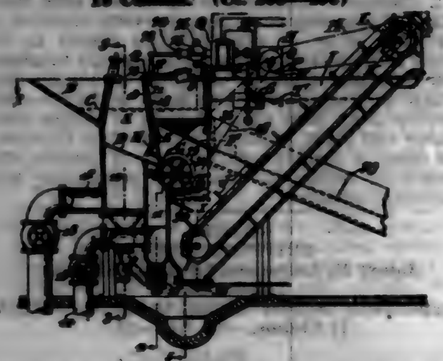
1. A shipping case comprising; a unitary metal frame, a plurality of side and end panels, a bottom panel, and an inner bottom, the top periphery of frame including a panel securing groove, said side and end panels held in permanent position by means of said panel securing groove and said inner bottom.

2,026,302
GAME APPARATUS
Herbert McClellan, Los Angeles, Calif., assignor to Exhibit Supply Company, Chicago, Ill., a corporation of Illinois
Application January 11, 1935, Serial No. 1,350
7 Claims. (Cl. 273—121)

1. In a game apparatus, the combination of: a member providing a playing surface having

spaced ball playing areas thereon; means for propelling balls onto said playing surface so that they will normally enter into one of said playing areas; and means automatically actuated by balls

entering the said one of said playing areas, after a predetermined number of balls have entered the same, for directing subsequently played balls from said propelling means into the other of said playing areas.



2,026,903

SEPARATING AND WASHING APPARATUS

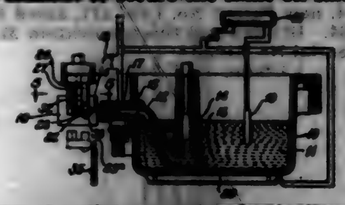
William C. Mennies, Scranton, and Francis H. Blatch, Hazleton, Pa.; said Blatch assignor to Wilmot Engineering Company, Hazleton, Pa., a corporation of Pennsylvania

Application January 12, 1933, Serial No. 586,138

10 Claims. (Cl. 209—496)

1. In a hydro separator, the combination of a separating compartment, a perforated bottom in said compartment, means for conducting a liquid to said compartment through said perforated bottom, a baffle wall in one end of said compartment above which coil is discharged, said compartment having a refuse discharge opening adjacent one end of said bottom, a movable refuse gate for regulating the size of said opening and the discharge of refuse through said opening, refuse removing means adjoining said opening for positively removing refuse from said opening, and intermittently operated motor means controlled by the amount of refuse on said perforated bottom for actuating the refuse gate and the refuse removing means.

2,026,904



METHOD OF MANUFACTURING FASTENER DEVICES

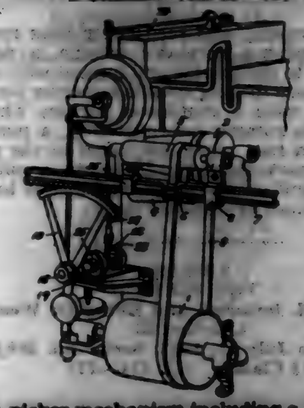
Louis H. Morin and David Mariasky, New York, N. Y., assignors to Whitehall Patents Corporation, New York, N. Y., a corporation of New York

Application December 20, 1933, Serial No. 703,165

20 Claims. (Cl. 29—148)

1. The herein described method of producing in a successive series of operations of an apparatus, a mounting member with a plurality of molded or cast elements applied thereto which consists in first molding an element between relatively movable die parts, then feeding the formed element from the die parts and applying the same to a mounting member, applying pressure to the element to secure the same on said mem-

ber, trimming the element prior to its application to said member, feeding said member to space the same for receiving the next adjacent element to be applied thereto, and molding the element on a core disposed between said relatively movable die parts and utilizing said core as a feeding means for the element when removed from the die parts.



2,026,905

SENSITIZED EVENER MOTION FOR PICKERS

John A. Merrill, Greer, S. C.

Application May 18, 1934, Serial No. 725,993

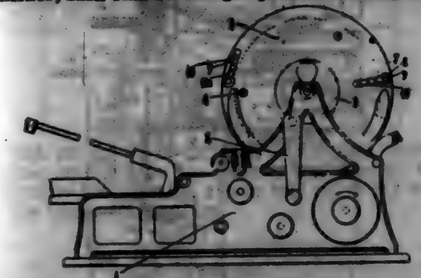
2 Claims. (Cl. 19—70)

2. A picker mechanism including a rack bar, an operating rod and a quadrant, a disk, supporting means for the disk including anti-friction means, supporting means for the hub of the quadrant including anti-friction means, a strap connecting the disk with the operating rod, a weighted disk connected with an intermediate part of the shaft, a bracket for supporting a part of the rack bar, a ball bearing supported roll carried by the bracket upon which said part of the rack bar rests and a second bracket placed between the first named bracket and that part of the rack bar engaged by the quadrant, said second bracket having its bottom open.

2,026,906

PRINTING CYLINDER OF ROTARY DUPLICATING MACHINES

Samuel Tankard Merrell and Horace George St. Vincent Beechey, Auckland, New Zealand



Application September 25, 1934, Serial No. 745,494

In New Zealand March 17, 1934

4 Claims. (Cl. 101—115)

1. In a duplicating machine, a rotary cylinder, a segmental open-work frame displaceably mount-

ed in the rotary cylinder said mounting ribs radial to the axis of the cylinder, a foraminous diaphragm attached to the outer face of the frame in complementary relation to the periphery of the cylinder, said ribs forming separated inking com-

partments on the inner surface of the foraminous diaphragm and with the compartments open on their inner sides, a pad displaceable on the outer face of the diaphragm, and a stencil imposed on the pad.

2,026,907

RADIOGRAPHIC PLATE CHANGER

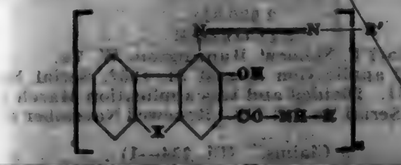
Montford Morrison, Montclair, N. J., assignor to Westinghouse X-Ray Company, Inc., a corporation of Delaware

Application April 4, 1931, Serial No. 527,659

11 Claims. (Cl. 250—54)

1. In an automatic plate changer for X-ray photography the combination of a guideway, a cassette tray movable longitudinally along said guideway, tensioning means connected at one end with said cassette tray, a portion of said tensioning means serving to move the tray in one direction and the remaining portion thereof serving to move the tray in an opposite direction, means connected with the other end of said tensioning means for increasing the tension of either of said portions thereof, and releasable means cooperating with said cassette tray for holding the same stationary at predetermined points in its path of movement.

2,026,908



WATER-INSOLUBLE AZODYESTUFFS

Friedrich Muth, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

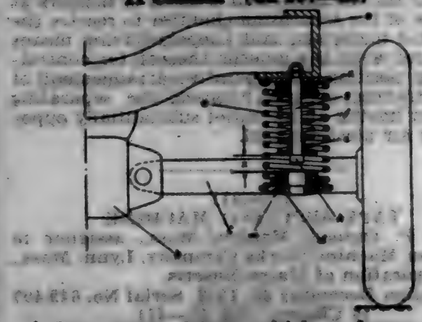
No Drawing. Application June 24, 1934, Serial No. 732,535. In Germany October 5, 1933

12 Claims. (Cl. 260—53)

1. Water-insoluble azodyestuffs of the general formula:

wherein X stands for a sulfur or an oxygen atom, R and R' for aromatic radicals and n stands for one of the numbers one and two, yielding, when produced on the fibre, generally brown to blackish brown to black shades of good fastness properties.

2,026,909



SPRINGING ARRANGEMENT FOR VEHICLES

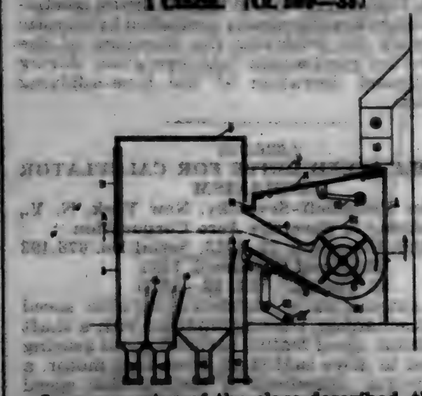
Fritz Nallinger, Stuttgart, Germany, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart-Untertürkheim, Germany, a company of Germany

Application January 26, 1934, Serial No. 708,483

In Germany February 4, 1933

11 Claims. (Cl. 267—34)

1. In a power driven vehicle, a frame, a half axle suspended so as to extend transversely to the longitudinal direction of the vehicle, a vehicle wheel on one end of said half axle, an unguided helical spring for supporting the half axle resiliently with respect to the frame, spring abutments for said helical spring on the frame and at one end of the half axle, a second helical spring arranged concentrically with respect to the first-mentioned helical spring and having one end free so as to come into action and co-operate with the first-mentioned helical spring only after the latter has been partly compressed and guiding means for the second helical spring arranged within the first-mentioned helical spring and located so as to come into action on the first-mentioned helical spring being partly compressed.

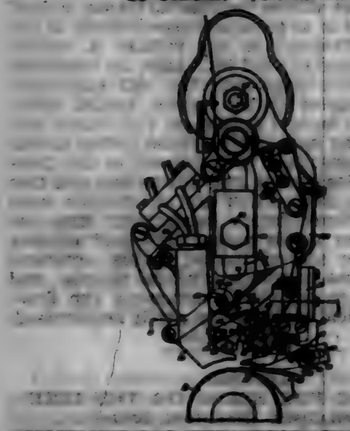


2,026,910

SEPARATOR FOR SEEDS OR THE LIKE

Wilfred Olsen, Blackfoot, Idaho

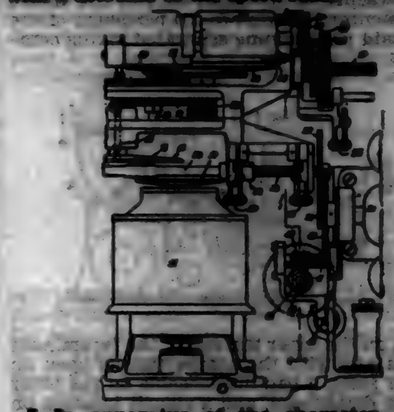
Application September 14, 1934, Serial No. 744,055



1 Claim. (Cl. 209—35)

In a separator of the class described, the combination of a housing forming a separating chamber, means for feeding a stream of materials to be separated into said chamber at a

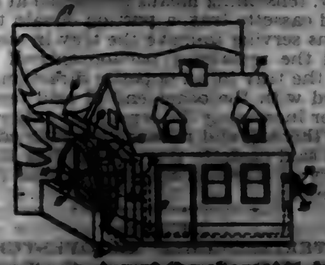
point substantially below the top of the same, an angular shaped throat member at the entrance of the feeding means into the chamber, means for producing an air blast through the housing in a path intersecting the stream of materials to toss said materials and effect separation thereof according to the specific gravity of the particles, said means including a fan and a housing extending about the same and having lateral openings and an opening at the rear thereof, and an inclined air channel communicating with the separating chamber directly beneath the angular shaped member aforesaid, said air channel having its base wall adjustable to control the angularity of the air blast, and a series of hoppers at the base of the separating chamber to receive the separated materials, said hoppers having means associated with the mouths thereof for controlling the position and operative arrangement of the entrances to said hoppers, the separating chamber having an air outlet substantially opposite the air blast channel.



2,026,911
TAPE-APPLYING MACHINE
Walter P. Osgood, Malden, Mass., assignor to Boston Machine Works Company, Lynn, Mass., a corporation of Massachusetts
Application December 19, 1932, Serial No. 647,497
18 Claims. (Cl. 12—51)

1. A tape-applying machine having, in combination, tape-applying and tape-severing mechanisms, and automatic means controlled by the size of the work for initiating the throwing of the tape-severing mechanism into operation during the continued operation of the tape-applying mechanism.

2,026,912
VARIABLE SPEED DRIVE FOR CALCULATOR MECHANISM
Alexander Procofieff-Seversky, New York, N. Y., assignor to Seversky Aero Corporation
Application November 23, 1932, Serial No. 643,493
Renewed October 6, 1934
23 Claims. (Cl. 12—46.5)



1. In automatically controlled variable speed driving mechanism, the combination with a shaft of a constant speed motor, variable speed gearing connected to drive said shaft from said motor, a control motor connected to the variable speed gearing to increase and decrease the speed ratio thereof and means actuated by said control motor to actuate said shaft independently of the variable speed driving mechanism in one direction simultaneously with an increase of the speed ratio and in the other direction simultaneously with a decrease of the speed ratio.

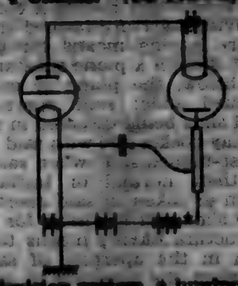
7. In apparatus of the character described, in combination, a shaft, a motor, variable speed gearing connecting said motor and shaft, a control motor, connections actuated thereby to increase or decrease the driving ratio of the variable speed gearing, and other connections driven by said control motor for independently actuating said shaft temporarily without disconnecting the first-mentioned connections.

19. In apparatus of the character described driven mechanism electrical control mechanism including relatively movable pivoted arms, cooperating contacts normally disengaged, carried by the respective arms, a swinging arm arranged to engage alternatively two of the aforesaid pivoted arms to close the contacts for controlling the driven mechanism substantially as described.

2,026,913
TOY OR DISPLAY DEVICE
Kalman Klein, Irvington, N. J.
Application March 2, 1935, Serial No. 8,978
7 Claims. (Cl. 46—39)

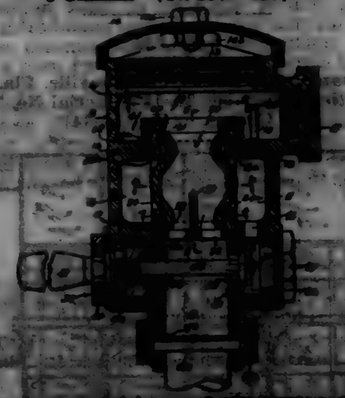
1. In an apparatus of the character described, the combination of a device representing a water display having a water outlet and a water mill and wheel, mechanism for turning the water mill wheel, and imitative flowing water means fastened to said device at said outlet contacting said wheel and extending into a receptacle.

2,026,914
RECORDER
Karl F. Schoew, Huntington, W. Va.
Original application August 31, 1932, Serial No. 631,261. Divided and this application March 8, 1934, Serial No. 714,710. Renewed November 13, 1935
2 Claims. (Cl. 234—1)



1. A recorder comprising a stylus and a fixed holder with respect to which the stylus is mov-

able, resilient means for acting between the holder and stylus as to tend to move the stylus in one direction with respect to a chart, a cord connected with the holder and so trained with respect

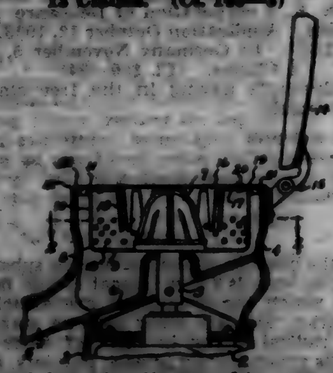


to the stylus as to tend to resist said resilient means, and means for pulling the cord so as to overcome the resilient means and move the stylus in the opposite direction.

2,026,915
TELEVISION SYSTEM
Georg Schubert, Berlin, Germany, assignor to the firm of Fernseh Aktien-Gesellschaft, Zehlendorf, near Berlin, Germany
Application July 26, 1933, Serial No. 681,451
In Germany July 26, 1932
4 Claims. (Cl. 178—6)

1. In a television system, a luminous tube having a positive column, a low frequency amplifier having an output tube, a source of direct current in the anode circuit of said output tube, a resistance in series with said luminous tube in said anode circuit, and a condenser shunted across said source of direct current and a part of the said resistance.

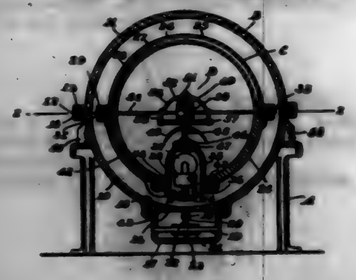
2,026,916
VALVE
David Baker Smith, Los Angeles, Calif.
Application February 5, 1932, Serial No. 591,067
9 Claims. (Cl. 137—139)



2. A valve comprising: a body having an inlet and an outlet; a flexible tube forming a passageway between the inlet and outlet; a substantially portion of said passageway intermediate its ends being unobstructed so that the tube walls along said unobstructed area may collapse against each other to close the passageway, pressure applying means to distend the tube walls for opening the passageway, pressure applying means to collapse the tube walls against each other along the unobstructed passageway area to close said passageway, means for relieving said last mentioned pressure for a predetermined period, and a member mounted independently of the tube and extending into the outlet and thereof to resist collapsing of the tube walls from the direction of the said outlet end.

2,026,917
PROPELLING DEVICE
Earl Homer Smith, Flushing, N. Y.
Application April 17, 1934, Serial No. 720,919
14 Claims. (Cl. 170—162)

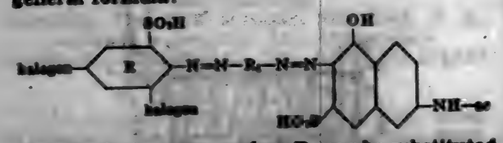
1. A propelling device including a rotary driven shaft, a hub secured thereto, circumferentially spaced blades mounted on the hub and protruding in generally radial directions therefrom, and coacting means for imparting gyratory motion to the blades during the rotation of the shaft and hub so as to cause any point on each blade to travel in a succession of contiguous arcs and in a generally spiral path due to the combined gyratory motion of the blades and the forward movement of the device.



2,026,918
GUARDED JUICE EXTRACTING MACHINE
Elmer G. Strechfuss, Cincinnati, Ohio, assignor to The Cincinnati Time Recorder Company, Cincinnati, Ohio, a corporation of Ohio
Application January 20, 1933, Serial No. 652,716
12 Claims. (Cl. 146—3)

1. In a juice extracting machine comprising a bowl, a rotatable reamer in said bowl, and a

guard surrounding said reamer relatively to which the reamer is rotatable, admitting the fruit to the reamer to be held thereto by the hand of the operator and adapted to prevent the fruit from becoming substantially displaced from said reamer toward the side of the bowl if the fruit escapes from the hand, said guard comprising an upper rim and prongs depending from said rim.



2,026,919
COMPASS
James Leslie Stright, Summerside, Prince Edward Island, Canada
Application March 27, 1934, Serial No. 717,645
In Canada March 29, 1933
3 Claims. (Cl. 33—233)

1. In a marine compass, the combination of an outer casing formed with a transparent top and filled with a liquid, an inner casing formed with spaced transparent top members providing an air space therebetween and rendering the inner casing more buoyant, the said inner casing being gimbal hung in spaced relation to the outer casing and formed with orifices adapted to establish communication between the casings, a compass card in the inner casing, a jewel cup supported by the inner casing providing a pivot mounting for the card, magnetic means associated with the card, adjustable compensating magnets associated with the outer casing and reservoir means for maintaining a supply of liquid in the casings.

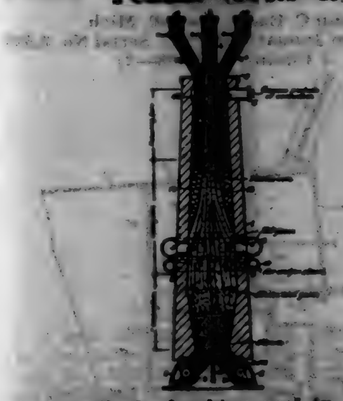
2,026,920
AZODYESTUFFS
Carl Taube, Leverkusen-I. G.-Werk, and Josef Hilger, Leverkusen-Wiesdorf, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application October 12, 1932, Serial No. 638,394. In Germany November 5, 1932
4 Claims. (Cl. 260—84)

1. Azodyestuffs having in the free state the general formula:

wherein the benzene nucleus R may be substituted by alkyl, R_1 stands for a radical of the benzene series to which the azobridges are attached in para-position to each other and ac stands for an acyl radical, being in form of their alkali metal salts generally red to dark powders, soluble in water, dyeing the cellulosic fibre generally red to violet shades of good fastness to light.

2,026,921
COIN CHUTE
Walter A. Traiesh and Bernhard Grenig, Chicago, Ill.
Application March 14, 1935, Serial No. 11,163
2 Claims. (Cl. 194—99)

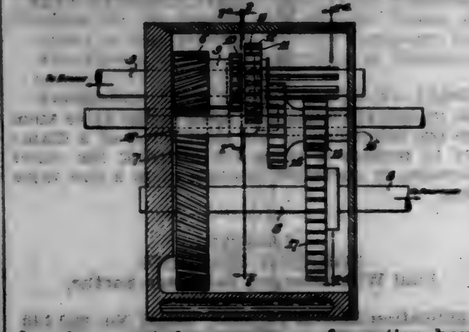
1. A coin chute comprising a coin slide having a coin-receiving or token-receiving aperture formed therein; a guide structure for said coin slide having means to support a coin or token in said aperture when the coin slide is moved from a coin receiving position to a coin discharging position; said guide structure having a coin or token display pocket formed therein for the reception of a coin or token discharged from the said coin aperture of said coin slide; said coin slide having a sight opening formed therein and disposed in registration with said display pocket when said coin slide is disposed in its normal or coin receiving position; a second slide carried by said guide structure and having a coin-receiving or token receiving aperture formed therein; said guide structure having means for guiding the second-named slide in a plane substantially parallel to, but below, the plane of movement of said first-named slide; said aperture in the second-named slide being disposed in registration with said display pocket and with said sight opening in said first-named slide when said slides are disposed in their normal or initial positions whereby a coin or token in said aperture of said second-named slide will be visible for inspection; said guide structure having means to support a coin or token in the aperture of said second-named slide when the aperture in said second-named slide is in registration with said display pocket and said sight opening; means coacting with said first-named slide, when the latter is moved away from its initial position, to move said second-named slide whereby a coin in the aperture of said second named slide will be discharged therefrom and a coin carried in the aperture of said first named slide will be discharged therefrom into said display pocket and will rest upon an end portion of said second-named slide; and means for returning said slides to normal position whereby the coin resting upon the end portion of said second-named slide will drop into the aperture of said second-named slide.



2,026,922
DRIER
Daniel B. Vincent, Jacksonville, Fla.
Application November 21, 1934, Serial No. 754,161
4 Claims. (Cl. 34—44)

1. A drier comprising a casing having a plurality of chambers therein, rotatable reels within

said chambers, an air supply duct for said chambers and through which hot air passes to the chambers, means for controlling the flow of hot air to said chambers, an exhaust duct for said chambers, said exhaust duct being in communication with the chambers through auxiliary chambers, means for controlling the flow of air from the auxiliary chambers to the exhaust chamber, whereby the circulation of air within the chambers may be independently controlled, means whereby material will be transferred from one chamber to the other during the rotation of the agitating means, conveyor means extending across the chambers adjacent the lower sides thereof and through which material from any of the chambers may be discharged and means for controlling the flow of material through said conveyor and from any of the chambers.



2,026,923
METHOD OF OPERATING RETORTS TO PRODUCE COKE, GAS, AND OIL
Arthur Woodward Warner, Media, Pa., assignor to Isbell Porter Company, Newark, N. J., a corporation of New York
Original application October 27, 1931, Serial No. 571,212. Divided and this application February 2, 1933, Serial No. 654,891
3 Claims. (Cl. 202—15)

1. A method of coking coal in a continuous internally heated retort comprising feeding coal into the retort to form a column thereof, igniting the column at one end to form a combustion zone, forcing oxygen bearing gases into the combustion zone to maintain it and coke the coal, introducing coke into the central portion of the column above the combustion zone to form a core for the column, removing the gases generated in the column from the top thereof, said gases passing through coal column, and removing the residue from the bottom of the column, whereby an upstanding plastic film of conical shape of melted coal is formed and maintained vented at the apex of the coke core.

2,026,924
TRANSMISSION GEARING
Frank A. Wolmgarten, Philadelphia, Pa.
Application September 1, 1934, Serial No. 742,450
3 Claims. (Cl. 74—343)

1. In a transmission gearing for marine service, the combination of a driving shaft and a driven shaft, and means for selectively transmitting power, from the driving to the driven shaft, for direct drive at a given speed ratio, for reverse drive, and for a second direct drive at a relatively increased speed, comprising a pinion loosely mounted on the driving shaft and provided with a clutch formation, a gear wheel splined on the driving shaft and provided with a cooperating clutch formation, a forward drive normal speed gear wheel keyed on the driven shaft and in constant mesh with the loosely mounted gear wheel, a second forward drive gear wheel of different ratio, keyed on the driven shaft, and a

loosely mounted reverse gear formation having a pinion in constant mesh with the second forward-drive gear-wheel, and a pinion adapted to cooperate with the splined gear wheel, the splined gear wheel having a range of movements to and from positions cooperating with the first mentioned loosely mounted pinion, the pinion of the reversed gear formation, and the second forward drive gear wheel.

2,026,925
POWDER DISPENSER
Leslie D. Whitney, San Francisco, Calif.
Application May 7, 1935, Serial No. 20,169
4 Claims. (Cl. 221—61)

1. A powder-dispenser comprising in combination a glass-bottle having a neck with an open throat; a metal split sleeve seated in said throat in frictional contact throughout its length with the throat wall, said sleeve having a penetration-limiting flange resting on top of the neck, one end of said sleeve being open and the other end having an apertured, cross wall of less discharge capacity than the open end; and a cap fitted upon and covering the neck of the bottle.

2,026,926
TIRE VALVE TOOL
Selden T. Williams, Bellerose, N. Y., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a corporation of New York
Application September 21, 1933, Serial No. 690,122
1 Claim. (Cl. 7—1)

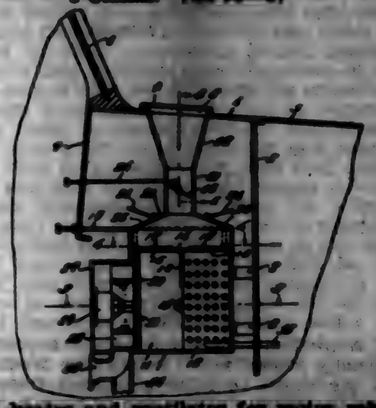
A tire valve tool comprising a body portion having reduced, oppositely-directed extensions,

each formed to serve for cooperation with a tire valve, and a split tubular shell formed of resilient metal encircling said body portion, the end of said shell which encircles one extension being slitted to provide resilient fingers for holding the

tool in operative position upon a tire valve stem and the other end of the shell being of a diameter to provide a guide for bringing the other extension in operative position upon a tire valve stem.

2,026,927
CORKING MACHINE
Paul Winstemberger, Sable-sur-Sarthe, Sarthe, France
Application March 14, 1933, Serial No. 660,740
In France March 14, 1932
3 Claims. (Cl. 226—66)

1. A corking machine for bottles comprising a frame, a bottle-bearer slidably mounted vertically on the frame, a flexible element movable over said frame and attached at one end to the bottle-bearer, a locking means attached to the other end of the flexible element and adapted to lock the bottle-bearer, a handle operatively connected with the flexible element so that when the handle is operated the locking means secures the bottle-bearer in a fixed position determined by the height of the bottle.



2,026,928
CONTINUOUSLY VARIABLE CHANGE-SPEED GEAR
Alfred Rach, Reichenberg, Czechoslovakia, and Josef Krautschneider, Hudson Bay Junction, Saskatchewan, Canada
Application January 3, 1934, Serial No. 705,144
In Czechoslovakia March 17, 1933
4 Claims. (Cl. 74—217)

1. A change-speed gear of continuously variable transmission ratio, comprising a transmission chain shiftable pulley means supporting said chain, two pairs of frusto-conical toothed wheels engaging with the chain, each pair consisting of two wheels engaging with the chain at the same point but on opposite sides of it, the axes of the said two wheels converging and the wheels themselves both tapering in the direction of convergence, but the direction of taper and convergence of one pair being opposite to that of the other pair, and the axial length of the wheels being considerably greater than the breadth of the chain, the generating lines of the two wheels of a pair passing through the same point of en-

gagement with the chain being parallel to one another, the teeth of each of the wheels being opposite to the spaces between the teeth of the other wheel of the pair at the same point of engagement, means for displacing the transmission chain relatively to the wheels in the direction of the parallel generating lines of the wheels.

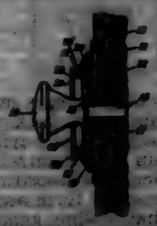
2,026,929
HEATER AND VENTILATOR FOR MOTOR VEHICLES
John C. Bodie, Howell, Mich.
Application January 15, 1932, Serial No. 586,980
3 Claims. (Cl. 98—3)

1. A heater and ventilator for motor vehicles comprising a casing, said casing including a cold air compartment and an air heating compartment, means in the second-named compartment for heating the air, said compartments having air inlet openings therein, valves for controlling said openings, a hood mounted on the casing and communicating with the atmosphere, said hood enclosing the valves, and a pump for drawing the air through the casing and discharging said air into the automobile, said compartments communicating with each other.

2,026,930
FASTENING DEVICE
Mabel Alma Bingham, Los Angeles, Calif.
Application August 27, 1934, Serial No. 741,812
14 Claims. (Cl. 24—73)

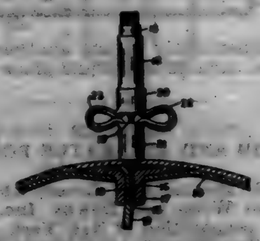
1. A fastening device comprising in combination, a safety pin having a base portion formed of wire, a supporting device connected thereto and comprising a single section of wire attached to one end portion of the safety pin and having a spring loop forming a pivot, a straight bar

section extending from the loop and a hook formed by an end portion bent in part at an acute angle to the straight bar, the base wire of the safety pin, the straight bar and the hook at



the end of the bar being in substantially the same plane and the end of the hook being spaceable from the base wire of the pin for inserting a strap of a garment to be supported by the straight bar.

2,026,931
RELEASABLE JARRING TOOL
Erwin Burns, Los Angeles, and Harry P. Wickersham, Huntington Park, Calif.
Application August 7, 1933, Serial No. 684,939
13 Claims. (Cl. 255—27)



1. A well tool including, two sections adapted to be connected in an operating string, releasable means for transmitting strains between the sections including a sleeve around and movable on one section, and threads on said section and sleeve for feeding the sleeve into and out of strain transmitting cooperation with the other section, and means operable to effect a jarring action between the sections after the release of the first mentioned means.

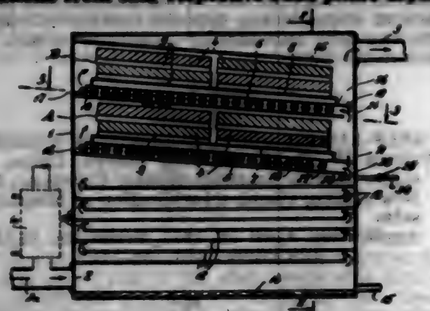
2,026,932
COMBINATION LOCK
Benjamin F. Clear, Los Angeles, Calif.
Application February 6, 1935, Serial No. 5,540
2 Claims. (Cl. 70—56)

1. A combination lock having a stem with a knob, a disc secured thereto to rotate with the knob and the stem, the disc having a plurality of sockets with a pair of diametrically opposite pins therein, a ring-like dial having graduations and a pair of diametrically opposite notches to engage the two pins and thereby removably attach the dial to the pins.

2,026,933
SELF-LUBRICATING INFLATING NEEDLE
Wallace W. De Laney, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a corporation of Massachusetts
Application April 12, 1935, Serial No. 16,043
14 Claims. (Cl. 152—11)

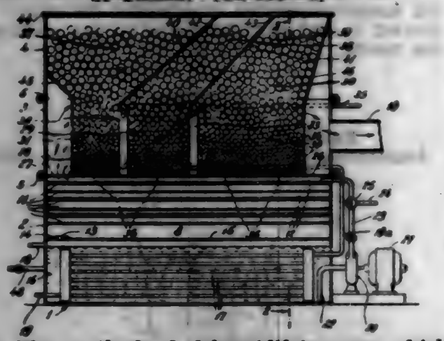
1. An inflating needle having a lubricant-carrying means supported to adjacent the outlet end thereof to deliver a lubricant to the surface of the needle.

2,026,934
ORNAMENT
Ralph de Rosa, New York, N. Y.
Application August 15, 1935, Serial No. 36,323
1 Claim. (Cl. 63—30)



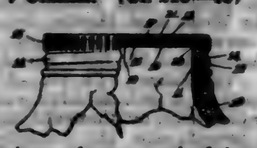
In an ornament of the character described, a body portion, body hinge plates secured thereto, wing members, wing hinge plates secured to the wing members one end of said wing hinge plates being attached for swinging movement to the body hinge plates the other end of said wing hinge plates being downturned, piercing pins carried by said downturned ends, springs in the hinges for yieldably holding the piercing pins closed and said wings being movable against the action of said springs to open said pins.

2,026,935
METHOD AND APPARATUS FOR CONDITIONING AIR
Charles R. Downs, Old Greenwich, Conn., assignor to Weiss and Downs, Inc., New York, N. Y., a corporation of New York
Application August 17, 1932, Serial No. 629,121
13 Claims. (Cl. 183—4)



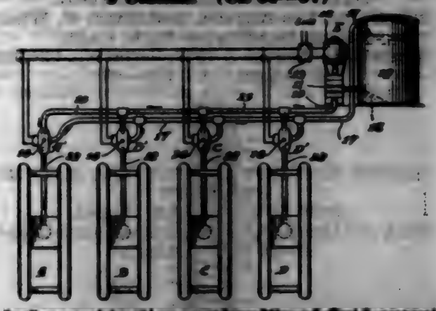
1. The method of dehumidifying air by the deliquescence of a solid deliquescent material which comprises passing the air through a series of drying zones including a liquid phase drying zone and a plurality of solid phase drying zones, removing heat from the air during its passage

through said series of drying zones, draining the solutions from said respective solid phase drying



zones independently of one another, and transferring the same to said liquid phase drying zone.

2,026,936
METHOD AND APPARATUS FOR CONDITIONING AIR
Charles R. Downs, Old Greenwich, Conn., assignor to Wolff and Downs, Inc., New York, N. Y., a corporation of New York
Application May 23, 1933, Serial No. 672,415
29 Claims. (Cl. 183—4)

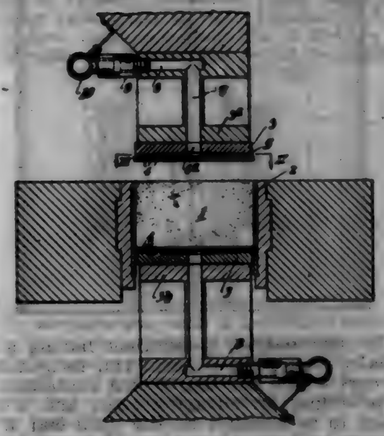


4. The method of dehumidifying gas which comprises recirculating calcium chloride solution through a series of pools, cooling said recirculating solution, passing the gas in contact with and counter-current to the flow of said recirculating solution, then passing the gas horizontally through a series of beds of solid calcium chloride lumps, cooling the gas between said beds, collecting the solutions draining from said beds and transferring them to the body of said recirculating solution.

2,026,937
CONTAINER CLOSURE
Jay Bernard Eisen, Yonkers, N. Y., assignor to Ferdinand Gutmann & Co., Brooklyn, N. Y., a corporation of New York
Application October 18, 1935, Serial No. 45,570
7 Claims. (Cl. 215—43)

1. A container closure embodying therein a shell having a skirt adapted to co-operate with securing means formed about the neck of a container, and a liner within and separable from said shell, consisting of an inner seal disk including a fibrous stratum presented toward the bottom of the skirt, a stratum of thin metal foil presented toward the top of the shell, and a bonding stratum permanently uniting said fibrous and said metal foil strata, whereby said inner seal disk may be firmly cemented to the top of the neck of a container and the escape of volatile matter from the container through said fibrous stratum is prevented.

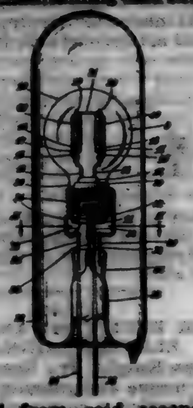
2,026,938
LIFT
Charles W. Eisner, Chicago, Ill., assignor to Rotary Lift Company, Memphis, Tenn., a corporation of Tennessee
Application May 25, 1933, Serial No. 672,827
9 Claims. (Cl. 60—97)



1. In combination, a plurality of fluid operated lifts, a source of fluid pressure common to all of the lifts, and an independent control for each lift, each control including valves and a switch, the switches being adapted and arranged to start the operation of the common source of fluid pressure and the valves to establish and interrupt the flow of pressure fluid between the source of pressure and the associated lift and in cooperation with all of the switches of all other controls to stop the operation of the common source of fluid pressure.

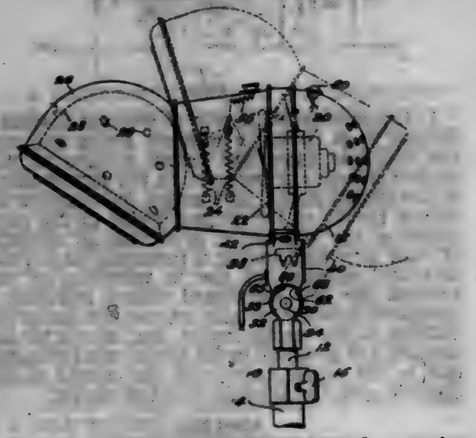
2,026,939
DIFFED-BRIDGED LAMP SHADE OR SIMILAR ARTICLE AND METHOD OF MAKING THE SAME
Max Greenzaft, New York, N. Y.
Application July 19, 1933, Serial No. 681,168
11 Claims. (Cl. 15—88)

2. The method of making a lamp shade or the like, having a thin open work wire frame open at the top and bottom and having side openings at least one inch in maximum width bridged uniformly by a hardened composition material, said frame being of conoidal form and having upright wire elements that define generally downward tapering side openings extending substantially from top to bottom of the frame, dipping said frame wholly into a composition liquid bath, withdrawing said frame from said bath in an upward substantially vertical path with the frame in inverted substantially vertical position, to bridge said side openings and with the composition being of such high viscosity and drying quality as to cause the bridging film to begin to dry substantially as withdrawn from the bath, maintaining said bath relatively quiescent during the withdrawal, causing said frame as withdrawn to enter an atmosphere relatively free of concentrated vapors solvent to the film, including the atmosphere substantially immediately above the bath, and permitting a free flow of drippings to said bath as the frame is withdrawn.



2,026,940
SHAPING REFRACTORY ARTICLES
Dwight B. Hendryx, Pittsburgh, Pa., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 13, 1934, Serial No. 757,312
10 Claims. (Cl. 25—45)

2. An apparatus for pressing semi-dry ceramic material under high pressure comprising a mold, means for applying pressure to batch of such material in the mold, a face of said mold being provided with a plurality of bores of relatively small sectional area and of a length less than the greatest dimension of the opening of the bore, means for creating vacuum, and a connection between said vacuum means and said bores for evacuating the mold.

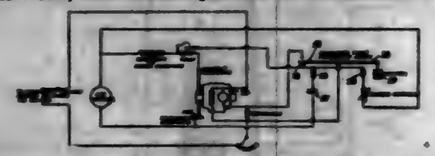


2,026,941
VAPOR ELECTRIC DEVICE
Donald E. Henry, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a corporation of Pennsylvania
Application August 24, 1933, Serial No. 687,424
4 Claims. (Cl. 176—122)

1. An electric discharge device comprising an envelope, a plurality of electrodes therein, said envelope having a press, a plurality of conductors sealed in said press and electrically connected to said electrodes, an envelope surrounding said first mentioned envelope and spaced therefrom, said second mentioned envelope having a cruciform shaped press, a plurality of conductors sealed in said press and electrically connected to said first mentioned conductors for supplying current to said electrodes and means sealing a portion of said first mentioned envelope and having a portion thereof sealed in said cruciform shaped press for maintaining said first mentioned

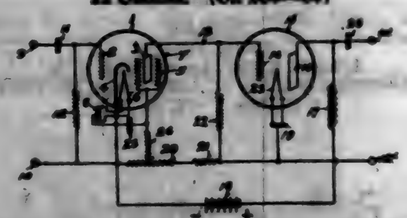
envelope spaced from said second mentioned envelope.

2,026,942
HAIR DRIER
John E. Kelley, Larchmont, N. Y.
Application October 31, 1932, Serial No. 695,986
4 Claims. (Cl. 34—96)



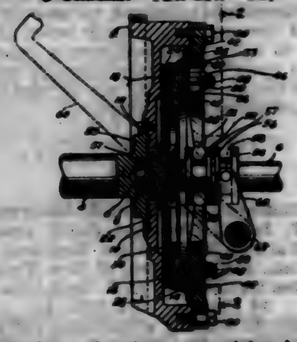
1. A hair-drier comprising a stand, a casing and a hood and a motor-driven fan mounted thereon, a pivotal connection between said casing and stand, and an electrical connection to said motor-driven fan including a switch having a part movable with said casing around said pivotal connection arranged to operate to close the circuit through said switch when the casing is turned to bring the hood over a head, and to operate to open the circuit through said switch when said casing and hood are turned upwardly, around said pivotal connection.

2,026,943
ARC WELDING
Harry E. Kennedy, Maynard A. Rotermund, and Lloyd T. Jones, Berkeley, Calif., assignors to Union Carbide and Carbon Research Laboratories, Inc., a corporation of New York
Application October 22, 1930, Serial No. 490,426
14 Claims. (Cl. 219—8)



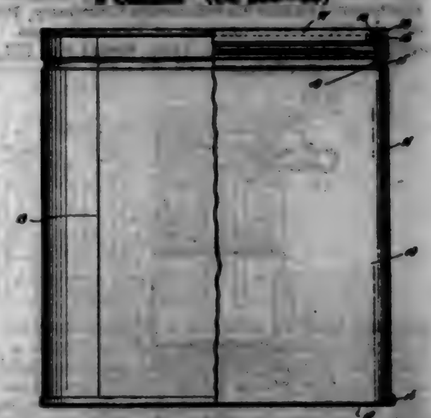
1. In electric welding apparatus, the combination of an electrode disposed adjacent to the work and arranged to have an arc established

therebetween for globules of electrode material at the arcing end of said electrode to be deposited on the work, means for feeding said electrode to the work, and means operable in accordance with



changes from a predetermined normal rate at which the electrode globules are deposited on the work for varying the rate of feeding of said electrode to the work.

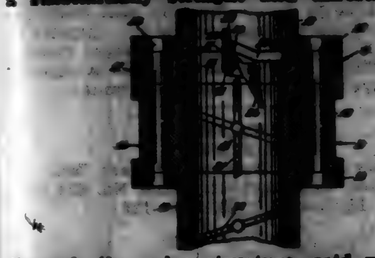
2,026,944
MEANS FOR RECEIVING AND AMPLIFYING ELECTRIC SIGNALS
John Breadus Knight, Jr., New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a corporation of Delaware
Application October 1, 1929, Serial No. 396,469
22 Claims. (Cl. 250—20)



1. In combination a pair of electron discharge devices, each having a cathode, anode and control electrode, input and output circuits for said devices, a source of potential in the output circuit of the second device, and means for coupling the output circuit of the second device to the input circuit of the first device, to provide an amplifier of high gain and having a frequency-gain characteristic suitable for use in television or like systems the last mentioned means including a resistance included serially between the anode and cathode of the second device, and means for impressing the potential drops across said resistance, due to the anode current of the second device, directly upon the anode of the first device.

2,026,945
CLUTCH MECHANISM
George S. Lane, Passaic, N. J., assignor to Raybestos-Manhattan, Inc., a corporation of New Jersey
Application October 23, 1931, Serial No. 570,233
6 Claims. (Cl. 192—63)

1. A clutch mechanism comprising in combination a driving member and a driven member relatively movable axially toward and from each other, a flexible resilient spring plate tending to move said members relatively in one direction axially, said plate being located and shaped to form a housing element for the clutch, a device movable along the side of the driving and driven members in a direction toward said members to relieve the engagement between said members to throw out the clutch, and mechanism for actuating the said device.

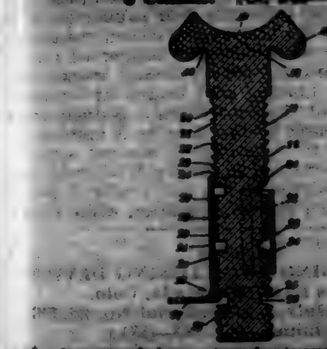


2,026,946
CONTAINER
Victor K. Le Cuenia, Forest Hills, N. Y., assignor to Le Cuenia & Co., Inc., Brooklyn, N. Y., a corporation of New York
Application April 17, 1933, Serial No. 666,481
8 Claims. (Cl. 215—39)

1. In combination, a container having a substantially continuous resilient rim formed by an open curl within the top of said container, said curl providing an engaging edge, and a cover adapted to be clamped on the open end of said container, said cover being provided with an outer circumferential bead having an engaging ledge, said rim and said bead being located with respect to each other so that in moving to the clamped position said bead moves past said rim and resiliently strains said rim in passing, and when in the clamped position said rim reverts to its normal unstrained condition, the outer diameter of said ledge being sufficiently greater than the normal diameter of said engaging edge, and said ledge making such an angle with respect to said edge, as to prevent said bead from moving out of said clamped position without permanently deforming said bead or said rim.

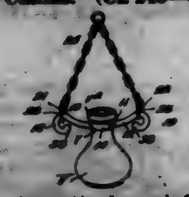
2,026,947
METHOD AND APPARATUS FOR GOVERNING FLOW LINES
William E. Leibing, Sausalito, Calif., assignor to Leibing Automotive Devices, Incorporated, San Francisco, Calif., a corporation of Nevada
Application May 11, 1933, Serial No. 670,533
22 Claims. (Cl. 137—153)

1. In a throttling device for controlling the fluid flow through a conduit of continuous substantially equal cross-sectional area, a valve structure pivoted for oscillation within said conduit about a single axis, said structure comprising a set of spaced interconnected fluid controlling wings designed to provide, upon slight oscillation from closed position, a relatively large effective flow area across the conduit to permit a substantially straight and unrestricted flow



through the valve structure, said wings being shaped at their outer edges to engage the walls of said conduit in closed position.

2,026,948
METHOD AND APPARATUS FOR GOVERNING FLOW LINES
William E. Leibing, Sausalito, Calif., assignor to Leibing Automotive Devices, Incorporated, San Francisco, Calif., a corporation of Nevada
Application March 6, 1933, Serial No. 659,893
10 Claims. (Cl. 137—153)



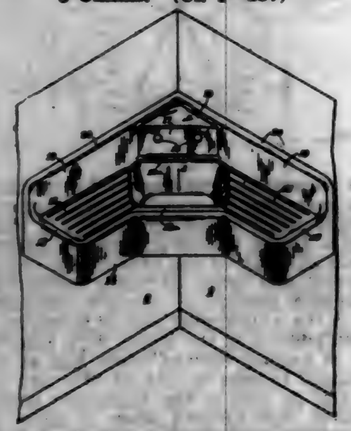
1. In combination with a governor valve and a throttle valve for controlling fuel flow through a conduit, means on said throttle valve for directing a sufficient portion of said fuel flow to said governor valve to effect operation thereof at relatively restricted throttle openings.

2,026,949
NEON TUBE SUPPORT
Arthur B. McMahan, Long Beach, Calif.
Application February 14, 1934, Serial No. 711,139
5 Claims. (Cl. 248—20)

1. A neon tube support comprising, in combination, a refractory stem having a head with means to contact a neon tube, threads of constant pitch on the outside of the stem and integral therewith extending from the end opposite the head, each thread having a gradual sloping wedging surface facing away from the head and also having an abrupt shoulder considered substantially transverse to the stem, an expandible socket having a plurality of knubs spaced apart lengthwise of the socket, the said knubs engaging the threads and on forcing the stem into the socket by rectilinear motion, the wedge surfaces forcing the knubs outwardly for insertion of the stem, the said knubs being adapted to engage the shoulder of the threads and prevent removal of the stem by rectilinear motion, the said knubs being operative to thread the stem into or out of the socket on rotation of the stem, the stem having a plurality of annular grooves spaced apart longitudinally of the stem by a plurality of threads, the grooves being adapted to facilitate severing a section of the stem and the knubs being spaced apart longitudinally whereby one knub always engages the threads.

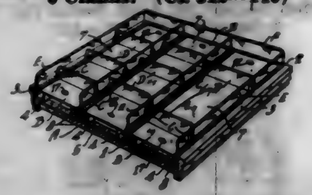
2,026,950
SUSPENSION ATTACHMENT FOR BOTTLE-NECKED VESSELS
Edward J. Miller, Springfield, Long Island, N. Y.
Application May 25, 1935, Serial No. 23,450
4 Claims. (Cl. 248—318)

1. A suspension attachment for bottle-necked vessels, comprising a pair of yokes, each of which is a counterpart of the other, each of said yokes having a bowed middle portion for surrounding substantially half of the neck of the vessel to be suspended, and arms extending outwardly from said middle portion in opposite directions, the arms on the counterpart pair of yokes, in the assembled position of the latter, lying side-by-side; a pair of keepers each of which has an eye and is arranged to pass on and off of a pair of arms lying side by side in the assembled position, of the yokes, said keepers when in place holding said yokes in assembled position, and when removed permitting the separation of said yokes, and means attached to said keepers for suspending a bottle-necked vessel clasped by said yokes in a freely pendent position.



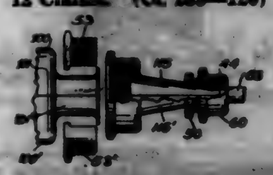
2,026,951
DECONCENTRATOR FOR LOCOMOTIVE BOILERS
Rudolf M. Ostermann, Kenilworth, Ill., assignor to The Superheater Company, New York, N. Y.
Application August 24, 1934, Serial No. 741,191
7 Claims. (Cl. 122—455)

1. In a locomotive type boiler, the combination of partitioning means dividing off a portion



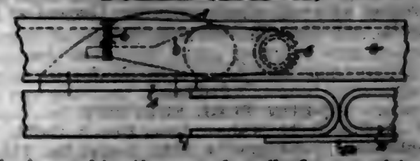
of the space in the upper portion of the boiler from the remaining boiler space, a feed water pipe to deliver feed water for the boiler into said portion of the space, an auxiliary pumping means, a conduit to deliver water from said portion of the space to said auxiliary pumping means, a weir interposed adjacent to the inlet to said conduit so as to prevent the water level in said portion of the space from falling below a predetermined point, a conduit leading from the auxiliary pumping means to the water space of the boiler, a steam dome on the boiler, means to lead steam from the dome and to deliver it below the surface of the water in said portion of the space, and means to take off steam from the upper portion of said portion of the space.

2,026,952
SINK WARE
John C. Reed, 3d, and Clarence C. Schott, Louisville, Ky., assignors to Standard Sanitary Manufacturing Company, a corporation of New Jersey
Application August 8, 1934, Serial No. 738,946
8 Claims. (Cl. 4—187)



1. A sink adapted for corner mounting which has a front edge of a substantially U shaped outline.

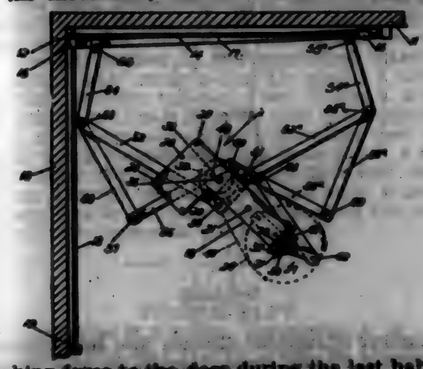
2,026,953
ARTICLE DISPLAY-COUNTER
Peter Schott, Jr., St. Louis, Mo., assignor to American Fixture & Showcase Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application January 17, 1935, Serial No. 2,194
6 Claims. (Cl. 312—140)



1. In a counter-sham, a frame comprising a pair of spaced parallel rails each provided longitudinally in its upwardly presented face with a groove, clips each comprising a U-shaped body-portion and a depending tongue, the clips being seated in opposed pair relation with their said tongues fitting endwise in said grooves, and means including spring-strips each of arcuate formation in transverse section and edgewise fitting in and lengthwise extending longitudinally in the respective grooves for co-operably with respective walls of the grooves engaging the clip-tongues for yieldingly retaining the clips in upright position for supporting a cross-partition at a selected location edgewise on and over the frame.

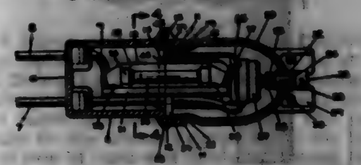
2,026,954
PIPE FITTING
Charles A. Van Deusen, Baltimore, Md.
Application July 25, 1932, Serial No. 624,454
12 Claims. (Cl. 285—120)

5. An article of manufacture including in operative relation: a hollow body of ductile metal having at least one extending tubular stub; a collar of a length materially less than that of said stub and having a threaded portion together with an internally chamfered portion; said collar being mounted upon said stub in concentrically rotatable relation with the chamfer remote from said body and the end of the stub remote from the body being flared in companion relation to the chamfered surface for securing said collar on said stub while permitting longitudinal movement thereon, and said flared surface being radially extended to develop a flange.



2,026,955
ANTIRATTLER DOOR GUIDE
Albert E. Welgris, East Orange, N. J., assignor to National Pneumatic Company, New York, N. Y., a corporation of West Virginia
Application February 8, 1934, Serial No. 710,264
2 Claims. (Cl. 16—91)

1. A combination as described comprising a fixed guide track, a folding door supported so as to lie parallel to the track when closed, means including a guide roller pivotally supported on the door so that the roller moves in said track, resilient means for holding said means at an angle with the plane of the door when it is open and a member engageable by the door as it approaches closed position to constrain it against sidewise movement with respect to the track whereby said means is pivoted to tension the resilient means and hold the door against vibration while closed.

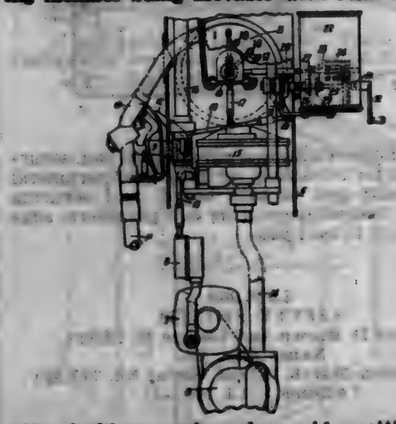


2,026,956
DOOR OPENING AND CLOSING DEVICE
Charles K. Allen, Arvada, Colo.
Application July 1, 1933, Serial No. 29,596
10 Claims. (Cl. 296—21)

1. A device for opening and closing a door which is mounted for movement along a track, comprising in combination, a source of power, means interposed between the power and the door for transmitting movement to the door, said means comprising two sets of link assemblies each connected with the source of power and with the door, each link assembly serving as a means to exert a pull on the door in the direction of its movement during the first one half the distance of the movement, and as a means to apply a

pushing force to the door during the last half of its movement when moving in the opposite direction.

2,026,957
FUSE AND SWITCH RECEPTACLE
Walter J. Bausroth, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a corporation of Ohio
Application March 18, 1931, Serial No. 523,571
5 Claims. (Cl. 247—20)



5. In a switch receptacle, a removable closure therefor, a U-shaped switch supporting element having its bight portion located in said closure, a switch mounted on the bight portion of said element, a fuse supporting member secured between the legs of said supporting element, and a switch actuator mounted in said closure and engageable with the switch upon positioning the closure upon the receptacle.

2,026,958
SINTERED HARD METALLIC ALLOY
Karl Becker, Berlin-Steglitz, Karl Schröter, Berlin-Lichtenberg, and Hans Wolff, Berlin, Germany, assignors, by mesne assignments, to General Electric Company, Schenectady, N. Y., a corporation of New York
No Drawing. Application July 3, 1931, Serial No. 548,472. In Germany February 21, 1930
4 Claims. (Cl. 75—1)

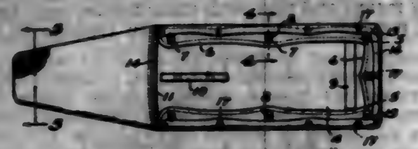
1. A sintered hard metallic alloy consisting of a tungsten carbide containing from about 3 to 7% carbon, an appreciable amount not over 20% of an auxiliary metal of lower melting point such as iron, cobalt, nickel, and from about 0.01 to 30% of vanadium carbide.

2,026,959
LIQUID DISPENSING APPARATUS
Eric H. Bradley, Cincinnati, Ohio, assignor to National Pumps Corporation, Dayton, Ohio, a corporation of Ohio
Original application February 23, 1933, Serial No. 658,536. Divided and this application January 24, 1933, Serial No. 653,647
12 Claims. (Cl. 221—95)

1. In a liquid dispensing apparatus comprising mechanism for delivering measured quantities of liquid, a device to register the quantities of liquid delivered, means for resetting said registering device, and a device to control the operation of said delivery mechanism, cooperating locking members connected respectively with said resetting means and said controlling device, each locking member being movable with relation to the

other locking member when said resetting device is in its normal position and said controlling device is in a position to prevent the operation of said delivering mechanism, said locking members having parts arranged to be brought into interlocking relation by the initial movement of either said resetting means or said controlling device.

2,026,960
MOTION PICTURE CAMERA AND PROJECTOR
Leslie Ernest Thomas Branch, Ilford, England, assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application July 13, 1934, Serial No. 735,760
In Germany July 19, 1933
12 Claims. (Cl. 242—55)



1. In a motion picture camera or projector, in combination, film feed mechanism, a take-up support, means for driving the feed mechanism and take-up support, transmission mechanism through which the drive is transmitted to the feed mechanism, a take-up roll which can be placed on and rotated by said take-up support, and means associated with the roll whereby when this is placed on the take-up support in one position relatively thereto the transmission mechanism is operative but when the roll is placed on the support in the reversed position relatively therete the transmission mechanism is inoperative and the drive cannot be transmitted to the feed mechanism.

2,026,961
PAD AND COVER
Mercedes E. Bradt, Lakewood, Ohio
Application June 7, 1934, Serial No. 729,433
8 Claims. (Cl. 24—16)

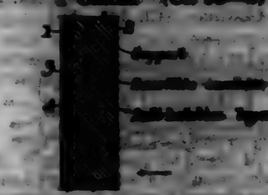
1. A cover in combination with a pad for a board having an open end and a substantially flat sur-

face, comprising a pocket for housing said open end of said board, means for maintaining said pad taut on said flat surface of said board, a peripheral edge forming a part of said cover, a

peripheral edge forming a part of said pad, securing means for releasably securing said peripheral edge of said pad to said board, and securing means for releasably securing said peripheral edge of said cover to said pad.

2,026,962
SAFETY SWITCH
George D. Brown and George M. Myers, Nasty Gin, Pa.
Application March 1, 1934, Serial No. 713,594
2 Claims. (Cl. 200—8)

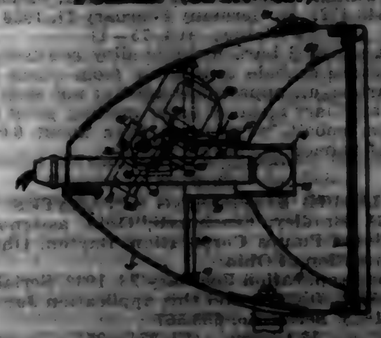
1. A safety switch, comprising a base, a slide member slidable on said base, a pair of terminals secured to said base and adapted to be connected to a source of electric power supply, a terminal bridging member carried by said slide member, a spring constantly urging said slide member in a position whereby said bridging member will engage said terminals, a second pair of terminals carried by the base in spaced relation to said first pair of terminals, a second bridging member carried by said slide member in spaced relation to said first bridging member and engageable with said second pair of terminals when said first bridging member engages said first pair of terminals, a pair of contacts secured to said slide member and adapted to engage said second pair of terminals when said slide member has been moved to disengage each of said bridging members from each pair of terminals, and flexible conductors connecting said first pair of terminals with said contacts.



2,026,963
WARP KNIT GIRDLE WITH INTEGRAL SUPPORTING PANELS
Charles R. Burns, Reading, Pa., assignor to Vanity Fair Silk Mills, Reading, Pa., a corporation of Pennsylvania
Application February 12, 1935, Serial No. 6,314
2 Claims. (Cl. 66—176)

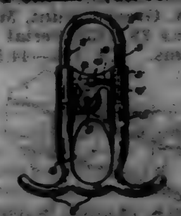
1. Girdle of warp knit fabric comprising side panels of major elasticity and front and back panels of minor elasticity, said panels being integrally knit, including rubber strands incorporated into said fabric in both said front, back and side panels at substantially uniform space inter-

vals, the elasticity of the front and back panels being diminished by the incorporation of a greater number of inelastic threads into said knitting per unit of circumference than in the side panels.



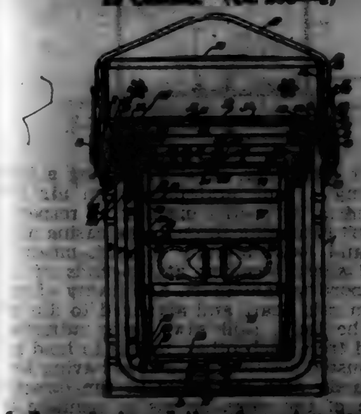
2,026,964
FILM FOR COLOR PHOTOGRAPHY
John G. Capstaff, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application February 9, 1933, Serial No. 656,644
3 Claims. (Cl. 95—6)

A photographic element comprising a light transmitting support of cellulosic composition containing a neutral dye and having minute lenticulations on one surface, a sensitive, panchromatic layer on the other surface, and on the outer surface of the sensitive layer an anti-halation layer which embodies a material absorptive of light of all colors, said material being readily removable in the baths of a photographic reversal process.



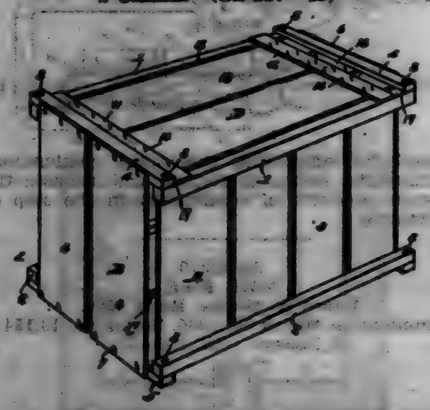
2,026,965
SIGNAL
Charles W. Cusack and William E. Funk, Spokane, Wash.
Application November 15, 1932, Serial No. 642,704
2 Claims. (Cl. 177—337)

1. In a headlight, a body portion, a reflector positioned in the body portion, a [illegible]



tended horizontally disposed lamp within the body portion, vertical supporting bars within the body portion, brackets secured to the vertical supporting bars, plates secured to the brackets and supported in spaced relation with each other, a main shaft, the ends of the shaft being mounted in bearings formed in the supporting plates, a segmental gear mounted on the shaft, a motor mounted between the plates and having a shaft, a worm on the shaft meshing with the segmental gear, a tubular color screen operating over the lamp, a link connected to the main shaft, a link connecting the first mentioned link and color screen whereby movement of the main shaft is transmitted to the color screen moving the color screen with respect to the lamp.

2,026,966
FINGER CUFF
Abraham D. Cushing, Woodsville, N. H.
Application May 5, 1934, Serial No. 723,644
1 Claim. (Cl. 70—240)

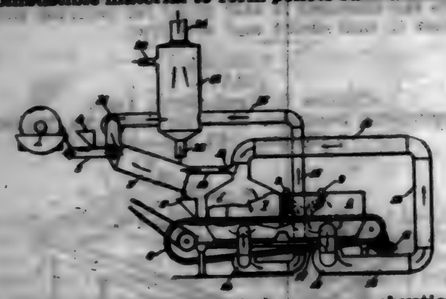


In a finger cuff, a body having a handle comprising oppositely projecting arms and an interposed flatted portion, the said body having bores, a transversely disposed channel intersecting one of the bores, a shackle having two end portions movable in the bores, ratchet teeth on the surface of one of said end portions facing the said channel, a ratchet in the channel engageable with the ratchet teeth, means for urging the ratchet into engagement with the teeth, and means for retaining the ratchet against movement when in engagement with the teeth.

2,026,967
LUNCH BOX
James H. Devine, Ste. Genevieve, Mo., assignor to Dev-Insular Company, St. Louis, Mo., a corporation of Missouri
Application November 25, 1932, Serial No. 644,296
19 Claims. (Cl. 206—4)

1. In a device of the character described, an outer casing, a liner within the casing and thermally insulated therefrom, a collar having a plurality of channels formed on the upper surface thereof associated with said casing and said liner, and means on said casing and liner extending into the channels in said collar for securing said collar to said casing and said liner.

2,026,968
CRATE
Charles O. Ewell, Dyer, Tenn.
Application December 23, 1934, Serial No. 759,506
2 Claims. (Cl. 217—43)



1. A collapsible crate or lug comprising end panels having upper and lower strips on the inner sides thereof providing upper and lower ventilating spaces therebetween open at the sides of the structure, said strips projecting laterally beyond the open sides, side panels including upper and lower side strips on the outer sides thereof providing outside ventilating spaces therebetween open at the ends of the structure, said side strips being so located as not to obstruct the top and bottom ventilating spaces at the sides of the crate, said side strips extending between the projecting ends of the cross strips of the end panels to lap the same, clinched pivot nails extending through the lapping portions of the strips of the end and side panels and constituting the sole connections between the panels, a bottom panel removably mounted at its ends on the lower cross strips of the end panels and held against longitudinal displacement by the end panels and against lateral displacement by the side panels, the top and bottom cross strips on the end panels being so positioned that, when the crates or lugs are stacked, top and bottom ventilating areas of increased size are provided between the stacked crates which spaces are constantly open at their sides, and the top and bottom side strips of the ends or lug constituting means for engaging corresponding strips on similar crates or lugs when stacked at the sides thereof, thereby to provide open ended side ventilating areas of increased size between the crates or lugs when positioned side by side, and a top panel normally positioned to afford no obstruction to the said upper and lower ventilating spaces.

2,026,969
METHOD FOR TREATMENT OF SEWAGE
Edward D. Flynn, New Rochelle, N. Y., assignor, by mesne assignments, to Oliver United Filters, Incorporated, San Francisco, Calif., a corporation of Nevada
Application May 18, 1932, Serial No. 611,129
4 Claims. (Cl. 210—15)

3. The method of treating sewage sludge comprising effecting a separation of its solid and

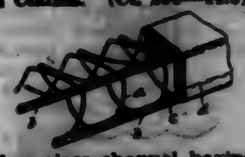
liquid phases; continuously rolling and tumbling the separated solids in the presence of a sufficient quantity of hot gases and a comminuted combustible material to form pellets substantially

capable of supporting their own combustion; burning the pellets so formed and utilizing the gaseous products of combustion in the step of pelletizing.

2,026,970
NAIL FILE
James W. Gorow, Reno, Nev.
Application March 26, 1935, Serial No. 13,154
3 Claims. (Cl. 132—73)

1. A nail treating instrument comprising a blade-like member perforated over its whole area, the perforations being small and close together, and the opposite faces of the perforated blade being smooth.

2,026,971
WINDOW GLASS GUIDE
Daniel A. Greene, Flint, Mich.
Application December 14, 1934, Serial No. 758,050
3 Claims. (Cl. 296—44.5)

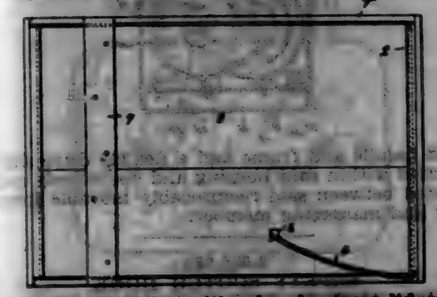


1. A window glass guide comprising a channel shaped core composed of a pair of longitudinal edge wires, a series of regularly spaced transverse wires connected at their ends with said edge wires, and a pair of longitudinal stay wires interwoven with and connected to said transverse wires and arranged in proximity to said edge wires, said transverse wires being substantially unobstructed to movement into relatively radial positions when the channel is bent to conform to a curved window frame.

2,026,972
WINDOW GLASS GUIDE
Daniel A. Greene, Flint, Mich.
Application March 5, 1932, Serial No. 597,411
10 Claims. (Cl. 296—44.5)

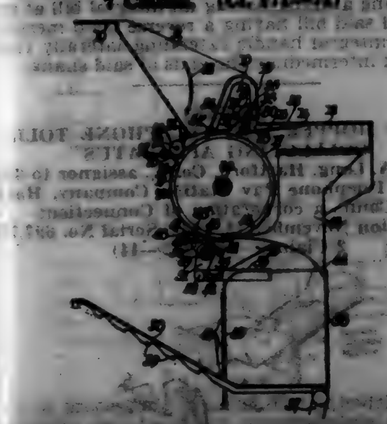
1. A glass run channel comprising a generally channel shaped core portion of flat continuous sheet metal having a base and side walls, said core portion having transverse slits extending alternately partly across the same from opposite edges of its sides, and the edges of said slits being spaced apart at their open ends.

2,026,973
WINDOW GLASS CHANNEL
Daniel A. Greene, Flint, Mich.
Application May 29, 1935, Serial No. 24,013
4 Claims. (Cl. 296—44.5)



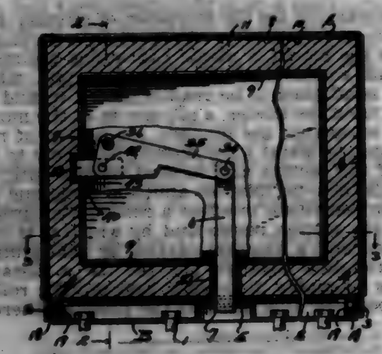
1. A window glass channel having a channel shaped metal core composed of a continuous wire formed into a series of coils having oppositely disposed segmental portions thereof arranged approximately in the same plane with the corresponding segmental portion of each coil overlapping the opposite segmental portion of the next adjacent coil and means engaged with the intermediate portions of said coils for securing the same in fixed relation.

2,026,974
AIR CONDITIONING APPARATUS
John Oliver Geffry, Arkansas City, Kans.
Application May 15, 1935, Serial No. 21,599
1 Claim. (Cl. 261—26)



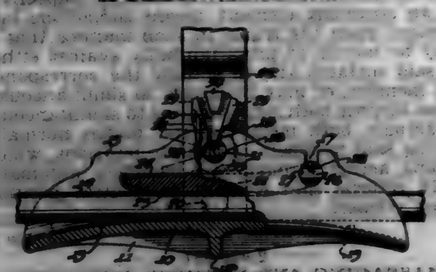
In an air moistener, a casing having a lower part forming a tank and having an air inlet opening and an air outlet opening at respective ends, a shaft extending through the casing above the tank and longitudinally thereof, means to rotate said shaft, bearings at the ends of said casing supporting said shaft, a plurality of saws mounted on said shaft and arranged to dip into water in the tank, said saws being adjustable toward and from each other, means to hold said saws in adjusted positions said saws having teeth with points directed forwardly in the direction of rotation of the saws, means to regulate the height of the shaft above the water in the tank and thereby control the depth of immersion of the saws, a second shaft extending through the tank parallel to the first shaft, means to rotate said shaft, breaker plates mounted on said shaft for adjustment thereabout to position the plates in the paths of spray from the saws, and means to hold the breaker plates in adjusted position on the shaft.

2,026,975
BOX
Oscar L. Hein, Shawano, Wis.
Application March 19, 1935, Serial No. 11,369
2 Claims. (Cl. 217—56)



1. In combination with a box having a lid, said box having grooves on the inner faces of its end pieces for receiving the ends of the lid, the length of the lid being less than the distance between the outer walls of the two grooves, whereby by pushing one end of the lid into one groove the other end of the lid can be placed opposite the other groove and then the lid moved forwardly to place said other end in said other groove and an elongated member movably fitting in one of the grooves between an end of the lid and an outer wall of said groove for holding the lid in place, said member having an angle extension at one end forming a handle.

2,026,976
GUIDING ARRANGEMENT FOR A DOCUMENT REPRODUCING MACHINE
Carter J. Hughey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application February 2, 1934, Serial No. 709,889
7 Claims. (Cl. 271—74)



1. In a machine for handling documents, the combination with a feeding means having an exit and including a drum for moving documents, of a fixed guide member located adjacent to the exit of said feeding means and having a curved edge which extends outside from said drum, and a movable guide member adapted resiliently to press against the periphery of said drum and for directing a document, which is leaving said feeding means, into contact with said curved edge of the fixed guide member, said guide members being displaced along said drum with the spirally curved edge of said fixed guide member being variably displaced from said movable guide member.

2,026,977
SAFE
William H. Jaeger, Trenton, N. J.
Application February 7, 1933, Serial No. 655,644
5 Claims. (Cl. 109—3)

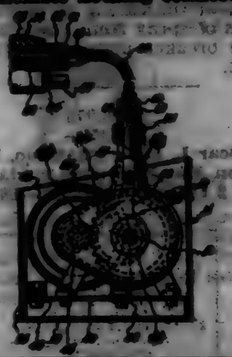
1. In combination, a base structure, a safe slidable on the base structure, a door for such safe, means for interlocking the safe and base structure when the safe is slid on the base structure, and means carried by the door and coacting with the base structure for holding the safe against sliding movement when interlocked with the base structure, said means being ineffective when the door is opened.

2,026,978
RELEASING CLAMP
John Milton Junior, Washington, D. C.
Application September 28, 1932, Serial No. 635,273
19 Claims. (Cl. 248—64)

17. In a conductor clamp, a lower clamping member for receiving a conductor and having spaced upstanding sides, an upper clamping member located between said sides for clamping engagement with the conductor, a hold-down cam located between said sides for cooperation with the upper clamping member to hold the same in engagement with the conductor, and means integral with said cam and rotatably and detachably engaged within openings in said sides.

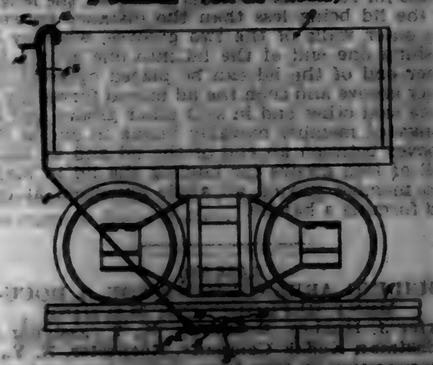
2,026,979
APPARATUS FOR PRODUCTION OF STEEL TUBES AND OTHER SECTIONS
Ernest Frazer Jones, London, England
Application December 12, 1934, Serial No. 757,206
In Great Britain October 12, 1933
4 Claims. (Cl. 29—33)

1. Apparatus for the extrusion of circular steel sections comprising in combination a holder to receive the mould, a mould containing a circular die and constituting an extrusion pot, which mould is adapted to be readily placed in and removed from the holder, a plunger to fit the mould, a ram to operate the plunger, a plurality of rollers mounted about axes skewed relatively to the axis of the section and located in line with the die with their peripheries abutting upon one another to constitute in effect a rolling die through which the section passes and by which it is consolidated and a mandrel carried by said plunger and extending through the die for a distance such as to enable it to enter between the rollers to support the tube against the pressure thereof.



2,026,980
ELECTRIC SWITCH MECHANISM
Henry B. Joy, Grosse Pointe Farms, Mich.
Application January 26, 1934, Serial No. 708,868
4 Claims. (Cl. 200—5)

4. Electric switch mechanism including a frame, two switch operating members having oppositely facing relatively inclined surfaces, means supporting the said members upon the frame for limited movements relatively thereto, respectively, an operating element, means supporting said element upon the frame in such manner that it may be moved to press normally against either of said surfaces and to actuate the corresponding member, or may be moved to simultaneously press against both such surfaces to simultaneously actuate both members, and means normally urging said members to definite positions, which means, acting through said members, automatically returns said element to neutral position when released.



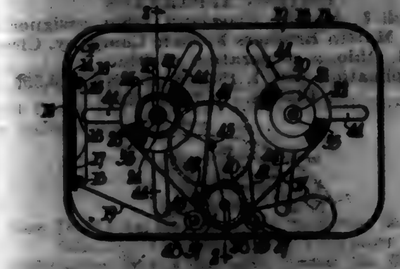
2,026,981
MASSAGING AND BATHING APPARATUS
Ellis Kahnt, Chicago, Ill.
Application February 7, 1934, Serial No. 710,847
5 Claims. (Cl. 15—22)

1. A massaging apparatus including a handle, a massaging member supported thereby for reciprocable movement with respect thereto, and means for reciprocably moving said massaging member with respect to said handle comprising a frame remote from said massaging member, a motor, a reciprocably movable member driven by said motor and supported in said frame, and a flexible drive connection between said reciprocably movable member and massaging member comprising a flexible housing connected between

said handle and frame and a flexible drive shaft carried within said housing and operatively connected between said reciprocably movable member and massaging member.

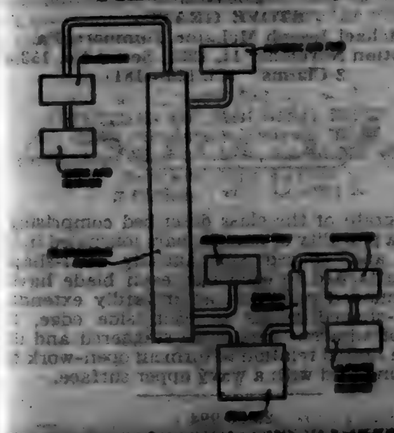
2,026,982
SAFETY SCOTCH HOOK
Jesse McKinley Kinkeon, Coal Park, W. Va.
Application May 20, 1935, Serial No. 22,455
2 Claims. (Cl. 24—230.5)

1. As a new article of manufacture, a hook for use in connection with a mine cat scotch and comprising a shank having an integral bill at one end, and said bill having a reverse bend merging into an integral handle extending laterally from the hook intermediate the ends of said shank.



2,026,983
COIN HOPPER FOR TELEPHONE TOLL COLLECTING APPARATUS
George A. Long, Hartford, Conn., assignor to The Gray Telephone Pay Station Company, Hartford, Conn., a corporation of Connecticut
Application November 11, 1933, Serial No. 697,771
2 Claims. (Cl. 221—84)

1. A case for a coin hopper and a baffle fixing therefrom and of curved contour in cross sec-

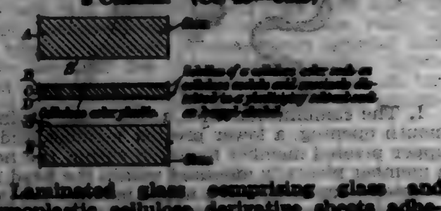


tion, all being formed of a single piece of metal and said case being open at the bottom and having a notch in one wall, and a separately formed bottom having an opening for discharge of coins therefrom and a wing fitting within said notch.

2,026,984
FILM MAGAZINE
Donald F. Lyman, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application December 7, 1932, Serial No. 781,211
11 Claims. (Cl. 88—17)

1. In a film magazine, the combination with a casing, a pair of supports for rotatably mounting a pair of film rolls within said casing, and a film advancing means including a sprocket rotatable in a predetermined direction to move film from one film roll to the other and for engaging the film and maintaining a preformed loop in said film within said casing, of a uni-directional clutch means between said casing and said sprocket and for permitting rotation thereof in said predetermined direction but preventing rotation of said sprocket in reverse direction.

2,026,985
PROCESS FOR THE MANUFACTURE OF ALIPHATIC ACID ANHYDRIDES
Carl J. Malm and Webster E. Fisher, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application March 27, 1933, Serial No. 663,966
4 Claims. (Cl. 260—133)



1. A process of preparing the anhydride of an aliphatic acid from the corresponding acid and acetic anhydride comprising passing the aliphatic acid and acetic anhydride vapor, in contact with magnesium perchlorate, in counter-current through a fractionating column.

2,026,986
PREPARATION OF HIGH VISCOSITY MIXED ESTERS OF CELLULOSE
Carl J. Malm, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application May 1, 1933, Serial No. 19,349
3 Claims. (Cl. 260—101)

1. The preparation of a high viscosity mixed ester of cellulose containing acetyl and acyl groups of 3–4 carbon atoms in a bath in which the acyl groups of 3–4 carbon atoms comprise at least 40% of the total acyl therein which comprises pretreating cellulose with a mixture of acetic acid and a fatty acid of 3–4 carbon atoms, the former comprising at least 20% of the mixture and then esterifying it in a bath containing a catalyst and a mixture of the anhydride of a fatty acid of 3–4 carbon atoms and acetic anhydride, the latter comprising at least 20% of the anhydride present.

2,026,987
LAMINATED GLASS
James G. McNally and Sterling R. Sweet, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application March 11, 1933, Serial No. 660,808
3 Claims. (Cl. 49—81.5)

1. Laminated glass comprising glass and thermoplastic cellulose derivative sheets adhesively bonded thereto by the agency of a film containing a mixed carbohydrate organic ester at least one of the acyl groups of which contains a free carboxyl group.

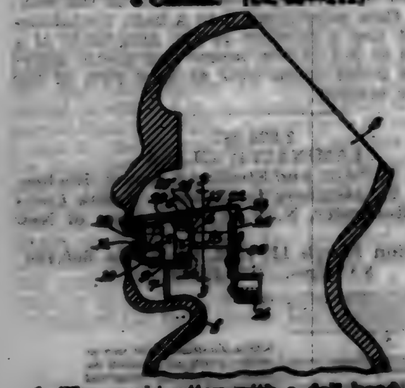
2,026,988
ROAD PAVING
Hermann Plauson, Darmstadt, Germany, assignor, by mesne assignments, to T. R. C. Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 1, 1930, Serial No. 492,975. In Germany November 3, 1929
5 Claims. (Cl. 94—23)

1. A rolled ballast road comprising ballast stones, which are united by a hydraulically set uniformly bituminated mortar filling the interstices between the stones, the said mortar being prepared from an initially pulverulent intimate mixture of a hydraulic binder and not more than seven per cent, calculated on the weight of the binder, of a bituminous substance, so as to form a monolithic block.

2,026,989
METHOD OF BUILDING ROADS
Hermann Plauson, Freiberg, Germany, assignor, by mesne assignments, to T. R. C. Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Original application August 12, 1931, Serial No. 556,610. Divided and this application January 18, 1934, Serial No. 707,241. In Germany August 15, 1930
5 Claims. (Cl. 94—22)

1. The method of making a rolled ballast road which comprises arranging on the road a layer of

ballast stones and a dry uniformly bituminated mortar prepared from a pulverulent intimate mixture of a hydraulic binder and not more than seven per cent, calculated on the weight of the binder, of a bituminous substance, compressing the layer of stones and mortar by rolling so as to fill the interstices between the stones with the mortar and adding water to cause the bituminated hydraulic binder to set in situ thereby uniting the ballast stones into a monolithic block.



2,026,906

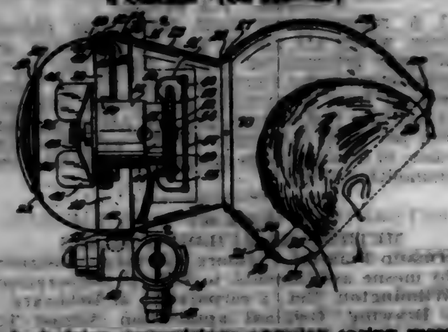
DOLL HEAD

Joseph A. Manning, Pawtucket, R. I.

Application June 12, 1934, Serial No. 730,110

6 Claims. (Cl. 46—171)

1. The combination with a doll head having a mouth opening, a lower pivoted member and an upper pivoted member mounted within the head, a member pivotally mounted within the head and adapted to move over the upper member partially concealing the upper member, the upper pivoted member adapted to engage the lower pivoted member restricting downward movement of the upper pivoted member, weighted means for moving the member operating over the upper member, means for transmitting movement of the member moving over the upper member, to the upper member.



2,026,981

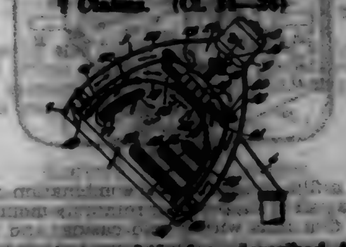
DRIER

Wendell L. Martin, Cleveland, Ohio

Application September 21, 1931, Serial No. 564,972

4 Claims. (Cl. 219—39)

1. A drier, comprising: angular casing means having an open end portion adapted to be directed toward a subject to be treated; a motor and fan unit disposed in said casing and cooperating therewith to define an annular passage for air, said motor and fan unit operating to effect flow of a stream of air through said casing and into contact with said subject, said motor and fan unit carrying a threaded projection; an insulating member carried by said projection and having radiant energy generating means mounted thereon, a shield mounted upon said projection for shielding said generating means from the stream of air passing through said casing means, and a member threaded upon said projection and clamping said insulating member and said shield in fixed position with reference to said motor and fan unit.



2,026,982

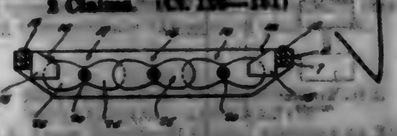
DATING APPARATUS

Wendell L. Martin, Cleveland, Ohio, assignor to The Martin Brothers Electric Company, Cleveland, Ohio, a corporation of Ohio

Application July 1, 1933, Serial No. 678,153

7 Claims. (Cl. 35—30)

1. Apparatus, as of the type described, for subjecting a person to the action of a stream of gaseous-like fluid, comprising: an open-front housing having a plurality of orifice areas, and means cooperating with said housing and defining a plurality of cooperating passages communicating with said orifice areas; and circulating means within said housing, axially shiftable from passage to passage, and operable in one passage to induce flow through said passages and orifice areas in one direction, and operable in another passage to induce flow in the opposite direction through said passages and orifice areas; said housing and cooperating means whereby gaseous fluid discharged from one passage is entrained in the stream of gaseous fluid entering the other passage and thus recirculated.



2,026,983

STOVE GRATE

Michael Joseph McLaine, Dunmore, Pa.

Application November 14, 1934, Serial No. 753,831

2 Claims. (Cl. 126—141)

1. A grate of the class described comprising a frame, a plurality of parallel bars journaled in the frame, and spaced substantially oval-shaped blades attached to each bar, each blade having plain rounded ends and an inwardly extending arcuate-shaped recess in each side edge, the blades of adjacent bars being staggered and disposed in nested relation to form an open-work fire supporting grid with a wavy upper surface.

2,026,984

ARMATURE FOR MAGNETIC MOVEMENTS

Charles Mantek, Brentwood, N. Y.

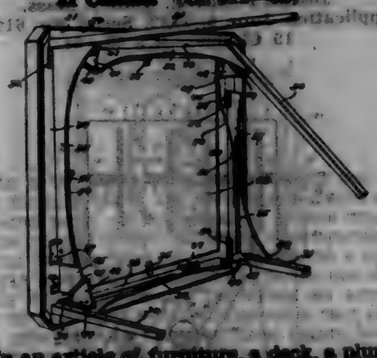
Application May 15, 1930, Serial No. 452,978

16 Claims. (Cl. 172—119)

4. In a magnetic movement, the combination of a pair of pole pieces of the same polarity, a

stationary voice coil to vary the strength of the polarity of one of the pole pieces with respect to the other, a pole face on each of the pole pieces and a reciprocating armature provided with two

magnetic portions each having a face adjacent to and of substantially the same area as one of said pole faces, the adjacent faces overlapping when in normal position.



2,026,985

TABLE

Don D. Myers, Toledo, Ohio, assignor to The Blandon Manufacturing Company

Application March 31, 1933, Serial No. 663,290

21 Claims. (Cl. 311—82)

1. In an article of furniture, a deck, a plurality of legs for said deck movable to supporting and non-supporting positions, and means operable upon movement of one of said legs to either of said positions to successively move the other legs to said position.

2,026,986

METHOD OF MOLDING PIPES

Harry Rafkovich, Detroit, Mich.

Application May 26, 1933, Serial No. 672,539

Renewed June 4, 1935

10 Claims. (Cl. 18—59)

1. The method of making hollow articles composed of fiber and a binder which hardens under heat which comprises applying said fiber and binder to a core helically wrapping a porous sheet around said fiber and binder the number of times to provide the proper thickness for a predetermined mold, applying said mold to said porous sheet, supporting said assembled core, fiber and binder sheet and mold to temperatures sufficiently high to harden said binder and subsequently removing said core, mold and sheet from the molded article.

2,026,987

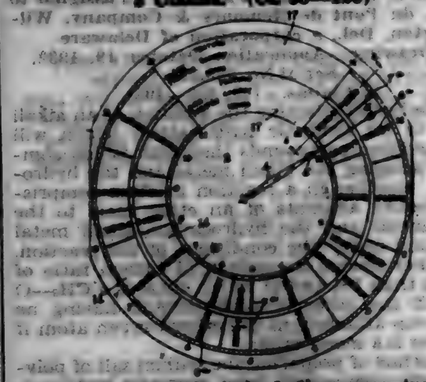
UNIVERSAL JOINT

Charles De Los Rios, West Hartford, Conn.

Application February 9, 1934, Serial No. 710,467

5 Claims. (Cl. 64—17)

1. In a universal joint, a pair of yokes disposed at right angles to each other, a spider, means comprising tubular members extending through said yokes and into said spider, bolts extending through said tubular members having heads bearing against the outer ends of said tubular members and screw threaded inner ends anchored in said spider for rigidly securing said tubular members to said spider, antifriction bearings between the outer ends of said tubular members and said yokes disposed with their axes of thrust inclined outwardly toward the radii of the tubular members to operatively connect said yokes together for frictionless angular movement relative to each other, and means on the outer ends of said tubular members for adjusting said bearings.



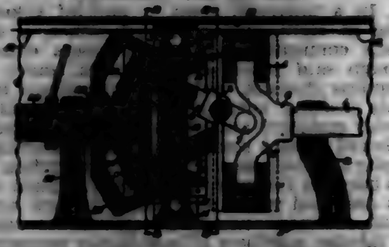
2,026,988

PROGRAM CLOCK

Hugh W. Sanford, Knoxville, and Fritz H. Thomas, Greeneville, Tenn., assignors to Program Clock, Inc., Knoxville, Tenn., a corporation of Tennessee

Application June 15, 1933, Serial No. 677,442

3 Claims. (Cl. 58—126)



1. A program clock including a central clock face adapted to carry an advertising display, in combination with a hand mounted to move across said face having a substantially opaque pointer end, the remainder of the hand, adapted to traverse the advertising display, being transparent, whereby the advertising display remains unobscured regardless of the position of the hand.

2. A program clock designed for public use to give persons several feet away a time record of

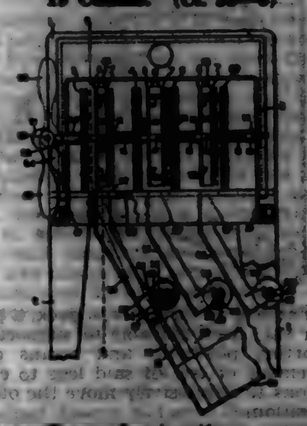
a variable entertainment presentation comprising a clock having a single hand, a substantially circular dial portion of relatively large diameter having a multiplicity of time division lines defining intervening spaces of individually small time value, a program band peripherally beyond the dial and concentric therewith, movable indicia carried by the band for designating the character of the individual program units, and movable means carried by the band having division lines adapted to be placed in prolongation of the time division lines to cooperate therewith and with the indicia to indicate the time of beginning, time of ending, and duration of the several program units.

2,026,999
DRIVING MECHANISM
John S. Schumaker and Alan G. Schumaker, Asheville, N. C.
Application May 16, 1934, Serial No. 725,944
10 Claims. (Cl. 74—389)

1. Driving means comprising a drive shaft, and a driven shaft, in combination with means for driving the latter by the former at an automatically variable speed, the latter means comprising an auxiliary shaft universally connected to the drive shaft and connected to the driven shaft, and rotatable on its own axis at different speed ratios from the driven shaft and swingable simultaneously about the axis of the driven shaft.

2,027,000
PROCESS OF REACTING ALKALI METALS WITH AROMATIC HYDROCARBONS
Norman D. Scott, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 19, 1932, Serial No. 638,336
14 Claims. (Cl. 260—667)

1. Method of effecting the addition of an alkali metal to an aromatic hydrocarbon which will form addition compounds therewith which comprises bringing the alkali metal and the hydrocarbon together in a reaction medium comprising effective amounts of an ether inert to the alkali metal and the hydrocarbon-alkali metal compound under the conditions of the reaction, said ether having an oxygen to carbon ratio of not less than 1:4 and in which there is a CH_2—O group if the ether is aliphatic and having no aryl group attached to the ether oxygen atom if the ether is a mono-ether.



9. Method of preparing the sodium salt of polycarboxylic compounds from aromatic hydrocarbons which will form addition compounds with alkali metals, which comprises bringing the alkali metal and the hydrocarbon together in a reaction medium comprising effective amounts of an ether inert to the alkali metal and the hydrocarbon-alkali metal compound under the conditions of the reaction, said ether having an oxygen to carbon ratio of not less than 1:4 and in which there is a CH_2—O— group if the ether is aliphatic and having no aryl group attached to the ether oxygen atom if the other is a mono-ether, and, after the alkali metal-hydrocarbon reaction has started, adding CO_2 to the solution so as to simultaneously carboxylate the alkali metal compound and form further amounts of alkali metal compound.

14. Dihydrophenanthrene dicarboxylic acid prepared by a process comprising reacting phenanthrene with an alkali metal in an ether solution to form a di-alkali metal addition compound and reacting said addition compound with carbon dioxide.

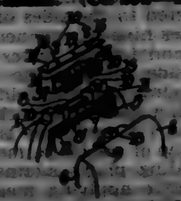
2,027,001
PRESERVATION OF RUBBER
Winfield Scott, Akron, Ohio, and Horace G. Byers, Washington, D. C., assignors to The Rubber Service Laboratories Co., Akron, Ohio, a corporation of Ohio
No Drawing. Original application October 26, 1927, Serial No. 228,966. Divided and this application May 12, 1934, Serial No. 725,496
21 Claims. (Cl. 18—59)

1. The method of preserving rubber which comprises treating rubber with the condensation product of an aliphatic aldehyde with a diarylamine containing two amino groups.

2,027,002
COOKING APPLIANCE
Joseph F. Young, Quincy, Mass.
Application June 6, 1933, Serial No. 675,617
19 Claims. (Cl. 53—5)

1. An appliance for toasting or cooking food in slice formation comprising a housing having a plurality of separate unobstructed openings in its bottom, a pair of slice-clamping members to support a slice stationarily within the housing over each opening, a spring for holding each pair of clamping members in clamping engagement with the slice, heating elements within the housing arranged to toast or broil said slices while thus stationarily supported, and means common to all the pairs of slice-clamping members to open simultaneously, whereby said slices gravitate through said openings.

2,027,003
STRAP FASTENER FOR TIRE CHAINS
Frank E. Stahl and Raymond W. Waterbrod, Tonawanda, N. Y., assignors to Columbus McKinnon Chain Corporation, Tonawanda, N. Y., a corporation of New York
Application March 8, 1935, Serial No. 10,218
3 Claims. (Cl. 24—121)

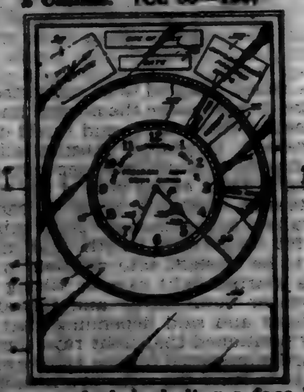


1. A fastener for a strap comprising a supporting plate, spaced wings carried by the plate, each wing being formed with an elongated bearing

adjacent the end of the plate which receives the strap, a lever extending between said wings and having trunnions slidable in the elongated bearings to permit longitudinal movement of the lever in clamped position, said lever being provided between the trunnions with a claw for clamping the strap, keepers formed in the body of the plate

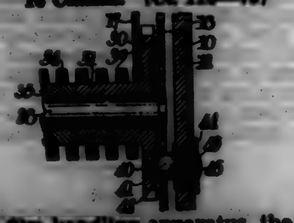
independently of the wings, and hooks formed on the free end of the lever, said hooks being drawn into engagement with the keeper when the lever is in its clamped position by longitudinal movement of the strap in the opposite direction from that in which it is received due to the tension of the strap on the claw.

2,027,004
CAMERA LATCH
Donald H. Stewart, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application April 27, 1936, Serial No. 76,713
2 Claims. (Cl. 292—167)



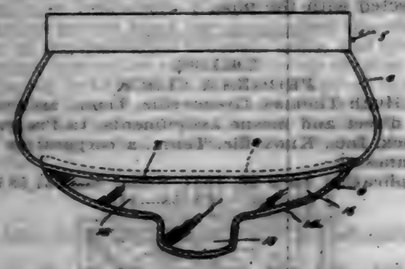
1. In a latch for cameras including two relatively movable parts, the combination with a pair of spaced posts on one member, a slide mounted on the spaced posts including downwardly extending flanges forming with the posts a hollow, box-like receptacle between the posts, one downwardly extending flange including an aperture, a lug on the other relatively movable part adapted to pass through the apertured flange into the box-like receptacle between the posts and flanges, and means including a plate fastened at its ends to the posts and overlying the slide for retaining the slide on the camera.

2,027,005
ROOT SPRAY
Raymond F. Tairov, Coffeyville, Kans.
Application September 30, 1935, Serial No. 41,483
2 Claims. (Cl. 47—32)



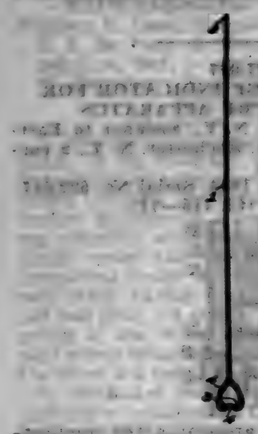
2. Means for supplying water to the bases of trees, plants and the like comprising a pipe having a beveled end which causes the water to flow from the bore of the pipe sidewise, means for connecting the upper end of the pipe to a source of supply, a valve for controlling the flow of water through the pipe and a handle on the upper portion of the pipe, said handle being adjustably connected with the pipe.

2,027,006
PROGRAM CLOCK
Fritz Hugh Thomas, Greeneville, Tenn., assignor, by direct and mesne assignments, to Program Clock, Inc., Knoxville, Tenn., a corporation of Tennessee
Application April 20, 1931, Serial No. 531,583
2 Claims. (Cl. 58—126)



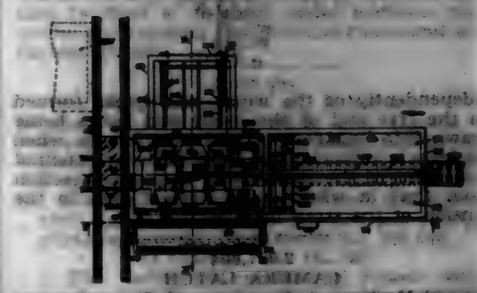
1. A program clock including a face having a central clock dial and an annular area surrounding the circumference of the dial, oppositely facing flanges at the edges of the annular area, a plurality of segments detachably retained by the flanges each bearing indicia corresponding to a program unit, dial time markings carried by the flanges and a clock hand cooperating with the clock dial, the markings and the segments to indicate the elapse of time and the currency of a program unit.

2,027,007
FEELABLE FOOTAGE INDICATOR FOR MOTION PICTURE APPARATUS
Otto Wittel, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application October 7, 1932, Serial No. 637,667
16 Claims. (Cl. 116—73)



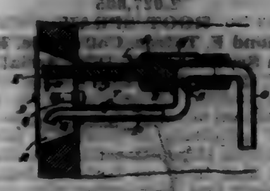
4. In a film handling apparatus, the combination with a casing for said apparatus, and a driving means for advancing film through said casing, of a feelable member movably mounted with respect to said casing in a position available to the touch of the operator during normal operation of the apparatus and actuated by said driving means periodically to affect the operator's sense of feeling in timed relation to the rate of film advancement.

1,027,902
EYESHADE
James R. Woodworth, Manteca, Calif.
Application January 19, 1935, Serial No. 2,366
1 Claim. (Cl. 2—12)



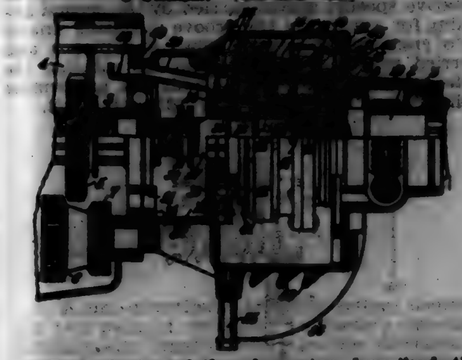
A glare shield adapted to be supported with the lower edge thereof above the normal line of vision of the head of the wearer, said shield comprising a transversely elongated substantially opaque member having a centralized depending part for disposition in front of the nose of the wearer, the lower laterally extending edges on each side of the centralized depending part being substantially straight for their entire length, said shield being adapted to be brought into position to intercept oncoming glaring light rays by tilting the head of the wearer downwardly and forwardly, said side portions and said depending part being so relatively positioned that light rays coming from the left are intercepted for the right eye and vice versa, so as to leave the right eye with unaffected vision.

1,027,908
TOOL FOR OPENING AUTOMOBILE DOORS
Floyd J. Wyssaver, Washington, D. C., assignor of one-third to Henry C. Parker, Washington, D. C.
Application March 14, 1934, Serial No. 715,858
3 Claims. (Cl. 81—5)



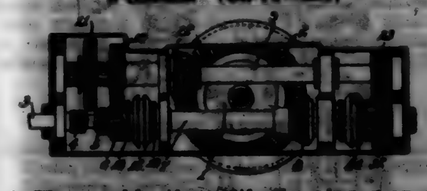
1. A tool for opening automobile doors comprising a stiff but bendable rod having a length sufficient to reach from the floor boards of an automobile to an inner door handle and being provided with means for pushing and pulling an inner door handle, said means comprising a loop having at least one hook shaped portion for pulling said handle and a reversely bent section adapted for pushing said handle.

1,027,910
ICE WRAPPING MACHINE
Maxwell T. Leigh, Huntington Park, Calif., assignor, by mesne assignments, to Leigh Packaged Ice Machinery Corporation, Huntington Park, Calif., a corporation of California
Application July 30, 1931, Serial No. 554,115
24 Claims. (Cl. 93—8)



17. In an ice wrapping machine, a platform, means for positioning a sheet of wrapping paper thereon, and folding plates hingedly connected to the ends of the platform, side folding plates hingedly connected to the sides of the platform, top folding plates hingedly connected to the side folding plates, and folding plates hingedly connected to the sides of the side folding plates, means for swinging the side folding plates upwardly against the sides of a block placed on the platform, means for swinging the top folding plates over the top of the block, means for swinging the end folding plates against the ends of the block, adhesive applying means carried by one of the top folding plates for applying adhesive between the lapped edges of the sheet on the top of the block, and adhesive applying means carried by the other side folding plate for applying adhesive between the folded portions of the sheet at the ends of the block.

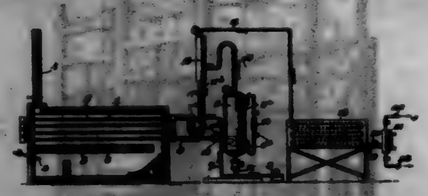
1,027,911
INSET TAP
Ernest Atkinson, Toronto, Ontario, Canada
Application March 23, 1926, Serial No. 13,594
In Canada April 11, 1925
1 Claim. (Cl. 236—46)



An inset tap comprising, in combination, a cup adapted to be attached to a container, a rim on said cup lying flush with said container, a door closing the cup, sealing means for said door, an air valve in the cup, a dispensing valve casing communicating with the cup, a valve plug in said casing, an extension thereto terminating in a key, a spring holding the valve plug in position in the casing, a pipe communicating with the casing and with the interior of the container, an extensible faucet in said cup communicating with said casing, a passage in the valve plug adapted upon turning of the key to open or close communication between the casing and the faucet for dispensing liquid from the container.

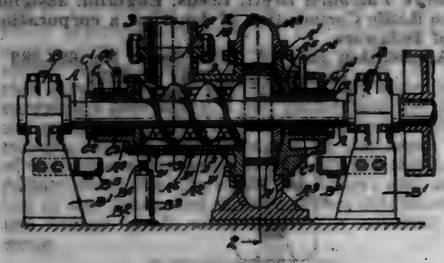
1,027,912
OILING MEANS FOR PLANETARY TRANSMISSION
William B. Barnes, Indianapolis, Ind.
Application August 9, 1933, Serial No. 684,899
6 Claims. (Cl. 192—13)

1. In a device of the character described, the combination with a casing, of a rotating member in said casing including planetary pinions mounted on bearings requiring lubrication, a lubricant conduit extending into each of said bearings and parallel with the axis of said member, an annular ring mounted on said rotating member and overhanging the ends of said bearings, a stationarily mounted shield having a central opening, a flange on said shield surrounding said opening and entering said ring, and means for conveying lubricant picked up by said rotating member within said casing on one side of said shield to the opposite side of said shield, the lubricant thus conveyed flowing through the opening in said shield into said annular ring.



2,027,613
TRANSMISSION
William B. Barnes, Indianapolis, Ind.
Application October 7, 1932, Serial No. 637,562
5 Claims. (Cl. 74—336)

1. The combination with the ring gear of a differential, of a pair of driven shafts, a pinion rotatably mounted on one of said shafts and drivingly engaging said ring gear, a pinion fixed to the other of said shafts, a driving shaft, means for directly connecting said driving and first-mentioned shaft, means for drivingly connecting the pinion thereon with said shaft, two sets of speed-changing gears for driving the second-mentioned shaft and means for drivingly disengaging the pinion on said first-mentioned shaft when the second-mentioned shaft is driven by one of the sets of said speed-changing gears.

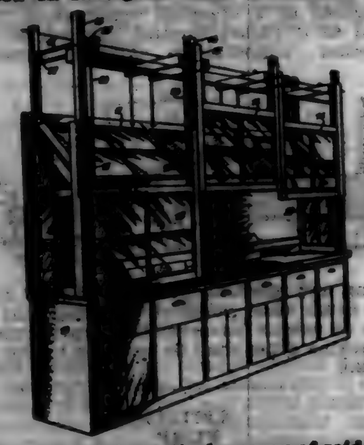


2,027,614
PROCESS FOR MAKING GASOLINE
Otto Dubbs, Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Application November 21, 1932, Serial No. 643,522
In Canada December 1, 1931
26 Claims. (Cl. 196—52)

1. The process of cracking oil which comprises forcing oil through a coil into an enlarged drum under pressure in which a body of liquid oil is maintained at a cracking temperature, raising the oil as it passes through the coil to a decomposing temperature without substantial

cracking and effecting decomposition of the oil in the drum while positively insuring that none of the oil which has remained unvaporized in the cracking drum shall be returned to the heating coil.

2,027,615
PUMP
Walter M. Bell, Chicago, Ill.; Gertrude F. Bell, administratrix of said Walter M. Bell, deceased, assignor to Gertrude F. Bell
Application November 11, 1932, Serial No. 642,157
9 Claims. (Cl. 103—89)



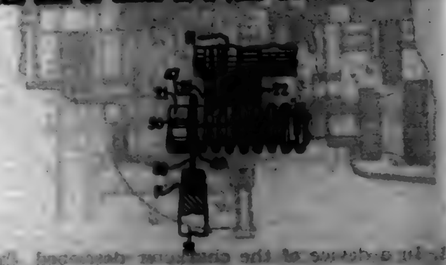
1. In combination, in a pump for pumping liquids containing solid or semi-solid materials, a cylindrical housing having a suction inlet in its side wall and a discharge opening in an end spaced away from the suction inlet, a comminuting rib extending along the internal face of the housing, said rib being spaced away from the side of the suction inlet and extending beyond the same, and a combined comminuting and conveying element rotating in said housing, said suction inlet being located within the length of the combined comminuting and conveying element and the latter being provided with helical blades extending completely around the body thereof, each blade crossing said comminuting rib at several places and at a relatively wide angle, whereby solid and semi-solid materials are comminuted within the confines of the casing, and conveyed from the suction inlet to the discharge opening.

2,027,616
WINDOW CONSTRUCTION
Eugene C. Bingham, Easton, Pa.
Application January 14, 1933, Serial No. 2,005
9 Claims. (Cl. 20—48)

1. A window comprising a sash having guide arms, one at each side thereof, projecting above the upper edge of the sash, a frame having guides projecting downwardly and terminating above the bottom of said window sash when the latter is in its lowermost position, said window sash and upwardly projecting guide arms overlapping

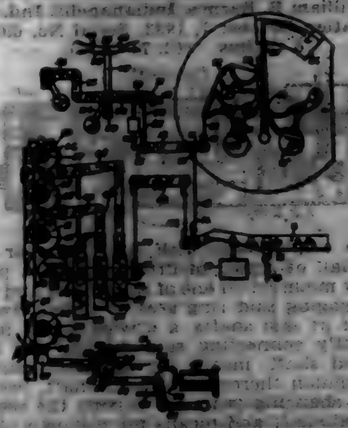
the front surface of said frame guide and tongues mounted on said guide arms and said window

sash extending into vertical grooves of said frame guide.



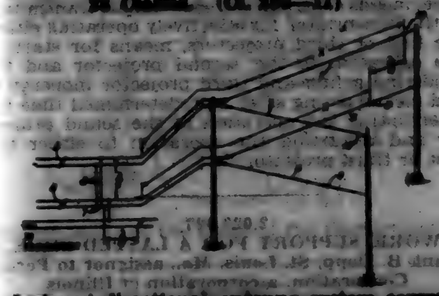
2,027,017
ELECTRICAL OSCILLATION GENERATOR
George Fairburn Brett, Leeds, England, assignor to Radio Corporation of America, a corporation of Delaware
Application July 19, 1932, Serial No. 623,369
In Great Britain July 28, 1931
17 Claims. (Cl. 250—36)

1. An oscillation generator comprising an electron gun or other source of electron beam, a first electrode system situated relatively near said source of electrons and positioned to be adjacent to the beam therefrom, a second electrode system consisting of at least two anodes, means for subjecting the electron beam to a uniform field which is independent of said electrode systems whereby said beam is caused to take a path passing adjacent the first electrode system to the second electrode system, and means operable in dependence upon the occurrence of current flow through an anode as a result of the electron beam striking said anode, for altering the velocity of the electrons in said beam whereby said beam is caused to be incident upon another anode, whereupon the velocity of the electrons is again changed whereby said beam is caused to be again incident upon the first anode.



2,027,018
CORRUGATING MACHINE
Louis H. Brinkman, Glen Ridge Borough, N. J.
Application August 4, 1928, Serial No. 681,578
11 Claims. (Cl. 153—73)

1. In a tube corrugating machine, in combination: an annulus; means for supporting and rotating the annulus; groove initiating fingers carried by the annulus, each having a tube engaging end; rolls carried by the annulus; each formed with a corrugation forming portion and a tube advancing portion; a second annulus; means for driving the annuli at slightly different rotative speeds; means carried by the second annulus for advancing the groove initiating fingers into engagement with a tube; and means also carried by the second annulus for rotating the rolls whereby at times the rolls act as forming rolls and at times as a tube advancing roll.

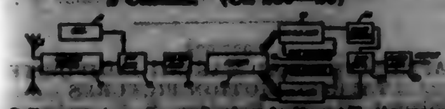


2. A corrugation forming and tube advancing roll comprising spaced ridges at a right angle to the longitudinal axis of the roll for a portion of the periphery of the roll and an integral tube advancing ridge at an angle to the first mentioned ridges for the remaining periphery of the roll.

2,027,019
SCALE
James Warren Bryce, Bloomfield, N. J., assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application August 7, 1931, Serial No. 555,715
21 Claims. (Cl. 265—5)

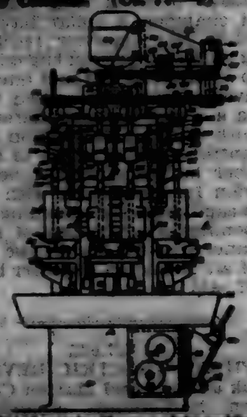
1. In combination with a load carrier and means operated by a load thereon to move away from an initial position, a device for returning said means substantially to a predetermined position, a supplementary scale for detecting when said means reaches the predetermined position, auxiliary mechanism effective for an operation upon return of said means to the predetermined position and means controlled by said supplemental scale for preventing operation of said auxiliary mechanism until the predetermined position is reached.

2,027,020
DIRECTIONAL ANTENNA
Philip S. Carter, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application September 15, 1933, Serial No. 689,239
26 Claims. (Cl. 250—11)



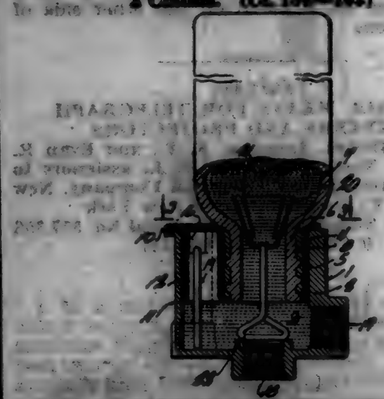
1. A uni-directional antenna system comprising two pairs of diverging conductors extending substantially longitudinally in the direction of desired transmission and placed one above the other, the conductors of one pair having lengths different from those of the second pair, and means for energizing said pairs in phase quadrature relation with respect to each other.

2,027,021
PROCESS OF MANUFACTURE OF DECORATIVELY COLORED ARTICLES
Albert Ester Cleghorn, Brooklyn, N. Y., assignor to Travalex Products Corporation, New York, N. Y., a corporation of New Jersey
No Drawing. Application February 4, 1933, Serial No. 655,936
4 Claims. (Cl. 106—39)



2. The process of manufacture of a decoratively colored plastic magnesia article with a desired decorative color by the addition to the plastic magnesia, magnesium chloride and other ingredients of a metal salt of predetermined amount and of a character both predetermined by the color desired in which said salt dissolves and with which it reacts to give a colored hydroxide or oxide of the metal decoratively coloring the article with the color or shade of color desired.

2,027,022
FADING ELIMINATION
James W. Conklin, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 12, 1934, Serial No. 706,525
3 Claims. (Cl. 250—20)



1. In a system for reducing fading effects, means for collecting transmitted modulated carrier energy, means for amplifying the collected energy, automatic control means for regulating the amplitude of the carrier, means for deriving from the amplified energy carrier energy, means for bringing the carrier energy to substantially constant volume despite variations in transmission conditions, means for filtering from the collected energies sideband energies, means for bringing the filtered sideband energies to constant volume despite variations in transmission conditions, means for combining the energies of constant volume, means for detecting the combined energies, and means for translating the detected energies.

2,027,023
MULTIPLE SPINDLE BORING MACHINE
James Coulter, Bridgeport, Conn.
Application September 1, 1933, Serial No. 687,781
9 Claims. (Cl. 77—4)

1. In a multiple spindle machine, the combination of a column, a carrier rotatably mounted thereon, a vertical longitudinal hollow shaft journaled centrally in the column, a driving shaft within the hollow shaft, a motor on the upper end of the column connected to drive the driving shaft, intermediate pulleys, a belt connecting the central drive shaft and intermediate pulleys, vertically reciprocatory slides mounted on the carrier, driving spindles journaled in the slides each carrying a belt pulley, a belt connecting the driving spindle pulleys with one of the intermediate pulleys, change speed gearing in the lower end of the column intermediate the driving shaft and hollow shaft for operating the latter, and gearing in the upper end of the column intermediate the hollow shaft and carrier for rotating the same.

2,027,024
LUBRICATOR
Carl L. Dana, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to William F. Dana, Saginaw, Mich., and one-half to L. Ray Smith and Minta A. Smith, Wauwatosa, Wis.
Application October 28, 1932, Serial No. 639,788
3 Claims. (Cl. 184—103)

1. A lubricator comprising a cup having an oil chamber therein, a reservoir receiving opening extending from the top of said cup to said chamber, said cup having a lateral extension formed thereon, spaced vertical openings in said exten-

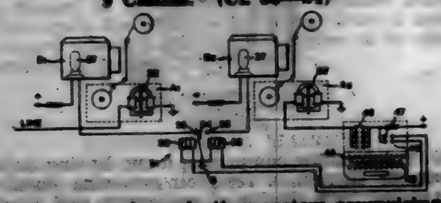
sion, one of said openings extending from the top of the cup through the bottom thereof, another of said openings extending from the top of said cup to said oil chamber, there being a communicating passage between said vertical openings above said chamber, a collar having a portion fitable within said reservoir receiving opening and having a flanged portion engaging and covering the top of said cup and said lateral extension, and an inverted reservoir united to said collar and having a single opening therein, said collar coacting with said cup to position said reservoir so as to control the level of oil in said chamber, said chamber having an outlet below the level of oil therein for connection with oil well type bearings, a capillary wick extending between said vertical openings whereby one of said openings may be connected with sleeve type bearings, the entrance of air to said oil chamber being through such one of said openings.

2,027,025

PHOTO-ELECTRIC DEVICE

Jan Hendrik de Boer and Marten Cornelis Teves, Eindhoven, Netherlands, assignors to Radio Corporation of America, a corporation of Delaware

Application November 20, 1933, Serial No. 698,788
In Germany December 21, 1932
2 Claims. (Cl. 250—27.5)



1. A photo-electric device comprising an evacuated envelope, a partition in said envelope, an anode and an alkali metal cathode within said envelope at one side of said partition, and an alkaline earth metal and means for vaporizing said alkaline earth metal on the other side of said partition.

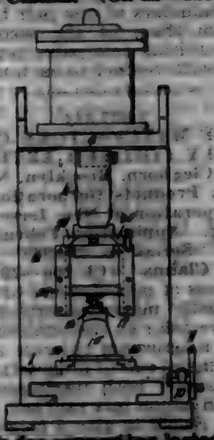
2,027,026

CONTROL MEANS FOR TELEGRAPH PRINTERS AND PROJECTORS

Robert F. Dirkes, Jamaica, N. Y., and Evan R. Wheeler, North Plainfield, N. J., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York

Application November 25, 1931, Serial No. 577,256
9 Claims. (Cl. 88—24)

1. A telegraph projecting system comprising a telegraph printer responsive to code signals to produce a printed record, a screen, a first projector associated with said printer, a second printer controlled by code signals, a second projector for the second printer, a third projector, said projectors being disposed relative to each other so as to illuminate a common area of the screen, means for operating one of said projectors at a time, means controlled by code signals transmitted to the first printer for selectively operating either the first or third projectors, means for starting the operation to the second projector and for rendering a first and third projector inoperative and means acting after a predetermined time for interrupting the operation of the sound projector and restarting the operation to either the first or third projector.



2,027,027

WORK SUPPORT FOR A LASTED SHOE

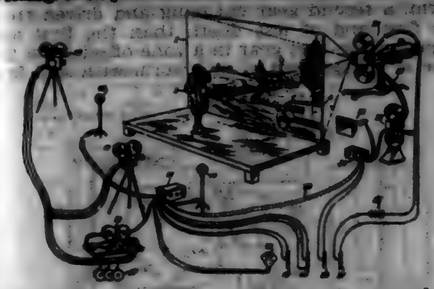
Frank B. Depp, St. Louis, Mo., assignor to Forma Corporation, a corporation of Illinois

Original application October 24, 1925, Serial No. 64,231. Divided and this application September 21, 1933, Serial No. 690,267

4 Claims. (Cl. 12—123)

1. In a jack for supporting lasted shoes, a hollow base member, a convexed face at the upper end of said base, a head member having a recess in the upper face thereof and open at one end to receive the neck end of a shoe last, said head having its lower face concaved to conform to the convexed face of the base member, and mounted thereon and yieldable connecting means to permit swivel movement of the head upon the base member.

1,027,028



APPARATUS FOR MAKING COMPOSITE TALKING MOTION PICTURES

William L. Dunlap, Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application March 1, 1932, Serial No. 596,828

4 Claims. (Cl. 88—16)

Apparatus for producing composite pictures comprising means for receiving projected images, means for supporting objects in predetermined relation to said first means, means for projecting optically rectified uninterrupted background pictures upon said receiving means, means for photographing both the objects and the projected images at a speed independent of the speed of operation of said optically rectifying projecting, means for driving the photographing means at a constant speed, means for driving the optically rectifying projecting means, and means for controlling the speed of the last-named drive means

independently of the speed of the photographing means.

2,027,029

SELF-SPACING SIDING

Clarence R. Eckert, Englewood, N. J., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey

Application December 12, 1931, Serial No. 580,559

5 Claims. (Cl. 20—5)

1. A flexible shingle arranged to be laid with other like shingles in overlapping courses and having in one transverse edge an aligning recess provided with a slit extending into the body of the shingle and in the opposite transverse edge a complemental projection provided with a slit extending therefrom into the body of the shingle, the projection of one shingle arranged to enter into the recess of a contiguous shingle in the same course to align the elements in the same course, and the portion of the shingle above the slits arranged to be flexed to engage the upper edge of an underlying shingle to temporarily support the same in desired overlapping relation with respect to the underlying shingle.

1,027,045

THIAZOLINE COMPOUND

Max Engelmann, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application July 22, 1933, Serial No. 681,051

8 Claims. (Cl. 260—44)

1. A compound of the general formula

wherein the phenyl ring is substituted by at least one substituent which does not neutralize the basicity of the compound or deprive it of its capacity to form a salt with HCl, said compound being characterized by the property of producing local anesthesia.

1,027,051

OXAZOLINE COMPOUND

Max Engelmann, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 12, 1933, Serial No. 684,699

11 Claims. (Cl. 260—44)

1. A 2-arylimino-dihydro-oxazole, wherein the aryl radical is of the benzene series.

2,027,033

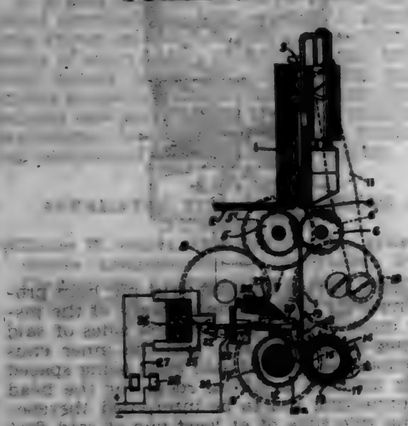
SANDWICH TRAY AND THE LIKE

Edward A. Farr, Meriden, Conn., assignor to Manning, Bowman & Co., Meriden, Conn., a corporation of Delaware

Application August 18, 1935, Serial No. 36,155

9 Claims. (Cl. 65—53)

7. A service tray of the character set forth, comprising a pair of tray halves which are pivotally fastened together by hinge elements provided at their inner marginal edges, said hinge elements permitting the folding of the tray halves toward each other in book-like fashion when not in use and a U-shaped handle grip member also pivotally connected to the tray at points adjacent said inner marginal edges and of smaller dimensions than a tray half so as to be contained within the tray halves when the latter are folded towards each other and said tray halves having surfaces engaging the legs of said U-shaped member and rigidly holding the latter in an upright position when the tray halves are unfolded for service.



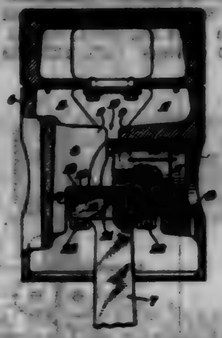
2,027,032

CARD ANALYZING MACHINE

Eugene A. Ford, Scarsdale, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application July 26, 1933, Serial No. 682,285

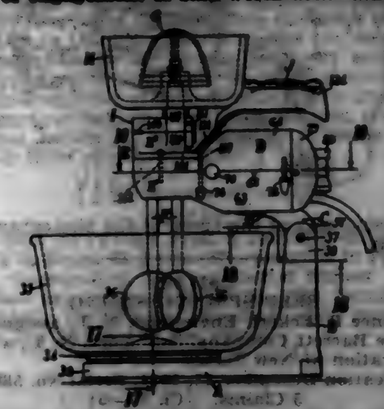
4 Claims. (Cl. 235—58)



1. In a perforated record sensing machine, a hollow roller having a plurality of rows of perforations therein corresponding to index point positions on records to be analyzed, means for synchronously feeding records and operating said roller, means for supplying compressed air to one row of perforations in the roller at a time during operation, and means operable by air passing through a perforation in the roller and a perforation in the record registering with the roller for controlling operation of the machine.

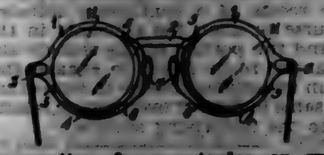
2,027,024
EDGE-ILLUMINATED SIGN
Thomas J. D. Fuller, Jr., Cambridge, Mass.
Application June 28, 1934, Serial No. 732,896
3 Claims. (Cl. 40—130)

1. An edge illuminated sign comprising a transparent glass panel having a visible symbol on one face, a tubular shaped electric light bulb, a socket for said bulb, means for supporting the glass panel and said socket to hold said socket in engagement with an edge of the glass, the maximum diameter of said bulb being only slightly less than that of said socket to permit the bulb to be inserted in and removed from said socket without engaging the glass, said socket supporting means comprising a pair of rigid spaced members between which an edge of the glass is positioned, and means for holding said socket against said members.



2,027,035
WRIST PIN BEARING CONSTRUCTION
Hewitt A. Gehres, Mount Vernon, Ohio, assignor to Cooper-Bessemer Corporation, Mount Vernon, Ohio, a corporation of Ohio
Application January 22, 1930, Serial No. 422,738
5 Claims. (Cl. 308—19)

1. A piston having opposed wrist pin hubs projecting inwardly from the inner walls of the piston, the inner ends of the pressure sides of said hubs being slightly spaced, and the inner ends of the remaining sides of said hubs being spaced a greater distance to afford room for the head of the connecting rod to be interposed therebetween, the side edge of at least one of said first mentioned inner hub ends forming a seat for a wrist pin bushing.

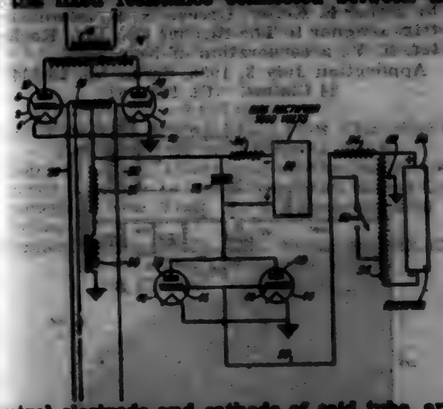


2,027,036
KITCHEN UTILITY DEVICE
Alfred C. Gilbert, North Haven, and Shirley F. Morse, East Haven, Conn., assignors to The A. C. Gilbert Company, New Haven, Conn.
Application January 9, 1934, Serial No. 705,876
14 Claims. (Cl. 259—94)

1. In a device such as described, the combination of a motor having a horizontal shaft, a worm on the motor shaft, a gear engaging and driven from the worm and of greater depth than the worm, a second gear engaging and driven from the first and of less depth than the first and engaging the first gear in a zone offset from the zone of engagement of said worm with said first

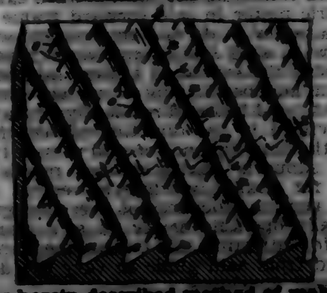
gear, a casing surrounding said worm and said gears, agitator devices depending from said casing and driven by said gears, a reamer shaft extending upwardly from said casing and driven by one of said gears, a reamer on the upper end of said reamer shaft, and a power shaft above said casing driven from said reamer shaft.

2,027,037
VENTILATED SPECTACLES OR EYEGLASSES
Ethel Gottlieb, Newark, N. J.
Application January 5, 1933, Serial No. 650,545
2 Claims. (Cl. 88—41)



1. A mounting for spectacles or eyeglasses comprising two lens-receiving rims, and a bridge connecting said rims, each of said rims having an arcuate guard therefor to contact with the portions of the face of the wearer closest to the rim when the spectacles or eyeglasses are worn and having only its ends connected to the rim at spaced points circumferentially thereof and its intermediate portions in closely spaced relation and in a plane approximately parallel to the plane of the rim, the guard extending around that portion of the rim to be adjacent the cheek and nose to provide a passage for air between the face of the wearer and lens in said rim and prevent condensation of moisture on the lens, and a nose rest on said guard in contact with the nose of the wearer.

2,027,038
KEYING
Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 11, 1932, Serial No. 637,577
8 Claims. (Cl. 250—17)

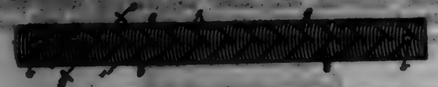


1. In combination, a multi-electrode tube having a control electrode and a cathode, a fixed resistance connected between the control electrode and cathode of said tube, a source of biasing potential, the serial combination of a resistance and condenser connected across said source of

biasing potential, a connection from the junction between said serial resistance and condenser to the fixed resistance connected between the

control electrode and cathode of said tube, and an impedance the value of which may be varied connected between the other side of the condenser and said cathode of said tube.

2,027,039
FILE AND METHOD OF MAKING THE SAME
Paul E. Heller, Newark, N. J.
Application March 31, 1934, Serial No. 718,283
11 Claims. (Cl. 76—24)



1. The herein described method of making files from the usual blanks consisting first in cutting the blank with overcuts arranged in successive groups and spaced to form each tooth in a group of a different width from that of an adjacent tooth and subsequently upsetting the blank in uniform spaced relation and in cross relation to the overcuts thereby to produce teeth having different elevation of the cutting edges resulting from greater lateral displacement of the metal of the teeth of lesser width in the upcutting operation.

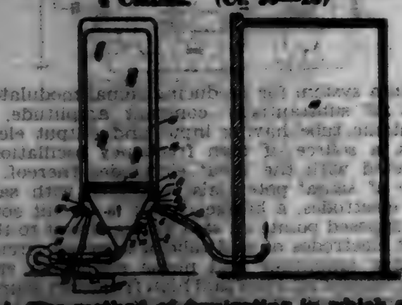
8. As a new article of manufacture, a file formed with a series of successive groups of overcuts, each group consisting of overcuts in spaced relation to form each tooth in the group of a different width from that of an adjacent tooth and having upcuts in cross relation to the overcuts and in uniform spaced relation, and having its teeth of different elevation resulting from lateral displacement of the metal of the teeth of lesser width in the upcutting operation.

2,027,040
CURVED TOOTH FILE
Paul Elias Heller, Newark, N. J.
Application September 26, 1934, Serial No. 745,111
3 Claims. (Cl. 76—24)

As a new article of manufacture, a file formed with transversely extending arcuate cutting teeth

and having relatively widely spaced, angularly disposed grooves dissecting the cutting teeth, said dissecting grooves being arranged in series of parallel grooves at opposite sides of the cutting

face, the respective series being in reverse angular relation and each of the grooves having a length to extend slightly across the longitudinal axis of the file cutting face.



2,027,041
MACHINE FOR REFINING PAPER STOCK AND PULP
Walter H. Hermann and Ludwig H. Wessel, Lancaster, Ohio, assignors to The Hermann Manufacturing Company, Lancaster, Ohio, a corporation of Ohio
Application June 16, 1933, Serial No. 677,044
9 Claims. (Cl. 92—27)

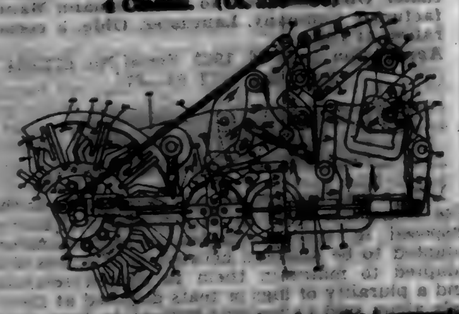
1. In a machine for refining paper stock or the like, a member made up of a plurality of knives disposed in spaced relation, spacer members adapted to be disposed between said knives and adapted to maintain them in spaced relation, and a plurality of lugs or teats disposed at intervals along said knives and projecting from both of the side surfaces of said knives, said lugs or teats being adapted to extend into said spacer members when they are positioned between said knives in order that said spacer members will be securely held in position between said knives, said lugs or teats being of such a nature and so disposed that the spacer members may be driven downwardly between the knives and then longitudinally thereof.

2. A plug liner for an engine of the type indicated comprising a body portion, a plurality of long knives mounted on said body portion, a plurality of short knives mounted on said body portion, spacer blocks for maintaining said long knives in spaced relation, spacer blocks for maintaining said short knives in spaced relation, said last-named blocks having portions which overlap portions of said first-named blocks.

2,027,042
APPARATUS FOR AND METHOD OF FUMIGATING
William W. Hinds, Kansas City, Mo., assignor, by mesne assignments, to Calcyanide Products Corporation, a corporation of New Jersey
Application July 8, 1933, Serial No. 679,520
4 Claims. (Cl. 99—18)

4. The method of fumigating in which a solid substance capable of releasing a fumigating gas

when brought in contact with air is utilized as the source of fumigant, which comprises entraining such a solid substance in a blast of air, conducting the blast of air and entrained solid substance into an enclosure, separating solid particles in said enclosure and conducting the gas freed of solid particles to the place of use.



2,027,842

TRANSFER, TRIMMING, AND CLOSING MECHANISMS FOR COMBINATION BAG FORMING MACHINES

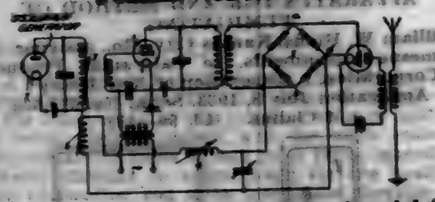
Samuel Hirsch and Hans Irmscher, New York, N. Y., assignors to Millic Patent Holding Co., Inc., New York, N. Y., a corporation of New York

Application June 24, 1933, Serial No. 677,268

4 Claims. (Cl. 226—58)

1. A device of the character described comprising a rotatable table, means to move the table in a step by step fashion, a plurality of radial arms fixedly mounted on the table, a movable arm associated with each fixed arm, a lever upon which the movable arm is pivotally mounted, means to urge each movable arm against its respective stationary arm, a plurality of cam surfaces, and means on each movable arm engaging the cam surfaces.

2,027,924



MODULATING BRAND

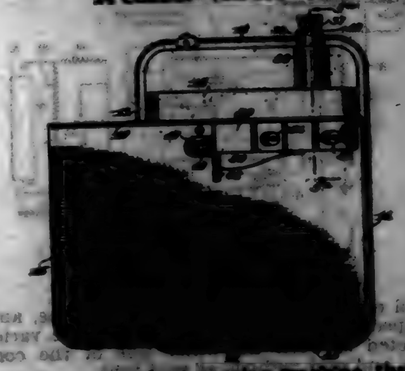
Rudolf Hofer and Wilhelm Kummerer, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., a corporation of Germany

Application May 12, 1932, Serial No. 611,648

In Germany May 12, 1931

5 Claims. (Cl. 179—171)

1. In a system for producing signal modulated waves of substantially constant amplitude, a thermionic tube having input and output electrodes, a source of high frequency oscillations connected with the input electrodes thereof, a source of signal potentials connected with said input electrodes, a bridge circuit, a circuit coupling opposed points on said bridge circuit to the output electrodes of said tube, a separate circuit including amplitude and phase regulating elements coupled between said high frequency source and another pair of opposed points on said bridge circuit, and a load circuit connected to said bridge circuit.



2,027,945

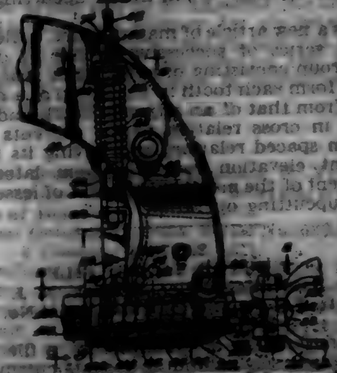
ENVELOPE OPENING MACHINE

Arthur J. Kaiser, deceased, late of Greece, N. Y., by Esther R. Kaiser, Greece, N. Y., administratrix, assignor to The Bircher Co., Inc., Rochester, N. Y., a corporation of New York

Application July 2, 1935, Serial No. 29,704

14 Claims. (Cl. 164—61)

10. In an envelope opening machine, the combination of a frame having forward and rear portions, cutting mechanism on said rear frame portion, an envelope guide, a belt for feeding envelopes along said guide to said mechanism, spaced pulleys supporting said belt and relatively positioned to incline the same toward said guide, an electric motor in said forward frame portion having a pulley in driving engagement with said belt between said spaced pulleys, a presser foot for pressing the envelope against said belt comprising a member having a surface shaped to conform to said belt and resiliently yieldable supports inclined in the direction of feed for supporting the opposite ends of said presser foot, one of said supports having spaced pivotal joints therein, for flexible yielding movement to conform to varying thickness of the envelopes, and a manually operable device on said rear frame portion for adjusting said cutting mechanism toward and from said guide to vary the depth of cut on said envelopes.



2,027,946

DRAFT APPLIANCE

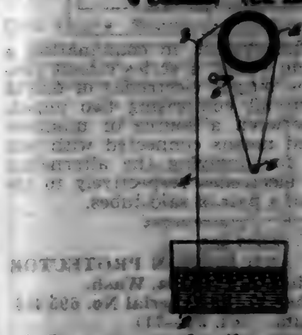
Joseph Kadow, Chicago, Ill., assignor to Athey Truss Wheel Co., Chicago, Ill., a corporation of Illinois

Original application September 26, 1930, Serial No. 484,682. Divided and this application May 11, 1933, Serial No. 670,901

12 Claims. (Cl. 280—33.9)

3. A draft mechanism, comprising a drawbar having an arched lower end and rigidly mounted on a vehicle and projecting therebeyond, a draft element pivotally secured to said arched lower end, a draw bolt resiliently secured to said draft element, a vertical yoke pivotally secured to said draft element, and resilient means securing said yoke to said drawbar.

2,027,947



PROCESS AND APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL SILK

Friedrich Lappe, Obernburg-on-the-Main, Germany, assignor to North American Rayon Corporation, New York, N. Y., a corporation of Delaware

Application March 14, 1933, Serial No. 661,421

In Germany October 19, 1932

6 Claims. (Cl. 18—8)

1. In a process for the manufacture of filaments of artificial origin, the steps of extruding the filaments, passing them to and over a take-up means, then to a guiding device, passing them back to the same take-up means and collecting the filaments thereupon.

2,027,948

SHOE FORM

Alfred G. Legge, Brockton, Mass.

Application March 8, 1933, Serial No. 660,969

4 Claims. (Cl. 12—142.5)

1. A shoe form comprising a hollow toe part having its opposite side walls provided with bottom inturned flanges, a cross member connecting said flanges, an arm pivotally secured to one of said flanges and extending inwardly therefrom, a member pivotally secured to the free end of said arm and adapted to extend beneath said cross member, said member having a downwardly extending prong adapted to engage the insole of a shoe and having an intermediate inwardly extending portion adapted to engage said cross member to prevent rearward movement of the form.

2,027,949

WHEELED TOY

Michael Levy, Brooklyn, N. Y.

Application May 18, 1935, Serial No. 22,135

5 Claims. (Cl. 46—201)

1. In a device of the character described, the combination of a body section and a chassis section, a pin on one of the said sections and a seat for the said pin in the other of the said sections, lugs carried by one of the said sections and means on the other of the said sections positioned to engage the said lugs, traction wheels for the said device, axles for the said traction

wheels, and means for attaching the said axles to said device comprising a plurality of leaves extending below the chassis and forming open seats for the said axles, and lugs on the body section positioned to close the said seats and to hold the axles therein.

2,027,950

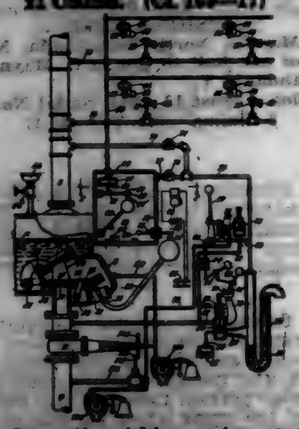
FLUID OPERATING PROPELLER

William H. Leinweber, Chicago, Ill.

Application April 19, 1933, Serial No. 666,574

2 Claims. (Cl. 170—170)

1. A propeller for acting on fluid, comprising radially extending blades pitched at an increasing angle radially of the propeller, vanes carried thereby and extending therethrough, said vanes having concave faces presented radially outwardly, said vanes on one side of the blade extending more than the full width of the blade and on the other side extending only from that portion near the trailing edge and therebeyond.



2,027,951

FIRE EXTINGUISHING AND ALARM APPARATUS

Ernest A. Lowe and John B. Hamilton, Cleveland Heights, Ohio, assignors to Automatic Sprinkler Company of America, Cleveland, Ohio, a corporation of Delaware

Application September 18, 1930, Serial No. 482,900

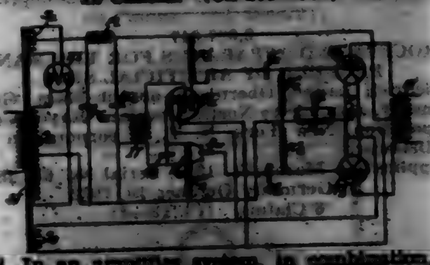
21 Claims. (Cl. 169—17)

1. In a fire extinguishing system, a system of fire extinguishing fluid distributing pipes, release means for supplying fire extinguishing fluid to

said pipes, temperature responsive devices for actuating said release means, said devices including a heat absorbing pressure producing element in a fire zone, an element responsive to pressure changes operatively associated with said release means and with said heat absorbing element and means responsive to a predetermined heat condition for permitting the equalization with atmosphere of any pressure in said elements.

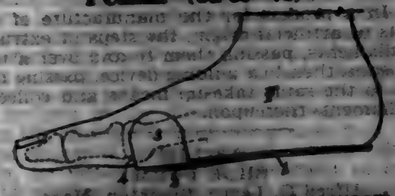
10. The combination with air or gas tubing and a heat collecting chamber connecting therewith for producing increase of pressure in said tubing, of a fuse controlled seal for said chamber adapted to vent the same on the attainment of a predetermined or ultimate temperature.

2,027,852
FRUIT BASKET
William S. Lashell, New York, N. Y.
Application October 12, 1933, Serial No. 693,517
7 Claims. (Cl. 217—124)



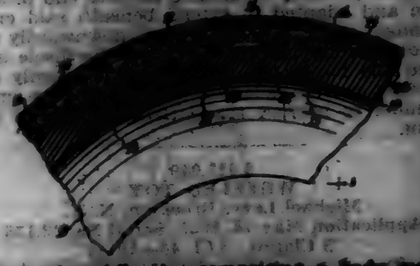
1. In combination, a carton of the type open at the upper end, a detached removable cover adapted to rest upon the upper edges of the sides, and a handle formed substantially in a rectangle open in the center of the lower side and adapted to be sprung open to insert the ends of the lower side in openings in the side walls of the carton positioned just above the base in order that the parts of the said lower side may rest upon the base, the vertical sides of said handle having loops extending inward into openings in the upper edges of the sides of said carton, and additional loops also extending inward positioned above the edges of the sides of the carton upon which the cover may rest to hold the cover above the carton.

2,027,853
FISHING REEL
Hyla F. Maynes, North Tonawanda, N. Y., assignor of one-half to Emma C. Maynes, North Tonawanda, N. Y.
Application August 13, 1934, Serial No. 739,696
2 Claims. (Cl. 242—84.1)



2. In a fishing reel structure, a rotatable reel driving crank having handle portions thereon, handle rollers mounted on the crank portion, said crank and handle portions each having a rounded edge portion facing in the direction of rotation of the crank when the line of the reel is being unwound and each having an opposite edge portion tapering to a relatively narrow extremity.

2,027,854
AMPLIFIER SYSTEMS
Benjamin F. Miessner, Short Hills, N. J., assignor to Miessner Inventions, Inc., Short Hills, N. J., a corporation of New Jersey
Application October 31, 1933, Serial No. 695,195
12 Claims. (Cl. 179—171)



1. In an amplifier system, in combination, a plurality of electron tubes; a series circuit connected between the control electrodes of one of said tubes, said circuit comprising two impedances and therebetween a source of unidirectional current; and means connected with said output electrodes for applying the alternating potentials of said electrodes respectively to the control electrodes of a pair of said tubes.

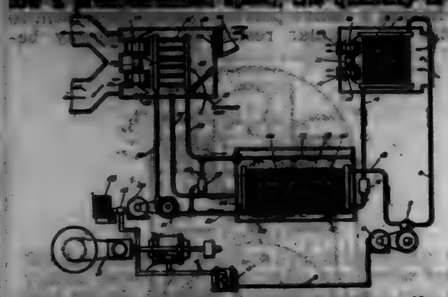
2,027,855
ARCH SUPPORT AND BUNION PROTECTOR
August Mirella, Tacoma, Wash.
Application October 27, 1933, Serial No. 695,462
1 Claim. (Cl. 36—71)

In a combined metatarsal arch support and bunion protector, an insole member having the contour of the inside of a shoe from the ball to the heel and an extra layer of soft, pliable material attached to the forward end of said member, said layer having a generally convex shape of sufficient extent to fill and support the anterior metatarsal area of the wearer's foot and an integral bunion-protecting shield turned up at its inner side for engaging a small lateral area of the wearer's foot just rearward of the head of the first metatarsal.

2,027,856
AUTOMOBILE TIRE
Morris Mentkoff, New York, N. Y.
Application August 27, 1934, Serial No. 741,648
1 Claim. (Cl. 152—17)

An automobile tire comprising a body member and a sensitive peripheral tread adapted to be

mounted on said body member, the periphery of said body member being provided with spaced-apart cut-out substantially square in outline and arranged in staggered rows about said periphery, said tread members having inward projections of similar outline registering in said cut-outs, each of said projections being provided with a conical suction cup to eliminate the gripping contact between the floors of said cut-outs and said projections and at the same time to provide air cushions between said members, each of said suction cups having a circular peripheral lip enclosing an air space between said lip and the walls of the cut-out.



2,027,857
REFRIGERATION
Carl Georg Munters, Stockholm, Sweden, assignor, by mesne assignments, to Servel, Inc., Dover, Del., a corporation of Delaware
Application December 6, 1933, Serial No. 701,123
In Germany January 4, 1933
20 Claims. (Cl. 62—119)

20. In absorption refrigeration apparatus having periods of absorption at low pressure alternating with periods of vapor expulsion at higher pressure, the improvement which consists in maintaining the bulk of the absorption liquid cool during both the expulsion periods and the absorption periods and circulating absorption liquid both during the expulsion periods and during the absorption periods due to the lifting action of refrigerant vapor in narrow pipes.

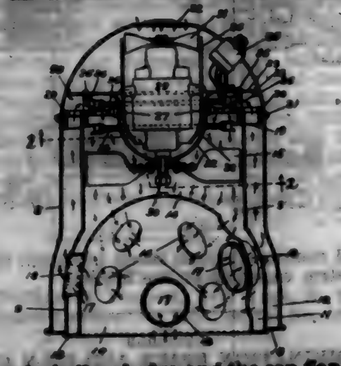
2,027,858
METHOD AND APPARATUS FOR AIR CONDITIONING
Charles E. Munson, New Rochelle, N. Y., assignor to Baldwin Southwark Corporation, a corporation of Delaware
Application September 16, 1933, Serial No. 689,412
9 Claims. (Cl. 62—117)

1. The method of conditioning air for railway cars consisting in operating a refrigeration system during travelling of the car, circulating liquid in heat interchanging contact with said system so as to chill the liquid, causing car air to be cooled by said circulating chilled liquid only during travelling of said car, freezing only a portion of said liquid, and circulating the remaining unfrozen portion thereof whereby the frozen liquid is adapted to keep the circulating liquid chilled at when the car is stopped or running below a predetermined speed, the quantity of circulated cooling medium being less than the total volumetric capacity of the system.

2,027,859
COMBINATION DRIER AND KILN UNIT
Ray C. Northam, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application April 19, 1933, Serial No. 666,254
12 Claims. (Cl. 263—33)

1. A heater of the direct contact hot gas flow type comprising means therein adjacent the material inlet end of said heater for increasing the surface area of contact for the material, means for introducing counter to the gas flow a portion of the material to be heated, and means for introducing in the same direction as the gas flow another portion of the material to be heated.

2,027,860
FINGER RING
Henry A. Niven and Karl Kill, Attleboro, Mass., assignors to L. G. Balfour Company, Attleboro, Mass., a corporation of Massachusetts
Application February 5, 1934, Serial No. 709,835
5 Claims. (Cl. 63—12)



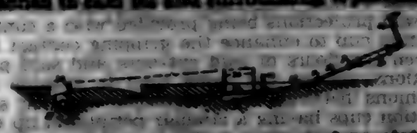
1. A finger ring having a laminated structure comprising a layer of neutral colored metal positioned between layers of highly colored metal, the edge of said neutral colored metal being exposed and polished to provide a reflecting surface.

2,027,861
HAIR DRIER
Reuben A. Olsen, Encinitas, Minn.
Application December 2, 1933, Serial No. 646,329
7 Claims. (Cl. 34—96)

1. In a drier the combination comprising a housing having an apertured hood mounted in one end thereof, a partitioning shell extending from adjacent the base of the housing with its

upper end edge remote from the head, a cup member positioned in the upper end of the shell and having a flange portion spaced therefrom to provide an annular restricted passageway be-

tween such shell end edge and the cap flange portion, and a motor and fan carried by the cup for producing a positive circulation of air inwardly through said restricted opening and thence downwardly to the apertured hood.



2,027,962
PRESSING IRON
Julius Puretz, Brooklyn, N. Y.
Application December 23, 1933, Serial No. 703,723
1 Claim. (Cl. 38—36)

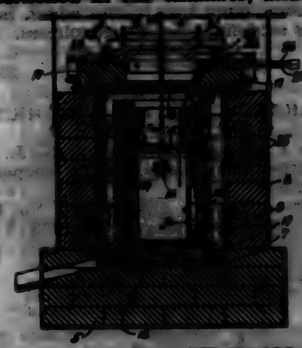
A base for a flatiron, said base being provided with an inlet bore 11 at its upper portion, and which extends substantially from the butt end of the base to the point thereof, and being located substantially at the median line of said base, said bore 11 communicating at its front end with transverse bores 12 and 14, said transverse bores 12 and 14 communicating with bores 15 and 16 which extend substantially to the butt end of the base, said bores 15 and 16 communicating with transverse bores 17 and 18 adjacent the butt end of the base, the bores 17 and 18 communicating with longitudinal bores 19 and 20 which terminate at substantially the transverse median line of the base, the bores 19 and 20 being connected by means of vertical bores 20 and 21, at substantially said transverse median line, with outlet bores which are located at the lower part of the base, said outlet bores being closed at their ends and having openings which communicate with the bottom face of the iron, the bores which precede the vertical bores 21 and 22 being all located at the upper part of the base.

2,027,963
MACHINE FOR TRENCHLESS BORING
John W. Reifel, Huntington Park, Calif.
Application January 2, 1935, Serial No. 1116
4 Claims. (Cl. 255—58)

1. In a machine of the class described the combination of a tubular body member having stuffing boxes on each end; a perforated pipe rotatably mounted through said body member and said stuffing boxes; a boring bit attached to said perforated pipe by tubular members adapted to rotate with said perforated pipe; a stiffening sleeve attached to said bit and surrounding a portion of

the said tubular members; means for rotating said perforated pipe, the tubular members, the stiffening sleeve and the bit; and means for supplying water to the said bit through said tubular body, the perforated pipe and the tubular connecting members.

2,027,964
ELECTROMAGNETICALLY OPERATED VACUUM SWITCH
Ernst Rosenack, Berlin-Lichterfelde, Germany
Application May 13, 1933, Serial No. 672,436
In Germany August 6, 1931
6 Claims. (Cl. 200—166)



1. An electromagnetically operated vacuum switch comprising a vacuum tight vessel of substantially cylindrical form having a central longitudinal axis, fixed and cooperating movable contacts arranged on said axis, the latter being adapted to move along the same, a cylindrical insulating member arranged with its axis coincident with the axis of said tube and adapted to surround said contacts, a concentric cylindrical magnetic armature of large mass compared to the mass of said movable contact surrounding said insulating member, an anvil fixed to said movable contact and adapted to be struck by said armature, spring means for normally pressing said contacts together and a magnet coil adapted on energization to move said armature rapidly toward said anvil in a direction parallel to the axis of the tube and opposite to the direction of thrust of said pressing means.

2,027,965
METHOD AND APPARATUS FOR HEAT TREATING HIGH SPEED STEEL
Chester B. Sadtler, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application October 15, 1930, Serial No. 488,778
9 Claims. (Cl. 263—11)

1. An apparatus of the character described comprising, in combination, a furnace having a furnace chamber into which the heating medium is admitted around the sides, a refractory bed on

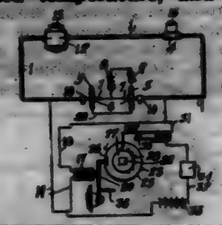
the floor of said chamber, a container of pure nickel positioned in the chamber, and a muffle

surrounding and extending above said container and spaced uniformly therefrom for heating said container uniformly.

2,027,966
SOLID MINERAL ACID DIAZONIUM SALTS AND A PROCESS OF PREPARING THESE
Karl Schmidtmahn, Offenbach-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application June 29, 1934, Serial No. 733,123. In Germany July 7, 1933
6 Claims. (Cl. 260—69)

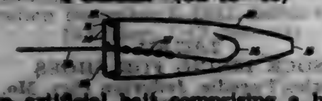
1. Solid mineral acid diazonium salts from halogen-4-amino-diphenylethers which salts are easily soluble in water and possess a good stability.

2,027,967
FILTER CIRCUIT
Kurt Schubert, Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, a corporation of Germany
Application October 24, 1931, Serial No. 570,893
In Germany November 5, 1930
9 Claims. (Cl. 178—44)



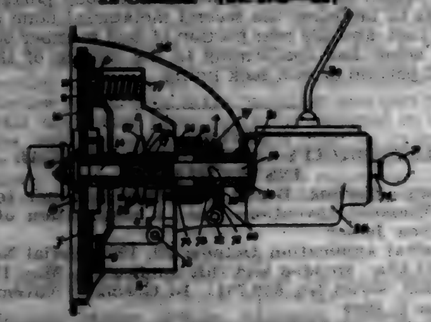
3. Filter circuit means for the suppressing of disturbing high frequency currents comprising an inductive capacitor, said inductive capacitor comprising a pair of conductive strips wound in the form of a reel, a pair of dielectric strips interposed between the conductive strips, the dimensions of the width and the number of turns of said conductive strips and the thickness of the said dielectric layers being determined by having the inductance of the conductive foil higher than the active inter-turn capacity.

2,027,968
FIRE ALARM SYSTEM
William M. Siddall, Jr., East Orange, N. J.
Application September 2, 1932, Serial No. 631,962
12 Claims. (Cl. 177—336)



12. In a fire alarm system, means for manifesting signals responsive both to the attainment of predetermined temperature and to more than a predetermined rate of temperature rise, said means comprising "fixed temperature" mech-

anism for altering the conductivity of a normally closed circuit responsive to attainment of a predetermined temperature, and "rate-of-rise"



fire detecting mechanism including tubing, which tubing serves as an electrical conductor between said circuit altering mechanism and said signal manifesting means.

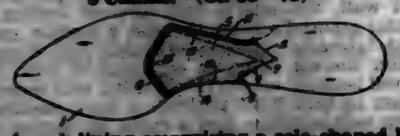
2,027,969
ARTIFICIAL BAIT
Wendell L. Stevenson, Brooklyn, N. Y.
Application July 2, 1934, Serial No. 733,539
6 Claims. (Cl. 43—43)

1. An artificial bait comprising a hollow cylindrical head portion containing a perforated front wall, the lateral wall thereof having an annular grooved portion thereon, a flexible, open-ended laterally enclosed envelope, the forward portion thereof being in engagement with said grooved portion, means for securing said terminal portion to said head portion, a hook positioned within said envelope, and a chain anchoring said hook to said front wall.

2,027,970
AUTOMATIC CLUTCH CONTROLLING MECHANISM
Robert Sucsik, Detroit, Mich.
Application October 27, 1933, Serial No. 695,725
12 Claims. (Cl. 192—22)

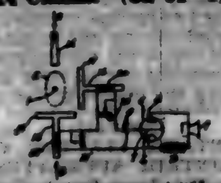
1. An automatic clutch control for automobiles comprising two springs for storing up energy, a relay with each spring and means for operating one of said relays for disengaging the clutch by the corresponding spring and the other relay for engaging the clutch by the other spring.

2,027,971
THERMOSTATIC ELECTRIC CIRCUIT CONTROL APPARATUS
Wesley Starke Tay, Long Beach, Calif., assignor of one-half to Clarence W. Hoefer, Santa Ana, Calif.
Application December 6, 1932, Serial No. 761,455
1 Claim. (Cl. 200—140)



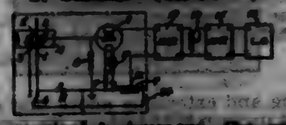
A device of the character described comprising a hollow body member containing a heat respon-

stve fluid, a flexible conduit closed at its outer end secured to and communicating with the interior of said hollow body member, a lever formed of insulating material pivotally mounted on said hollow body member adjacent one end thereof and carrying a contact point at the opposite end to its pivot point, an adjustable screw contact mounted on said body member, a retractile coil



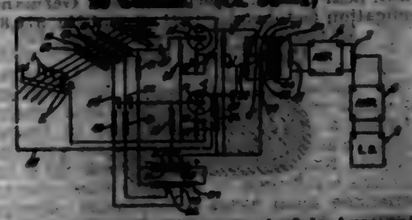
spring secured to said lever and normally urging the contact on said lever into engagement with said screw contact, a Bourdon tube secured and communicating with said hollow body member at one end thereof, a pin having a head slidably mounted in an opening formed in said lever at a point beyond the pivot and screw threadedly engaging a block screwed to the free end of said Bourdon tube, for the purpose set forth.

2,027,972
SOCK LINING FOR SHOES
Charles Tweedie, Jefferson City, Mo.
Application May 27, 1933, Serial No. 673,130
3 Claims. (Cl. 36—71)



3. A sock lining comprising a sole-shaped body portion having a slit in the rear part of its shank portion, and an arch support member of suede leather with its rough side uppermost extending through said slit, the front end of said arch support member being secured on top of said body portion and being of angle shape with its tip in the region of greatest width of the body portion so as to lie below the second metatarsal bone of the foot, and the rear portion of said member being below and conforming to the outline of the heel portion of said sock lining.

2,027,973
ELECTRICITY-CONTROLLED MUSICAL INSTRUMENT
Oskar Vierling, Berlin, Germany, assignor to Misamer Inventions, Inc., a corporation of New Jersey
Original application October 23, 1931, Serial No. 571,214. Divided and this application May 13, 1933, Serial No. 670,761. In Germany November 2, 1930
14 Claims. (Cl. 84—1)

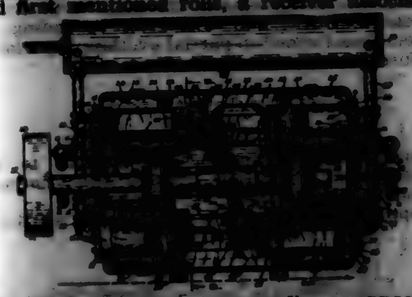


1. In a musical instrument, the combination of a mechanical oscillator; exciting means therefor operable to produce oscillation thereof which comprises initially a component in a single plane only and thereafter components in said plane and in a plane normal thereto; and mechanico-electric translating apparatus having a plurality of surface portions in spaced relationship to said oscillator to be inductively influenced thereby, said portions lying in a plane which is inclined to each of said first mentioned planes.

2,027,974
APPARATUS FOR THE PRODUCTION OF MUSIC
Benjamin F. Miessner, Millburn, N. J., assignor to Miessner Inventions, Inc., a corporation of New Jersey
Application June 1, 1932, Serial No. 616,594
Renewed August 26, 1935
17 Claims. (Cl. 84—1)

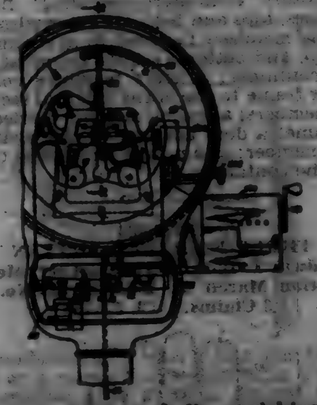
8. In a musical instrument, the combination of a relatively stationary member; a tuned vibrator in spaced relation thereto and means for vibrating said vibrator in a plane substantially parallel to the portion of said member nearest said vibrator, the mean position of said vibrator in the direction of its vibration being asymmetrical with respect to the extent of said portion in said direction; and means associated with said member for producing electric oscillations in accordance with vibratory variations in the relative positions of said vibrator and said member.

2,027,975
METHOD AND APPARATUS FOR THE PRODUCTION OF MUSIC
Charles T. Jacobs, New Providence Township, Union County, N. J., assignor to Miessner Inventions, Inc., a corporation of New Jersey
Application November 9, 1932, Serial No. 642,426
Renewed September 3, 1935
20 Claims. (Cl. 84—1)



1. In combination in a musical instrument: a plurality of capacities; means for oscillatorily varying said capacities; means for charging said capacities; means for limiting changes of charges in said capacities by said oscillatory variations; means responsive to oscillatory voltages across all of said capacities; and progressively adjustable means for varying the amplitudes and signs of the mean charges in said capacities.

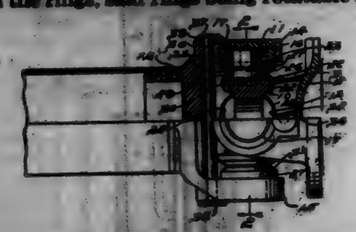
2,027,976
AIR COMPRESSING DEVICE
Joseph Vollmann, San Francisco, Calif.
Application July 24, 1934, Serial No. 736,969
5 Claims. (Cl. 230—226)



1. A compressor of the class described, embodying, in combination, a plurality of opposed alternate low and high compression cylinders, pistons arranged in said cylinders, rectangularly shaped piston rods connecting said pistons for unitary action, anti-friction rollers carried by said rods, said anti-friction rollers arranged to guide said

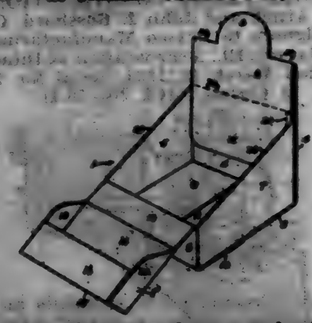
rectangular shaped rods, a driving shaft, a disc cam obliquely and integrally mounted on said shaft, and having track-ways operable between said first mentioned rolls, a receiver associated

with the compressor, by-pass lines connecting certain low and high compression cylinders, and lines leading from certain of said cylinders to said receiver.



2,027,977
SCALE
Edward J. Von Pein, Dayton, Ohio, assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application January 5, 1931, Serial No. 506,650
23 Claims. (Cl. 265—5)

24. In a machine including weighing mechanism, the combination of a series of electrical control circuits, devices controlled by said circuits, a conductive feeler common to all said circuits and variably displaceable by said weighing mechanism in accordance with the load, a plurality of conductive members each in a different one of said circuits and each selected by the feeler in accordance with a different load position of the feeler, a movable mounting for said plurality of conductive members, and a device for moving said plurality of members on their mounting bodily towards said feeler to effect engagement of the feeler with the conductive member selected thereby to correspondingly select one of the control circuits for operation.



2,027,978
UNIVERSAL JOINT
Archibald A. Warner, Royal Oak, Mich., assignor to The Universal Products Company, Inc., a corporation of Delaware
Application September 22, 1932, Serial No. 634,294
11 Claims. (Cl. 64—17)

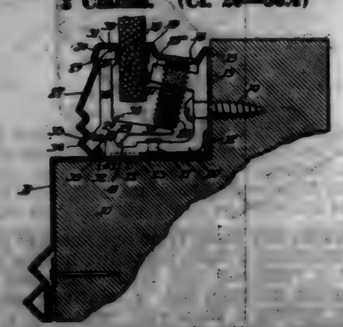
1. In a universal joint, an oscillatory trunnion, a bearing cup for the trunnion, rings releasably fitted on the cup and trunnion respectively adjacent the open end of the cup, and rubber between the rings, said rings being rotatable respec-

tively with the cup and trunnion, and the rubber being under compression and bonded to one of the rings.

2,027,979
KNOCKDOWN DUAL DISPLAY CONTAINER
Arthur J. Weiss, St. Albans, N. Y., assignor to Robert Gair Company, Inc., New York, N. Y., a corporation of Delaware
Application December 6, 1932, Serial No. 791,691
10 Claims. (Cl. 206—44)

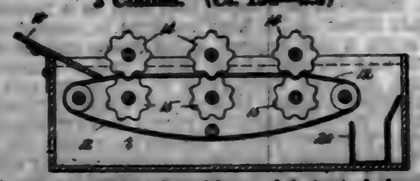
1. A display box made from one sheet of paperboard comprising a main container having a rear wall and a relatively low front wall, said container having an open top; a relatively movable container having a high rear wall and a relatively low front wall, said latter container also having an open top; a hinge panel connecting the low wall of said main container and said high wall, said panel being vertically disposed so that the two last mentioned walls may be engaged to render the open tops continuous, and a cover panel continuous with the first mentioned rear wall and extensible over both of the open tops.

2,027,980
PERCUSSIVE TOOL SUCH AS HAMMERS AND PILE DRIVERS
Duncan Marler Wilson, Smithills, Bolton, England, assignor of one-half to The British Steel Piling Company, Limited, London, England
Application May 9, 1934, Serial No. 724,747
In Great Britain March 12, 1933
4 Claims. (Cl. 121—7)



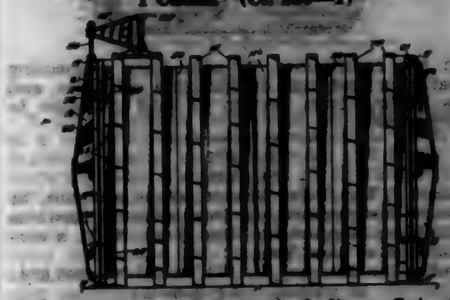
1. Improved percussive tool such as a hammer or pile driver of the kind referred to, comprising an anvil, a rod secured at its lower end to the anvil and having at its upper end a pumping piston, said rod supporting at its upper end in a non-rigid manner to allow of relative displacement a second pumping piston having secured thereto a power piston, means to supply air to the space between the two pumping pistons when separated, said air being compressed by the return of said pumping pistons, said air being sup-

plied under pressure for scavenging the power cylinder of the products of combustion and means



for supplying a fresh combustible mixture into the said cylinder.

2,027,061
STORE FRONT CONSTRUCTION
Purdy E. Attick and John J. Bombard, Chicago, Ill., assignors to Brasco Manufacturing Company, Harvey, Ill., a corporation of Illinois
Application March 19, 1934, Serial No. 716,292
3 Claims. (Cl. 20—56.4)



1. A store front construction, comprising in combination a fixed inner glass pane engaging member, an anchoring member having a projecting end portion mounted therein, having an outwardly inclined face, an outer movable glass pane engaging member having a channel formed therein along its base, a lever having a portion thereof in said channel and having a projection thereon adapted to engage said anchoring member, the engaging portion of said projection having a face parallel with the inclined face on the anchoring member, and means whereby said lever is actuated.

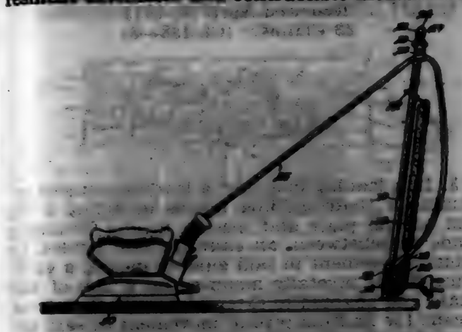
2,027,062
METHOD FOR PRODUCING MICA PRODUCTS
Francis Clarke Atwood, Newton, Mass.
Application October 28, 1933, Serial No. 695,263
3 Claims. (Cl. 154—3.6)

1. The method of making a fabricated sheet of mica which consists in flexing a body of mica in a bath of water containing an adhesive, whereby the water and adhesive is caused to work in between the laminations of the mica, thus separating the laminations of the mica to form thin sheets of mica, and thereafter spreading the sheets thus formed in partial overlapping relation to form the fabricated sheet.

2,027,063
CONTAINER
John M. Beer, Chicago, Ill., assignor to The Gearldite Corporation, Chicago, Ill., a corporation of Illinois
Application February 1, 1935, Serial No. 6,504
1 Claim. (Cl. 220—1)

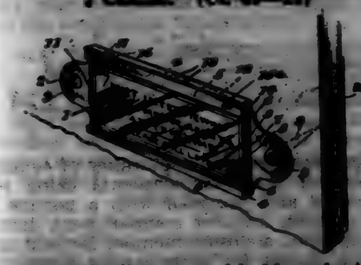
A pressure container, including: flat sheet metal sides, top, and bottom; external rectangular frame members fastened to said sheet metal sides, top, and bottom; a door frame at one end of the container; bracing members connecting said door frame to one of the external rectangular frame members; a sealing member carried by said door frame; a door adapted to seat against said sealing member; and means for closing the other end of the container.

2,027,064
THREE FINGERED MITTEN
Edwin T. Bashin, Kansas City, Mo.
Application March 26, 1935, Serial No. 12,760
2 Claims. (Cl. 2—158)



1. A hand covering of the character described comprising a body portion having finger pockets and a thumb pocket, and an insert finger pocket arranged between the first mentioned finger pockets and formed from two finger sections sewed together and to said first-mentioned finger pockets, the rear portion of the sides of each insert finger section extending outwardly in opposite directions in the form of reverse curves to provide a much greater width than exists at the front end of the section.

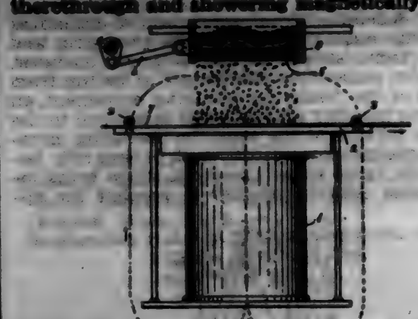
2,027,065
CORD HOLDER
Maurice L. Brashears, Washington, D. C.
Application March 4, 1935, Serial No. 9,269
13 Claims. (Cl. 248—61)



1. A cord holder comprising a cord supporting standard normally arranged in an upright posi-

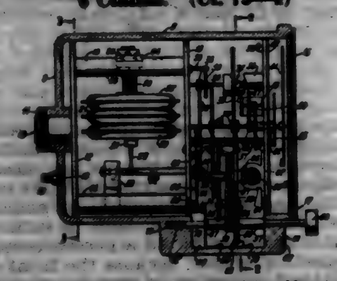
tion and provided at its lower end with a pivotal joint to permit the standard to swing downwardly and upwardly, means for yieldably maintaining the standard in an upright position and for urging it toward such position, including a resilient extensible and contractible member dis-

posed longitudinally of the standard and connected at its upper end to said standard above the lower end thereof, and means for anchoring the other end of the resilient member so that said member will swing with the standard without materially varying its tension thereon.



2,027,066
REVERSIBLE NAME PLATE AND HOLDER
Andrew C. Breakey, Mount Morris, Mich.
Application July 12, 1935, Serial No. 31,452
7 Claims. (Cl. 40—16)

6. In combination, a card holder adapted to be mounted on a support and comprising a member having opposite edge portions flanged to form opposed parallel guide slots; the said plate having joggled portions adjacent the slots to offset the guides from the plane of the member; a reversible name plate in said slots comprising a plate bearing indicia on one face, an indicia bearing member against the opposite face of the plate, a transparent member against the indicia bearing member; opposite edges of the plate being rolled over the edges of the transparent member; means for limiting the entry of the plate in the slots; and means for locking the plate in the slots.

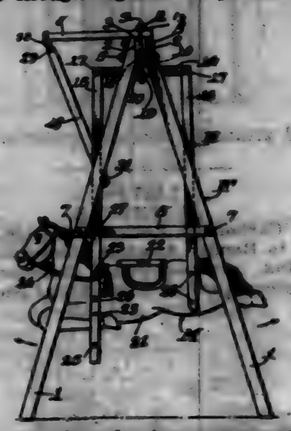


2,027,067
ABRASIVE SHEET AND PROCESS OF MAKING THE SAME
Orello S. Buckner, Westboro, Mass., assignor to Behr-Manning Corporation, Troy, N. Y., a corporation of Massachusetts
Application October 2, 1928, Serial No. 310,858
3 Claims. (Cl. 91—68)

1. The method of making sutrible sheets which consists in placing a sheet having an adhesive surface in a magnetic field, so that the lines of force pass approximately perpendicularly

therethrough and showering magnetically coated elongated grains of abrasive material onto said surface.

2,027,068
ALTIMETER
Victor E. Carbonara, Rockville Centre, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 26, 1932, Serial No. 606,504
6 Claims. (Cl. 73—4)



6. In an altimeter, the combination of pointer means, scale means, a pressure sensitive device, transmission means including a shaft having a one-way clutch thereon for operating said pointer means by said device, said one-way clutch including a gear mounted on said shaft and having a hub provided with a transverse opening adjacent said gear for exposing said shaft, and a spring secured to said gear and formed to provide a pair of fingers one of which is seated in said opening to engage said shaft and the other of which engages the exterior of the hub on the opposite side of said opening, means for causing relative movement between said pointer means and said scale means for setting the altimeter to a predetermined altitude or barometric pressure so that said pointer means will give a desired indication when said altitude or barometric pressure is reached, said last-named means comprising another transmission means separate from but interconnected with said transmission means through said clutch whereby relative movement is effected between the first transmission means and the pointer means during setting but unitary movement while indicating, and means simultaneously operable with said setting means for indicating the predetermined altitude or barometric pressure for which the altimeter has been set.

2,027,069
SWING
Marshall L. Carraway, Malvern, Ark.
Application January 25, 1935, Serial No. 2,519
1 Claim. (Cl. 155—42)

A swing comprising a frame, a forwardly presented arm carried by the top of the frame, a

hanger of inverted U-shape and comprising a pair of depending front strips and a depending rear strip, means secured to the rear strip and to the front strips for carrying an operator, means for suspending the hanger at its top from the top of the frame for swinging movement, an operating member pivoted at its upper end to the forward portion of the arm, the operating member extending downwardly and backwardly between the front strips, the front strips being located close enough together to prevent the op-

erating member from having any appreciable lateral swinging movement, and a handle on the operating member and slidable up and down on the rear edges of the front strips when the hanger is in motion and when the operating member is not in use, the handle being kept in such a position that it is accessible to a person occupying the first specified means, because the front strips limit the lateral movement of the operating member and because the handle is engaged with the rear edges of the front strips.

2,027,690

MEANS AND METHOD FOR DISPERSING MATTER IN MANUFACTURED MATERIAL

William W. Carter, Needham, Mass., assignor to Brayton Merton, Fall River, Mass., trustee

Application June 28, 1932, Serial No. 619,524

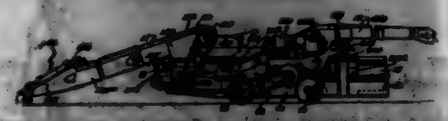
Renewed March 5, 1934

15 Claims. (Cl. 92—21)

1. The method of incorporating added material in dispersed condition throughout a fibrous product of manufacture which consists in first attaching separated particles of the added material with fibers, so that ends of fibers project from such particles, mixing said fibers and attached particles of added material with the fibers of the main manufacture in liquid suspension and separating the liquid vehicle from the mass of mixed fibers so that the fibers which carry attached particles become felted with the fibers of the main mixture.

15. A paper manufacture comprising intermingled fibers substantially free from attached masses or films of added substances, and other fibers intertwined with the first named fibers and having in attached connection with them particles of added material encysted in colloidal envelopes.

2,027,691



LOADING MACHINE

Frank Carlsten, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois

Application August 6, 1930, Serial No. 473,791

Renewed April 26, 1935

22 Claims. (Cl. 198—4)

3. In a loading machine, a loading element including a chain guiding means including a top and bottom plate and spacing means forming a guide therebetween, an endless chain guided for orbital movement in said guiding means, a gathering finger pivotally mounted on a link of said chain and adapted to extend laterally therefrom, means for limiting pivotal movement of said finger, said finger having an forwardly extending portion overlapping said top plate for clearing material from the same.

2,027,692

CONDENSATION RECEPTACLE FOR REFRIGERATORS

Alvis Yates Dowell, Hastings-on-Hudson, N. Y., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware

Application October 1, 1932, Serial No. 635,713

13 Claims. (Cl. 62—141)

1. A receptacle having a plurality of compartments, one of said compartments being completely closed and provided with a portion extending through another compartment defining a filling opening, a closure member for said opening, and a faucet for withdrawing liquid from said compartment, both of said compartments being constructed to contain a substantial body of liquid whereby heat transfer is provided between liquid contained in said compartment having the filling opening extending therethrough and another compartment.

2,027,693

DEODORIZED CALCIUM CHLORIDE

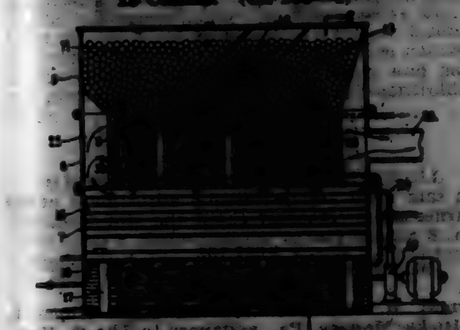
Charles R. Downs, Old Greenwich, Conn., assignor to Weiss and Downs, Inc., New York, N. Y., a corporation of New York

No Drawing. Application November 15, 1932, Serial No. 642,123

19 Claims. (Cl. 183—4)

5. The method of dehumidifying air, which comprises causing the air to flow in contact with a deliquescent material and with a solid deodorant, and progressively exposing fresh portions of the deodorant for contact with the air at a rate proportional to the rate of consumption of the deliquescent material.

9. As an article of manufacture for use in air conditioning apparatus, preformed humps consisting of solid calcium chloride and finely divided activated carbon distributed within the lump and held thereby.



2,027,694

METHOD AND APPARATUS FOR DEHUMIDIFYING AIR

Charles R. Downs, Old Greenwich, Conn., assignor to Weiss and Downs, Inc., New York, N. Y., a corporation of New York

Application April 6, 1934, Serial No. 719,968

15 Claims. (Cl. 183—4)

14. The method of dehumidifying air which comprises passing the air through a drying zone in contact with a solution of calcium chloride and thereafter through the body of a bed of solid calcium chloride constituting a second drying zone, draining the calcium chloride solution formed by deliquescence from the solid calcium chlorides into the liquid zone through openings in the bottom of the second drying zone and applying heat at said openings of said second drying zone to maintain the draining solution above the congealing temperature.

2,027,695

COATING COMPOSITION

Earl D. Flood and John A. Hannum, Cleveland Heights, Ohio, assignors to The Flood Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application December 17, 1931, Serial No. 581,776

7 Claims. (Cl. 134—68)

A wood-filling composition, comprising an aqueous vehicle, a predominant proportion of finely-divided mineral filler, and small proportions respectively of cellulose acetate, rubber latex, a dryer, oil, and crystalline sodium salicylate.

2,027,696

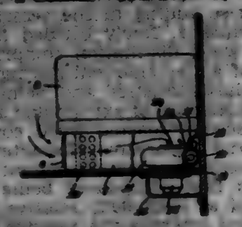
UTILITY LIGHT AND TEST LAMP

Alfred L. Ehammer, Boston, Mass.

Application May 3, 1934, Serial No. 723,743

3 Claims. (Cl. 175—183)

1. In a utility lamp including a light bulb, a dry cell, and an enclosing housing forming a part of the electric circuit therebetween, bus bars insulated within the housing and respectively in engagement with the positive and negative poles of the dry cell and with the positive terminal of the light bulb; a switch in the housing adapted to close the circuit between the housing and the negative bus bar; insulated terminals extending from each bus bar through the housing, and adapted to be engaged by apparatus to be tested, to close the circuit through the bus bars independent of the switch.



2,027,697

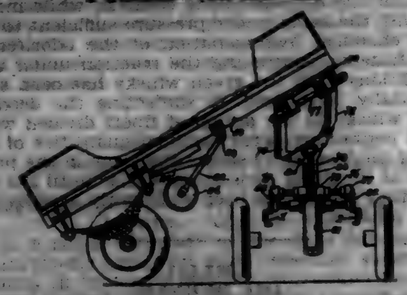
AIR CONDITIONING SYSTEM

Milton E. Hansen, Collingswood, N. J., assignor to B. F. Sturtevant Company, Inc., Hyde Park, Boston, Mass.

Application October 2, 1934, Serial No. 746,617

1 Claim. (Cl. 257—9)

Air conditioning apparatus for a railway passenger car, comprising a pair of air conditioning units, one of said units being mounted completely under a seat and in one corner of one end of said car, and the other of said units being mounted completely under a seat in the opposite corner of the same end of said car, said units having recirculated air inlets facing the aisle of said car and placed opposite each other, a fan, and a heat exchange surface within each of said units, a pair of longitudinal distribution ducts arranged along the floor line, each along one longitudinal side of said car, and a discharge outlet in each of said units connected each to one of said ducts.



2,027,698

HOIST FOR SEMITRAILERS

Harry W. Holton, Detroit, Mich., assignor to Highway Trailer Company, Edgerton, Wis., a corporation of Wisconsin

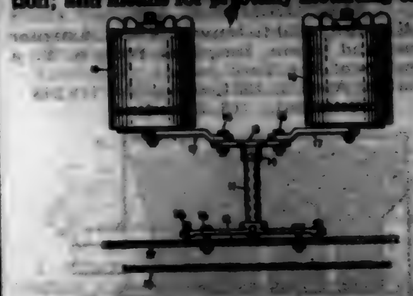
Application April 8, 1932, Serial No. 603,943

8 Claims. (Cl. 212—35)

1. In combination, a tractor, a semi-trailer, a separable fifth wheel including a part on the tractor and a part on the trailer engageable and disengageable by relative substantially horizontal movement, and hoisting mechanism on the tractor including an arm fulcrumed on the tractor frame ahead of said fifth wheel and having its opposite end branched for engaging said fifth wheel at opposite sides, such engagement comprising pivotal connection between the lower fifth wheel and the branches of the arm at a transverse horizontal axis, the forward end of the arm being fulcrumed upon a parallel horizontal axis, and being also swivelly connected for twist-

ing movement about an axis at right angles to said fulcrum axis substantially in the plane of its said branches.

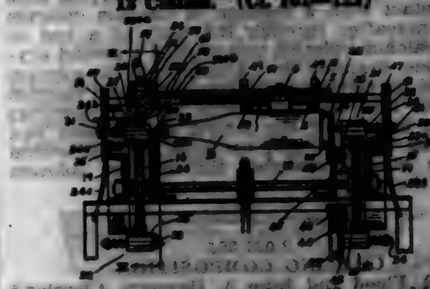
2,027,099
AGING OF WHISKEY
Carroll A. Hochwalt and William H. Carmody, Dayton, Ohio, assignors, by mesne assignments, to Nelson S. Talbott, Dayton, Ohio
No Drawing. Application August 26, 1933, Serial No. 687,515
1 Claim. (Cl. 99—78)



In the art of aging green whiskey, the steps, which comprise adding to the vessel containing the green whiskey, finely divided heat treated products of wood distillation comprising a first component of active charcoal having substantial absorptive characteristics and being free from substantial quantities of extractable alcohol solubles and a second roasted wood component of less active and absorptive character, but containing a relatively greater amount of alcohol solubles, said first component being present in an amount of at least 30% relative to the second component whereby the relative proportions are maintained so that the first component absorbs the odoriferous substances from the green whiskey while the alcohol soluble content of the minor second component rapidly imparts the necessary taste, body and odor to the whiskey, and heating the whiskey in the presence of said components.

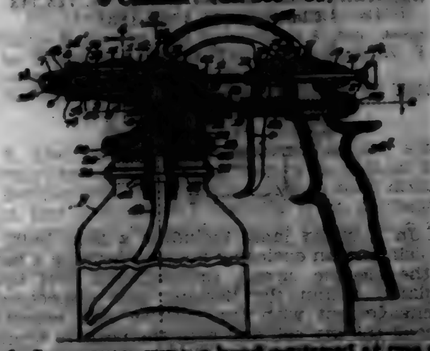
2,027,100
METHOD OF AGING WHISKEY
Carroll A. Hochwalt, Dayton, Ohio, and Charles A. Thomas, Wayne, Pa., assignors, by mesne assignments, to Nelson S. Talbott, Dayton, Ohio
No Drawing. Application December 19, 1933, Serial No. 703,154. Renewed June 15, 1935
3 Claims. (Cl. 99—78)

1. The method of chemically deodorizing and of aging green whisky which comprises the steps of distributing a finely divided hydrogenating catalyst in a body of green whisky, in deodorizing the green whisky by reacting the odoriferous constituents of the whisky with hydrogen in the presence of the hydrogenating catalyst, while maintaining the same under pressure sufficient to effect chemical hydrogenation of the odoriferous constituents, continuing the reaction under said conditions until the green whisky has been substantially deodorized, in subjecting the deodorized whisky to the action of finely divided wood char containing predetermined quantities of alcohol solubles, and heating the same in the presence of the finely divided wood char until the deodorized whisky has been sufficiently aged by the said solubles.



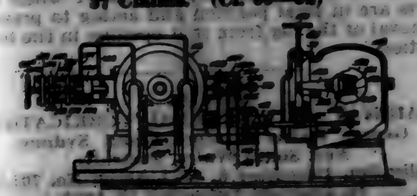
2,027,101
OIL BURNER
Leslie W. Holmes, Stratford, Conn., assignor to Oronoque Oil Burner Corporation, New York, N. Y., a corporation of Delaware
Application October 24, 1933, Serial No. 695,931
14 Claims. (Cl. 158—36)

1. In an oil burner having a plurality of burner units, a standard adapted to be secured on a supporting surface; a head mounted on said standard common to said plurality of burner units; a plurality of arms extending outwardly from said head, one for each burner, each of said arms having an elongated slot extending longitudinally thereof; means engaging said slot at any point therealong for adjustably securing a burner unit to the arm in desired position; and means for pivotally mounting each arm



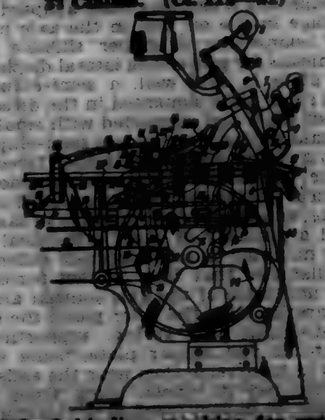
on said head and permitting adjustment of the burner units rotatably about the standard.

2,027,102
METHOD OF AND APPARATUS FOR STENCILING
Ernest M. Hommel, Pittsburgh, and Elmer L. Hicks, Monaca, Pa., assignors to The O. Hommel Company, a corporation of Pennsylvania
Application August 1, 1933, Serial No. 682,142
13 Claims. (Cl. 101—123)



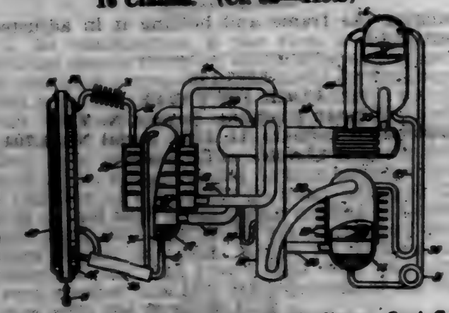
1. In a stenciling machine, the combination of a stencil screen impervious in main and pervious in pattern, a squeegee device movable across one face of the screen, means for rolling round objects across the opposite face of the screen, and means for automatically moving said squeegee device in synchronism with the advance of said objects.

2,027,103
SPRAYING DEVICE
Gustaf E. Johnson and Gilbert Lowenberg, Chicago, Ill., assignors to Metal Specialties Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application November 17, 1930, Serial No. 496,290
5 Claims. (Cl. 299—39)



1. In a spray-gun: a head equipped at one side with a nozzle; a handle at the opposite side spaced from said head; a bridge piece connecting the upper portion of the handle to the upper portion of said head; a lateral air inlet connected with said head and communicating with an air passage leading to the nozzle; a liquid-passage in said head leading to the nozzle; a liquid-passage leading from the lower side of the head and communicating with the liquid-passage leading to the nozzle; an upper liquid-controlling valve and a lower air-controlling valve; and a trigger depending from said bridge having lost-motion connections with the liquid-controlling valve and having pivotal connection with the air-controlling valve.

2,027,104
HYDRAULIC DEVICE FOR OIL WELL PUMPING
Martin Kahr and John S. Kahr, Milwaukee, Wis.; said John S. Kahr assignor to said Martin Kahr
Application June 29, 1931, Serial No. 547,482
27 Claims. (Cl. 60—52)

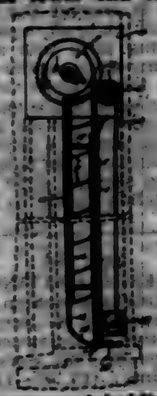


1. In an hydraulic power transmission system, a cylinder provided with a reciprocating piston, a pump for delivering fluid to the piston, means synchronized with the pump for operating the piston in a positive cyclic movement, said means including a system of levers associated with the pump for controlling the length of stroke of the piston, and means for shifting the fulcrum of said levers whereby to vary the capacity and flow from the pump and the stroke of the piston between zero and maximum position.

2,027,105
MECHANISM FOR SEPARATING THE BOOKS OF AN INTERCONNECTED BOOK-PAD
Oscar Kleinschmit and Oskar Muller, Leipzig-Plagwitz, Germany, assignors to Gebruder Brehmer, Leipzig-Plagwitz, Germany, a limited partnership of Germany
Application October 21, 1931, Serial No. 570,246
In Germany November 25, 1930
27 Claims. (Cl. 112—21)

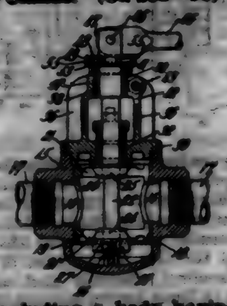
27. A book-binding machine for producing a continuously stitched multi-book block each book of which has attached thereto at least one backing strip which is free of the adjacent books, comprising a stitching head, means for guiding a continuous backing strip into a position to be stitched, a swinging sheet carrier for bringing the closed edge of a folded sheet into a position to have stitches inserted into the closed edge by said stitching head and thereby be attached to said backing strip alongside of a previously attached sheet in book formation, and means for mechanically severing the backing strip between groups of assembled stitched sheets to form individual books.

2,027,106
ABSORPTION REFRIGERATING APPARATUS
Donald Branch Knight, Brooklyn, N. Y., assignor, by mesne assignments, to Servel, Inc., Dover, Del., a corporation of Delaware
Application June 20, 1932, Serial No. 618,102
16 Claims. (Cl. 62—119.5)



1. A refrigerating system including a first fluid circuit comprising a first evaporator and a first absorber interconnected for the circulation of gas therebetween, a second fluid circuit comprising a second evaporator and a second absorber also interconnected for the circulation of gas therebetween, said second absorber and said first evaporator being in heat exchange relation, a generator adapted to contain a solution of a refrigerant in an absorption liquid, a condenser connected to receive refrigerant vapor from said generator and discharge liquid into first said evaporator, means for circulating weak absorption liquid from said generator through said second absorber, and means for circulating absorption liquid through and between said second evaporator and said first absorber.

2,027,107
ROLLER SHADE
Herman H. Keller and Wilfred G. Dery, Amsterdam, N. Y.
Application February 28, 1935, Serial No. 7,425
1 Claim. (Cl. 156—17)



In a shade structure of the class described, a transversely arranged shaft rotatably supported, drums on the shaft adjacent the ends thereof, a chain having one end connected to each drum, arcuate-shaped slats, a rod connected to one edge of each slat, the ends of the rods being connected to spaced links of the chains, guideways for the chains, a second shaft rotatably supported, gears connecting the two shafts together, and a strap connected to the second shaft and so wound on the second shaft that a pull upon the strap will cause the gears to rotate the first shaft in an opposite direction from the second shaft to wind the chains and slats upon the drums, a frame having portions contacting the free edges of the slats, means for supporting the frame for swinging movement, and a manually-operated lever

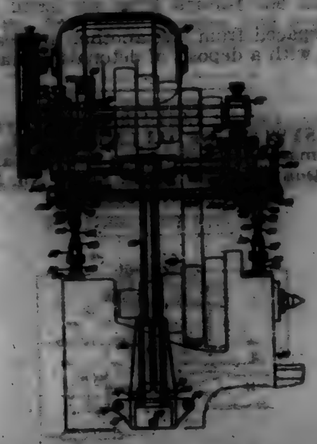
connected to the lower end of the frame for

swinging the frame and holding it in adjusted position.

2,027,166
COCK OR VALVE
Herman Kuebling, Snyder, N. Y.
Application January 14, 1935, Serial No. 1,764
15 Claims. (Cl. 251—96)

1. A cock including a body having a conduit extending through the same, a seat extending across said conduit, an expansible plug rotatably arranged in said seat and having a passage therethrough adapted to be moved into registration with said conduit, a pair of frusto-conical wedge members engaging corresponding seats formed in the opposite end portions of said plug, a stem secured to one of said wedge members and also connected with said plug and passing through the other wedge member, a cover closing one end of said body and against which said other wedge member bears, and means exerting pressure against said cover for moving said stem endwise to move said first wedge member toward said other wedge member for expanding said plug in its seat, said stem also being rotatable to move said plug about its axis to move said passage into and out of registration with said conduit, said other wedge member being urged against said seat, whereby all forces for urging said wedge members toward each other are exerted against said cover without transmission to said body.

2,027,195
EYEGLASS CONSTRUCTION
John A. Lauber and Rose M. Schimpeck, Rochester, N. Y., assignors to Continental Optical Company, Inc., Rochester, N. Y., a corporation of Indiana
Application November 12, 1934, Serial No. 752,417
4 Claims. (Cl. 88—42)

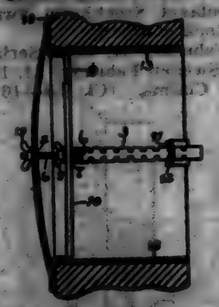


1. In an eyeglass construction, the combination with a nose pad and an oblong shaped lug carried thereby, of a supporting arm including a body portion having an oblong shaped opening to conform to said lug and a locking end portion formed integral with and bent upon said body portion and having an oblong shaped opening shaped to conform to said lug, the openings in said end and body portions being angularly disposed in relation to each other so that the lug after being inserted through the locking portion must be turned partially before insertion into the body portion, said locking portion occupying a position between the said end the body portion of the locking arm substantially parallel with the latter when the parts are in final position and acting to prevent removal of the lug from said opening in the body portion.

2,027,119
RAILWAY AXLE JOURNAL LUBRICATOR
George Walter Bamford Ludlo, Sydney, New South Wales, Australia
Application December 6, 1933, Serial No. 701,215
In Australia December 15, 1932
6 Claims. (Cl. [illegible]—67)

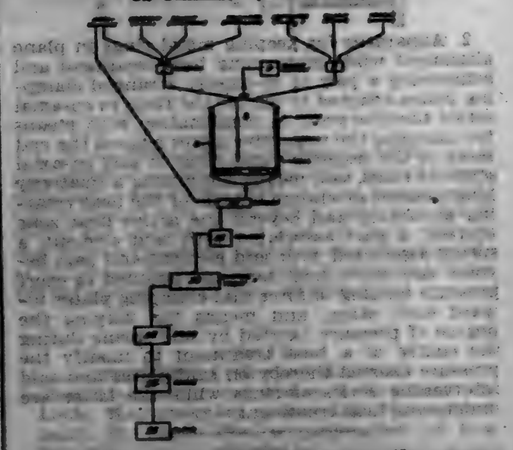
1. A railway axle journal lubricator of the roller type, comprising a carriage plate adapted to slidably engage in the oil well in the axle box, said carriage comprising a slipper slidable in said oil well, means for preventing lateral displacement of said plate in said well, a semi-elliptic leaf spring, a rider plate elongated in the direction of the slipper plate and supported with small clearance on said slipper plate by said semi-elliptic leaf spring so as to permit it constrained freedom for transverse and longitudinal rocking movement and vertical movement, bearings fixed on said rider plate, an axle journal rotatably in said bearings, and a plurality of short cylindrical rollers rotatably mounted on said axle, said rollers being of such diameter that they contact peripherally with the undersides of the axle journal and have small clearance from the rider plate, the ends of said semi-elliptic leaf spring, supporting said rider plate on the slipper plate, being slidably embraced in transverse slots near the ends of the rider plate, and its crown being fixed to the slipper plate, to insure freedom of relative movement in a longitudinal direction between said rider plate and said slipper plate.

2,027,211
MOTORIZED DRIVE
Robert E. Manley, York, Pa., assignor to Manley Products Corp., York, Pa., a corporation of Pennsylvania
Application December 16, 1933, Serial No. 702,771
26 Claims. (Cl. 74—142.12)



1. In a device for motorizing a line shaft machine of the belt and pulley driven type, an adjustable support for accommodating electric motors of various sizes, a counter shaft adjustably secured to said support and adapted to receive a drive pulley for driving the power receiving pulley of the machine, means for mounting said support and shaft so that, as a unit about an axis fixed with respect to said machine so that the axis of the counter shaft is constantly parallel with the axis of the power receiving pulley of the machine, means adjacent to engage a fixed portion of the machine, and unit rotating mechanism spaced from said fixed axis and engaging said last mentioned means for moving the unit about its pivotal axis to alter the distance between the shaft and the axis of the cone pulley.

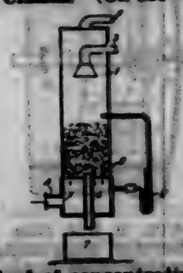
2,027,113
DUST CLOTH
Hilda D. Merriam, Chicago, Ill.
Application January 5, 1935, Serial No. 573
4 Claims. (Cl. 15—209)



1. A dust cloth comprising a thin layer of cotton wadding having a backing of strong flexible paper, the wadding being impregnated with a non-gummy dust holding oil.

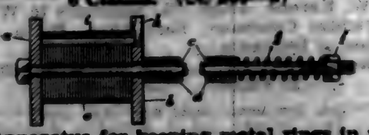
2,027,112
ADJUSTABLE LOCKING, SOLDING, AND TIGHTENING DEVICE
August Millinger, Louisville, Ky.
Application February 13, 1933, Serial No. 656,632
6 Claims. (Cl. 126—319)

1. In combination, a flue ring, a flue cover, holding means therefor, comprising a front pair of relatively extensible sheet metal slotted members with their slots lengthwise, adapted to register with each other, a back pair of relatively extensible sheet metal slotted members with their slots lengthwise, adapted to register with each other, a sheet metal locking member with a plurality of notches in its edges engaging the slots of said back members for holding the members rigid with the front edges and the back edges of the flue ring, means for holding the center of the flue cover rigid with the rigid front member and the circumference of the flue cover with the flue wall.



2,027,114
MANUFACTURE OF SMOKELESS POWDERS
Fredrick Olsen, Gordon C. Tibbitts, and Edward R. W. Kovats, Alton, Ill., assignors to Western Cartridge Company, East Alton, Ill., a corporation of Delaware
Application March 13, 1931, Serial No. 522,133
32 Claims. (Cl. 52—32)

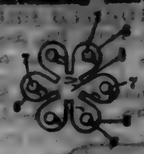
21. In the art of making explosives, the process comprising, agitating a smokeless powder base in a non-solvent vehicle with solvent which is substantially immiscible with the vehicle, sufficient to form globules of dissolved base, and thereafter removing the solvent from the globules.



30. A propellant powder grain which is a solidified droplet of gelatinized smokeless powder base.

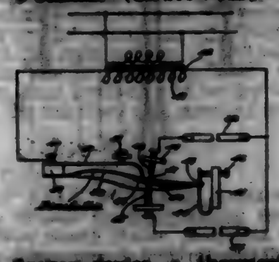
2,027,115
METHOD AND APPARATUS FOR CONCENTRATING BRISKLY FOAMING SOLUTIONS
Erik Ömark, Stockholm, and Sven Harald Loffe, Stockholm, Sweden, assignors to Industriforsäkra Aktiebolaget, Stockholm, Sweden, a Swedish joint-stock company
Application February 21, 1931, Serial No. 517,545
In Sweden February 21, 1930
5 Claims. (Cl. 159—16)

4. The method of concentrating briskly foaming liquids while avoiding excessive foaming thereof which consists of the steps of passing a current of gas under pressure through a layer of said liquid and dividing the current of gas into a multiplicity of streams substantially uniformly distributed with respect to said layer, said streams having individual cross-sectional areas of at least 0.8 square mm. and not more than 1.9 square cm. and pitches at least 2.8 times the width of said streams.



2,027,116
RING HOLDING APPARATUS
William Arthur Outebridge, Coventry, England
Application March 5, 1934, Serial No. 714,186
In Great Britain October 27, 1933
6 Claims. (Cl. 266—5)

2. Apparatus for keeping metal rings in plane alignment while undergoing heat treatment and comprising a pair of co-axially arranged clamping plates adapted to receive the rings in co-axial series therebetween, in combination with means for clamping the respective plates against the end faces of the respective end rings of said co-axial series of rings, said means comprising a relatively long element extending outside of the heat treating apparatus and beyond the active heat zone thereof, a part associated with said element, a spring associated with said element and part beyond said active heat zone and adapted to exert pressure tending to force said clamping plates toward each other, and means for varying the degree of pressure exerted by said spring during the course of a heat treatment to modify the pressure exerted thereby on said plates and said intervening series of rings while the latter are undergoing heat treatment.



2,027,117
PAPER CAP AMMUNITION FOR TOY PISTOLS
Edward Sutton Peake, East Columbus, Ohio
Application June 6, 1934, Serial No. 729,555
2 Claims. (Cl. 102—43)

1. A multiple ammunition cap for a toy pistol including a central portion provided with a plurality of arms extending therefrom, said arms

entirely spaced from one another and each arm provided with a deposit of detonating material.

2,027,118
SYSTEM OF ILLUMINATION
Norman L. Prosser, Long Beach, Calif.
Application August 7, 1931, Serial No. 555,250
9 Claims. (Cl. 200—116)

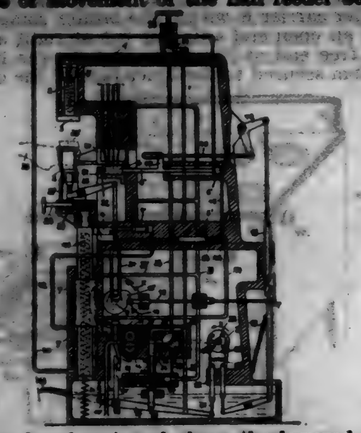
9. In a flasher device, a thermostatic strip confined at one end to a stationary support and restrained at the other end to an endwise movement and capable of snapping from one stable position to another, corresponding respectively to a low and to a high temperature of the strip, and a pair of contacts operated by the strip, to be in arcing relationship during the position corresponding to low temperature, the current thus passing through the contacts acting to generate heat to throw the strip to the high temperature position beyond arcing distance where the strip can cool to return to arcing position for repeating the cycle.

2,027,119
EXPANDING NECKTIE HOLDER
Claude A. Ritter, Cincinnati, Ohio
Application December 12, 1932, Serial No. 763,115
3 Claims. (Cl. 223—87)

1. A device of the class described, comprising a flexible strip having a first transverse fold, a second transverse fold, a third transverse fold, a fourth transverse fold, and a fifth transverse fold, the first transverse fold and the second transverse fold forming a first cover member, the first fold forming a flap, joined to the first cover member at the first fold, the second fold and the third fold forming a second cover member, joined to the first cover member at the second fold, the third and the fourth fold and the fifth fold forming a double-walled partition, comprising inner and outer walls, said walls being joined together at the fourth fold, the inner wall of the partition being joined to the second cover member at the third fold, the fifth fold forming a free-ended wing at the extremity of the strip which is remote from the flap, a separating tongue being struck from the inner wall of the partition, to form an opening therein, the tongue being hinged to the second cover member at the third fold, the strip being capable of being closed at the second and third folds to bring the wing against the inner surface of the first cover member and overlap the flap on the outside of the second cover member.

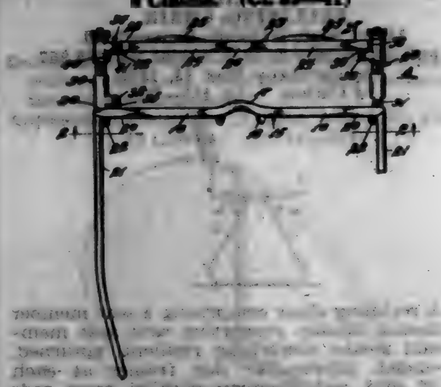
2,027,120
STORAGE BATTERY CONNECTOR
Antonio Rocheleau, Cap-de-la-Madeleine, Quebec, Canada
Application February 23, 1935, Serial No. 7,668
In Canada July 6, 1934
3 Claims. (Cl. 173—259)

1. A battery connection comprising a pair of superimposed plates apertured to be received on a battery post, an upstanding knuckle formed on each plate and adapted for alignment with the other knuckle, a bolt passed through said knuckles for drawing the same together, a lug projecting from the edge of one of said plates, and a hook formed at the corresponding edge of the other plate and adapted to interlock with said lug for maintaining said plates in surface contact.



2,027,121
TOILET COMB
Howard Z. Ross, Harrisburg, Pa.
Application February 14, 1935, Serial No. 6,504
4 Claims. (Cl. 132—12)

1. A toilet comb comprising a back and two sets of teeth with the teeth of one set terminating on a line spaced inwardly from the teeth of the second set, the said second set of teeth being provided with enlarged rounded terminals.

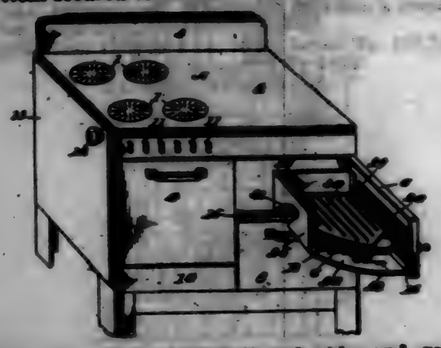


2,027,122
HEEL NAILING MACHINE WITH NAIL FEED
Julius Sandt, Pirmasens, Germany
Application December 29, 1934, Serial No. 759,505
In Germany December 29, 1933
9 Claims. (Cl. 1—32)

1. In a heel nailing machine, a fixed hand rest for the hand of the operator in positioning the shoe and heel, a nail pillar, means for raising and lowering the nail pillar relative to the hand rest, a nail feeder designed to be moved to a position immediately above and in contact with the nail pillar, and means for operating the nail feeder to position the same relative to the nail pillar when the latter is in lowered position; the plane of movement of the nail feeder being

below the hand rest and above the lowered nail pillar.

2,027,123
SPORT OPHTHALMIC MOUNTING
Wayne S. Searles, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a corporation of Rhode Island
Application February 20, 1933, Serial No. 657,555
6 Claims. (Cl. 88—41)



1. In an ophthalmic mounting, a frame for a pair of lenses, a second frame for a pair of lenses, adjustable telescoping posts, spring means tending to extend said telescoping posts, and hinge means for attaching said posts at their ends to said frames to permit swinging of said posts relative to said frames, that said frames may move toward each other in parallel planes.

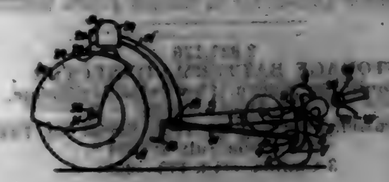
2,027,124
BROILER FOR GAS RANGES
Arthur Stockstrom and Almer H. Bradbeck, St. Louis, Mo., assignors to American Stove Company, St. Louis, Mo., a corporation of New Jersey
Application May 15, 1933, Serial No. 21,618
4 Claims. (Cl. 126—41)

1. In a range, a broiling compartment, a burner in said compartment, a horizontally swinging door providing access to said compartment, a drawer-like carrier carried by the inner side of said door, said carrier having a rear wall arranged in separated spaced relation to the

inner face of said door, a side wall adapted to parallel the end wall of the range when the broiler carrier is within the broiler compartment and an open end adjacent but at right angles to the free end of the door, said drawer having a bottom secured to the inner face of the door and

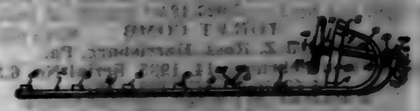
supporting the aforementioned side and rear walls of said drawer, supports carried by the inner face of the door and the inner face of the rear wall of the drawer member, and a broiler pan adjustable upon said supports and accessible through the open end of the drawer when the door is in an open position.

2,027,125
RECLINING CHAIR
Albert Stoll, Koblenz, Switzerland
Application May 8, 1933, Serial No. 669,967
In Germany May 13, 1932
4 Claims. (Cl. 155—77)



1. A reclining chair comprising a seat member and means tiltably supporting said seat member, said means comprising resilient, upturned, open-ended, stirrup-like side frames at each side of said seat member, parallel cross rods extending across said seat member adjacent the longitudinal centerline thereof and connecting the corresponding ends of said open-ended side frames on opposite sides of said seat member, and hinge sockets carried by said seat member and pivotally receiving said cross rods therein, whereby the tilting positions of said seat member are obtained in adaptation to the flexion of said resilient side frames according to the load applied to said seat member shifting relative to said cross-rods.

2,027,126
ANÆSTHETIC
Oscar H. Steyer and Edmund H. Brigham, Buffalo, N. Y., assignors to The Oleothesin Company, Inc., Buffalo, N. Y.
No Drawing. Application October 27, 1933, Serial No. 695,509
4 Claims. (Cl. 167—82)

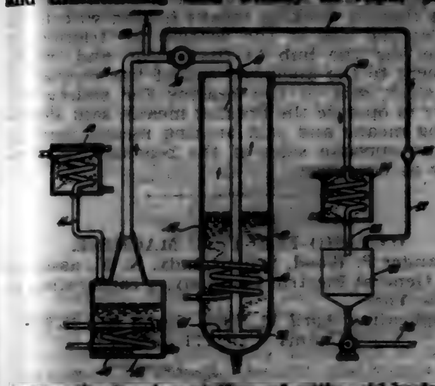


1. An anæsthetic including a salt formed by the reaction of procaine base and a fatty acid having at least nine carbon atoms.

2,027,127
ONE WHEELED TRAILER FOR AUTOMOBILES AND SIMILAR VEHICLES
Hubert Taskenhoye, Vilvorde, Belgium
Application October 30, 1933, Serial No. 696,677
In Belgium October 24, 1933
2 Claims. (Cl. 280—33.4)

2. In a trailer for vehicles, a frame adapted to be attached at one end to a vehicle; a substantially vertical post at the opposite end of the frame, a bearing on said post; a fork having a pivot pin journaled in said bearing; means for permitting the pivot pin to have a restricted universal rocking movement with respect to the post; and a running wheel mounted in the fork on an axle which is disposed substantially in the plane of the frame.

2,027,128
TOBOGGAN
Edwin William Tessmer, Kenosha, Wis.
Application July 15, 1935, Serial No. 31,151
2 Claims. (Cl. 280—32)



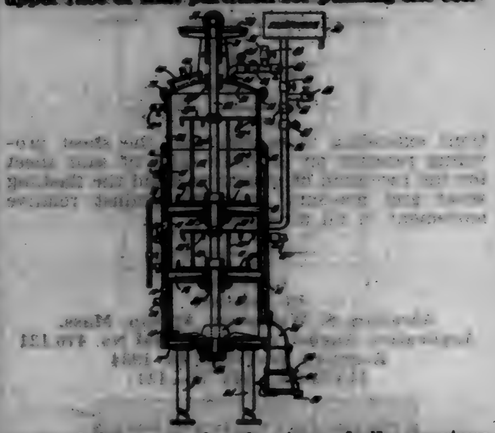
1. A toboggan comprising an approximately flat, elongated body having an upturned, flexible runner mounted on the lower surface of the body, mechanism under the control of the rider and connected to the forward portions of the runners for flexing the runners laterally, to bring about a steering of the toboggan, means for attaching the rear portions of the runners to the body, and means for pivotally connecting the intermediate portions of the runners to the body whereby the runners will flex laterally in one direction, ahead of the last-specified means, and laterally in an opposite direction, to the rear of the last-specified means.

2,027,129
METHOD OF ARTIFICIALLY AGING WHISKY
Charles A. Thomas and Carroll A. Hochwalt, Dayton, Ohio, assignors, by mesne assignments, to Nelson S. Talbott, Dayton, Ohio
Application September 18, 1934, Serial No. 744,710
16 Claims. (Cl. 99—78)

1. The method of artificially aging whisky to improve its odor and taste, which comprises the step of passing said whisky in vapor phase

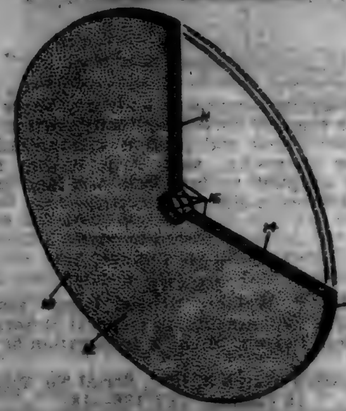
with hydrogen over a hydrogenating catalyst, and maintaining said whisky in vapor phase

during the treatment thereof with said hydrogen and catalyst.



2,027,130
INSPECTION LENS
Thomas M. Towne, Parma, Ohio
Application September 5, 1933, Serial No. 688,138
2 Claims. (Cl. 88—14)

1. In an article of the character described, the combination of transparent members having opposed flat surfaces, an intermediate plate like member positioned between said transparent members, all of said members having their mutually contacting faces permanently bonded to each other, said plate like member having a plurality of openings therein and also having slots extending from said openings to its outer periphery, the surfaces of said transparent members and the edges of said openings and of said slots forming enclosed cavities and conduits communicating with the outer edge of said article.



2,027,131
COOKER
Charles B. Upton, Piqua, Ohio
Application July 23, 1931, Serial No. 552,574
9 Claims. (Cl. 99—12)

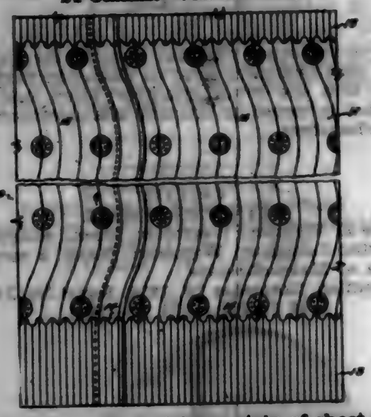
2. An improved cooker comprising an upright tubular structure subdivided by an approximately horizontal partition into a plurality of superposed chambers in each of which material may be treated under different conditions, said structure having apertures in the side wall thereof immediately above and below said partition and forming communication between said chambers with the aperture above the partition rising from said partition, a gate member disposed across both of said apertures and movable on said structure to present different portions thereof across said apertures, means engageable by one of said portions for tightly sealing and preventing communication between said apertures and said chambers during the treating of said material in said chambers, and the other of said portions having a channel therein which connects said apertures so as to provide a gravity chute leading from the uppermost aperture to the other, and an agitator in the chamber above said partition and moving in close proximity to the upper face of that partition for pushing the con-

tents of the upper chamber towards the aperture from that chamber, so as to discharge said contents into the lower chamber when said gate member is moved to connect said apertures and said chambers.

2,027,132
GRINDING WHEEL
Duane K. Webster, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application December 19, 1934, Serial No. 758,279
10 Claims. (Cl. 51—206)

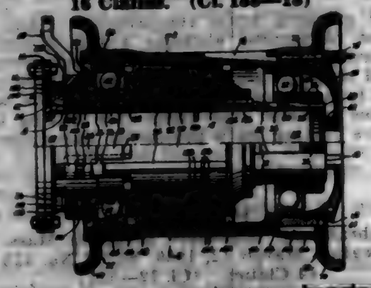
1. A grinding wheel comprising a main body portion of bonded abrasive grains shaped in the form of a disk, and a separately manufactured sheet of abrasive material integrally secured to a side of the main body portion which provides a rough side wheel face having sharp abrasive cutting teeth projecting therefrom.

2,027,133
FLASHING
Abraham S. Weinstein, Brighton, Mass.
Application March 12, 1930, Serial No. 435,124
14 Claims. (Cl. 72—187)



1. A sheet metal flashing for masonry structures comprising a sheet of sheet metal of the

width to extend substantially through the wall of said structure and thereby provide a means for deflecting and draining moisture of infiltration from said wall, said flashing being deformed to provide a series of struck-up encased projec-



tions extending upwardly from the sheet providing recesses on opposite sides of said sheet for the reception of mortar to bond the flashing sheet and masonry structure against relative movement in all directions.

2,027,124
FLASHING
Abraham S. Weinstein, Allston, Mass.
Application August 18, 1930, Serial No. 476,121
Renewed November 10, 1934
24 Claims. (Cl. 72—187)

1. A flashing comprising a strip of sheet metal having a coarsely corrugated body portion and a finely corrugated end portion substantially coextensive therewith, said strip having means thereon adapted to interlock and key mortar disposed on each side of said strip.

2,027,125
BRAKE
Chichester P. Weldon, Bristol, Conn., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 3, 1932, Serial No. 596,441
16 Claims. (Cl. 188—18)

1. In a brake, a non-rotary overhanging support, a rotatable hub, a bearing between the hub and the support, a sleeve slidably mounted on the support and keyed against rotation with respect thereto, braking means housed within the hub at one side of the bearing for frictionally connecting the hub to the sleeve, and means adjacent to the anchored end of the support at the other side of the bearing for sliding the sleeve to operate the braking means, said sleeve-sliding means and said braking means reacting against opposite sides of the bearing; substantially as described.

2,027,126
DYNAMO-ELECTRIC MACHINE
Alexander F. Wood, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 12, 1935, Serial No. 16,026
4 Claims. (Cl. 171—252)

1. A dynamo-electric machine comprising a cylindrical frame, a laminated core mounted in said frame, a retaining ring mounted in said frame at each end of said core in abutting relation thereto, an end shield for said frame, and means including a plurality of integral inturned ears formed on said retaining ring adjacent said end shield securing said end shield to said frame.

2,027,127
CONTAINER
Lester L. Tremaine, Chicago, Ill.
Application August 17, 1932, Serial No. 629,103
7 Claims. (Cl. 215—44)

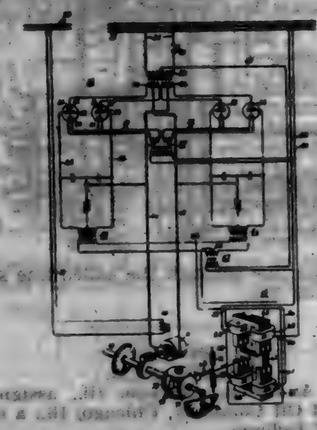
1. A container having a first depression formed in one wall thereof with a second depression of smaller diameter formed centrally in the bottom of the first depression, the bottom of the second depression having a port therein communicating with the interior of the container, an annular member seated on the bottom wall of the first depression and having a central tongue extending over said port, a valve member carried by said tongue and positioned in said second depression for controlling the passage of air or gas through said port, a disk holding said annular member in place, and an annular head in the wall of the container for clamping said disk in place.

2,027,128
UNIVERSAL JOINT
Oscar U. Zerk, Cleveland, Ohio
Application April 12, 1935, Serial No. 16,700
6 Claims. (Cl. 287—90)

1. In a joint construction for drag links, tie rods and the like, a housing element adapted

to be associated with a tie rod to oscillatably move longitudinally therewith, a bearing element projected into the housing element, and having a bearing portion thereon, a pair of ball raceway cavities on opposite sides of the bearing portion, the housing element being provided with a pair of spaced raceway cavities each concavely confronting a raceway cavity of the bear-

ing element, balls in the pairs of confronting raceways thus provided, the balls and raceway cavities being substantially in co-alignment with the direction of oscillatory movement of the tie rod associated housing element, and means resiliently checking movement of the bearing element after a predetermined movement from a normal position.



2,027,139
TUBULAR BORING TOOL
John Herbert Abramson and Edwin C. Swanson, Rockford, Ill., assignors to Greenlee Bros. & Co., Rockford, Ill., a corporation of Illinois
Application April 21, 1933, Serial No. 667,144
6 Claims. (Cl. 145—150)

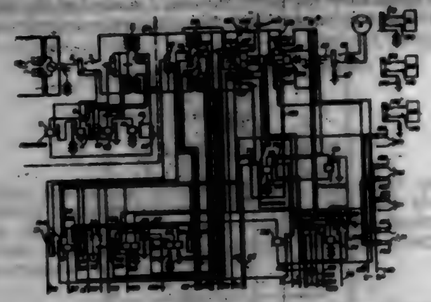
1. A tubular boring tool comprising a tubular body, a marginal scribing edge at the inner diameter of said body at its lower end and extending along said lower end through a substantial part of a circle to guide said tool in entering the work, and a cutter formed in the lower end of said body between the ends of said scribing edge arranged to trail said scribing edge in entering the work.

2,027,140
TORQUE AMPLIFYING SYSTEM
Ernst F. W. Alexanderson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 2, 1933, Serial No. 640,574
18 Claims. (Cl. 172—239)

1. An impulse amplifying system comprising an electric driving motor, supply means for said motor comprising electric valve apparatus provided with a control grid, means for supplying a voltage to said grid, means for controlling said grid voltage comprising a reactance bridge connected to said grid and provided with a core divided into two members spaced apart to provide an air gap, an armature member movably mounted in said air gap for controlling the magnetic balance of

said bridge, a pilot device for moving said armature to unbalance said bridge and a connection from said motor to said armature for returning said armature member to its initial position to balance said bridge.

2,027,141
AUTOMOBILE BODY
Peter Altana, Brooklyn, N. Y., assignor of forty per cent to Jennie Miles, Brooklyn, N. Y.
Application June 27, 1934, Serial No. 733,862
1 Claim. (Cl. 296—60)



In combination with the body of an automobile having an open top, a compartment across the rear end of said opening and compartments along opposite sides of the opening near the rear end and partially extending to the front end, and a tent in said compartments comprising a central rolled section housed in the end compartment and extendible to the front and side sections housed in said side compartments and extendible upwards and forwards to the front of said opening, and means for connecting and holding the sections of the tent, said side sections being foldable and extendible in accordion fashion.

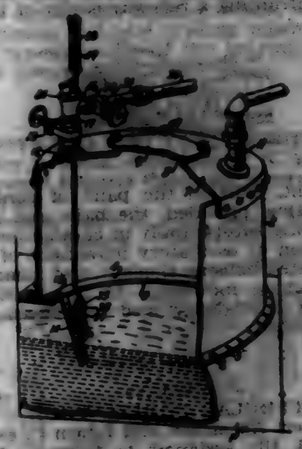
2,027,142
TELEPHONE EXCHANGE SYSTEM
Sewell W. Allison, West Orange, N. J., and James E. McKim, Douglas Manor, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 7, 1933, Serial No. 701,373
10 Claims. (Cl. 179—45)

6. In a telephone system, a switchboard, a called line appearing thereon, a link circuit terminating thereat and connected to said line, a repeating coil interposed in said link circuit, a

source of ringing current and means controlled over said link circuit for connecting said source

to the called line through the called line side of the repeating coil.

1,627,143
BARREL SEAL
Lonnie E. Anderson, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application June 17, 1922, Serial No. 617,773
4 Claims. (Cl. 220—39)



1. In combination, a bung provided with a head containing a non-circular socket for turning the bung and having a groove in the lower portion of the socket side wall, a destructible metallic cap surrounding the head and a portion of said cap being depressed nonconformably into said socket and into said groove.

1,627,144
FORMATION OF LEUCO COMPOUNDS
Louis E. Hahn, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 27, 1926, Serial No. 91,984
17 Claims. (Cl. 260—39)

12. The process which comprises reducing vat dyes in an open vessel by adding slightly more sulfur dioxide to the dye than will be combined during the reaction, the amount of sulfur dioxide added being sufficient to form zinc hydrosulfite in the solution, thereafter adding sufficient finely divided zinc to form sufficient zinc hydrosulfite to reduce the dye to its leuco form, heating the resultant mixture to a temperature below which the sulfur dioxide will be expelled, then passing into the reaction mass continuously at a rate insufficient to react with the zinc present, a quantity of sulfuric acid sufficient to release sulfur dioxide by reaction with any zinc bisulfite present.

17. The process of treating indigo, which comprises forming a water suspension of the indigo, adding to the said suspension a substance from the group consisting of hydrochloric acid, sulfuric acid, ammonium chloride and zinc chloride in an amount sufficient to initiate a reaction between zinc and sulfur dioxide therein, thereafter adding sulfur dioxide in an amount sufficient to react with zinc to produce zinc hydrosulfite and adding to the resultant enough zinc to form sufficient zinc hydrosulfite to reduce the indigo present to its leuco compound.

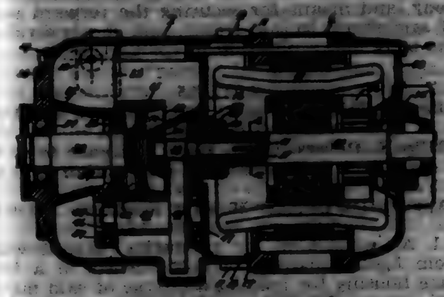
1,627,145
SIGHT ATTACHMENT FOR CAR OR OTHER TANKS
Jesse Beebe, Tulsa, Okla.
Application August 8, 1925, Serial No. 48,484
10 Claims. (Cl. 240—2.25)

1. A device of the character described, comprising a sight box having means for removable application to a tank fitting and having a passageway for communicating with the interior of a tank when the sight box is applied to such fitting, a window in said passageway, a lamp support adjustable on the sight box from the exterior of the fitting, and a lamp on the inner end of said support.

1,627,146
NUT ROASTING MACHINE
Ernest W. Ely and Harry H. Lisby, Cleveland, Ohio
Application November 19, 1924, Serial No. 750,777
16 Claims. (Cl. 53—7)

1. In a roasting machine of the class described in combination, a casing, a roasting bath receptacle in said casing, an apertured agitating drum for containing nut meats to be treated, normally disposed so as to be partially submerged in the bath in said receptacle, instrumentalities whereby said drum may be moved out of the said receptacle to effect discharge of its contents, and driving mechanism connected with one end of the drum for rotation thereof, the other end of the drum being open to provide a discharge, the movement of the agitating drum out of the receptacle as aforesaid being such that the roasted nut meats will be discharged through the open end of the drum by reason of such movement.

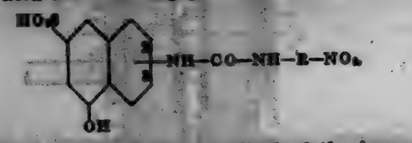
1,627,147
THIRD POINT SUPPORT SHOE
Edwin G. Ehnes and Herbert W. Hiltabiu, Chicago, Ill., assignors to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application December 3, 1924, Serial No. 753,626
16 Claims. (Cl. 105—212)



2. In combination, a brake beam including a strut and a tension member, and a third point support chair including structure engaging said tension member sidewardly of said strut and separately formed means for securing said structure to said tension member.

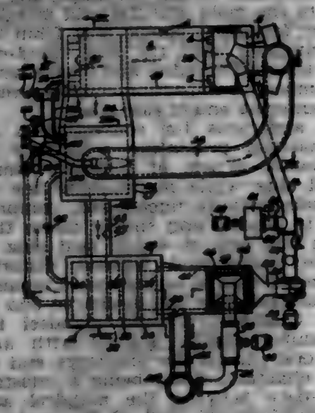
1,627,148
PREPARATION OF PROTOCATECHUIC ALDEHYDE
Marion Scott Carpenter, Nutley, and Eric C. Kunz, Montclair, N. J., assignors to Givaudan-Delawanna, Inc., New York, N. Y., a corporation of New York
No Drawing. Application May 16, 1924, Serial No. 717,725
8 Claims. (Cl. 260—127)

1. Process for the manufacture of protocatechuic aldehyde comprising reacting heliotropine with anhydrous aluminum chloride in the presence of an aliphatic chlorinated hydrocarbon solvent, followed by treatment with an aromatic hydrocarbon, said heliotropine being present in amount sufficient to prevent reaction between said solvent and said aromatic hydrocarbon.



1,627,149
ELECTRIC POWER UNIT
Joseph D. Christian, San Francisco, Calif.
Original application May 2, 1922, Serial No. 558,787. Divided and this application July 7, 1924, Serial No. 724,172
16 Claims. (Cl. 74—421)

1. In combination, a casing including a wall member and an end wall, a motor shaft on one side of said wall member, a stub shaft slidably connected to said motor shaft and extending on the other side of said wall member, a bearing for said stub shaft, said wall member including a portion extending from said wall member toward said end wall and supporting said bearing, a power take off shaft coaxial with said stub shaft, and a gear on the end of said take off shaft adjacent said extending casing member portion, said gear having a recessed face adjacent said extending portion to receive said portion.

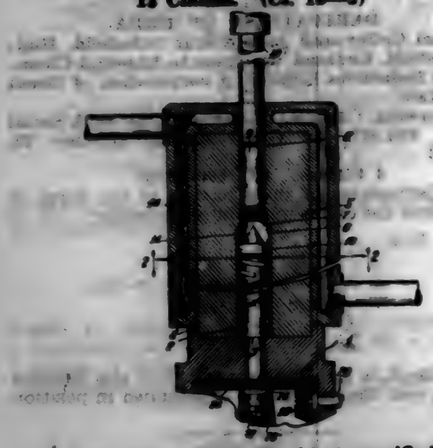


1,627,150
DERIVATIVES OF UREA
Samuel Coffey and John Edgar Schofield, Huddersfield, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application October 24, 1923, Serial No. 669,397. In Great Britain October 28, 1922
4 Claims. (Cl. 260—134)

1. Derivatives of urea having in the form of free acid the following general formula:

wherein R is an arylene radical of the benzene series, and the urea group is attached in position 2 or 3.

1,627,151
APPARATUS FOR MAKING OPEN-HEARTH STEEL
Martin J. Conway, Canterville, Pa.
Application June 28, 1924, Serial No. 721,456
11 Claims. (Cl. 263—15)



1. An open hearth furnace comprising a melting hearth forming the bottom wall of an enclosed heating chamber, heating means at one end of the chamber above the hearth embodying fuel and air supply means, means for withdrawing the products of combustion at another end of said chamber, and means for preheating the air supply to the heating means by the heat of the products of combustion leaving the heating chamber including means for balancing the pressure of the preheated air entering the furnace and the products of combustion or waste gases leaving the furnace chamber, said pressure balancing means being responsive to and controlled by variations in the pressure of the waste gases or products of combustion leaving the furnace chamber and the preheated air entering said chamber.

2,027,152

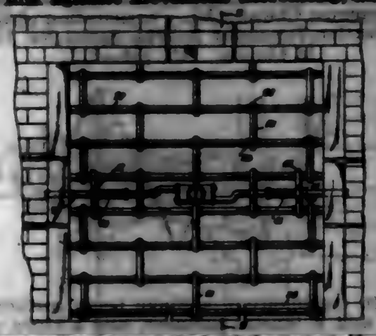
METHOD AND APPARATUS FOR CONVERTING SOLID ARTICLES INTO TUBULAR STRUCTURES

Glenn A. Cooper, Chicago, Ill., assignor to Cruver Manufacturing Company, Chicago, Ill., a corporation of Illinois

Application October 8, 1932, Serial No. 636,834
13 Claims. (Cl. 18—3)

11. An apparatus of the kind specified comprising a mold chamber open at one end, a slug receiving chamber communicating at one end with said open end of said mold chamber, a mandrel within said mold chamber having a free end opposed to and spaced from the open end of said chamber, means for imparting relative rotation to the mold and the said mandrel, and means for forcing a plastic slug from said receiving chamber into the said mold-chamber and over the said mandrel and means within the mold chamber for imparting counter-pressure to the first entering end of said slug.

12. An apparatus for converting a slug of plastic material presenting a surface pattern into a hollow article of different dimensions than said slug while maintaining the surface pattern substantially unchanged, comprising a chamber to receive and snugly house the slug, and from one end of which said slug is dischargeable bodily and without distortion, a mold chamber having unobstructed communication at one end with the discharge end of said receiving chamber, a rigid mandrel in said mold chamber axially aligned with and opposed at one end to the discharge end of said receiving chamber, there being a substantially annular space between the mandrel and the inner circumferential wall of the mold chamber, a ring-piston snugly fitting and reciprocable in said mold chamber, a spring for maintaining said piston normally disposed adjacent to the aforesaid end of said mandrel, and a plunger in the receiving chamber for forcing said slug over said mandrel into said mold chamber to fill the latter progressively against the action of the said piston.



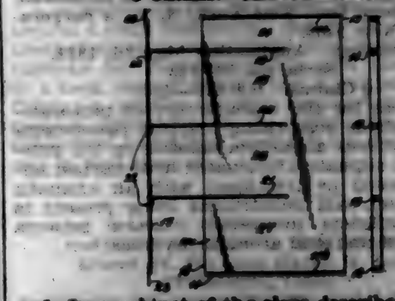
2,027,153

OVERHEAD-ACTING GRILLE

Milton L. Cornell, New York, N. Y., assignor to Cornell Iron Works, Inc., Long Island City, N. Y., a corporation of New York

Application October 30, 1933, Serial No. 695,794
11 Claims. (Cl. 189—36)

1. A flexible grille comprising a plurality of straight parallel rods, a plurality of spaced links spacing and flexibly interconnecting adjacent rods, said rods having integral projections extending therefrom and respectively confining each link against movement therealong, and ad-



ditional aligned end links interconnecting and pivotally mounted on the ends of adjacent rods, and vertical guides at the sides of said grille for confining said aligned end links to movement in a vertical path.

2,027,154

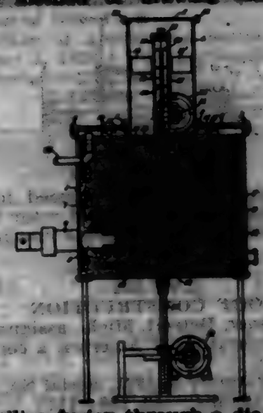
CABINET, CHEST, AND THE LIKE

Harry Derman, Lawrence, Long Island, N. Y.

Application January 16, 1935, Serial No. 2,011
5 Claims. (Cl. 312—140)

1. In a cabinet of the class described, a casing consisting of an oblong, rectangular, tubular body of fibrous board open at the front and rear thereof, a frame secured to the open end of said body, a back wall secured to the rear open end of said body, a plurality of spaced partition sheets attached to the inner surface of said back wall and extending forwardly through said body, and means for securing the forward ends of said sheets to said frame, said sheets dividing the body into a plurality of compartments.

2,027,155



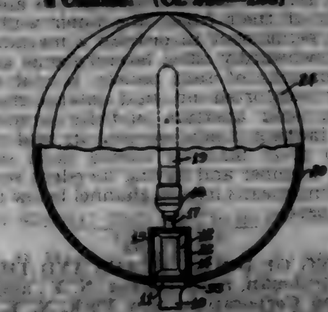
APPARATUS FOR AND METHOD OF FUSING VITREOUS MATERIAL

Philip K. Devers, Lynn, Mass., assignor to General Electric Company, a corporation of New York

Application October 30, 1934, Serial No. 750,624
6 Claims. (Cl. 49—78.1)

1. An apparatus for producing shaped ware from fusible material which consists in a furnace housing for holding a charge of said material, means for heating said charge to fusion temperature, a chute-like die arranged above said charge and being movably mounted to permit of advancing and withdrawing motion to penetrate said charge, external means for reciprocating said die, a core mounted below said die, means for reciprocating said core to maintain said core in predetermined relation to said die irrespective of motion of the latter, and means for withdrawing plastic material through a space between said die and said core through said die.

3. The method of drawing elongated stock



from a silica fusion through a die submerged in said fusion which consists in varying the orientation of the inlet of said die with respect to said fusion thereby varying the configuration of said stock.

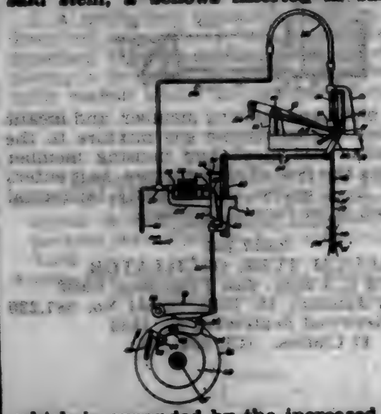
2,027,156

GLOBE MOUNTING

Raymond R. Dupler, Toledo, Ohio

Application July 16, 1935, Serial No. 31,600
4 Claims. (Cl. 240—126)

1. A device of the class described comprising a vertically disposed tubular member, a pair of vertically spaced cylindrical surfaces in juxtaposed relation to and in axial alignment with said member, an annular flange below the lower cylindrical surface, a translucent globe-like member having an opening, a sleeve extending entirely inside of said globe-like member through said opening except for an outwardly extending flange engaging the outside of said globe-like member, a shoulder on the inside of said sleeve spaced from the outer end thereof and adapted to rest against and be supported rotatably by said annular flange, and an elongate lamp carried by said tubular support and adapted to extend inside of said globe-like member for illuminating the same.



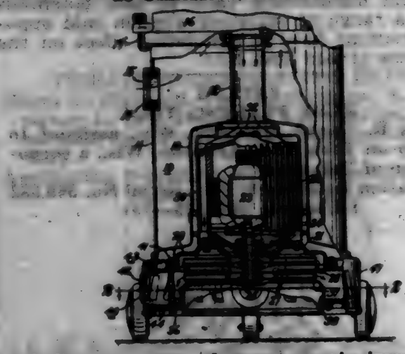
2,027,157

DETECTION DEVICE

John Flaws, Jr., Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York

Application June 12, 1934, Serial No. 730,234
6 Claims. (Cl. 175—183)

1. A device for detecting the absence of an exhaust aperture in a stem for electric lamps and similar articles comprising an air line which engages the exhaust tube of said stem, means for forcing air under pressure through said line, the air flowing normally through said exhaust tube and escaping through said exhaust aperture of said stem, a bellows inserted in said air line



which is expanded by the increased pressure in said line when a stem is devoid of an exhaust aperture, driving means for subsequent mechanisms normally operating upon said stem and mechanism operated by the expansion of said bellows for rendering inoperative said driving means.

2,027,158

VACUUM CLEANER

Axel Albert Fersberg, Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware

Application March 5, 1932, Serial No. 596,349
In Germany March 7, 1931
13 Claims. (Cl. 230—127)

1. In a vacuum cleaner, an air impeller, air conveying means connected to receive air from said impeller associated therewith comprising a casing having a curved air channel of constantly decreasing cross-sectional area, said casing having air discharge louver openings progressively disposed along the path of air flow and arranged so that the direction of air flow therethrough is suddenly reversed from the direction of air flow in said channel.

2,027,159

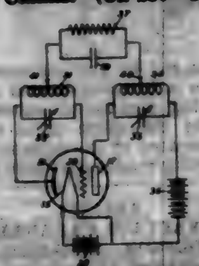
GAS BURNER CONSTRUCTION

Alden W. Fulton, Kansas City, Mo.

Application December 14, 1933, Serial No. 702,718
4 Claims. (Cl. 158—7)

1. A burner construction comprising a cylindrical housing member entirely open at its upper

end, a solid cylindrical refractory block mounted centrally within said housing member in spaced relation to the interior wall thereof, said block projecting above said housing member and having a top flange margin overlying the space be-



tween said block and housing member, and means for supplying a combustible gas mixture to the space between said block and housing member and directing the flow of said mixture, as it enters said space, in a course substantially tangential to the curved outer face of the block.

2,027,160

VACUUM TUBE OSCILLATOR

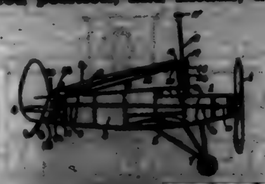
Richard E. Furay, San Francisco, Calif.
Application January 18, 1933, Serial No. 651,230
Renewed September 24, 1933
17 Claims. (Cl. 250—36)

14. The method of controlling an electric current which comprises generating an electron flow, establishing a pair of oppositely varying potentials differently positioned with respect to said flow, and maintaining each of said potentials within a range of variation wherein said opposite variations have a cumulative effect on the magnitude of said flow.

2,027,161

TUBE FLARING TOOL

Gideon R. Gagne, Kenosha, Wis., assignor to Snap-on Tools, Inc., Kenosha, Wis., a corporation of Delaware
Application October 18, 1931, Serial No. 569,582
8 Claims. (Cl. 153—79)



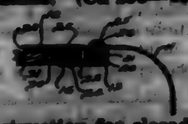
1. In a device of the character described, the combination of a circular body having radially disposed bores of different diameters in said body, there being an opening in said body to interrupt said bores, there being tapered seats at the interrupted extremities of said bores in one portion of said body, and a flaring tool member displaceable in the bores of the other portion of said body for the purpose set forth.

2,027,162

LANDING APPARATUS FOR AIRPLANES

Julius Goldman, Los Angeles, Calif.
Application July 2, 1915, Serial No. 37,483
5 Claims. (Cl. 66—76)

1. In a toy airplane, a motor for driving the propeller of the plane, a lifting rotor mounted on the plane to be lowered toward the plane, when not in use, and to be elevated into operative position above the plane, means for holding said rotor in its lowered position, and means, actuated by

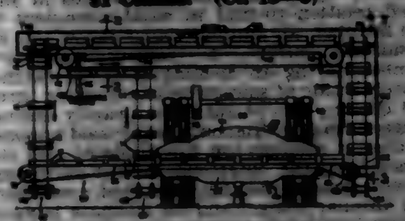


said motor, when its power is reduced, for releasing said holding means from said rotor to enable said rotor to rise above the plane into its operative position.

2,027,163

ROOF CONSTRUCTION

Otto F. Graebner, Detroit, Mich., assignor to The Murray Corporation of America, a corporation of Delaware
Application January 9, 1931, Serial No. 507,513
5 Claims. (Cl. 296—137)



1. A roof construction for closed vehicle bodies comprising metal quarter panels covering the margins of the roof and forming a central aperture, said panels having an upwardly presenting channel formed therein adjacent to and longitudinally of their edges, the inner wall of said channel being bent to provide a marginal bead and a downwardly offset lateral flange along the inner margins of said panels, a roof framing member supported on said lateral flange for spanning said aperture and for bracing said panels, tacking means secured in said channel, and top cover material spread upon said roof framing member and having its edges secured to the tacking means in said channel below the level of said bead.

2,027,164

MOLDING OF DOLLS' HEADS AND THE LIKE

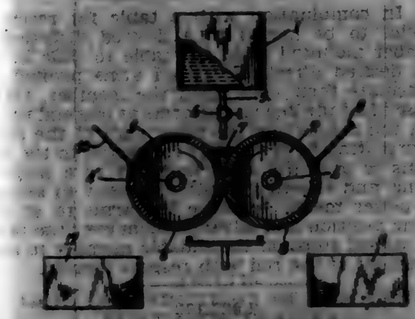
Leo J. Grabenstein, Belle Harbor, N. Y., assignor to Margon Corporation, New York, N. Y., a corporation of New York
Application February 16, 1932, Serial No. 593,943
11 Claims. (Cl. 18—5)

1. The method of making a doll part out of the conventional wood pulp and starch material in a single molding operation by means of a separable mold, which includes placing the molding material in the mold, heating and intermittently pressing the halves of the mold together, relieving the pressure between the intermittent pressings, without, however, moving the halves of the mold apart, so as to freely permit the escape of gases generated in the heated material without rupturing the embryo doll part, and additionally baking the molded material after the mold has been closed.

2,027,165

MOLDING OF DOLLS' HEADS AND THE LIKE

Leo J. Grabenstein, Belle Harbor, N. Y., assignor to Margon Corporation, New York, N. Y., a corporation of New York
Continuation of application Serial No. 591,947, February 7, 1932. This application March 16, 1934, Serial No. 715,901
12 Claims. (Cl. 18—4)



1. A mold for the molding of a complete hollow doll's head, said mold comprising separable top and bottom portions, the bottom portion corresponding to the face of the head and being provided with eye and mouth openings, an indestructible tapered core-locating arbor extending through the neck opening of the head, a low temperature fusible metal core on said arbor and having projections fitting the aforesaid openings and adapted to form eye and mouth openings in the head, pins extending from the bottom mold into the top mold for aligning the same, latch means for locking the mold in closed condition, top and bottom plates secured on the backs of the top and bottom molds respectively and providing substantial outwardly projecting flanges for cooperation with appropriate mold moving guides, said plates being cut away in alignment with the aforesaid latch means and said bottom plate being additionally cut away relative to the top plate to permit arresting of the top plate by supports which pass the bottom plate, thereby opening the mold.

2,027,166

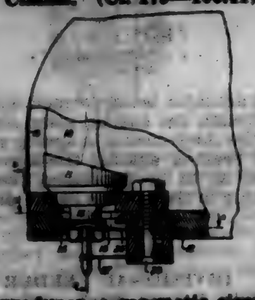
ROSIN SIZING AND METHOD OF MAKING THE SAME

William H. Harding, Wyalusing, N. Y., and Albert W. Montgomery, Cedartown, Ga., assignors to American Cyanamid & Chemical Corporation, New York, N. Y., a corporation of Delaware
Application October 26, 1929, Serial No. 402,854
10 Claims. (Cl. 134—31)

1. A process for making a low free rosin size having greater than 50% solids comprising subjecting a solution of an alkali metal compound and rosin mix to drying heat above 200° F. but not more than 500° F. relatively suddenly whereby the mix is carried rapidly through and beyond gelling and foaming stages and saponification accelerated.

2,027,167

CONFECTION



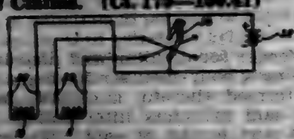
Benjamin R. Harris, Chicago, Ill.
No Drawing. Application June 4, 1934, Serial No. 728,958
22 Claims. (Cl. 99—16)

1. A confection composition of the character described comprising a fat, comminuted material dispersed therein, and an ester of sulfuric acid having a terminal lipophile group with at least eight carbon atoms and a hydrophylic sulphate group.

2,027,168

VIBRATION TRANSLATING DEVICE

Henry C. Harrison, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 29, 1934, Serial No. 746,873
8 Claims. (Cl. 179—100.41)



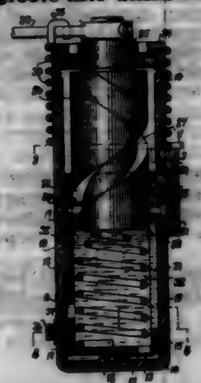
1. In a reproducer, a magnetic circuit, a moving system comprising a pair of spaced coils in operative relation to the circuit and a stylus for driving the coils and resilient means supporting the system between the coils for both lateral and vertical vibrations of the stylus.

2,027,169

VIBRATION TRANSLATING DEVICE

Henry C. Harrison, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 29, 1934, Serial No. 746,874
7 Claims. (Cl. 179—100.41)

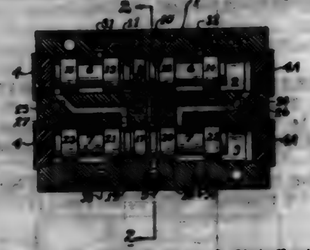
1. In a vibration translating device, a generating element, a stylus connected thereto, means for supporting the element for vibration in different modes corresponding to different modes of vibration of the stylus, means for producing flux transversely of the element, and means for reversing the direction of the flux at one side of the element.



2,027,170

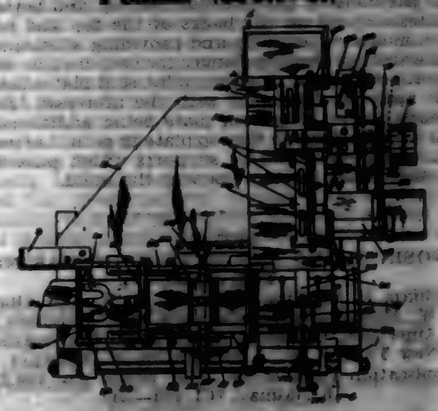
DOOR CHECK

Marcus B. Hemingway, New Haven, Conn.
Application May 29, 1933, Serial No. 673,552
1 Claim. (Cl. 16—53)



A door-check comprising a shell adapted to be mounted upon a door, a cup-shaped piston closely fitting said shell and axially movable therein, said piston formed on one side with a

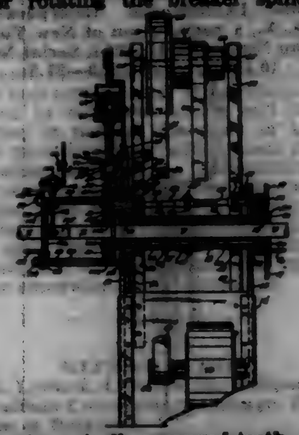
longitudinal slot and on the opposite side with an opening, means to prevent the rotation of the piston, a by-pass intersecting said opening, a pin mounted in said piston opposite the slot, an actuator closely fitting said piston and formed with a spiral groove into which the said pin ex-



tends, said actuator being formed with a stud extending through the casing, arms connecting the stud with the door-casing, a spring seated in said piston and bearing against the lower end of the actuator so as to be depressed thereby, and a valve-opening in the bottom of the piston.

2,027,171
DIVISIONAL FEEDER
David R. Hillis, Detroit, Mich., assignor, by mesne assignments, to Trahan Engineering Corporation, Cleveland, Ohio, a corporation of Ohio
Application January 26, 1934, Serial No. 708,353
3 Claims. (Cl. 194—7)

1. A feeder for dividing and distributing fluids comprising a body-member having a pair of cylinders formed therein, a central passage connecting said cylinders intermediate their ends, an inlet port in one of said cylinders, two discharge ports in each cylinder, one on each side of said central passage, two pairs of passages connecting the said cylinders, each of said last named passages leading from one end of one cylinder to a point adjacent the entrance of the central passage in the other cylinder and between said central passage and a discharge port, the respective points of entry of the first pair of passages from the ends of the first cylinder extending beyond the opening of the central passage in the second cylinder, and the respective points of entry of the second pair of passages from the ends of the second cylinder being on the respective sides of the opening of the central passage therein nearest the end of the cylinder from which they lead, a reciprocating piston rod in each cylinder, and four substantially equally spaced-apart piston-type valves on each piston rod, the spacing of said valves on each rod controlling the flow of fluid through the feeder, permitting flow of fluid under pressure entering the first cylinder through the inlet port and entering into the second cylinder through the central passage to pass from the second cylinder into the first cylinder, alternately through the first pair of passages to one end of the first cylinder, while the other of the first pair of passages is in communication with a discharge port in the second cylinder, the piston type valves on the piston rod in the first cylinder alternately establishing communication between the inlet and second pair of passages at respective ends of the stroke of said piston rod and simultaneously establishing communication between a discharge port in the first cylinder and the other of the second pair of passages, each of the passages of said first and second pair acting at one time as an inlet port to a cylinder end permitting fluid to shift the piston rod in its respective cylinder to the opposite end and to hold it there until the piston in the other cylinder shifts and, on the return stroke of the piston, acting as a discharge passage for the fluid in front of the piston rod discharging the fluid to a discharge port in the other cylinder.



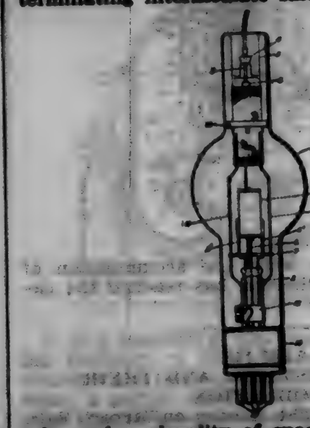
2,027,172
BAG FORMING MACHINE
Hans Iraschek, New York, N. Y., assignor to Mills Patent Holding Co., Inc., New York, N. Y., a corporation of New York
Application July 8, 1931, Serial No. 548,971
7 Claims. (Cl. 271—64)

2. In combination with a table for receiving articles to be moved in a desired direction, a member mounted upon the table to slide in the said desired direction, spaced arms pivoted intermediate their ends upon the member, spring pressed feet pivoted on the arms at one end thereof, a rod connecting the other ends of the arms, reciprocating power means connected to the rod, means to urge the arms normally to a non-engaging and elevated position, means to actuate the power means to move the arms to an engaging position and advance them over the table, and spaced stops on the slidable member to limit movement of the rod with respect thereto.

2,027,173
FLUE CLEANING MACHINE
Thomas J. Jackson and Joseph Alphonse Bekemans, Livingston, Mont.
Application September 21, 1932, Serial No. 634,118
2 Claims. (Cl. 29—81)

1. In a machine of the class described, means for guiding a flue endwise through the machine, a carrier guide, a scale breaker carrier having a spindle journaled in the guide for turning movement about an axis that extends substantially radially from the axis on which the flue guiding means holds a flue for endwise movement, a rotary scale breaker, a spindle fixed to the scale breaker, journaled in the carrier and extending substantially perpendicular to the first noted axis, means for rotating the breaker spindle, said

breaker having spirally arranged teeth, and manually operated means for turning the carrier spindle to adjust the breaker and change the angle of pitch of its teeth with respect to the direction of travel of the flue through the machine, said manually operated means including a bar intermediately fixed to the carrier spindle and set screws in the ends of the bar and engaging the carrier guide as a base of resistance.



2,027,174
BALANCED DRIVING HEAD FOR MACHINES
Forrest F. Johnson, Spencer, Ohio, assignor to The Spencer Manufacturing Co., Spencer, Ohio, a corporation of Ohio
Application April 16, 1934, Serial No. 720,836
3 Claims. (Cl. 82—41)

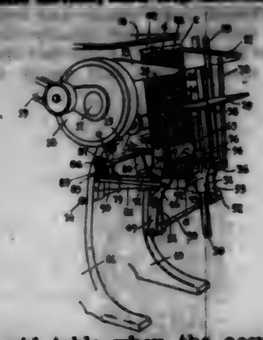
1. In a driving head for machines, a face plate, a work center secured in said plate, a driving dog for work supported by the work adjacent said center, said dog having a plurality of driving tails, and a floating connection between said face plate and said tails comprising driving pins normal to the surface of said plate and journalled thereon for rocking with respect to said plate in finding a driving contact with said tails, and means for adjusting the journals of said pins radially of said face plate.

2,027,175
GRID CONSTRUCTION OF ELECTRIC DISCHARGE DEVICES
George K. Kalmbach, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 8, 1930, Serial No. 487,372
2 Claims. (Cl. 250—27.5)

1. An electric discharge device comprising an elongated envelope terminating in remotely positioned stems and containing an anode supported from one of said stems, a cathode supported from the other of said stems, an ionizing medium at a pressure sufficient to support an arc-like discharge between said anode and cathode, an electrostatic control member closely surrounding the discharge path at the anode end thereof and terminating intermediate said anode and cath-

ode, and a plurality of spaced conducting elements supporting said control member from said other of said stems, said elements being solely interposed between the walls of said envelope and the portion of said discharge path between said control member and said cathode and being wholly remote from said discharge path.

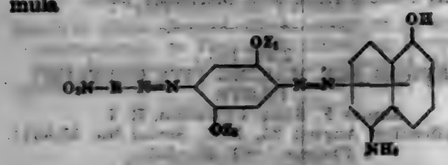
2,027,176
METHOD FOR MAKING PIPE COUPLING PARTS
James F. King, Cranston, R. I.
Application August 24, 1935, Serial No. 37,663
5 Claims. (Cl. 29—157)



4. The method of making pipe coupling parts which comprises, forming a hollow, two-diametered shape in which each portion of substantially uniform diameter is of generally cylindrical form, forming internal threads adjacent to one end of each portion of substantially uniform diameter, and separating the shape into separate parts along a line located substantially at the meeting line of the portions of different diameters and by the same operation forming an external shoulder and seating surface upon one of said portions.

2,027,177
PILE LOWERING DEVICE FOR PRINTING PRESSES
Abel Kluge and Emeral Kluge, St. Paul, Minn., assignors to Brandtjen and Kluge, Inc., St. Paul, Minn., a corporation of Minnesota
Application March 24, 1933, Serial No. 662,563
16 Claims. (Cl. 271—88)

1. The combination with sheet delivery means, of a lowering device including a table for accumulating the delivered sheets thereon in a pile, means for lowering the table, trip-means for interrupting the operation of said table lowering means, said trip-means being controlled by the height of the pile to maintain the uppermost



sheet thereof substantially in a given plane during the accumulation of sheets within the capacity of the device, said trip-means being actu-

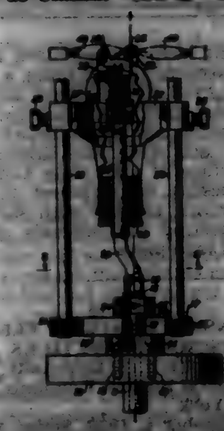
ated by said table when the accumulation of sheets in the pile thereon has reached the capacity of the device.

2,027,178
DISAZO DYESTUFFS AND THEIR PRODUCTION
Arthur Howard Knight, Ashton-on-Mersey, Sale, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application March 8, 1934, Serial No. 714,750. In Great Britain March 11, 1933
3 Claims. (Cl. 260—84)

1. An azo compound represented by the formula

wherein R is an arylene radical of the benzene series without water-solubilising groups, while Z_1 and Z_2 individually represent lower alkyl groups.

2,027,179
PISTON
Arnold Lack, Chicago, Ill., assignor to H. H. Shockey, Chicago, Ill.
Application August 18, 1932, Serial No. 629,649
2 Claims. (Cl. 121—49)

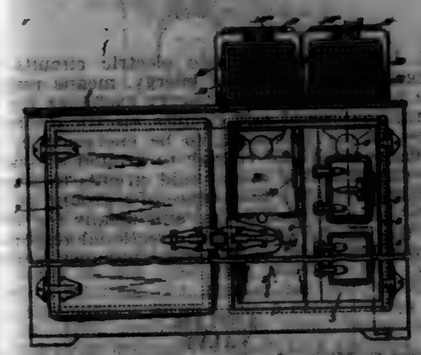


1. In combination, a circular piston carrier, a lug projecting radially therefrom, a hollow truncated toric piston having an aperture in the wall thereof adapted to be penetrated by the lug, the piston having opposed flat faces radially disposed with respect to the piston carrier, the walls of the lug being generally parallel to the radius of the piston carrier, the interior walls of the piston being parallel and adapted to be contacted by the lug walls, aligned apertures in lug and piston walls, having a central axis parallel to a tangent to the carrier, the apertures in the piston walls increasing in cross sectional area from inside outwardly and being irregular in contour, a holding pin extending through the apertures and enlarged at its ends to completely fill the apertures in the piston wall, the enlarged portions of the pin being substantially flush with the piston faces.

2,027,180
ELECTRON DISCHARGE DEVICE
Joseph P. Laico, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 17, 1934, Serial No. 753,447
10 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an enclosing vessel having a stem, a plurality of electrodes within said vessel including an electron emitting cathode supported from said stem, a grid surrounding said cathode, an anode surrounding said grid, said anode having an eccentric thickened portion, a leading-in wire extending from said grid, and a leading-in wire anchored in the thickened portion of said anode, both of said leading-in wires individually supporting the respective electrodes, said wires being sealed through the end of the vessel remote from said stem and arranged offset with respect to the axis of said vessel.

2,027,181
SEALING-IN MACHINE
Joseph P. Laico, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 1, 1934, Serial No. 755,115
15 Claims. (Cl. 49—5)

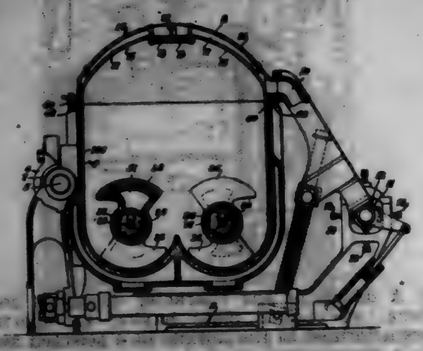


1. A head for a sealing-in machine comprising a bulb holder, a rotatable base supporting said bulb holder, and means for offsetting said bulb holder with respect to the axis of said base.

2,027,182
HYDROGENATION OF ALIPHATIC ALCOHOLS AND ESTERS
Wilbur A. Lazier, Marshallton, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 19, 1931, Serial No. 517,121
5 Claims. (Cl. 260—156)

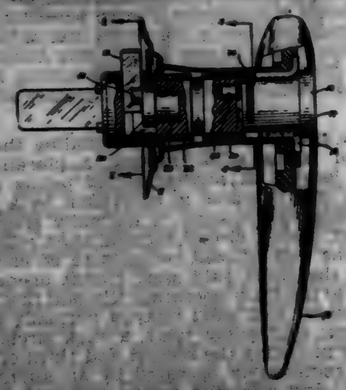
1. In the process of catalytically hydrogenating a mixture of higher saturated and unsaturated alcohols and esters of said alcohols with both saturated and unsaturated acids, which mixture is produced by dehydrogenation and condensation effected by passing the vapor of a primary alcohol of more than one carbon atom over a dehydrogenating catalyst at a temperature of 250° to 500° C. and at a pressure above 10 atmospheres to form the ester corresponding to said primary alcohol, the step which comprises contacting said mixture and hydrogen with a hydrogenating metal catalyst at a temperature of at least 50° C. and under superatmospheric pressure.

2,027,183
REFRIGERATOR
Carl E. L. Lipman, Chicago, Ill., assignor to Lipman Patents Corporation, Chicago, Ill., a corporation of Delaware
Application July 28, 1932, Serial No. 625,395
3 Claims. (Cl. 62—116)



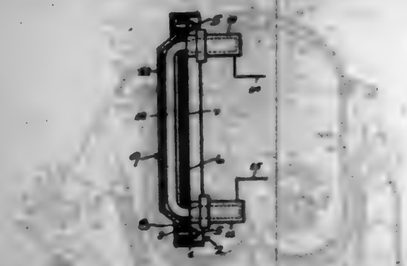
1. A refrigerator comprising a cabinet having a plurality of independent insulated compartments therein having independent doors thereto, one compartment being within the other and having its door within the outer compartment, a cooling element in each of said compartments, an individual control for each of said elements, and means for circulating refrigerant through each of said elements independently of the other elements.

2,027,184
VULCANIZATION ACCELERATOR
Wilhelm Lommel, Leverkusen-Wiesdorf, and Rudolf Schröter, Leverkusen-I. G. Werk, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application January 4, 1933, Serial No. 650,126. In Germany January 5, 1932
2 Claims. (Cl. 18—53)



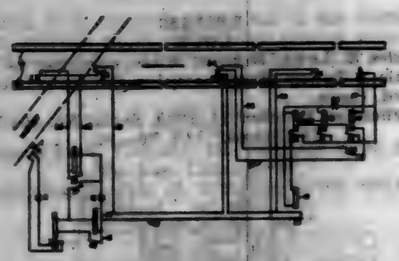
1. The process which comprises incorporating with rubber sulfur, a vulcanization accelerator other than an aliphatic amine and a primary aliphatic amine possessing a straight or branched aliphatic chain of more than 5 carbon atoms.

2,027,185
MIXING MACHINE
Evarts G. Loomis, Newark, N. J.
Application June 18, 1934, Serial No. 730,591
6 Claims. (Cl. 259—164)



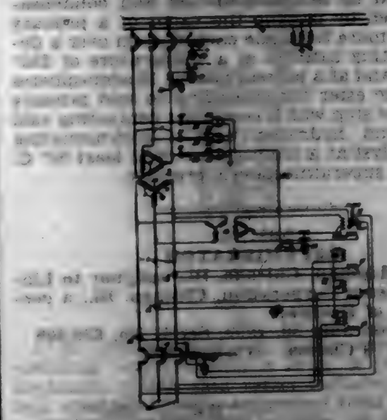
1. In a machine of the class described, a mixing chamber, a shaft extending through the chamber and having an end projecting out of the same, a paddle member having a tubular body of a length less than the distance between the walls of the mixing chamber so that said paddle member may be placed within the chamber through the open top thereof without disassembling the chamber, means for securing the paddle member on the shaft, said paddle member having blades and a continuous fluid passage extending through its tubular body and through the blades, a passage extending through the shaft and connecting with one end of the passage extending through the body of the paddle member, and an exhaust passage leading from the opposite end of the tubular body portion and passing through and out of the shaft.

2,027,186
LOCK
Charles E. Lowe, Detroit, Mich., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn.
Application October 31, 1929, Serial No. 403,718
19 Claims. (Cl. 70—61)



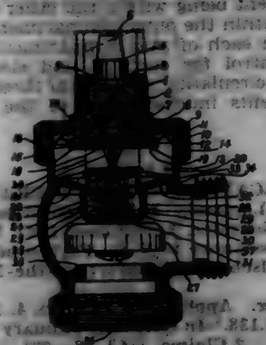
2. In a lock, a cylinder, a key plug, retaining means carried by said plug and normally cooperable with the cylinder to maintain the plug within said cylinder, a part of said cylinder being adapted to actuate said retainer said retaining means inoperative when said plug is key operated to a designated position.

1,927,127
ILLUMINATED SIGN LETTER
Romeo A. Luna, San Francisco, Calif.
Application May 16, 1934, Serial No. 725,915
3 Claims. (Cl. 40—130)



1. A device of the character described comprising, an opaque plate having an aperture therein formed in the outline of a selected symbol; a translucent sheet having a symbol embossed thereon and conforming to the outline of the aperture; a closure arranged on the rear side of the plate having the aperture therein; and a tube containing illuminating gas having its opposite terminals supported on the closure and the mediate portion thereof being formed to match the contour of the symbol and being confined on the rear side of the translucent sheet within said embossed symbol.

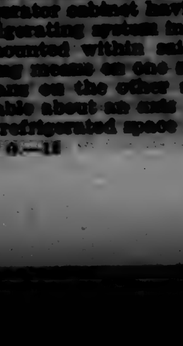
1,927,128
HIGHWAY CROSSING SIGNALING SYSTEM
Daniel J. McCarthy, Elgin, Ill., assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application May 23, 1934, Serial No. 727,626
6 Claims. (Cl. 246—126)



1. In a signaling system for signaling the approach of trains at a crossing, a plurality of contacts located at predetermined points along the track and operable in succession by a train approaching the crossing, a normally energized start relay, a stick circuit for said start relay including the first of said contacts to be encountered by the train, said stick circuit opened in response to the train operating the said first contact to release said start relay, a normally energized signal controlling relay, a stick circuit for said relay including the second and third of said contacts successively operated by an approaching train, slow releasing means initiated in response to the release of said start relay, means operated by said slow-releasing means for shunting the said second contacts after a predetermined time to maintain the stick circuit of said signal controlling relay only in case the said second contacts are operated after said second train operated contacts are shunted, and the operation of said third contacts by the approaching train thereafter opening said stick circuit to release said signal controlling relay.

1,927,129
CONTROL AND PROTECTION OF ELECTRIC CIRCUITS
Willard J. McLachlan, Scotia, N. Y., assignor to General Electric Corporation, a corporation of New York
Application March 24, 1934, Serial No. 717,318
7 Claims. (Cl. 175—294)

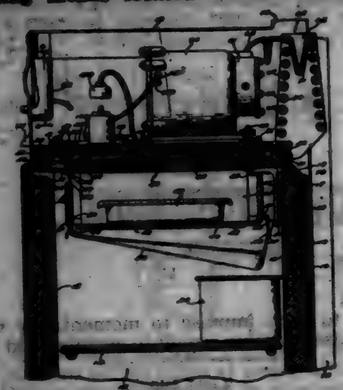
1. In combination, two electric circuits arranged for exchange of energy, means responsive to the direction of energy exchange for interrupting one of said circuits, electric discharge valve means connected to be energized in accordance with the voltage to ground of one of the conductors of one of said circuits to become conductive on the occurrence of a ground on another of said conductors, and means for varying the sensitivity of said directional responsive means when said valve means becomes conductive.



1,927,130
VALVE
Robert G. Miner, La Crosse, Wis., assignor to The Trane Company, La Crosse, Wis.
Application March 31, 1933, Serial No. 12,282
8 Claims. (Cl. 251—139)

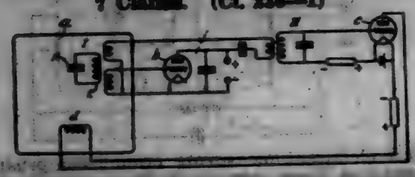
3. In a poppet valve, a valve body with ports therein, a valve seat, a valve head closing said valve seat, a valve stem attached to said valve head, a flexible disc sealing the top of said valve body, means outside said body for imparting mo-

tion and pressure to said disc, and means within said body to transmit and multiply the motion to said valve head, said last-named means comprising a fulcrum plate, and unattached levers, said fulcrum plate having a convex upper face and a lower face with a flat annular surface, the upper convex face of said fulcrum plate being in contact with said disc and said flat annular surface in contact with said unattached levers intermediate their ends, the ends of each unattached lever bearing respectively on a fixed support and on said valve stem.



1,927,131
COMBINATION PROJECTOR AND SOUND-REPRODUCING ASSEMBLY
William J. Merriney, Brooklyn, N. Y.
Application January 18, 1932, Serial No. 587,633
9 Claims. (Cl. 88—16.1)

1. In a projector, a film carrying both a picture record and a sound record, a lamp house, a socket supported in said lamp house, an incandescent lamp supported in said socket, a reflector positioned to one side of said lamp, a condensing lens positioned on an opposite side of said lamp in line with said filament and said reflector whereby the greater portion of light from said lamp is formed into a beam having an axis at right angles to said lamp house and adapted to be utilized for projecting pictures, an optical scanning unit adjacent to said lamp and having its center axis in line with filament and at right angles to said first axis, a cylindrical housing closely adjacent to said lamp house having a portion thereof forming a sound gate and including an opening formed therein in line with said scanning unit and said filament, a light sensitive cell positioned within said housing with its active elements positioned to receive light passing in a straight line from said filament through said scanning unit, and means for moving said film through said sound gate to cause said sound record to modulate the light passing to said cell.

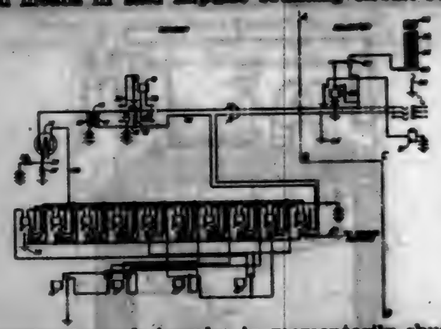


1,927,132
REFRIGERATING SYSTEM
Glenn Muffly, Scarsdale, N. Y.
Application August 27, 1931, Serial No. 559,476
17 Claims. (Cl. 62—116)

1. A refrigerator cabinet having a refrigerated space, a refrigerating system including a support swingably mounted within said cabinet having heat absorbing means on one side and heat dissipating means on the other side, said support being swingable about an axis adjacent the rear wall of said refrigerated space so as to bring the system into operative position with said heat absorbing means located in said refrigerated

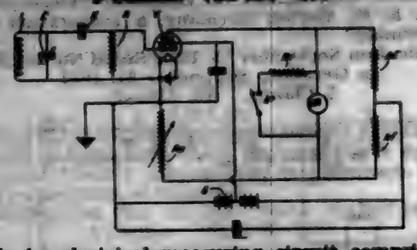
space and said heat dissipating means outside of said refrigerated space.

1,927,172
THERMOSTAT ARRANGEMENT
Herbert Muth, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application September 15, 1933, Serial No. 689,505
In Germany September 21, 1932
7 Claims. (Cl. 236—1)



1. An arrangement for controlling temperature comprising a container, an oscillating circuit comprising a condenser and an inductance within said container, the natural frequency of said circuit varying with its temperature, a tube generator coupled to said circuit whereby said circuit controls the frequency of electrical oscillations produced by said generator, a tuned circuit coupled to said generator, a rectifier connected to said tuned circuit and means responsive to the output current flow of said rectifier for controlling the temperature of said container.

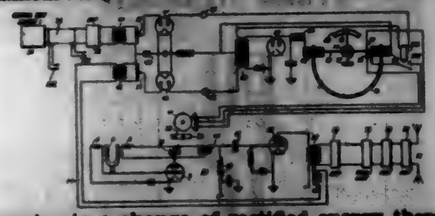
1,927,184
TELEPHONE SYSTEM
Oscar Myers, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 20, 1934, Serial No. 736,144
6 Claims. (Cl. 179—16)



1. In a telephone system, an impulsing device, an impulse responsive device, a control circuit extending from said impulsing device to said responsive device, a gaseous discharge tube at said responsive device having its grid inductively connected with said circuit and normally negatively biased below the ionization potential of said tube, an impulse counting circuit connected to the anode of said tube, means controlled by said impulse device for causing surges of potential through said inductive connection for intermittently rendering the grid of said tube sufficiently less negative to cause said tube to intermittently ionize and

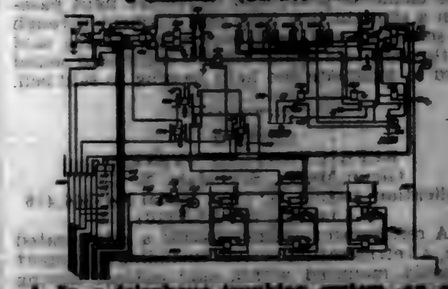
produce impulses in said impulse counting circuit, and means in said impulse counting circuit re-

sponsive to each impulse to momentarily shunt said impulse counting circuit to deionize said tube.



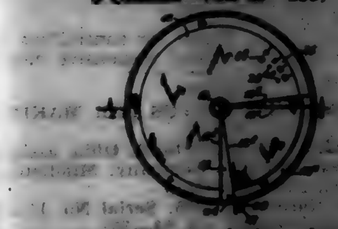
2,027,195
ELECTRICAL INSTRUMENT
Thomas Dixon Parkin, Broomfield, near Chelmsford, and Keith Stuart Webb, London, England, assignors to Radio Corporation of America, a corporation of Delaware
Application April 14, 1933, Serial No. 666,122
In Great Britain April 14, 1932
5 Claims. (Cl. 250—20)

1. An electrical measuring circuit comprising a calibrated input circuit, a thermionic valve including an anode, a cathode and a grid electrode with whose grid and cathode electrodes said circuit is coupled, and three additional impedances which, with the internal impedance of the said thermionic valve constitute a Wheatstone bridge, a measuring device being connected in one diagonal of the bridge and a source of potential for said anode in the other.



2,027,196
ELECTRICAL CONTROL SYSTEM
Arthur Pfister, Ridgewood Pinteau, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 14, 1932, Serial No. 637,715
1 Claim. (Cl. 250—36)

In an alternating current control system, a synchronizing source of oscillations and a local source of oscillations of approximately the same frequency as said synchronizing source, a first transformer having primary and secondary windings and a second transformer having primary and secondary windings, said synchronizing source being connected to the primary winding of said first transformer and said local source to the primary winding of said second transformer, a resistance connected across each secondary winding, a connection between said resistances, a pair of electron discharge devices each having anode, cathode and grid electrodes, the grid of one device being tapped to a point on one of said resistances intermediate its ends, and the grid of the other device being similarly tapped to the other resistance, the cathodes of said devices being connected together and to a point on the connection between said resistances, a third transformer having primary and secondary windings, one end of said last primary winding being connected to an anode of one of said devices and the other end of said primary winding being connected to the anode of said other device, a source of anode potential between said cathodes and the center of said last primary winding, a rectifier coupled to said secondary winding of said third transformer for rectifying the combined energies obtained from said two devices, means including a motor for varying the electrical constants of said local source of oscillations in either of two senses for restoring any departure of said local source from a predetermined relationship with respect to the synchronizing source, and means including a mechanical relay connected to said rectifier and re-

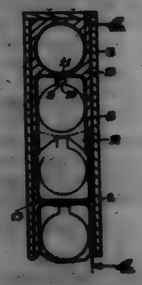


sponsive to a change of rectified energy therein of a value different from the resultant value obtained when a 90° phase relationship exists between energies of the two sources applied to said grids for driving said motor to compensate for said change, a switch comprising normally open contacts having an energizing winding connected between one end of the primary winding of said third transformer and the anode of that device whose grid is in circuit with said synchronizing source, said motor being connected through the contacts of said switch, means for biasing the grid of that device whose grid is in circuit with said synchronizing source substantially to cut off, whereby said energizing winding is normally responsive to the flow of current in said last mentioned device, due to said synchronizing source for closing its contacts, whereby the influence of said motor on said local source is only effective during continued current flow from said synchronizing source.

2,027,197
TRUNK CIRCUIT
Albert C. Fewell, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 17, 1934, Serial No. 753,449
6 Claims. (Cl. 179—37)

1. In a telephone trunking system, an operator's position, a plurality of calling lines incoming thereto and terminating in connecting plugs thereat, said receiving equipment thereat; control means common to said position for extending said calling lines to said receiving equipment, relay means associated with said lines and automatically responsive to calls thereon to connect said calling lines to said control means one at a time in a predetermined sequence and to cause said control means to extend such lines to the receiving equipment, an emergency jack arrangement, and circuit means associated with each calling line and responsive to connection of its associated plug with said emergency jack to connect such line to the control means and to cause the control means to extend the line to the receiving equipment independent of the sequence relay means.

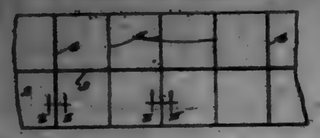
2,027,198
SLICE MEASURING CAKE BOX
George W. Rappold, Maspeth, N. Y.
Application August 10, 1934, Serial No. 739,531
5 Claims. (Cl. 45—125)



1. In a slice measuring device, a base, a disc rotatively centrally supported on the base and adapted to support a cake or the like, a removable cover on said base for covering said cake and having a sector shaped opening, a slidable cover section on said cover for covering said sector shaped opening, a stop for limiting opening of said slidable cover section to the size of the cut of said cake, and means for turning said disc when the cover section is moved in one direction, comprising a ratchet on said slidable cover section engageable with notches upon the rim of said disc.

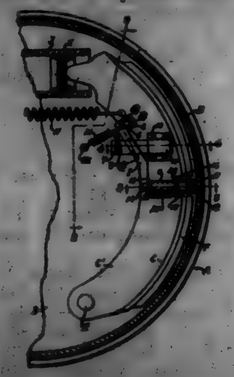
2,027,199
CONDENSATION PRODUCT
Walter Reppe and Ernst Keyssner, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application November 15, 1933, Serial No. 698,674. In Germany November 23, 1932
11 Claims. (Cl. 260—2)

1. The process of producing condensation products which comprises causing acetylene to act at between about 100° and about 300° C. on a cyclic organic compound being hydroxylated in the nucleus in the presence as catalyst of an organic base having a strongly basic action and being capable of withstanding the reaction temperature, the base being inert to the said hydroxylated cyclic organic compound at the reaction temperature employed.



2,027,200
METHOD OF CONNECTING TUBES IN SERIES
James Robertson and George H. Purdy, San Francisco, Calif.
Original application April 16, 1934, Serial No. 720,822, now Patent No. 2,001,922, dated May 21, 1935. Divided and this application August 24, 1934, Serial No. 741,331
2 Claims. (Cl. 23—157.4)

1. In the method of connecting tubes in series, the steps which comprise slitting the adjacent side walls of a pair of substantially parallel tubes from a point at adjacent ends thereof to points toward their central portions, bending the side



walls of the tubes outwardly at their slit ends so that portions of the tubes at points adjacent the slits therein overlap and are in engagement, and then forming the slit ends of the tubes into a substantially rectangular shape.

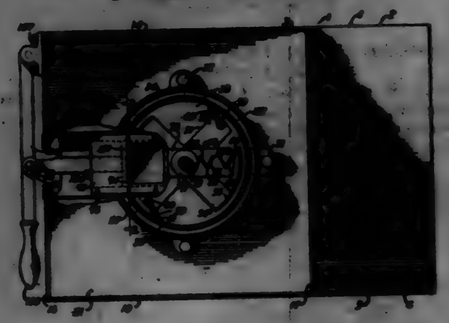
2,027,201
ROAD JOINT FORMER AND LOAD DISTRIBUTOR
Robert R. Robertson, Chicago, Ill., assignor to The Translode Joint Company, Chicago, Ill., a corporation of Illinois
Application September 6, 1933, Serial No. 688,575
26 Claims. (Cl. 94—18)

1. A road joint former and load distributor comprising a channel base section having a closed bottom, a plurality of holder sections slidably engaged therein in reversed staggered relation and anchoring means struck therefrom.

2,027,202
SELF-ADJUSTING BRAKE
Frank C. Emeryk, Overland, Mo.
Application March 21, 1935, Serial No. 12,140
14 Claims. (Cl. 188—79.5)

1. A brake comprising a brake drum, a brake shoe movable toward and from said brake drum, a brake lining, said brake shoe being so arranged that predetermined clearance is present between

said brake shoe and said brake drum when the brake shoe is in inactive position, automatically adjusted means including elements capable of relative movement for maintaining said predetermined clearance as the degree of movement of the brake shoe toward the braking position is increased because of wearing away of the brake lining or expansion of the brake drum, and means for automatically re-adjusting said automatically adjusted means when said brake drum contracts after expansion thereof, the last-mentioned means during readjustment of said automatically adjusted means acting to change the relative positions of said relatively movable elements of said automatically adjusted means.



2,027,202

APPARATUS FOR FREEZING ICE CREAM AND SIMILAR MIXES

Albert H. Schneider, Carter Lake, Iowa, assignor to Baker Ice Machine Co. Inc., Omaha, Nebr., a corporation of Nebraska

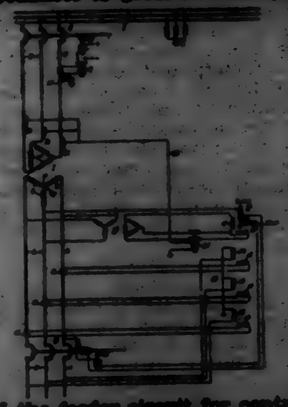
Application April 20, 1934, Serial No. 722,154

4 Claims. (Cl. 259—9)

1. In a device of the character described, a cylindrical container for a mixture to be agitated, a driving shaft rotatably mounted in the axis of the container, a dasher head fixed to the driving shaft, a complementary dasher head, means for rotatably mounting the last named head at the upper end of the container in axial alignment with the driving shaft, scraper blades pivotally supported between the heads and arranged to propel the mixture in circumvolution around the wall of the container, a mixture dividing member, means for supporting the divider member in fixed relation to the container, and means on the dividing member having channels for admission of air to the mixture as it is divided by the dividing member for effecting the folding of air into the mixture during circumvolution by the scraper blades.

2,027,204

CONTROL AND PROTECTION OF ELECTRIC CIRCUITS



Hudson R. Searing, New York, N. Y., assignor to General Electric Company, a corporation of New York

Application June 22, 1934, Serial No. 732,049

Renewed November 12, 1935

7 Claims. (Cl. 175—294)

1. In combination, a three-phase feeder circuit, a three-phase network circuit, a transformer having windings connected to the feeder circuit and windings connected to the network circuit, means responsive to the direction of energy exchange between said circuits for interrupting the network circuit and means connected to be energized in accordance with the balance of the impedances to ground of the phase conductors of the feeder circuit for controlling the sensitivity of said directional responsive means.

2,027,205

METHOD AND APPARATUS FOR MAKING BAGS

William E. Stanley, Middletown, Ohio, assignor to The Raymond Bag Company, Middletown, Ohio, a corporation of Ohio

Application March 16, 1935, Serial No. 11,206

14 Claims. (Cl. 93—35)

1. A method of providing the intermediate plies of a multi-wall bag with serrated ends comprising feeding a plurality of superposed webs at uniform speed, separating said webs, forming in each intermediate web a plurality of series of openings, the adjacent series of openings in each web being spaced apart a distance approximately equal to the length of a bag section, applying paste to the inner surfaces of the two outer webs along transverse lines arranged to register with the transverse series of openings in the intermediate web, bringing said webs into contact one with the other, folding said webs longitudinally to form nested tubes, pasting the longitudinal edges of each tube one to the other, and severing said nested tubes into bag sections along transverse lines intersecting the respective series of openings in said intermediate webs.

2,027,206

AZO DYE AND PROCESS FOR ITS PREPARATION

Francis Harvey Steele, Woodstown, N. J., and Clayton Knox Black, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

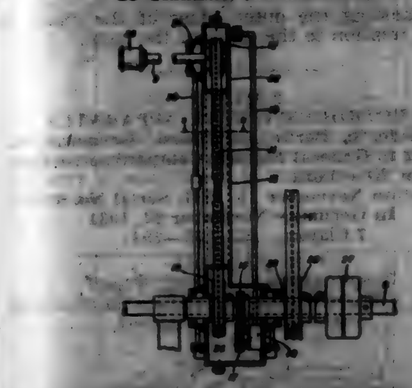
No Drawing. Application August 4, 1932, Serial No. 627,474

21 Claims. (Cl. 260—99)

12. An dyes having the following general formula:

wherein R'' represents the radical of an aromatic coupling component, R' represents the radical of an aromatic amine of the benzene series, and X represents the radical of a dihydroxy-benzene.

2,027,207



SOUND PICTURE APPARATUS

Edwin H. Smythe, Evanston, Ill., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 28, 1931, Serial No. 553,144

Renewed May 7, 1935

12 Claims. (Cl. 271—3.3)

1. A constant speed film driving mechanism for sound picture apparatus comprising a film driving sprocket having a pulley rigidly connected thereto, a main drive shaft having a pulley rigidly connected thereto, a belt arranged to positively engage said pulleys, a resistance filter arranged to resist forward or backward velocity variations in said driving mechanism and means whereby said belt may be directly subjected to the filtering action of said resistance.

2,027,209

IGNITION COMPOSITION

Charles Edwin Senson, Ardrossan, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

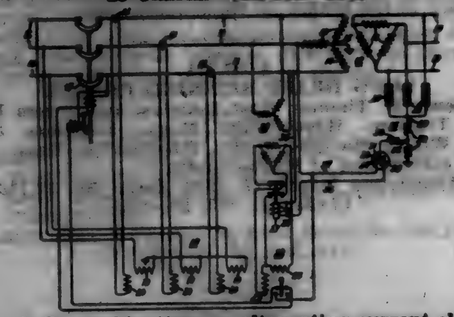
Application November 19, 1934, Serial No. 753,778

In Great Britain November 21, 1933

10 Claims. (Cl. 53—4)

1. An igniter composition comprising zirconium and an easily ignitable lead salt of a nitrophenol.

2,027,209



CONTROL AND PROTECTION OF ELECTRIC CIRCUITS

Frank M. Starr, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

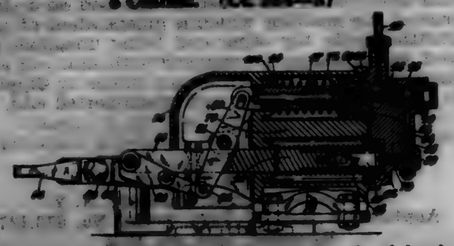
Application March 20, 1934, Serial No. 717,078

Renewed February 5, 1935

15 Claims. (Cl. 175—294)

1. In combination, an alternating current electric circuit of the type wherein a ground on one conductor results in an increase in voltage between another conductor and ground, a normally non-conductive electric discharge valve having control and discharge electrodes, means for impressing an operating circuit voltage on said discharge electrodes insufficient to render said valve conductive, means for rendering said valve conductive when the voltage to ground of said other conductor of the circuit exceeds a predetermined value including an inverse potential impedance characteristic device and a substantially constant resistance device connected in series relation between said circuit and ground, the control electrode of said valve being connected to one of said resistance devices at a point thereof above ground potential.

2,027,216



AIRCRAFT WHEEL BRAKE

Frederick John Tarvin, Silvertown, London, England, assignor to The India Rubber, Gutta Percha and Telegraph Works Company Limited, Aldwych, London, England, a British company

Application December 27, 1933, Serial No. 704,977

In Great Britain February 15, 1933

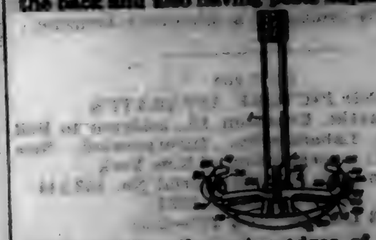
8 Claims. (Cl. 244—8)

1. For the operation of aircraft wheel brakes actuated by fluid pressure, a control mechanism comprising in combination a main control device to control the simultaneous operation of two sets of brakes respectively operative on wheels situated on opposite sides of the fore and aft centre line of the craft, a pair of auxiliary control devices and, to operate the latter, a rudder bar for the craft, each of which auxiliary control devices serves only one of the said brake sets and comprises a valve controlling the braking pressure in the respective brake set, loading means for

the valve operated in accordance with the extent of operation of the main control device, means for releasing the braking pressure and an actuator for connecting the said releasing means with the rudder bar of the craft whereby movement of the rudder bar can produce a differential braking effect by release of braking pressure in the brakes on one side of the aforesaid plane substantially without alteration of the braking pressure in the brakes on the opposite side.

2,027,211
LONG DRAFT SPINNING CRADLE
Henry L. Thomas, East Douglas, and James L. Truslow, Whitinsville, Mass., assignors to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Application March 21, 1935, Serial No. 12,136
13 Claims. (Cl. 19—131)

1. A cradle for long draft spinning frames having its side walls constituted respectively of front and rear plate sections adapted to clasp about a draft roll, said sections on each side of the cradle occupying a common plane and closing on each other in edge to edge flush relation to form a smooth and a substantially continuous belt guiding surface around said draft roll.



2,027,212
SPINNING FRAME
James L. Truslow, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts
Application May 28, 1931, Serial No. 540,530
12 Claims. (Cl. 19—131)

1. In a spinning frame, a set of drafting rolls including a top roll, an apron finger permanently located in front of and parallel to said top roll, said finger being supported at one end on a rigid part of the machine which is independent of said drafting rolls, the other end being unsupported, and an endless apron engaged with said roll and finger and removable from said finger by slipping it sideways from under said unsupported end.

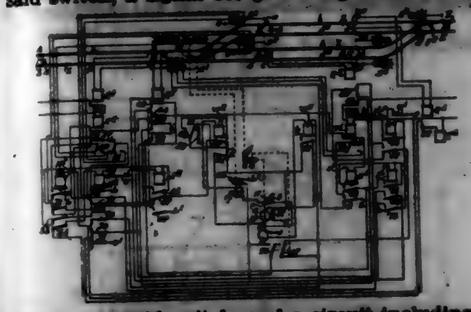
2,027,213
SAFETY RAZOR
William Venschgtt, Flushing, N. Y.
Application May 27, 1933, Serial No. 673,127
Renewed April 16, 1935
16 Claims. (Cl. 30—72)

1. In a safety razor having a back, a handle and a blade sharpened at both edges, a guard adapted to be placed over said blade adapted to resiliently hold the same and held by said handle in which the intermediate portions thereof are continuously open, providing a continuous open area behind the cutting edge of the blade and in which teeth are formed in the outer edges, with rollers rotatably mounted in the outer edges between the teeth, said guard having projections substantially in the corners of the ends adapted to hold the central portion of the blade against the back and also having posts adjacent the outer

edges holding the outer edges of the guard in spaced relation to the edges of the back.

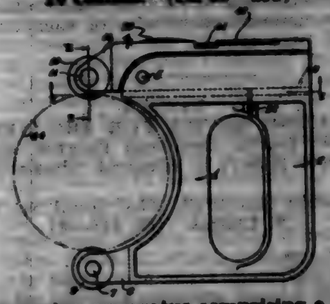
2,027,214
ELECTRORESPONSIVE APPARATUS
Rolf Widerøe, Berlin-Karlshorst, Germany, assignor to General Electric Company, a corporation of New York
Application November 14, 1931, Serial No. 575,139
In Germany November 22, 1931
7 Claims. (Cl. 175—294)

2. In combination with an alternating current electric system, fault responsive protective means therefor including two electric discharge valves and means for selectively rendering one or the other of said valves conductive in accordance with the relative values of two alternating current magnitudes derived from the system including rectifying means connected to be energized respectively in accordance with said alternating current magnitudes.



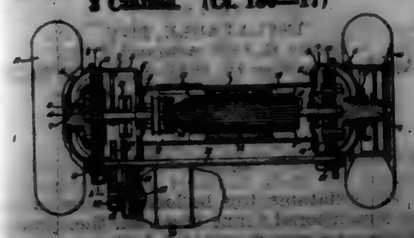
2,027,215
METHOD OF MAKING MOLDINGS
Lee L. Williams, Cleveland Heights, Ohio
Application March 27, 1934, Serial No. 717,613
4 Claims. (Cl. 183—38)

1. The method of making molding of the character described, which comprises bending side portions of a strip of rolled metal stock inwardly with respect to an intermediate portion of the strip whereby said intermediate portion forms the base of the molding and said side portions form wings which are adapted to be folded further to close the molding, and folding the metal of said intermediate portion and thereby thickening the same and in the same operation forming a groove for attaching devices on one side of the base and a rib on the other side.



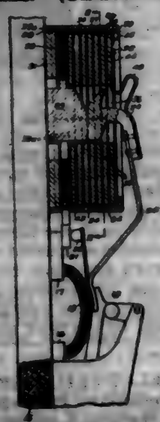
2,027,216
RAILWAY TRAFFIC CONTROLLING APPARATUS
Henry S. Young, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application October 12, 1932, Serial No. 637,617
13 Claims. (Cl. 246—169)

9. In combination, a railway track switch, means for at times locking said switch, an approach relay energized if a train approaches said switch, a circuit including a front contact of said relay for operating said locking means to unlock said switch, a signal for governing traffic move-



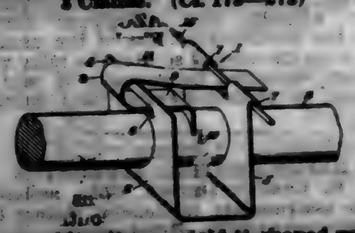
ments over said switch, and a circuit including a front contact of said approach relay and closed if and only if said switch is unlocked for clearing said signal.

2,027,217
INDICATOR
Paul F. Zophie, Cleveland, Ohio
Application January 28, 1932, Serial No. 589,491
10 Claims. (Cl. 33—169)



1. Measuring apparatus comprising a frame, a contacting element carried thereby, a lever pivoted to said frame, a shaft carried by said lever, a contacting element carried by said shaft and locked against axial movement thereon, another contacting element carried by the shaft, and free to move axially thereon, an indicator indicating the motion of the lever on the frame, and a second indicator indicating the motion of the last mentioned element on its shaft.

2,027,218
AXLE UNIT
Arthur P. Armington, Willoughby, Ohio, assignor to The Euclid Road Machinery Company, Euclid, Ohio, a corporation of Ohio
Application August 18, 1933, Serial No. 685,770
3 Claims. (Cl. 180—17)

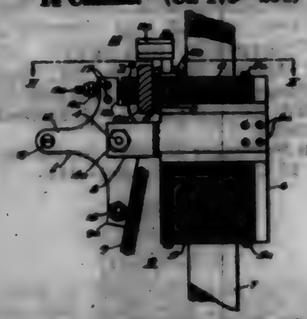


1. In a driving axle unit of the class described, a frame and housing including a central part and end parts with removable end covers, said parts being arranged to provide three enclosures, motor means in the central enclosure having shaft means extending into the end enclosures, wheel-carrying stub shafts extending through said end covers and bearing therein, gearing of planetary type arranged in each end enclosure to provide drive of its stub shaft by said motor shaft, each planetary gearing comprising a center pinion on said motor shaft, planet pinions mounted on the stub shaft, and a ring gear, and means providing for simultaneous actuation of said ring gears in opposite directions to cause steering actuation of said stub shafts.

2,027,219
CIRCUIT BREAKER
Walter M. Austin, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 29, 1932, Serial No. 645,278
17 Claims. (Cl. 200—144)

1. In electric circuit interrupting apparatus, in combination, means between which an arc may be established, a plurality of spaced metal plates surrounding the means for establishing the arc and disposed at right angles to the direction of the arc to provide an annular path for the arc, means to cause the arc to travel along the annular path between the plates, means of insulating material extending entirely around the periphery of the annular path to prevent movement of the arc therefrom, and said means of insulating material permitting outward flow of fluid from between the plates.

2,027,220
CLAMPING DEVICE
George O. Benson, Niagara Falls, N. Y.
Application December 16, 1931, Serial No. 580,109
2 Claims. (Cl. 173—273)



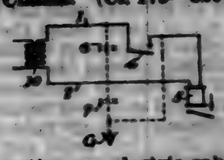
1. In combination, a rigid U-shaped yoke having its legs parallel and perforated, a conductor passing through perforations in said legs, cars on a free end of one of said legs to engage a second conductor, and a spring member having two legs

one of which presses against the first conductor and the other presses the second conductor against the ears, said spring member passing through a perforation in one leg of said yoke and being supported by said yoke.

2,027,221
DIRECT TRIP DEVICE

Myron A. Bostwick, Spokane, Wash., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 19, 1934, Serial No. 736,622
14 Claims. (Cl. 175—294)

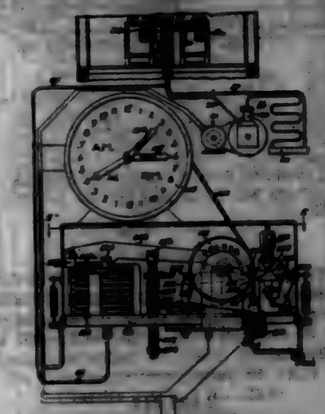


1. In an alternating-current direct-trip device, a movable tripping member operable to a tripping position, an electromagnetic actuating element energized solely in accordance with a current condition for moving said member to said position, and a second electromagnetic element energized in accordance with a voltage condition and a current condition for preventing movement of said member to said position except under predetermined conditions of current and voltage.

2,027,222
ELECTRIC CABLE

George W. Baughman, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Original application June 4, 1929, Serial No. 369,223. Divided and this application June 23, 1934, Serial No. 732,866
5 Claims. (Cl. 175—320)



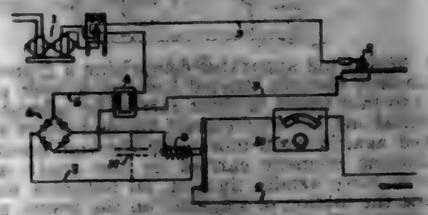
1. In combination, an electric cable comprising the usual longitudinal conductors, an additional conductor in the form of a cylinder enclosing said usual conductors; and a circuit including a source of current, one of said usual conductors, a contact, a relay and said cylindrical conductor; whereby said cylindrical conductor shields the electrostatic field of the usual conductor from the ground so that the relay will not be falsely energized by capacity if said usual conductor is grounded while said contact is open.

2,027,223
REFRIGERATING APPARATUS

Robert R. Carder, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware

Application March 22, 1929, Serial No. 353,682
26 Claims. (Cl. 62—4)

1. A refrigerating apparatus comprising a plurality of cabinets to be cooled, a plurality of evaporators in said cabinets, a refrigerant circulating line connected to said evaporators, a refrigerant circulating device connected to said line, said device being provided with an automatic adjustable controller for maintaining the refrigerant in



said evaporators within a predetermined temperature range, and means automatically adjusting said controller to vary the temperature range for a predetermined portion of each cycle of a series of time cycles.

2,027,224
INDICATING DEVICE FOR ARC WELDING

Bruce W. David, Cleveland Heights, Ohio, assignor to Robert E. Kinkead, Shaker Heights, Ohio

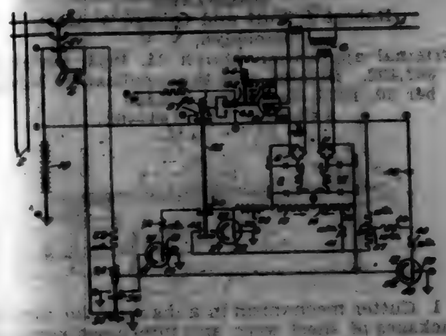
Application March 13, 1934, Serial No. 715,316
21 Claims. (Cl. 219—8)

1. In the art of arc-welding, the combination of an electric circuit including an arc-welding device and a source of current supply therefor, and means actuated only by the rapid pulsations of current or voltage caused by the transfer of molten metal from the welding electrode, for indicating when the arc-welding device is operated in a normal welding manner.

2,027,225
INFLATABLE TOY

Harry R. Gill, Ashland, Ohio

Application May 16, 1935, Serial No. 21,732
3 Claims. (Cl. 46—154)



1. An inflatable toy balloon having a given three dimensional shape imparted thereto during forming, and which remains hollow and retains substantially said given shape in all three dimensions while deflated.

2,027,226
IMPEDANCE RELAY SYSTEM

Shirley L. Goldsborough, East Orange, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

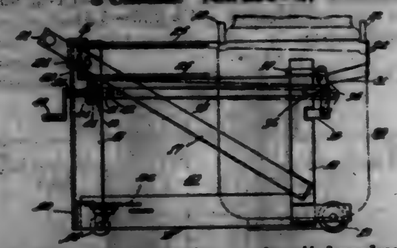
Application July 26, 1932, Serial No. 624,245
20 Claims. (Cl. 175—294)

1. An electron-tube impedance relay for responding to an impedance quantity of an alternating-current line, comprising, in combination, a three-element electron tube comprising an anode, a cathode and a control electrode, means for deriving a unidirectional relaying voltage responsive mainly to the line-voltage, means for deriving a unidirectional relaying current responsive mainly to the line-current, a plate-voltage source for the tube, a unidirectional biasing-voltage source for the control electrode of the tube, a plate-current-responsive means for performing a desired function in response to a predetermined change in the magnitude of the plate-current flowing in the anode-cathode circuit of said tube, the biasing-voltage source being of a magnitude close to, but slightly different from, the critical value at which said predetermined change in magnitude of plate-current will occur, means for deriving opposing biasing-circuit voltages from said relaying voltage and said relaying current, and means for so combining said derived biasing-circuit voltages with said biasing-voltage source as to produce said critical value of biasing voltage for conditions corresponding to a fault out on the line at a point slightly nearer than the balance-point of the relay, but not for conditions corresponding to a fault out on the line at a point slightly beyond said balance-point.

2,027,227
SHELF-TYPE LUBRICATOR

Wallace M. Gray, Cincinnati, Ohio

Application August 13, 1934, Serial No. 739,647
11 Claims. (Cl. 184—3)



1. In a lubricator of the class described, the combination of a resilient shelf for supporting lubricating material alongside of a railway rail in position to be picked up by the flanges of car wheels passing over said rail, means for supporting the shelf along the rail to support the lubricating material in said position, and means for piling up a lubricant upon the upper face of said shelf to a height sufficient to reach the wheel flanges.

2,027,228
CIRCUIT BREAKER APPARATUS

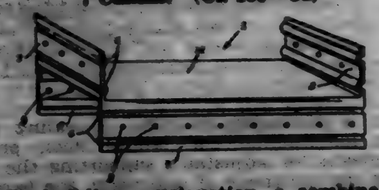
Benjamin L. Hayford, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application March 29, 1934, Serial No. 717,975
3 Claims. (Cl. 254—3)

1. A transfer truck for a circuit breaker unit comprising a truck frame, wheels for supporting the truck frame, a pair of spaced arms pivotally connected to the truck frame and disposed to straddle the circuit breaker unit and engage the sides thereof, separate toggle mechanisms for raising one end of each arm to lift the circuit breaker unit, and means for operating both toggle mechanisms simultaneously.

2,027,229
ACCELERATED DIAZO PRINTING AND MATERIALS THEREFOR

Walter M. Hinman, Chicago, Ill., assignor to The Frederick Post Company, Chicago, Ill., a corporation of Illinois



No Drawing. Application July 8, 1931, Serial No. 548,541
22 Claims. (Cl. 95—6)

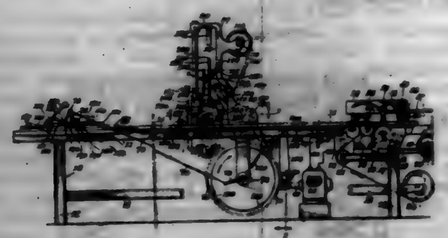
1. A photographic article comprising a carrier having a thin layer of material containing a light-sensitive diazonium compound and the essential component parts of a light-sensitive salt, one component part being a higher oxide form of a metal having two oxide forms, and another part being organic in character and being a reducing agent under the influence of light for reducing the higher oxide form to a lower oxide form, the lower oxide form serving after its formation by light to aid in the decomposition of the diazonium compound.

2,027,230
BUILDING CONSTRUCTION

James E. Hoover, Oklahoma City, Okla.

Application March 31, 1934, Serial No. 718,371
7 Claims. (Cl. 189—34)

1. In building construction, a combination of units each comprising a rectangular sheet of flexible material having right angle parallel flanges at its side edges, and having right angle parallel flanges at its ends extending in an op-

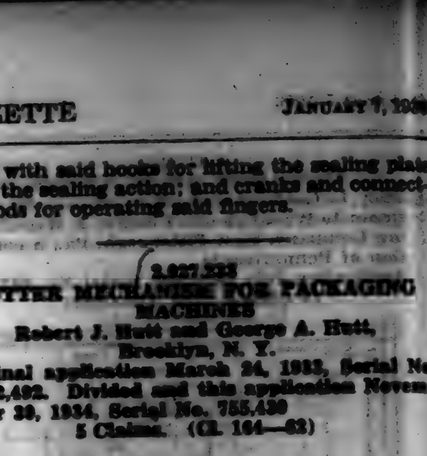


posite direction from the first mentioned flanges, said flanges each having a longitudinal groove for complementally forming a housing for a reinforcing element when the flanges of different units are fastened together.

2,027,231
CONTAINER
Robert J. Hutt and George A. Hutt, Brooklyn, N. Y.
Application January 21, 1933, Serial No. 652,802
5 Claims. (Cl. 229—5.5)

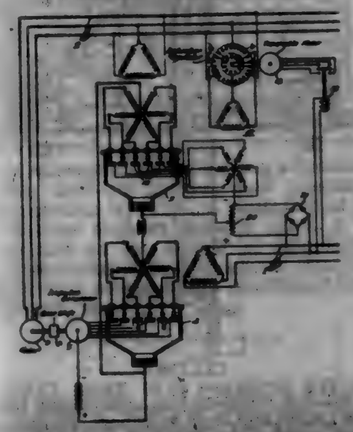
1. A container comprising side and end walls of multiple sheet paper, the sheets of the side walls being one greater in number than the end walls; the sheets of the end walls having triangular reinforcing extensions interposed respectively between the inner sheet and the next outer sheet of the side wall and between the next outer sheet and outer sheet of the side wall of the structure, said reinforcing extensions being permanently fixed in cross wall staggered relation and in circumferential equidistant positions between said sheets.

2,027,232
PACKAGING MACHINE
Robert J. Hutt and George A. Hutt, Brooklyn, N. Y.
Application March 24, 1933, Serial No. 662,493
7 Claims. (Cl. 93—2)



1. In a packaging machine, a sealing plate having longitudinal and lateral slots; presser bars; means for adjustably supporting the bars against the underside of said plate, the bars being located in registration with paste lines on webs to be sealed to form packages; hooks on said plate; opposed fingers for engagement with the top of said plate for applying added sealing pressure to the said webs and inversely for engagement with said hooks for lifting the sealing plate after the sealing action; and cranks and connecting rods for operating said fingers.

2,027,233
CUTTER MECHANISM FOR PACKAGING MACHINES
Robert J. Hutt and George A. Hutt, Brooklyn, N. Y.
Original application March 24, 1933, Serial No. 662,492. Divided and this application November 30, 1934, Serial No. 755,430
5 Claims. (Cl. 164—62)



1. Cutter mechanism in a machine for forming packages of sheet webs and interposed contents; an oscillatory cutter for severing the webs at appropriate intervals; rotary cutters for trimming the edges of the webs and for guiding the same against lateral displacement; said cutters having alternate actions while said webs are passing through said machine; and means for actuating the cutters in the manner set forth.

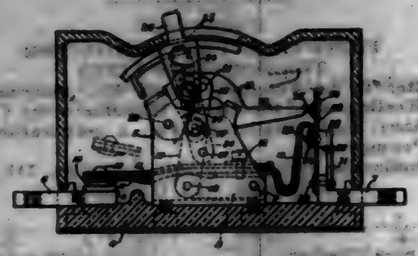
2,027,234
SYSTEM OF CONTROL
Richard I. Kimball, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 15, 1934, Serial No. 715,626
7 Claims. (Cl. 172—179)

2. In a system of control, the combination with a supply circuit and a main dynamo-electric machine adapted to regenerate current into the supply circuit and having an armature and a field winding, of means for separately exciting the field winding during regeneration, relay means mainly responsive to the regenerated current for controlling the excitation of the field winding to regulate the regenerated current, and a manually operable controller for controlling the regenerated current independently of said relay means when it exceeds a predetermined value.

2,027,235
VOLTAGE REGULATION INVERTER
Hans Klemperer, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 17, 1934, Serial No. 740,224
In Germany August 22, 1933
7 Claims. (Cl. 171—97)

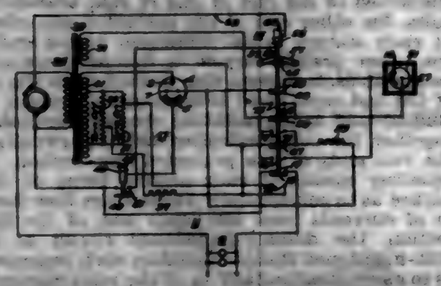
1. An electrical distribution system comprising an alternating current supply circuit, an alternating current load circuit operating at a frequency independent of the frequency of the supply circuit, a group of electric valves connected to the supply circuit, a second group of electric valves serially connected with respect to said first mentioned group of valves, said second group of valves being associated with said load circuit, control electrodes associated with said first group of valves, means for impressing control voltage on said electrode and means responsive to the voltage of the load circuit for varying the voltage supplied to the control electrodes.

2,027,236
COSMETIC APPLICATOR
Rella Lawry, Greenwich, Conn., assignor to Louis Philippe, Inc., Chicago, Ill., a corporation of New Jersey
Application July 17, 1934, Serial No. 735,558
2 Claims. (Cl. 132—79)



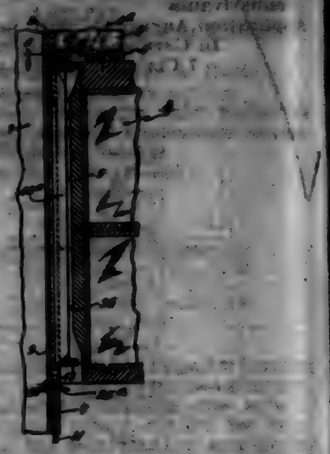
1. A lip-stick of plastic lip-rouge, the lip-stick comprising a small, substantially rigid body member consisting of a substantially cylindrical handle portion, and an extension from the handle portion, the extension being rounded; a substantial layer of paste cosmetic such as lip-rouge on the rounded extension, the layer being of substantially uniform thickness throughout, the cylindrical handle portion being in cross-section larger than the extension and its adhering charge of paste cosmetic; and a cover for the extension and the charge of paste cosmetic, the cover being in engagement with the section so that its walls are in spaced relation to the charge of paste cosmetic.

2,027,237
PILOT-WIRE PROTECTION FOR TRANSMISSION LINES
Lester B. Le Vesconte, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 11, 1934, Serial No. 747,914
14 Claims. (Cl. 175—294)



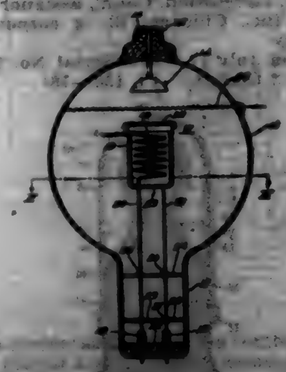
1. Protective means for an alternating-current line having two distant relaying stations at opposite ends of a line-section thereof, means for providing a communicating channel between said stations, line-current-responsive relay-current means at one relaying station for deriving a relaying current I_1 from said line, line-current-responsive relay-current means at the other relaying station for deriving a relaying current I_2 from said line, said relaying currents I_1 and I_2 being substantially equal in phase and magnitude when no current is withdrawn from or supplied to the protected line-section at any point intermediate of its ends, equalizer means at the first relaying station for providing two branch-circuits each traversed by substantially $\frac{1}{2}I_1$, equalizer means at the second relaying station for providing two branch-circuits each traversed by substantially $\frac{1}{2}I_2$, an operating-coil circuit and a communicating-channel circuit at each station, connected to the end of one of said branch-circuits, the other end of the operating-coil circuit at each station being connected to the end of the other branch circuit, a dummy-impedance means at each station, also connected to the end of the last-mentioned branch-circuit, means including said communicating channel for linking together the communicating-channel circuits at the two ends of the protected line-section, the equalizer means at each station being of such nature as to substantially exclude the flow therein of currents from the other end of the line-section, the dummy-impedance circuit at the first-mentioned station including such impedance as to cause substantially $\frac{3}{4}$ of the relay current I_1 to flow therein and to cause substantially $\frac{1}{4}$ of the relaying current I_1 to flow in the communicating-channel circuit at said station, the dummy-impedance circuit at the second-mentioned station including such impedance as to cause substantially $\frac{3}{4}$ of the relaying current I_2 to flow therein and to cause substantially $\frac{1}{4}$ of the relaying current I_2 to flow in the communicating-channel circuit at said station, whereby each of the communicating-channel circuits is traversed by a current of substantially $\frac{1}{4}(I_1+I_2)$, and each of the operating-coil circuits is traversed by a current of substantially $\pm\frac{1}{4}(I_1-I_2)$, and a differential-current relay at each station having an operating coil energized in response to the operating-coil circuit at its station.

1,827,226
CIRCUIT BREAKER
Tore Lindstrom, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application November 26, 1930, Serial No. 498,498
3 Claims. (Cl. 200—88)



1. In a trip device for a circuit breaker, a conducting means having a pair of electrical terminal members connected in circuit with said circuit breaker and including a portion heated by the flow of current therethrough, and movable means of bimetallic material joined to the heated portion of said conducting means to permit flow of heat by conduction from said heated portion to said bimetallic means to cause deflection thereof to trip the circuit breaker, and means including a member of magnetic material affixed to said movable means and energized by the flux set up by the current flow in said heated portion to deflect said means of bimetallic material to trip the circuit breaker.

1,827,229
GRID-GLOW TUBE POSITION RELAY COMBINATION
Thomas H. Long, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 13, 1933, Serial No. 642,487
10 Claims. (Cl. 250—41.5)

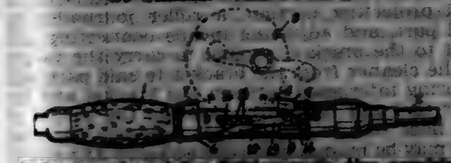


1. Apparatus for controlling the supply of power from a power source to a power consumption system comprising an electric discharge device and means for normally maintaining said device in a predetermined condition of excitation, means for varying the excitation of said electric discharge device, means actuated by said electric discharge device, when its excitation is so varied, to couple said power source to said power consumption system thereby to energize said power consumption system, means for locking said power consumption system in its energized condition and means actuated by said electric discharge device when its excitation is varied to revert said device to its normal condition of excitation.

1,827,240
WINDOW
Mark E. Lowry, Watertown, Mass.
Application September 6, 1930, Serial No. 480,311
3 Claims. (Cl. 20—48)

1. A window construction comprising relatively movable frame and sash members, guiding means including a rail secured to one of said members and a runner slidable thereon, means for locking said rail and runner in relatively fixed position, a link pivotally secured at one end to said runner and pivotally connected at its opposite end to the other of said members, and releasable retaining means operative to hold the sash member within the frame member.

1,827,262
THERMIONIC DISCHARGE DEVICE
Erwin F. Lowry, Whitinsville, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 16, 1924, Serial No. 744,585
4 Claims. (Cl. 250—27.5)

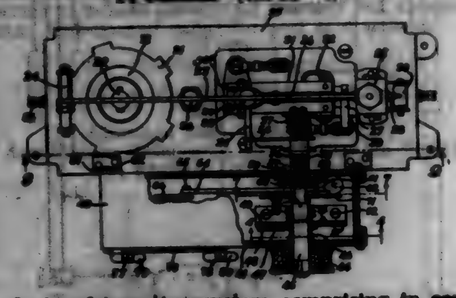


An electric discharge device comprising a container, a pocket in one end of said container, a vaporizable metal in said pocket, an anode at the other end of said container, an incandescible cathode intermediate said pocket and said anode, a plurality of shields between said cathode and said pocket and aligned openings in said shields for permitting a limited amount of direct heat radiation from said cathode to said pocket.

1,827,263
CAR DOOR
Gabriel Hackstedt, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application February 1, 1932, Serial No. 590,861
17 Claims. (Cl. 189—46)

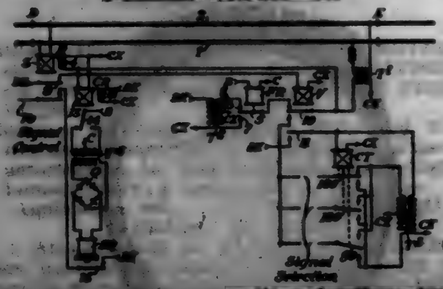
3. In a railway house car having a door opening, a slidable door for closing said opening, said door comprising a panel, a plurality of spaced lifting devices secured directly upon a portion of said panel on the outside of said panel and means connecting said devices for simultaneous operation, said means being positioned upon the inside of said panel.

1,827,341
REEL SEAT FOR FISHING RODS
Ralph W. Miller, Glendale, Calif., assignor of one-half to [illegible], Los Angeles, Calif.
Application March 13, 1934, Serial No. 715,146
20 Claims. (Cl. 43—23)



4. In a reel seat for fishing rods, the combination of a rod member, a clamping member slidable on said rod member, a U-shaped lever having its arms pivoted to opposite sides of said slidable clamping member with the ends of its arms projecting beyond its pivot, and links pivotally connected to the ends of the arms of said lever, and oppositely disposed T-headed studs at the sides of said handle member, said links being provided with a plurality of key-hole slots engageable with said studs when presented in alinement with the heads thereof, the pivots connecting said links to said lever arms being swung past the plane of the axis of the lever and said studs when the lever is swung to clamping position, thereby providing a locking toggle.

1,827,344
BALL ROLLING GAME
Albert S. Moorman, New York, N. Y.
Application October 5, 1933, Serial No. 692,282
7 Claims. (Cl. 273—121)

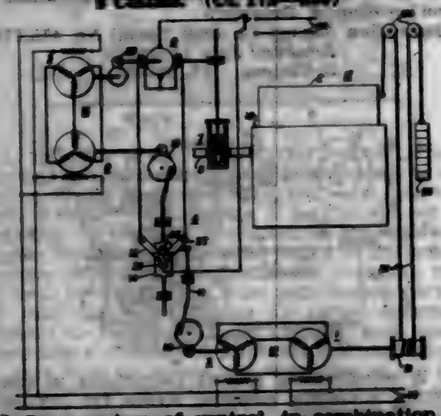


1. In a ball rolling game of the class described, a playing board having a ball shooter, said board having a primary playing field and a secondary playing field, a passage connecting said fields, a manually operable gate in said passage, said gate comprising a pin, a lever on which the pin is carried, and means for carrying the lever to rock the pin from an upright position to a horizontal position, the board having a slot therein to receive the pin in a horizontal position whereby the pin is removed entirely out of the path of the balls when it is in the horizontal position.

1,827,541
REFRIGERATING APPARATUS
James J. Nance, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware
Application August 14, 1930, Serial No. 475,179
Renewed July 11, 1934
14 Claims. (Cl. 62—4)

1. A refrigerating system comprising in combination, a cooling element, means for circulating a refrigerating medium through said element, means for maintaining said element at a normal predetermined average temperature, manually actuatable means for temporarily modifying said second named means to obtain a temperature of said cooling element different from the normal average temperature thereof, and thermometrically operated means cooperating with said manually actuatable means and controlling the duration of effectiveness thereof, said thermometrically operated means being operable independently of said first and said second named means for automatically restoring the system to normal operation.

1,827,546
RAILWAY TRAFFIC CONTROLLING APPARATUS
Frank H. Nicholson, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application October 20, 1932, Serial No. 638,780
3 Claims. (Cl. 246—34)



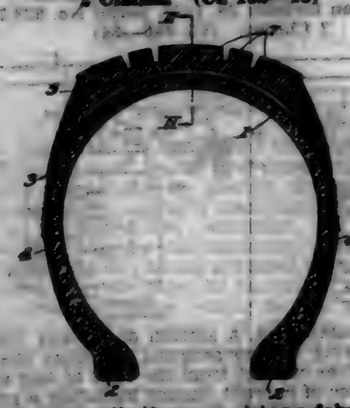
3. In combination, a section of railway track, a relay having two cooperating windings one of which receives current from the rails of said section, a source of current, means including a polechanger for supplying periodically and simultaneously reversed current to the track rails and

to the other winding of said relay, and traffic governing means controlled by said relay and effective when and only when both windings of the relay are supplied with current which is periodically and simultaneously reversed.

2,027,247
MOTOR CONTROL SYSTEM

Fred M. Parks, Marysville, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application April 14, 1934, Serial No. 720,886
8 Claims. (Cl. 172—239)



3. In a system of control, in combination, a member the position of which is to be controlled, a reversible motor coupled to aid in positioning said member in one or the other direction, a synchro-tie system including a transmitter motor and a receiver motor, said transmitter motor being coupled to said reversible motor, a shiftable member coupled to said receiver motor, a switch pivotally mounted on the shiftable member and adapted to control the direction of rotation of said reversible motor, and means adapted to tilt said pivotally mounted switch in response to movements of the first-named member.

2,027,248
PNEUMATIC TIRE CASING

Ralph M. Reed, Newark, Ohio, assignor to The Firestone Tire and Rubber Company, Newark, Ohio, a corporation of Ohio

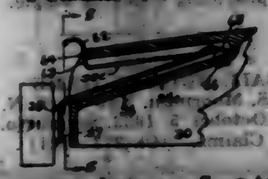
Application August 7, 1933, Serial No. 684,991
2 Claims. (Cl. 152—13)

1. A pneumatic tire comprising a fabric carcass and a compound outer covering of rubber, said outer covering being composed of an outer tread and side wall layer of relatively hard high abrasive-resisting properties, an intermediate cap layer of a more resilient composition than the tread layer, and an inner layer adjacent said cap layer and of a softer and more resilient composition than the cap layer, the said inner layer containing antimony sulphide, rubber and zinc oxide, said intermediate cap layer containing approximately 44 parts by weight of zinc oxide per 100 parts of rubber and being relatively thin in cross-section as compared to the outer tread.

2,027,249
SUCTION CLEANER

Frederick Richel, Jr., Toledo, Ohio, assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio, a corporation of Delaware

Original application February 27, 1932, Serial No. 658,624. Divided and this application April 3, 1934, Serial No. 718,837
8 Claims. (Cl. 15—155)

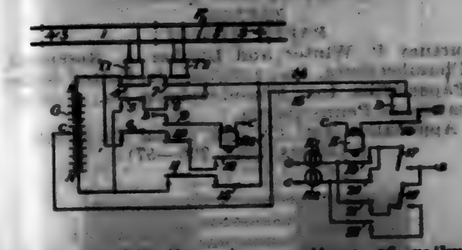


1. In a suction cleaner, a floor tool, a mounting including a bracket movably attached to the floor tool and having a projecting portion, a roller carrying part movably connected solely to said projecting portion, a roller journalled on said part, and adjusting means connecting said part to the bracket, serving to carry the weight of the cleaner from the bracket to said part, and a spring interposed between the bracket and the floor tool and resiliently carrying the weight of the floor tool to the bracket, whereby the floor tool may be manually depressed below any one of a series of normal riding positions determined by the balance between the weight of the cleaner and the tension in said spring when forced under said weight, and the position of adjustment of said part.

2,027,250
SUCTION CLEANER FLOOR TOOL

Frederick Richel, Jr., Toledo, Ohio, assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio, a corporation of Delaware

Original application February 27, 1932, Serial No. 658,624. Divided and this application April 3, 1934, Serial No. 718,837
6 Claims. (Cl. 15—155)



1. In a suction cleaner, a floor tool including an end socket, a mounting therein including a bracket and a leaf spring secured together, their free ends diverging toward the mouth of the socket, the spring being positioned above the bracket, and successively varied means formed in the spring near its free end, for adjustably engaging a fixed element of the upper wall of the socket near said mouth, for varying the spacing of the spring from said wall at said mouth, and a roller journalled on the free end of the bracket, adjustment being accomplished by moving said successively varied portion.

2,027,251
SIGNALING APPARATUS

James J. Vanhorn, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

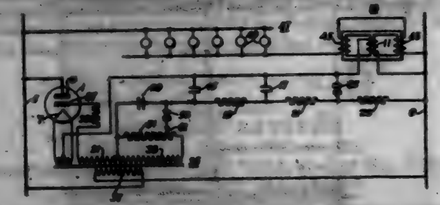
Application August 19, 1933, Serial No. 685,515
8 Claims. (Cl. 246—124)

1. In combination, two sections of railway track, a polar relay provided with a line circuit comprising two wires, means operating when both of said sections are unoccupied to supply said line circuit with current of normal polarity, means operating as long as both of said sections are occupied to continuously supply said line circuit with current of reverse polarity, means operating when a train enters the first section while the second section is unoccupied to discontinue the supply of current to said line circuit, means operating when a train enters the second section while the first section is unoccupied to momentarily supply current of reverse polarity to said line circuit and to thereafter discontinue the supply of current to the line circuit, and indicating means for said sections controlled by said relay.

2,027,252
STRIPPING PRESS

Thomas F. Stacy, Piqua, Ohio, assignor to The French Oil Mill Machinery Co., Piqua, Ohio

Application February 10, 1934, Serial No. 710,692
13 Claims. (Cl. 100—50)



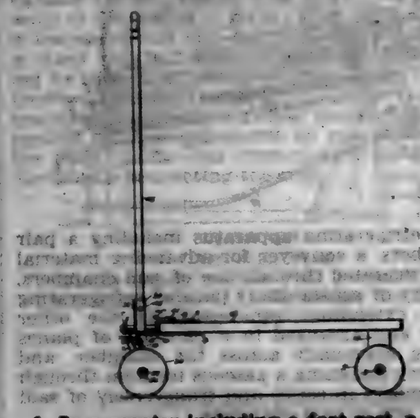
10. Control mechanism for a stripping press or the like, said press comprising a tank, a platen within the tank and movable across the same, hydraulic means including a variable delivery pumping device for actuating the platen in both directions across said tank, said control mechanism including means operable automatically by said platen at selected intermediate points in its travel across said tank for successively varying the rate of delivery of said pumping device and thereby varying the speed of travel of said platen in corresponding increments during its movement across said tank.

2,027,253
FLASHER CIRCUIT

William W. Vichaba, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 6, 1933, Serial No. 650,517
11 Claims. (Cl. 250—27)

1. In combination an electric discharge device having an anode, a cathode and a control electrode, a capacitor connected in series with said anode and cathode and between said cathode and said control electrode, the connection in series with said anode and cathode including a resistor connected in series with said capacitor, whereby



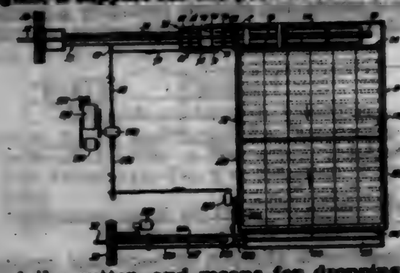
said capacitor is charged through said resistor by the current transmitted between said anode and cathode, and another capacitor connected in series with said anode and cathode but shunting said first-named capacitor and said resistor.

2,027,254
SCOOTER

Clarence Vogt, Wenonah, N. J.

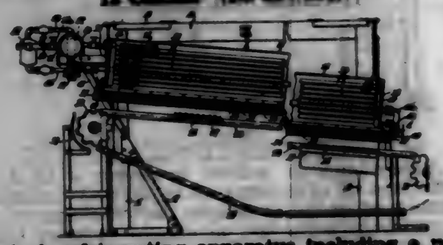
Application October 12, 1934, Serial No. 748,116
11 Claims. (Cl. 280—87.5)

1. In a scooter including a foot rest, a bearing pivotally mounted at the forward end of said foot rest and disposed at a rearwardly inclined angle with respect thereto, a spindle rotatably mounted in said bearing, an axle-supporting bracket connected to said spindle and arranged for rotation therewith, and means embracing the spindle and engaging the bearing and said bracket tending to resist rotation of the latter and the spindle.



2,027,255
APPARATUS AND METHOD FOR CONTINUOUS SOLIDIFICATION AND SUBDIVISION OF ICE CREAM AND ANALOGOUS PRODUCTS

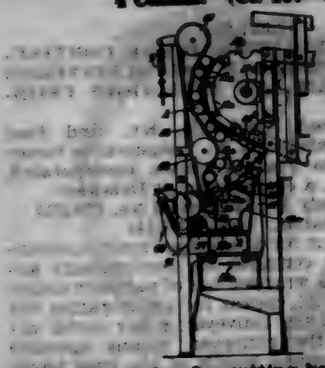
Clarence W. Vogt, Louisville, Ky., and Paul Phelps, Pleasantville, N. Y., assignors, by mesne assignments, to Vogt Processes, Incorporated, Louisville, Ky., a corporation of Delaware



Application July 1, 1933, Serial No. 678,234
20 Claims. (Cl. 62—114)

1. An apparatus for producing frozen comestibles, including a conveyer for continuously advancing endwise a wrapped bar of partially solidified edible material, means for refrigerating the bar while it is in the conveyer, a bar cutter arranged beyond the conveyer, means operable after a predetermined length of the case hardened bar has been advanced beyond the cutter

for operating the cutter to sever it into measured lengths, a support for the portion of the bar beyond the cutter, and means for dropping from said support the portion of the bar thus severed.



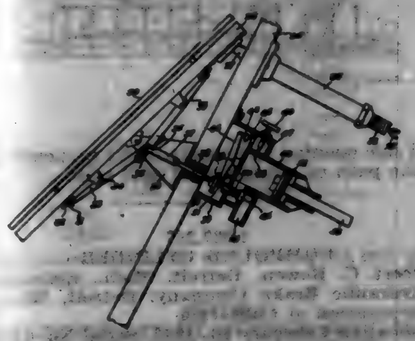
2,027,256
REFRIGERATING APPARATUS
Clarence W. Vogt, Louisville, Ky., assignor to Vogt Processes, Incorporated, Louisville, Ky., a corporation of Delaware
Application May 8, 1934, Serial No. 724,484
12 Claims. (Cl. 62—114)

1. A refrigerating apparatus including a pair of chambers, a conveyer for advancing material to be refrigerated through one of said chambers, a plurality of substantially parallel refrigerating conduits extending transversely in the other chamber and arranged in a plurality of planes extending diagonally across the chamber, and means for circulating a gaseous medium through said chambers in series and transversely of said conveyer and of said chambers.

2,027,257
CUTTER FOR BARS OF ICE CREAM OR THE LIKE
Clarence W. Vogt, Louisville, Ky., assignor to Vogt Processes, Incorporated, Louisville, Ky., a corporation of Delaware
Application June 23, 1934, Serial No. 732,048
4 Claims. (Cl. 107—22)

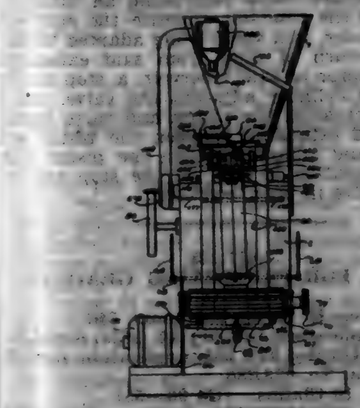
1. An apparatus for cutting bars into sections, including a pair of wheels having parallel vertically spaced axes and operating in succession to advance the bars, and a flexible belt having a portion substantially following the peripheries of the two wheels in opposition for preventing disengagement of the bars during their advancing movement by the wheels.

2,027,258
PAPER TOWEL
Courtney P. Winter and Dunbar A. Rosenthal, Chambersburg, Pa., assignors to United States Paper Mills, Inc., Chambersburg, Pa., a corporation of Pennsylvania
Application July 17, 1935, Serial No. 31,328
2 Claims. (Cl. 206—57)



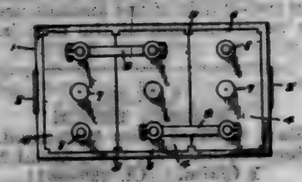
1. A paper towel consisting of an elongated sheet of paper having one end portion folded onto the central portion to constitute an intermediate body layer of the completely folded article, the other end portion being reversely folded onto the first end portion to constitute an outer body layer of the finished article, said intermediate layer having its end portion terminating at the second fold line, the three layers being folded adjacent to said second fold line to form a grasping flap.

2,027,259
AIR DISTRIBUTING MEANS FOR PASSENGER CARS
William B. Whitsell, Baltimore, Md.
Original application May 4, 1931, Serial No. 534,995. Divided and this application February 11, 1932, Serial No. 592,414
3 Claims. (Cl. 98—4)



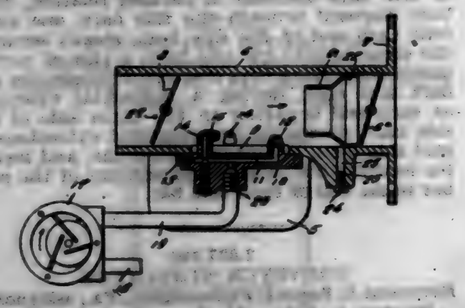
1. In an air distributing apparatus for railway cars, a distributing conduit extending longitudinally of the car and having at one end an inlet for supply of air under pressure thereto and having a series of longitudinally spaced lateral discharge nozzles, and arcuately curved baffle plates extending transversely of the conduit, and disposed one within each nozzle, for controlling the passage of air from the conduit to the nozzles throughout the series, the baffles of at least some of said nozzles being arranged at different points in their nozzles with respect to the axial centers of their nozzles to separate the associated nozzles into air passages of different effective widths in different nozzles.

2,027,260
FOOT-OPERATED TRANSMISSION
Lee Addison Wright, Jr., Burley, Idaho
Application December 13, 1934, Serial No. 757,287
2 Claims. (Cl. 192—3.5)



1. In a device of the class described, a drive shaft, a clutch for connecting the shaft to a motor, a driven shaft, a longitudinally movable shaft located between the two shafts, gears rotatably arranged on the longitudinally movable shaft, a countermember having gear teeth meshing with the gears, means for connecting one of the gears to the drive shaft, spring actuated keys carried by the longitudinally movable shaft and the gears having recesses therein for receiving the keys for connecting the gears to the longitudinally movable shaft, pedal means, means actuated thereby for moving the longitudinally movable shaft, vacuum controlled means for actuating the clutch, control means for the last mentioned means and pedal means for operating the control means.

2,027,261
BAG FILLING MACHINE
William D. Wright, Brockport, N. Y., assignor to Charles F. Babb, Jr., Webster, N. Y.
Application January 27, 1932, Serial No. 589,283
23 Claims. (Cl. 249—66)

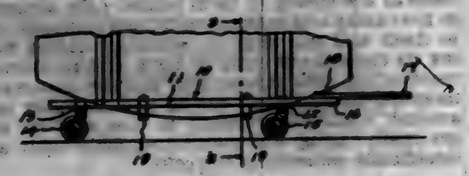


1. A bag filling machine of the class described, including bag filling mechanism and means for supporting a bag in filling position and for moving the same forwardly to a position in spaced relation to the filling means and downwardly to lower the bag when the bag is filled, a continuously moving endless conveyor provided with a frame and normally located below and spaced from the bag on said supporting means and receiving a filled bag when the same is lowered for carrying the filled bag outwardly from the bag filling mechanism and stripping the bag from the bag supporting means, and means for adjustably supporting the conveyor frame for arranging the endless conveyor at different elevations to suit the length of the bags being filled.

2,027,262
STORAGE BATTERY
Edgar W. Allen, Eldon, Mo.
Application September 5, 1934, Serial No. 742,823
1 Claim. (Cl. 136—166)

A storage battery comprising a main casing, handles for said casing, ribs formed on opposite walls of the casing to form guides, cells arranged in the casing and each comprising a complete unit in itself and including an auxiliary casing having its corners cut away to form end projections received by said guides and thereby removably mounted to said main casing and normally held against relative movement to one another and the main casing, and connectors detachably and electrically connecting the cells.

2,027,263
CARBURETOR
Julius Daniel Basher, Port Jervis, N. Y.
Application June 11, 1934, Serial No. 730,158
4 Claims. (Cl. 261—34)



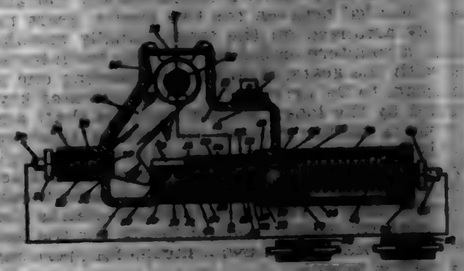
1. A fuel vaporizer comprising a float chamber, a single air induction tube constituting a mixing chamber having one end open and the other end adapted for connection to an intake manifold of an internal combustion engine, a throttle valve and a choke valve mounted in the tube and axially spaced from each other to provide a vaporizing compartment in an intermediate portion of the tube, a fuel conductor leading from the float chamber and terminating in the vaporizing compartment in a fuel jet discharging a fuel stream at right angles to the axis of the tube, one of the air nozzles discharging air under pressure at the mouth of the fuel jet at right angles to the fuel stream, and the other of said air nozzles discharging air under pressure at an angle to the air stream discharged by the first mentioned air nozzle.

2,027,264
MANUFACTURE OF ACID CALCIUM CITRATE
Alexander Hutcheon Bennett, London, England
No Drawing. Application January 31, 1935, Serial No. 4,469. In Italy July 12, 1934
4 Claims. (Cl. 260—112)

4. The process for the manufacture of acid calcium citrate which consists in adding successive amounts of a member of the group consisting of lime and calcium carbonate to a solution of citric acid and precipitating the acid citrate after each addition, each addition of lime or calcium carbonate constituting a substantial proportion of the total employed and said total comprising substantially two-thirds of the amount necessary for complete neutralization of the acid in the solution.

2,027,265
BARREL TRUCK
William A. Black, New Richmond, Wis.
Application February 24, 1934, Serial No. 712,835
1 Claim. (Cl. 254—61)

A barrel truck as set forth, comprising a frame structure, castor wheels secured to the frame at each corner thereof, said frame comprising a pair of side bars disposed in parallel relation, cross bars disposed beneath the side bars, one adjacent each end of the side bars, means securing the cross bars to the side bars, a pair of curved barrel supporting bars disposed between the end bars and each having a horizontal extension at each end engaging on the upper side of the side bars, means for securing said extensions to said side bars, a U-shaped nose bar, and means for securing the parallel end portions of the nose bar to an end of each side bar.

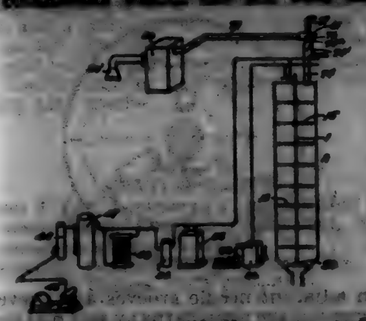


2,027,266
CONVEYER STRUCTURE
Hermann S. Bogaty, Philadelphia, Pa., assignor to Procter & Schwartz, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Original application August 1, 1931, Serial No. 553,529. Divided and this application June 15, 1934, Serial No. 730,827
9 Claims. (Cl. 198—181)

7. A conveyer structure comprising a train of normally vertical containers arranged to travel in a substantially horizontal path and each having a side opening for loading and unloading thereof, a door normally closing said opening and pivoted on a vertical axis substantially parallel to and adjacent the vertical edge of said side opening, means connecting said containers for relative lateral rocking motion with respect to said path, means for rocking the containers from said normal vertical position to a substantially horizontal position with the door closed opening underneath, and means for opening said door while a container is in said horizontal position to effect discharge of the contents thereof through

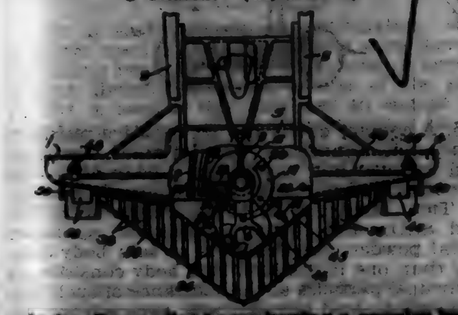
said side opening and substantially perpendicular to the path of movement of said train.

2,027,267
COMPOUND CYLINDER
Herbert C. Bowen, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application February 19, 1933, Serial No. 656,175
2 Claims. (Cl. 60—54.5)



1. A pressure device comprising a reservoir normally containing a liquid, a cylinder in the bottom of the reservoir below the liquid level and having an open end communicating with the reservoir, said cylinder being adapted to discharge into and operate an expansible chamber motor, a return valve controlling an intake in the wall of the reservoir opposite the open end of the cylinder, said valve being adapted to control the return of fluid from said expansible chamber motor to said reservoir, a stop on the wall of the cylinder adjacent the valve, and a lever for actuating the piston and valve having its free end extending between the piston and the valve and adaptable when the piston is in retracted position to rest on the stop and retain the valve in open position.

2,027,268
MEANS FOR PRESERVING GRAIN IN STORAGE
Jesse H. Davis, Baltimore, Md.
Original application January 12, 1933, Serial No. 651,434. Divided and this application June 19, 1935, Serial No. 672,285
10 Claims. (Cl. 99—55)



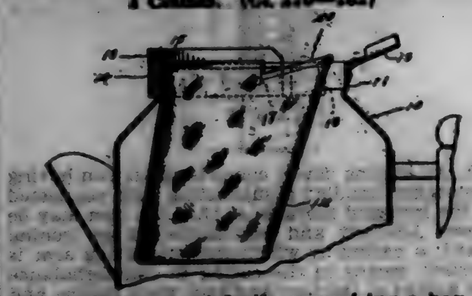
1. In an apparatus for storing and aerating grain, a grain storage bin, fluid conductors disposed at different levels in the bin and each having a plurality of radially arranged nozzles, a stand pipe connecting said conductors, a fluid conductor in communication with the upper end of the stand pipe, and a pipe arranged within the stand pipe concentrically therewith and provided with ports for communication with the fluid conductors within the bin, said pipe being ro-

tatable for selectively connecting any of said fluid conductors within the bin with the fluid

conductor connected with the upper end of the stand pipe.

2,027,269
LOCOMOTIVE PILOT, BUMPER, DECK PLATE, AND COUPLER STRUCTURE
Frederick H. Ekewaldson, Jr., West Hoboken, N.J.
Application December 6, 1934, Serial No. 756,251
6 Claims. (Cl. 213—4)

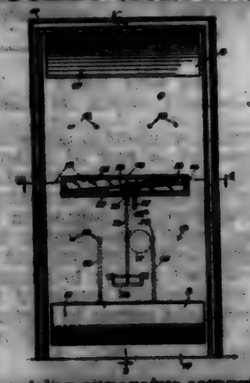
1. A railway pilot beam having a coupler housing formed unitarily therewith, a coupler mounted to swing horizontally on a vertical axis into and out of said housing, and a linkage connection between the coupler and bearing for locking the coupler in projected position with freedom of movement for service play.



2,027,270
CANNING OF CRAB MEAT
Carl B. Fellers, Amherst, Mass.
No Drawing. Application February 20, 1935, Serial No. 7,255
23 Claims. (Cl. 99—11)

1. In the canning of meat from the "blue crab", "rock crab" or "sand crab", the improvement which comprises subjecting the meat to treatment, before initial discoloration, with an aqueous solution of a salt of the class of metals consisting of aluminum, zinc and tin, the concentration of said solution being such as to contain 50 to 500 parts per million, computed as metal, of said salt, sealing the treated meat in containers, and thermally sterilizing the meat in the containers after sealing.

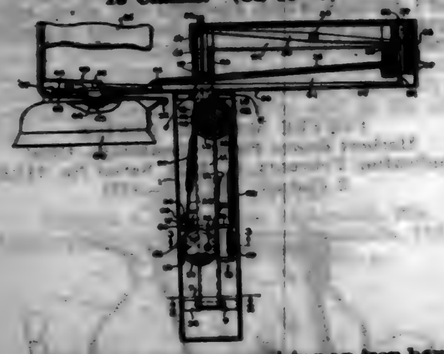
2,027,271
PRODUCTION OF NEGATIVES WITH PHOTOGRAPHIC IMAGES THEREON OF ENHANCED QUALITY
Arthur Ernest Field, London, England
No Drawing. Application June 17, 1935, Serial No. 27,123. In Great Britain December 7, 1933
5 Claims. (Cl. 95—33)



1. A process of treating a negative so as to obtain a photographic image thereon having improved tone-printing values, especially for use in photo-mechanical printing work; which process consists in subjecting a fixed negative to the action of a first solution comprising a bleaching reagent which produces on the plate a silver halide photographic image of positive appearance, then treating the plate with a second solution that is a solvent for the silver halide so as to effect the requisite retouching on the positive image without re-converting it to a negative image, and finally subjecting the plate to the action of a third solution which blackens the silver halide image thereby reconverting the image of positive appearance to a negative image.

2,027,272
COFFEE MAKING DEVICE
Herbert Bower Floyd, Cambridge, Ohio
Application February 18, 1934, Serial No. 711,648
1 Claim. (Cl. 216—163)

1. A device as set forth, comprising a bag, an arcuate resilient clamping member having a length greater than a semi-circle whereby to yieldably engage about the neck portion of a percolator, an arcuate shield member, and an extension carried by the bag disposed between the clamping member and the shield.



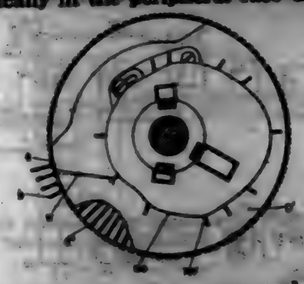
2,027,273
EXERCISING APPARATUS
Richard J. Perham, New York, N. Y.
Application May 27, 1933, Serial No. 673,276
5 Claims. (Cl. 273—148)

1. An exercising apparatus comprising a casing, a vertical guide located therein and connecting receiving and discharge openings for a thrown ball, an indicator comprising an inclined runway and a plurality of markers supported thereon and arranged to be released one at a time so as to pass from one end of the runway to the other, means for releasing the markers one at a time, said means comprising an operating element projecting into the guide to be at times struck by

the ball passing therethrough, and means in the guide to erratically control the direction of movement of the ball and its operation of the indicator on its passage from the receiving to the discharge opening.

2,027,274
IRONING DEVICE
Edwin E. Foster, Austin, Tex.
Application August 1, 1933, Serial No. 683,218
18 Claims. (Cl. 68—9)

1. An ironing device comprising an iron having a movable handle; a supporting arm connected to the iron and movable so that the iron may be moved laterally and lengthwise on an ironing board; a casing by which the supporting arm is carried; means in the casing to counterbalance the weight of the iron and arm when raising and lowering the iron and arm; and means operable by the actuation of the handle relative to the iron and passing through the supporting arm to remove the influence of the counterbalance when the iron is adjacent the material to be ironed.



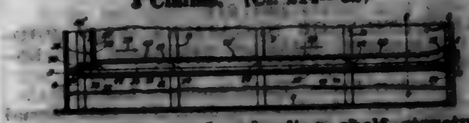
2,027,275
MECHANICAL MOVEMENT
Edwin E. Foster, Austin, Tex.
Application August 27, 1934, Serial No. 741,664
10 Claims. (Cl. 74—96)

1. A mechanical movement comprising a movable frame member, a pair of pulleys eccentrically mounted on the frame member, a cable system for the pulleys, a pair of springs mounted in said cable system, one spring in the normal position being under considerable tension and the other under slight tension, and means for rotating one of said pulleys to transfer the energy in the considerably tensioned spring into the slightly tensioned spring to perform a working stroke by utilizing the energy in the last-mentioned spring.

2,027,276
DIAL FOR KNITTING MACHINES
Ivan W. Grothey, Laconia, N. H., assignor to Scott & Williams, Incorporated, New York, N. Y., a corporation of Massachusetts
Application June 2, 1934, Serial No. 728,779
15 Claims. (Cl. 66—118)

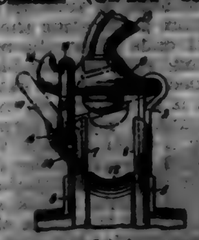
1. In a machine for knitting body and wrap yarns, a needle dial having needle grooves, needles in said grooves, and yarn guiding grooves extending vertically in the peripheral face of said dial

between adjacent needle grooves and preventing engagement of the wrap yarns by said dial needles.



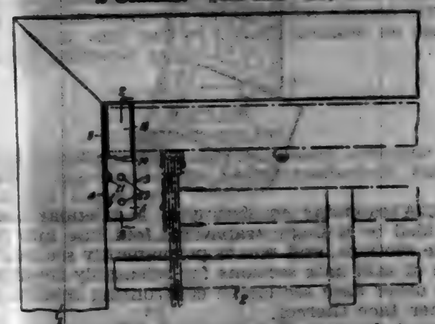
2,027,277
CONTACT DEVICE
Erich Habann, Berlin, Germany
Application August 27, 1930, Serial No. 478,206
In Germany August 16, 1929
13 Claims. (Cl. 201—63)

5. A contact device having negative resistance character, comprising two terminal electrodes, and between said electrodes a body of at least one substance selected from the group consisting of TiO_2, Mn_3O_4, ZnO, Cr_2O_3, Fe_2O_3, WO_3, CuO and SnO_2, and further containing conductive metal powder, the thickness of said body being less than one millimeter, said body consisting of individual particles of the substance of such fineness and pressed together with such a force that the contacts between the individual particles of the body will impart to the layer a decreasing current characteristic at constant temperature, said body being located in an atmosphere of oxygen at a pressure higher than atmospheric pressure, whereby regeneration of the material of the body is obtained.



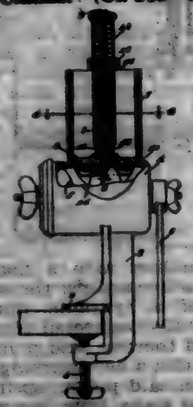
6. The method of producing negative resistance elements which consists in compressing a body of discrete particles of at least one material selected from the group consisting of TiO_2, Mn_3O_4, ZnO, Cr_2O_3, Fe_2O_3, WO_3, CuO and SnO_2, and passing through said body a high voltage electric current of low initial but slowly increasing intensity until puncturing of said body occurs, whereby the non-conductivity of said body is changed permanently into conductivity.

2,027,278
LOADING AND UNLOADING SHELF STRUCTURE
Charles William La Marsh, Alton, Ill.
Application January 5, 1935, Serial No. 574
3 Claims. (Cl. 214—82)



1. A loading and unloading shelf structure, comprising an upper and a lower track, said upper track having its rear end portion upwardly curved towards its rear terminus, a roller rotatably supported at the rear ends of said tracks, a pulley supported at the forward ends of said tracks, and a conveyor element including a foldable section travelling around said roller and upon said tracks and a section in the form of a cable travelling over said pulley and travelling between said tracks.

2,027,279
SNATCH BLOCK
William J. Lee, Lockport, N. Y., assignor to The Western Block Company, Lockport, N. Y., a corporation of New York
Application October 2, 1935, Serial No. 43,415
2 Claims. (Cl. 254—193)



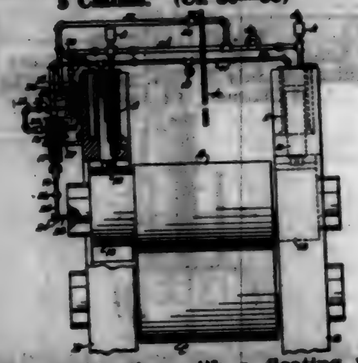
1. In a snatch block, in combination, shell members, open pockets on opposite sides thereof, a swinging head provided with a hook or horn, a support therefor mounted in one of the shell pockets, a loop or link arranged to engage the said horn, a support therefor mounted in the pocket on the opposite side, and a spring acting thereon, said spring having a shank fitted in said latter pocket and extending upwardly therefrom in position to engage the loop or link.

2,027,280
VENETIAN BLIND BRACKET
Carl Lindemann, Hackensack, N. J., assignor to Carl Lindemann Company, Inc., Jersey City, N. J., a corporation of New Jersey
Application October 12, 1934, Serial No. 748,168
2 Claims. (Cl. 156—17)

1. A Venetian blind supporting bracket comprising a body having a flat portion, a flange extending laterally to said flat portion along one edge thereof and an upstanding flange arranged at right angles to the first-mentioned flange, said first-mentioned flange having an overturned end presenting a section spaced from the second-mentioned flange and parallel therewith, said flat portion having an extending portion arranged centrally and at the upper edge thereof, said extending portion being provided with an apertured end portion arranged parallel to said second-mentioned flange, a hinge plate integral with said flat portion and spaced from said second-mentioned flange but in the same horizontal plane, and locking means hingedly connected with said hinge plate, said locking means having a laterally extending flange adapted to fit over part of said end portion of said extending portion, said locking means being of such a length that its flange resiliently fits over said end portion, said last-mentioned flange having a pressed out member adapted to snap into the aperture in said apertured end portion.

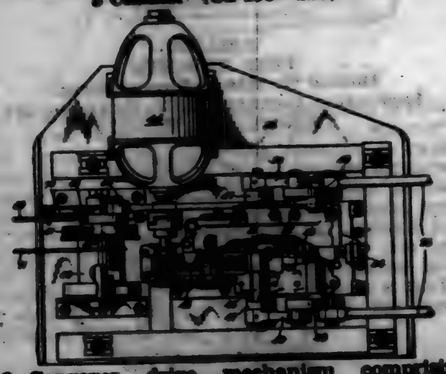
2,027,281
FOOD GRINDER
Louis J. Lista, Mount Shasta, Calif.
Application July 2, 1934, Serial No. 733,483
2 Claims. (Cl. 146—183)

1. In a food grinder, a hopper therefor, automatic feeding means for said hopper and including a plunger, guiding means for said plunger, a tube secured to and rising from said plunger, a tube having a closed upper end and telescopically mounted on the tube first mentioned, a spring arranged in the tube and engageable with the plunger and the closed upper end respectively, a cross bar detachably secured to the upper end of the hopper, and a clamping plate engageable with the outermost tube and together with the cross bar being provided with registering openings for the passage of the tubes therethrough.



2,027,282
TIRE AND RIM
Donald W. Mason, Eugene, Oreg.
Application January 2, 1935, Serial No. 144
2 Claims. (Cl. 152—22)

1. In a tire and and rim section, a tire having a central partition and inflation chambers at the sides of the partition, rim sections engaging the tire at the sides of the same and having outer bands clamping the partition and supporting inflation tubes in the tire, said bands each having an opening for an inflation valve stem, a rib on one section, an inner felly band on the other sec-



tion having openings for inflation valve stems, a rib on said felly band interfitting with the first named rib, and means carried by both ribs to secure the sections together.

2,027,283
HYDRAULIC ROLL ADJUSTER MECHANISM
William G. McFadden, Niles, Ohio
Application May 21, 1934, Serial No. 726,529
5 Claims. (Cl. 80—56)

3. The combination with a floating roll, of hydraulic rams active against the same at opposite ends thereof, a hydraulic pump having a plunger eccentrically connected with the floating roll and operated thereby, said plunger having a piston provided with a bore working in the pump cylinder, a rod in said piston, spring means influencing the rod away from the piston, means limiting the movement of the rod, a second rod having a universal connection with the first named rod and a wrist pin carried by the second named rod and screwed in the floating roll.

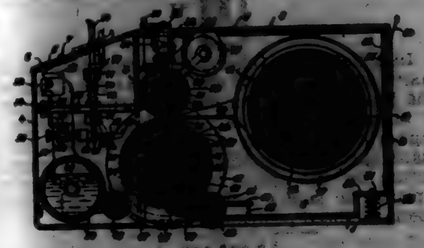
2,027,284
DRIVE FOR SHAKER CONVEYERS
Roscoe Moore, Kingston, Pa.
Original application May 26, 1933, Serial No. 673,532. Divided and this application May 2, 1934, Serial No. 723,754
8 Claims. (Cl. 198—220)

8. Conveyer drive mechanism comprising means to reciprocate the conveyer including means constructed and arranged to brake operation of the conveyer during its movement in one direction and thereby provide opposite strokes of different duration, and further means to additionally brake operation of the mechanism through the later portion of the shorter stroke whereby to permit the conveyed material to come to rest prior to the inception of the longer stroke.

2,027,285
METHOD OF FORMING SEAMLESS TUBE COUPLINGS
Arthur La Rue Parker, Cleveland, Ohio
Application October 6, 1933, Serial No. 692,541
2 Claims. (Cl. 29—157)

1. The method of forming a seamless tubular coupling having a branch intermediate its ends consisting in forming a tubular blank of uniform cross section, perforating the tubular blank intermediate its ends where the branch is to be formed, confining said tubular blank in a sectional die shaped to conform exteriorly to the coupling which is to be formed, inserting within said tubular blank a plastic form maintaining material having a lower melting point than the metal of the blank, progressively subjecting said plastic form maintaining material to pressure for expanding the tubular blank so as to cause the same to conform to the shape of the sectional die in which said tubular blank is placed.

2,027,286
CALENDAR
Overton W. Pendergast, Terre Haute, Ind.
Application December 13, 1933, Serial No. 702,943
19 Claims. (Cl. 40—107)

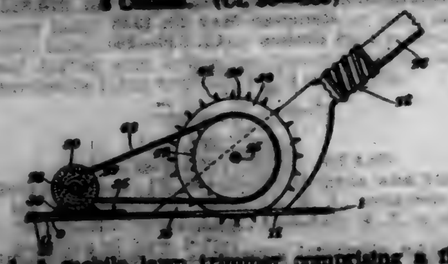


1. A calendar consisting of a calendar sheet divided by a single transverse fold line into two date sections, and means permanently secured to one of said date sections for releasably retaining the other date section in confronting relation to either face thereof.

2,027,287
APPARATUS FOR DELIVERING AND AFFIXING LABELS, POSTAGE STAMPS, AND THE LIKE
Hilde Kemnade, geb. Futterknecht, Berlin-Treptow, Germany
Application May 10, 1934, Serial No. 724,965
In Germany October 31, 1932
71 Claims. (Cl. 216—25)

1. An apparatus for delivering and affixing labels, comprising in combination a storage reel for a label strip, arrangements for pulling a label off said storage reel, arrangements for severing this label from said strip, arrangements for moistening this label, arrangements for affixing this label on a support, a stationary axis in said apparatus, and a driving means adapted to be rotated about said axis by the apparatus being pushed over the support and to control the arrangements for pulling off, severing, moistening and affixing.

38. An apparatus for delivering labels, stamps and the like, comprising in combination a storage reel, an exchangeable casing for said reel consisting of a cup-shaped container, a cover closing said container and having an aperture, and a boss-shaped extension adapted to be removed only after the removal of said cover from said container, an axis for said reel in said cup-shaped container, a knob on said axis of smaller diameter than the aperture in said cover, resilient means for holding said knob on said axis, and a destructible sealing strip adapted to close the aperture in said cover and to be held on the axle after the fitting of said knob.

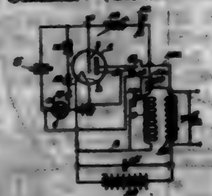


61. An apparatus for delivering and affixing labels, stamps and the like, comprising in combination a drum-shaped driving means adapted to be rotated by the apparatus being moved over a support, a storage reel for labels connected to form a strip, an arrangement for pulling a label off said reel, an arrangement for severing this label from the strip, an arrangement for moistening this severed label, all of said arrangements controlled by said driving means, movable pins on said driving means adapted to hold the severed label on said driving means, a carrier plate carrying said pins, an axle for said carrier plate radially shiftable relatively to said drum-shaped driving means, said carrier plate rotatable on said radially shiftable axle.

2,027,288
SHEET PILING
Walter Prüllage, Dortmund, Germany, assignor to Vereinigte Stahlwerke Aktiengesellschaft, Duesseldorf, Germany
Application March 10, 1932, Serial No. 663,818
In Germany August 13, 1931
1 Claim. (Cl. 61—39)

A sheet piling wall consisting of pairs of planks composed of sheet iron elements having web and flange portions, the flange portions being directly connected with each other at the one side and connecting elements arranged at the opposite side, said connecting elements being secured against tension and rigidly securing the elements forming the pairs of planks and extending without interruption over that part of the wall, which has to resist against the highest bending moment, whereas they are arranged with distances between them over the remaining part.

2,027,289
LAWN TRIMMER
George B. Randolph, San Antonio, Tex.
Application October 22, 1934, Serial No. 749,446
6 Claims. (Cl. 56—255)



1. A mobile lawn trimmer comprising a flat plate for sliding in superimposed relation over the lawn to be trimmed, said plate provided intermediate its ends with an opening having its forward end cut out lengthwise thereof to provide it with a transverse row of spaced teeth formed with cutting edges, a traction wheel extending through the opening in said plate and spaced rearwardly from said teeth, means carried by the plate for rotatably supporting said wheel, a ratchet wheel on one side of said traction wheel, a horizontally disposed revoluble cutter element positioned in superimposed relation upon said plate forwardly of the traction wheel and being formed with cutting blades travelling in superimposed relation over said teeth, operating means for said cutter element fixed thereon, a post carried by the plate and provided with means forming a shaft and retainer for said element and operating means, driven means supported in lateral relation to said post for driving said operating means, and an endless power transmitting belt connecting said driven means to said sprocket wheel to provide for the operation of said driven means on the rotation of said traction wheel.

2,027,290
WATER BOTTLE
Milton B. Resch, Springfield, Mass.
Application July 2, 1935, Serial No. 29,573
11 Claims. (Cl. 128—258)

2. The method hereindescribed comprising cementing a fabric layer to the face of a corrugated core with said fabric conforming to said face and molding rubber upon said fabric covered core to form a wall conforming in shape to said corrugations and thereby uniting the rubber to the fabric to provide a fabric lined wall upon removal from the mold and core, substantially as described.

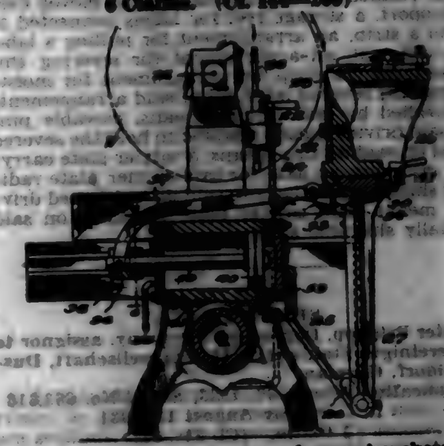
2,027,221
ELECTRIC CIRCUITS FOR EMPLOYING CAPACITATIVE CURRENTS
Gordon D. Robinson, Annapolis, Md.
Application June 12, 1929, Serial No. 370,623
Renewed May 29, 1935
9 Claims. (Cl. 250—36)

4. An electrical apparatus including elements for providing interconnected first and second sources of alternating current of the same frequency but differing in phase, and a common load of low power factor at such frequency, said first source having a high impedance and adapted to pass only a low current intensity at such frequency; said elements including means for energizing said sources, means for maintaining said second source at the same frequency as said first source so that said second source operates as a relay for said first source, and also means for connecting said sources in multiple to said load and supplying to said load from said second source a current component substantially in quadrature to the output voltage of the said first source to relieve said first source at least in part from the delivery of quadrature current to said load.

2,027,255
BLOCK FLOORING
Byrd C. Rockwell, Sheffield, Ala., assignor of one-half to Bradley Lumber Company of Arkansas, Warren, Ark., a corporation of Arkansas
Application March 25, 1933, Serial No. 661,257
7 Claims. (Cl. 20—8)

1. A flooring unit comprising a wooden block having two faces thereof disposed across the grain, and expansion compensating means attached to said block and forming a part thereof across each of said cross grain faces.

2,027,293
ROLLING METHOD
Hugo Seiferth, Duesseldorf-Oberkassel, Germany
Application June 13, 1931, Serial No. 543,893
In Germany July 15, 1930
7 Claims. (Cl. 80—60)

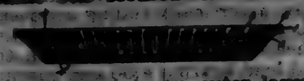


1. A method for producing, by rolling, metal bars with relatively high transverse ribs, which method consists in feeding the working material between a roll and a rolling table, moving said roll and table relatively to one another at a rate depending upon the metal to be worked, thereby stretching the material and pressing it into transverse grooves provided on the rolling table in order to form said transverse ribs without deformation.

2,027,294
LIGHTER
Hans Silberknopf, Vienna, Austria
Application October 2, 1934, Serial No. 746,357
2 Claims. (Cl. 67—7.1)

1. In a lighter, a tube, a combined snuffer and abrasive wheel pivotally mounted at the upper end of the tube, a handle for manipulating the snuffer and abrasive wheel, a spring in the tube, a pyrophoric stick urged toward the abrasive wheel by said spring, a piston forced in the opposite direction by the spring, and a yoke connecting the piston to said wheel for holding the snuffer in open or closed position.

2,027,295
VENEER MACHINE
Wallace W. Stoddard, Savannah, Ga.
Application March 26, 1934, Serial No. 717,488
6 Claims. (Cl. 144—209)

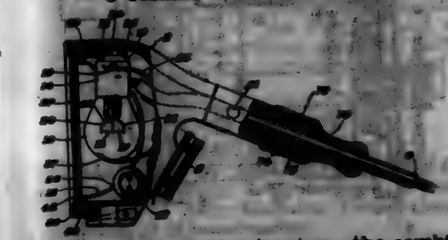


1. In a veneer machine, a frame, brackets on said frame having slots therein, means for rotatably supporting a body of wood, a carriage, a cutting element mounted in said carriage, rocking bearings for said carriage in said slots, and fluid actuated means for rocking said carriage in said slots to force said cutting element into engagement with a body of wood carried by said supporting means with a regulable uniform pressure.

2,027,296
BAKING UTENSIL
Kimberly Stuart, Neenah, Wis., and Garrett S. Lindeman, Jr., Beverly, N. J.
Application August 5, 1933, Serial No. 684,816
7 Claims. (Cl. 53—4)

1. A laminated, unitary self-sustaining baking utensil capable of withstanding baking tempera-

tures, comprising an inner layer of heat-resistant metallic foil secured in substantially full



surface engagement to an outer layer of heat-resistant fibrous material by means of a heat-resistant adhesive.

2,027,297
PAINT MIXER
Frank Trumpeack, Hawthorne Station, N. Y.
Application June 19, 1935, Serial No. 27,364
3 Claims. (Cl. 259—107)

1. A mixing device comprising a shaft, paddles, interdigitating hinge eyes securing the paddles at the inner ends to the shaft and permitting the paddles to fold flat upon each other, an annulus adjustably mounted on the shaft and having slots adapted to receive the upper edges of the paddles and hold the paddles radially, disengagement of the annulus from the paddles permitting the paddles to be nested together laterally of the shaft to permit easy withdrawal from a container, and means for rotating the shaft.

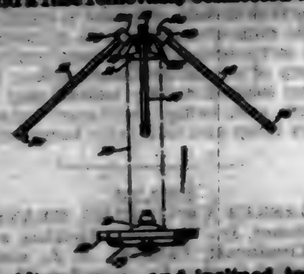
2,027,298
PORTABLE ELECTRIC LAMP
Grant Wheat, Marlboro, Mass., assignor to Keebler Manufacturing Company, Marlboro, Mass., a corporation of Massachusetts
Application June 5, 1933, Serial No. 674,115
5 Claims. (Cl. 240—11.3)

1. In a portable lamp structure, the combination of a headpiece, a main electric lamp bulb mounted in said headpiece, a reflector in said headpiece behind said bulb, a lens supported in said headpiece at the opposite side of said bulb from said reflector, said lens closing the normally open end of the headpiece, means for supporting said bulb with its axis lying approximately parallel to said lens and with the filament of the lamp approximately centered with reference to said reflector, the base of said lamp projecting through a hole in said reflector, a spring arm engaging the bulb of said lamp to assist in holding said bulb in its operative position, and an emergency lamp of a smaller candle power than said main lamp located chiefly behind said reflector, said spring arm being positioned between said emergency lamp and said main lamp bulb.

2,027,299
GASKET CENTERING MEANS
Henry Böhmer, Jr., Woodbury Heights, and Stanley S. Lippincott, Palmyra, N. J., assignors to "Flexitallic" Gasket Co., Camden, N. J., a corporation of New Jersey
Application February 10, 1934, Serial No. 710,738
6 Claims. (Cl. 288—1)

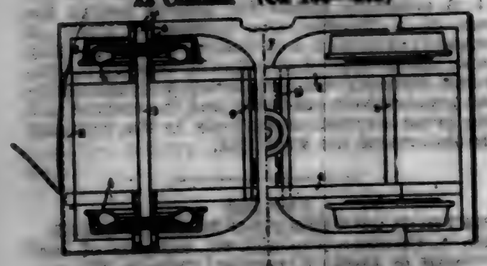
1. A centering means for gaskets having the form of a flexible ring composed solely of compactly-wrapped longitudinally-beaded strip metal, said wrapping causing the beading of contiguous convolutions to interlap and angularly-flare progressively outwards, and the ends of said strip being secured respectively to the engaging convolutions of the wrapping.

2,027,300
METHOD OF TREATING MOLTEN STEEL
Alvin A. Claassen, Chicago, Ill., assignor of one-half to James L. Hyland, Chicago, Ill.
Application July 22, 1932, Serial No. 623,641
24 Claims. (Cl. 75—27)



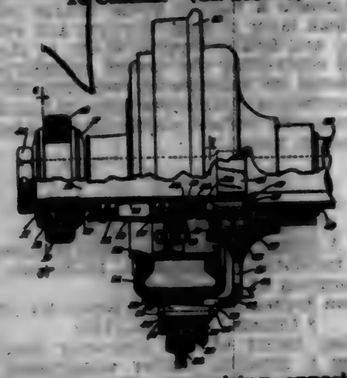
1. The method of making open hearth steel which includes the steps of heating in an open hearth furnace a molten metal charge covered with a thick layer of slag, working and refining the metal and finally tapping it out of the furnace, and controlling the carbon content of the molten metal by introducing beneath the slag covered surface of the molten metal a liquid material containing carbon which can be absorbed by the molten metal.

2,027,301
FUSED GRADING SHIELD
Howard A. Frey, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a corporation of Maryland
Application September 11, 1929, Serial No. 391,816
9 Claims. (Cl. 200—115)



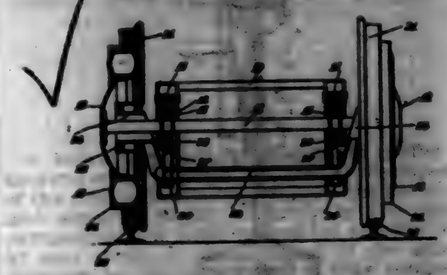
1. A fuse device of the character described comprising a metallic carrier constructed and adapted to be mounted upon the uppermost metallic element of a vertical series of insulators, a

plurality of holding means mounted upon said carrier, and a fuse removably connected with each



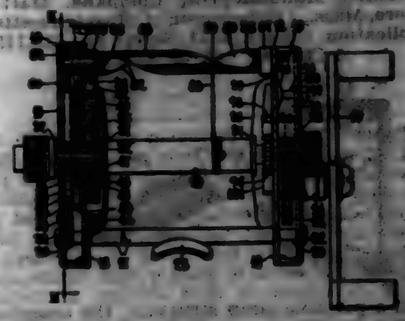
of said holding means and inclined toward the lower end of the series.

2,027,302
RAIL WHEEL
Oskar Hacker, Wiener-Neustadt, Austria, assignor to the firm Austro-Daimler-Puchwerke A. G., Wiener-Neustadt, Austria
Application September 14, 1932, Serial No. 633,196
In Austria February 15, 1932
23 Claims. (Cl. 105—215)



1. Running gear for rail vehicles, comprising in combination drum-shaped guiding wheels having a profile like that of a rail wheel, supporting wheels with resilient tires within the said guiding wheels and capable of running therein; and stub axles for the guiding wheels, which are independent of the axles of the supporting wheels.

2,027,303
RUNNING GEAR
Oskar Hacker, Wiener-Neustadt, Austria, assignor to Austro-Daimler-Puchwerke A. G., Wiener-Neustadt, Austria, a firm
Application September 9, 1932, Serial No. 632,734
16 Claims. (Cl. 105—3)

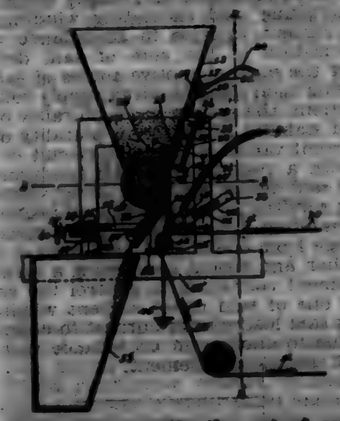


1. Running gear comprising oppositely disposed track wheels, a rotatable tubular axle connecting said wheels, a load bearing axle extending through said tubular axle, a bearing for each wheel having a vertically sliding connection with said load bearing axle, pneumatically tired supporting wheels mounted to rotate on the outer ends of said load bearing axle and running within the track wheels.

2,027,304
RUNNING GEAR FOR VEHICLES
Oskar Hacker, Wiener-Neustadt, Austria, assignor to Austro-Daimler-Puchwerke A. G., Wiener-Neustadt, Austria, a firm
Application September 13, 1932, Serial No. 633,193
23 Claims. (Cl. 105—215)

1. Running gear for vehicles comprising a relatively stationary axle normally free of the vertical load of the vehicle, a part at least of said axle being hollow, a track-engaging wheel rotatably supported upon a hollow part of said axle, a load bearing axle extending through the hollow part of said track wheel axle, a resiliently tired load wheel carried by the load bearing axle and travelling within the track-engaging wheel and movable independently thereof, and a fitting supported on said load bearing axle and connected with said track wheel axle and adapted at times to transmit the vehicle load to the track wheel axle.

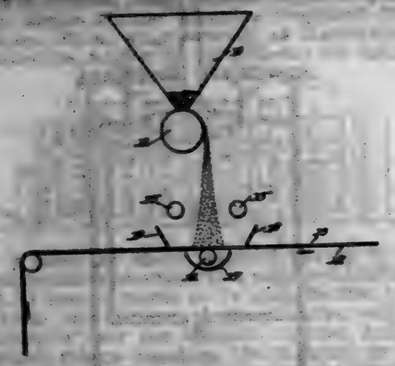
2,027,305
FISHING REEL
Hyla F. Maynes, North Tonawanda, N. Y., assignor of one-half to Emma C. Maynes, North Tonawanda, N. Y.
Application December 5, 1934, Serial No. 756,688
17 Claims. (Cl. 242—84.4)



16. In a fishing reel having means for winding a fishing line thereon, a level wind spiral shaft in the form of a twisted strip of material, said shaft presenting converging surfaces incidental to its spiral configuration for guiding a fishing line from end to end of the reel in levelly wound relation.

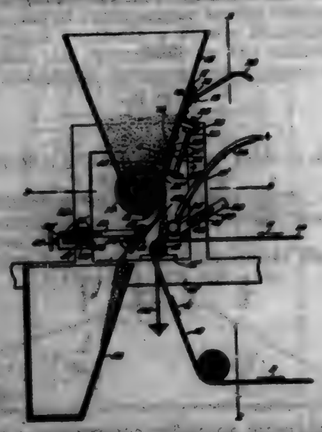
2,027,306
REEL STRUCTURE
Hyla Frederick Maynes, North Tonawanda, N. Y., assignor of one-half to Emma C. Maynes, North Tonawanda, N. Y.
Application June 6, 1935, Serial No. 25,275
8 Claims. (Cl. 242—84.4)

2. In a fishing reel having means for winding a fishing line thereon, a level wind shaft for guiding the fishing line alternately from end to end of the reel, said shaft having axially aligned bearing portions, the shaft being in the form of a spirally shaped wire between the bearing portions.



2,027,307
METHOD OF COATING AND APPARATUS THEREFOR AND PRODUCT
Elmer C. Schacht, Troy, N. Y., assignor, by mesne assignments, to Behr-Manning Corporation, a corporation of Massachusetts
Application July 30, 1932, Serial No. 626,323
49 Claims. (Cl. 91—68)

1. That improvement in the art of coating a carrier with finely divided abrasive material which consists in gravitationally supplying abrasive particles to the carrier, controlling the positions of the particles upon the carrier by the action of an electrical field substantially at their point of deposition upon the carrier, and adhesively retaining the particles upon the carrier with the positions of the particles arranged by the electrical field.

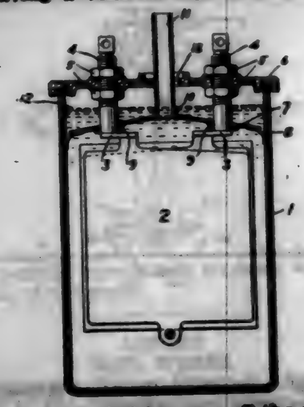


2,027,308
MANUFACTURE OF ABRASIVE ARTICLES
Elmer C. Schacht, Troy, N. Y., assignor, by mesne assignments, to Behr-Manning Corporation, a corporation of Massachusetts
Application November 26, 1931, Serial No. 576,615
Renewed January 7, 1935
5 Claims. (Cl. 91—68)

5. In an apparatus of the class described comprising a feeding means for abrasive particles, means for supporting a carrier having an adhesive surface to be coated with said particles, and means for forming an electrical field comprising terminals of opposite polarity on opposite sides of the carrier, said terminals cooperating to narrow and intensify the field and

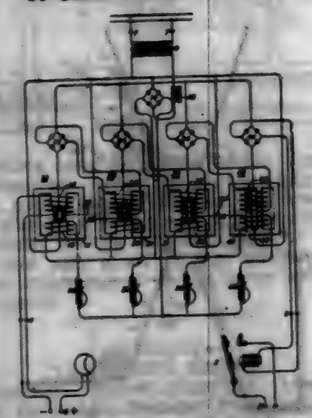
converge the same at the point of disposition of the particles upon the carrier.

2,027,309
ABRASIVE MATERIAL
Elmer C. Schacht, Troy, N. Y., assignor to Behr-Manning Corporation, Troy, N. Y., a corporation of Massachusetts
Application March 24, 1932, Serial No. 601,891
1 Claim. (Cl. 51—185)



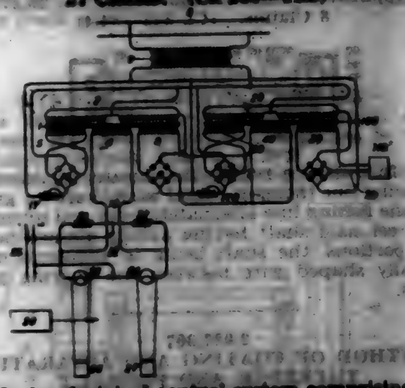
A new article of manufacture having abrasive particles positioned relative to one another by electric action, substantially all of the abrasive particles at the abrading surface being substantially uniformly spaced apart and having major and minor axes and being responsive to electric action, substantially all of said particles being positioned and supported in an adhesive with their major axes substantially perpendicular to the abrading surface.

2,027,310
SECONDARY OR STORAGE BATTERY
Edward W. Smith, Philadelphia, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa., a corporation of New Jersey
Application August 22, 1933, Serial No. 685,436
7 Claims. (Cl. 136—177)



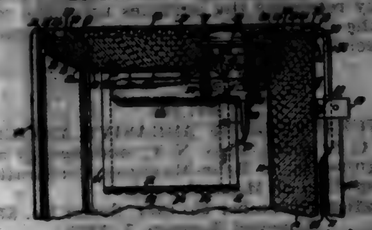
1. In a storage battery cell, the combination with a container, a plate element and a sealed-on closure having an opening, of a gas cover mounted directly over the plate element and arranged

to collect the gas given off by charging, said gas cover having a vent tube passing through said



opening and adapted to carry off the gas without accumulation of substantial amounts of said gas.

2,027,311
MAGNETIC AMPLIFIER
Alan S. Fitz Gerald, Wynnewood, Pa.
Application June 21, 1933, Serial No. 676,785
In Great Britain July 1, 1932
10 Claims. (Cl. 171—242)

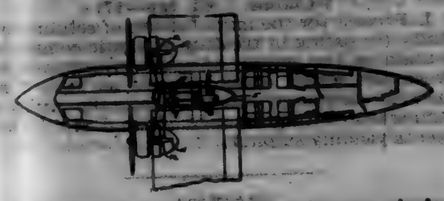


8. A magnetic amplifier comprising a plurality of saturable core devices connected in cascade, each having a saturating winding and an output winding, a source of control current connected to the saturating winding of the first of said devices, means for energizing said output windings, a circuit including rectifying means interconnecting the output winding of each device with the saturating winding of the next successive device, a controlled circuit connected to the output winding of the last of said devices, and means for substantially eliminating the effect on the controlled circuit of the magnetizing current of any of said devices, but the last, when unsaturated, comprising means associated with each device after the first for neutralizing the saturation thereof due to the magnetizing current of the preceding device, at least one of the saturable core devices having a core made of a nickel alloy capable of being raised substantially to saturation point by a magnetizing force of less than one Gilbert per centimeter, and at least one of the saturable core devices having a core made of steel.

2,027,312
MAGNETIC AMPLIFYING AND CONTROL SYSTEM
Alan S. Fitz Gerald, Wynnewood, Pa.
Application July 12, 1934, Serial No. 735,439
27 Claims. (Cl. 250—41.5)

12. An electrical control system comprising, an alternating current supply circuit, a load circuit, a saturable core device having a direct current saturating winding and an alternating current winding connected to control the energization of said load circuit from said supply circuit, means for energizing said saturating winding with a direct current variable in accordance with the magnetization of the core of said device, the ratio of the magnetomotive forces of said windings being such that, for given supply voltage and connections, the system has a plurality of conditions of stability furnishing a plurality of different current values in said load circuit in accordance with a residual magnetic condition of the core of said device, a further direct current saturating winding for modifying said residual magnetic condition so as to cause the control system to change from one of said conditions of stability to another, and means, comprising a variable circuit element connected to control the energization of one of said direct current windings, for causing said load circuit current to change from one value to another in accordance with variations of said circuit element.

2,027,313
REFRIGERATOR
Donald H. Gaston, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application June 14, 1935, Serial No. 26,589
10 Claims. (Cl. 62—115)



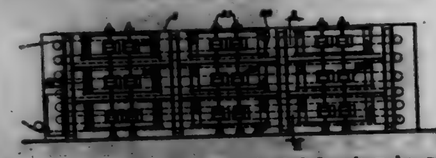
1. A refrigerator including a heat insulated cooling compartment having an aperture in the top wall thereof, means including an evaporator mounted in said compartment for abstracting heat therefrom, means including a refrigerant accumulator for supplying liquid refrigerant to said evaporator, said accumulator being located in said

aperture and having the lower portion thereof extending into said compartment, and means including a shield of flexible heat insulating material surrounding said lower portion of said accumulator extending into said compartment for minimizing the transfer of heat from the liquid refrigerant in said accumulator to said compartment.

2,027,314
METHOD OF MANUFACTURING THIN-WALLED SHAPED BODIES
Eugen Heinicke, Berlin, Germany
No Drawing. Application October 7, 1933, Serial No. 692,617. In Germany October 12, 1932
1 Claim. (Cl. 25—155)

The method of manufacturing particularly thin-walled shaped bodies of earth-moist masses not able to flow, for instance concrete and cement, in moulds consisting of two parts, said method comprising blowing the mass into the mould, removing one of the mould parts, subjecting the mass in the remaining mould part to the action of a die so as to subject it to an after-pressing and -compressing, the strength of which is so chosen that also the other mould part can be removed prior to the mass having set.

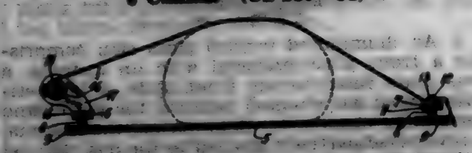
2,027,315
HEAT EXCHANGE APPARATUS
Darragh Loring Hilgedick, Dedham, Mass., assignor to B. F. Sturtevant Company, Inc., Boston, Mass.
Application March 23, 1933, Serial No. 662,679
5 Claims. (Cl. 257—12.5)



1. Heat exchange apparatus for an airplane having a cabin and having an internal combustion engine mounted above said cabin, comprising a liquid circulating system, containing a liquid having a lower freezing point and a higher vaporization temperature than water, means in said system for heating said liquid with heat from the exhaust gases of said engine, air heating coils and a pump in said system mounted below said heating means and between said cabin and said engine, a blower for moving air over said coils, means for passing recirculated air from said cabin into said blower and means for passing the heated air leaving said coils into the passenger space within said cabin.

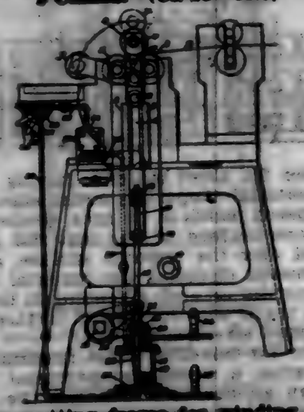
2,027,316
CATALYST
Edward S. Johnson, New Rochelle, N. Y., assignor to The Calco Chemical Co. Inc., Bound Brook, N. J., a corporation of Delaware
No Drawing. Application March 1, 1935, Serial No. 8,487
16 Claims. (Cl. 23—234)

1. A vanadium contact mass for catalytic oxidations comprising a vanadium compound homogeneously incorporated in gelatinous curds of hydrous SiO_2 produced by acidification of a silicate solution under conditions alkaline or neutral to Congo.



2,027,317
TENTER DRIER
Frank B. Morrill, North Adams, Mass., assignor to The James Hunter Machine Company, North Adams, Mass., a corporation of Massachusetts
Application August 16, 1933, Serial No. 685,069
12 Claims. (Cl. 34—48)

2. A drier for sheet material having in combination material-supporting means engaging the cloth at spaced points in its area, devices taking air from one surface of the material and discharging it over the opposite surface, and air-directing means disposing the material so as to have the form of an arch extending in the direction of air travel with its convex surface toward the discharged air-stream.

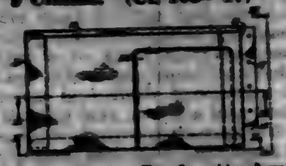


3. A drier for travelling sheet material having in combination a drying compartment for the material, an air-chamber alongside the path of travel of the material, and in communication with the air surrounding the traveling material through its ends which are spaced apart lengthwise of the traveling material, screens covering the air-passages in such ends and disposed perpendicularly to the travelling material in two dimensions and at right angles to the compartment wall for quick removal, a blower discharging air from within the chamber over the material, and heaters interposed between the screens and the blower.

2,027,318
IMMOBILIZATION BELT FOR X-RAY APPARATUS
Albert Charles Nelson, Flushing, N. Y., assignor to Westinghouse X-Ray Company, Inc., a corporation of Delaware
Application September 2, 1932, Serial No. 631,487
8 Claims. (Cl. 250—34)

1. In an X-ray apparatus, the combination with a patient supporting member, of means for rigidly securing the body of a patient to said member comprising a roller secured to one side of said patient supporting member and movable longitudinally thereof, a belt normally wound upon said roller adapted to be unwound therefrom and to extend transversely of said patient supporting member across the body of a patient with its free end secured to said patient supporting member opposite said roller, a shaft extending from said roller provided with a worm gear and a control knob, said control knob being operable to make said belt taut across said patient supporting member and the body of a patient, and a pivoted shaft adjacent the worm gear carried by said first mentioned shaft and provided with a control knob and a worm, said pivoted shaft being rotatable to cause said worm to engage said worm gear for rendering said last mentioned control knob operable to increase the tautness of said belt across the body of a patient, and for locking said roller in a desired position.

2,027,219
SETTING FRAME
Ernest T. Plasnik, Amsterdam, N. Y., assignor to Bigelow-Sanford Carpet Co. Inc., Thompsonville, Conn., a corporation of Massachusetts
Application February 22, 1934, Serial No. 712,519
9 Claims. (Cl. 26—65.5)



2. In a setting frame for winding a series of yarns side by side upon a receiver, the combination of means for rotating the receiver, a presser roll mounted for movements into and from engagement with the yarn on the receiver, and fluid pressure actuated means connected to the presser roll for effecting such movements of the presser roll.

2,027,220
ILLUMINATED SIGN
William R. Piper, Memphis, Tenn., assignor to Gunnald Sign Corporation, Memphis, Tenn., a corporation of Tennessee
Application September 27, 1934, Serial No. 745,009
11 Claims. (Cl. 40—139)

1. An illuminated molded glass sign comprising a front plate provided with an insignia, a rear plate fused to the front plate, a hermetically sealed gas channel between the plates and behind the insignia for illuminating the insignia, a transverse partition molded in the gas channel to close it and a jumper channel molded in the rear plate and in circuit at each end with the gas channel on opposite sides of the partition.

2,027,221
METALLIC SHINGLE
Charles J. Ratelike, Chicago, Ill., assignor, by direct and mesne assignments, of fifty-five per cent to Nils G. Olsson, Aurora, Ill.
Application April 16, 1932, Serial No. 605,655
9 Claims. (Cl. 108—17)

1. In a shingle that affords attachment to an inclined roof from the top down, the combination with a substantially rectangular metallic sheet, of a roof attaching bracket disposed along one side of said sheet, a reversely bent flange connecting said bracket and sheet to define spaced edges along said sheet side, there being a downwardly impressed trough along the lower side of said reversely bent flange to convey moisture therealong onto the succeeding shingle, and an opposite reversely bent flange on the side parallel to the first named side for telescopic interengagement with the first named flange on an adjacent shingle.

2,027,223
PRINTER'S BLANKET
Harold D. Rice, Barrington, R. I., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application June 21, 1933, Serial No. 676,254
9 Claims. (Cl. 154—54.5)

[redacted]

1. A printer's blanket consisting of a base and a coating of the solids deposit of an aqueous dispersion of rubber vulcanized to said base.

2,027,226
SULPHUR DYESTUFFS AND PROCESS OF MAKING SAME
Paul Schmidlin, Basel, Switzerland, assignor to "Society of Chemical Industry in Basle", Basel, Switzerland
No Drawing. Application August 7, 1934, Serial No. 738,961. In Switzerland August 19, 1933
9 Claims. (Cl. 260—17)

1. Process for the manufacture of sulphur dyestuffs, consisting in treating aromatic compounds containing the radical of such an aromatic hydrocarbon which contains itself at least 3 nuclei linearly condensed aromatic nucleus united at temperatures lying between 200 and 300° C. with agents yielding sulphur.

2,027,224
WITHDRAWN

2,027,225
YARN SUPPORTING DEVICE
John G. Shelton, Richmond, Va., assignor to J. G. Shelton Company, Inc., Richmond, Va., a corporation of Virginia
Application March 26, 1935, Serial No. 13,168
10 Claims. (Cl. 242—118)

1. A yarn supporting device involving a base, a spindle carried by the base, and a resilient supporting frame mounted on the spindle, said frame being connected with the spindle so as to exert a constant tendency to return to normal position when displaced therefrom and comprising a plurality of resilient members mounted on the spindle and diverging outwardly therefrom, in the direction of the yarn, each of said members including inner and outer downwardly converging portions joined at their lower ends and so associated with the spindle at their upper ends that the upper ends of the outer portions are spaced upwardly from the upper ends of the inner portions, certain of said portions being provided at their upper ends with means encircling the spindle and movable lengthwise thereof, and the upper ends of the other of said portions being supported on said spindle.

2,027,226
SLIDER FOR SLIDE FASTENERS
Gideon Sundback, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a corporation of Pennsylvania
Application October 31, 1933, Serial No. 695,668
5 Claims. (Cl. 24—205)

4. A slider for slide fasteners of the class described comprising a channeled body member having a recess therein communicating with said channel, a floating block mounted in said recess and having locking teeth movable into and out of the slider channel for locking the slider against movement, and means on the slider for retaining said floating block in said recess, and a slider operating member connecting directly to said floating block and adapted to transmit the slider operating force through said block.

2,027,227
SLIDER FOR SLIDE FASTENERS
Delbert R. Gilmore, Erie, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a corporation of Pennsylvania
Application November 12, 1934, Serial No. 752,879
4 Claims. (Cl. 24—205)

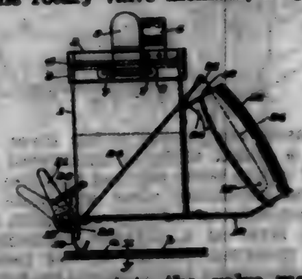
1. A slider for slide fasteners comprising a body member having an interior channel, the body member having also an opening communicating with said channel, a slider locking member movably mounted in said opening and having locking projections adapted to engage between fastener elements in the slider channel, means for retaining said locking member in position comprising a loop attached to the slider body and extending centrally over said locking member, a spring between said loop and said locking member which normally presses said locking member inwardly toward locking position, and an operating member attached to said locking member.

2,027,228
INSOLE
Charles Tweedie, Jefferson City, Mo., assignor to Tweedie Footwear Corporation, Jefferson City, Mo., a corporation of Missouri
Application July 5, 1933, Serial No. 679,661
2 Claims. (Cl. 36—32)

1. An insole comprising a top layer, a lower layer and a shank stiffener interposed between them, said layers being secured together by lines of stitching extending close alongside of said stiffener and substantially parallel with the edge of the top layer at a distance inwardly therefrom, the marginal portion of the lower layer forward of the shank being turned back free from the top layer.

2,027,229
MOTOR VEHICLE
Cornelius W. Van Ranst, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 8, 1934, Serial No. 751,387
8 Claims. (Cl. 180—24)

1. In a drive system for motor vehicles, the combination with transmission and differential housings, of a drive shaft extending between said housings and having universal joint connections at each end thereof with the gearing in the respective housings, said drive shaft being of sufficient length and sufficiently small diameter to afford substantial torsional flexibility and to offer insufficient resistance to whipping, and means supported independently of said drive shaft and having a bearing engagement with the latter intermediate the ends thereof for resisting lateral flexure of the shaft.



2,027,230
WELDING ROD ALLOYS
Richard A. Wilkins, Rome, N. Y., assignor to Revere Copper and Brass Incorporated, Rome, N. Y., a corporation of Maryland
No Drawing. Application March 8, 1935, Serial No. 10,947
6 Claims. (Cl. 75—1)

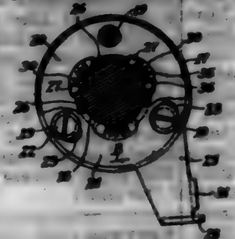
1. Hot and cold workable alloys capable, when deposited by a welding process, of forming a dense, machinable, hard weld metal of high tensile strength, containing 0.05 to 0.3% silicon, 0.25 to 5% nickel, 0.25 to 3% iron, and 35 to 50% zinc, with the balance substantially copper, and characterized by materially reduced fuming as compared to brass of the same zinc content.

2,027,231
HAND SPREADER FOR PLACING AN ADHESIVE ON THE BACK OF CARPETS AND RUGS
Ernest K. Bauer, Thompsonville, Conn., assignor to Bigelow-Sanford Carpet Co., Inc., Thompsonville, Conn., a corporation of Massachusetts
Application August 17, 1931, Serial No. 749,273
3 Claims. (Cl. 91—67.4)

1. In a spreader for applying an adhesive over the abutting edges of two carpet strips to unite

the strips without a visible seam, the combination of a reservoir or container for the adhesive having an outlet, a rotary valve member for controlling the flow of the adhesive through the outlet and comprising cylindrical end bearings and an elongated cut away portion between the cylindrical end bearings, an arm secured at each end of the rotary valve member, a spring nor-

mally acting to rotate the valve member into closed position, a spreader disposed below the reservoir outlet and having a backwardly inclined surface terminating at its lower edge in a spreading bend for forcing the adhesive into the back of the woven strips and manually operated link members connected to the arms at opposite ends of the rotary valve member.



2,027,232

AUTOMATIC FILM STOP FOR CAMERAS

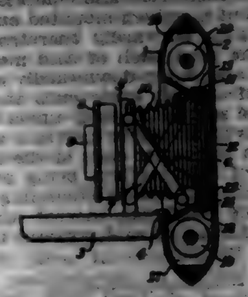
Chester W. Cramarine, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York

Application April 30, 1935, Serial No. 19,011

9 Claims. (Cl. 95—31)

1. In a camera adapted for use with roll film having a perforation therein for each exposure, the combination with a camera body, of spool chambers included in the body, a winding key shaft extending through a wall of said chamber, an arm mounted to turn a limited distance about the key shaft, a clutch member between the arm and key shaft and finger on said arm adapted to pass through a film aperture and control the clutch, whereby rotation of the key shaft in a direction to wind film may be prevented when the finger lies in a film aperture.

2,027,233



CAMERA CONSTRUCTION

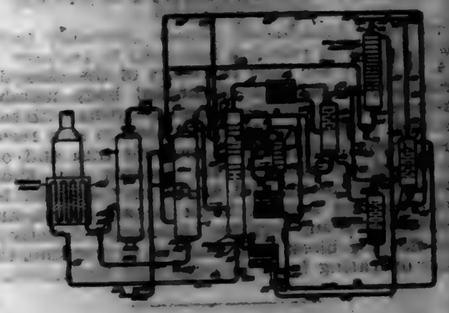
Chester W. Cramarine, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York

Application April 30, 1935, Serial No. 19,012

9 Claims. (Cl. 95—45)

1. In a film camera, the combination with a camera body, including an opening through which an exposure may be made, of a lens board adapted to carry a camera objective, an exposure frame carried by the camera surrounding the exposure opening therein, said exposure frame comprising rigid and accurately formed plane surfaces adapted to position a film in the focal plane of the

objective, and means for altering the position of the frame as a unit with respect to the camera.



2,027,234

TREATMENT OF HYDROCARBON OILS

Luis de Florez, Pomfret, Conn., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

Application April 27, 1932, Serial No. 608,126

6 Claims. (Cl. 196—94)

6. The method of fractionally condensing mixed hydrocarbon vapors which comprises delivering said vapors to a fractionating zone maintained under superatmospheric pressure, whereby said vapors are cooled to effect a condensation of relatively high-boiling constituents, removing from said fractionating zone at least a portion of the condensate thereby obtained, stripping condensate so removed of relatively low-boiling constituents and cooling the stripped condensate, removing uncondensed vapors from said fractionating zone and cooling them to effect condensation of relatively low-boiling constituents, flashing said low-boiling condensate to a lower pressure in a weathering zone to liberate gases contained therein, scrubbing said liberated gases at said lower pressure, to remove vapors therefrom, with a portion of said stripped and cooled relatively high-boiling condensate from said fractionating zone, returning the thereby enriched condensate to said fractionating zone, passing light gases and vapors remaining uncondensed after the cooling of the uncondensed vapors removed from said fractionating zone, to an absorbing zone of higher pressure than said weathering zone and therein scrubbing said light gases and vapors with another portion of the said stripped and cooled relatively high-boiling condensate from said fractionating zone to remove desired constituents therefrom, and returning the thereby enriched condensate to said fractionating zone.

2,027,235

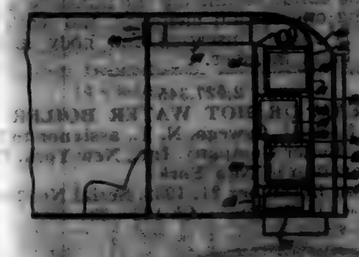
STRAIN RELEASE FOR WRINGERS

Karl H. Eichmann, Salem, Ohio, assignor to Mullins Manufacturing Corporation, Salem, Ohio, a corporation of New York

Application June 11, 1934, Serial No. 729,977

6 Claims. (Cl. 100—32)

1. In a wringer, the combination with a roller-supporting frame and an associated crosshead, vertically-interlocking means carried by the frame and one end of the cross head, and releasable latching means interposed between the other end of the crosshead and the frame, said latching means comprising a pair of cooperating latches pivoted upon the crosshead on a substantially horizontal axis, a pin carried by the frame in position to be underlaid by the latches, a blocking finger interposable between the latches to maintain pin engagement thereof, and an element associated with said last-mentioned finger by which said finger may be retracted from blocking position.



2,027,236

REFRIGERATION APPARATUS

Milton E. Hanson, Collingswood, N. J., assignor to B. F. Sturtevant Company, Inc., Hyde Park, Boston, Mass.

Application October 3, 1934, Serial No. 746,618

7 Claims. (Cl. 62—94)

1. Air cooling apparatus utilizing dry ice as a source of cold, comprising a pair of ice compartments mounted one above the other and spaced a small distance apart, the upper and lower walls of both compartments being formed from thin metal sheet, means for placing dry ice in said compartments, said lowermost compartment having a thin metal sheet forming one vertical side thereof, said uppermost compartment having a thin metal sheet forming a vertical side thereof on the side of said compartment opposite to that from said side of said uppermost compartment, and means for passing air to be cooled in contact with the lower wall of said undermost compartment, the vertical side of said undermost compartment, between said compartments, said vertical side of said uppermost compartment, the upper wall of said uppermost compartment, and for discharging it into the space to be served.

2,027,237

MANUFACTURE OF RESINS

Adolf Hock, Kansas City, Mo., assignor to Cook Paint & Varnish Company, Kansas City, Mo., a corporation of Delaware

No Drawing. Application March 30, 1931, Serial No. 526,568

11 Claims. (Cl. 260—4)

1. As an improvement in the manufacture of useful complex resins from phenols and aldehydes, the improvement which comprises condensing about 2 mols of a phenol with 1 mol of an anhydrid of an aromatic dicarboxylic acid in the presence of an inorganic catalyst of the class consisting of chlorides of aluminum, iron and zinc, reacting 100 parts of the condensation product thus obtained with between 5 and 25 parts of an aldehyde said parts being parts by weight and partially resinifying the aldehyde reaction product by heating said reaction product to about 170° C. until a resinous product soluble in alcohols, esters and ketones is obtained.

2,027,238

MANUFACTURE OF VARNISH BASES

Adolf Hock, Kansas City, Mo., assignor to Cook Paint & Varnish Company, Kansas City, Mo., a corporation of Delaware

No Drawing. Application June 25, 1935, Serial No. 28,252

14 Claims. (Cl. 260—8)

1. In the manufacture of varnishes, the improvement in making a varnish base which comprises condensating about 2 mols of a phenol with 1 mol of an anhydrid of an aromatic dicarboxylic acid in the presence of an inorganic catalyst of the class consisting of the chlorides of aluminum, iron, tin and zinc, to form a phenol-polybasic acid condensation product, fusing together the said condensation product and the fatty acid of a fatty oil, adding sufficient glycerine to the molten mixture to produce esterification, and heating to at least 260° C. until esterification and resinification occur, a resinified material being obtained upon cooling.

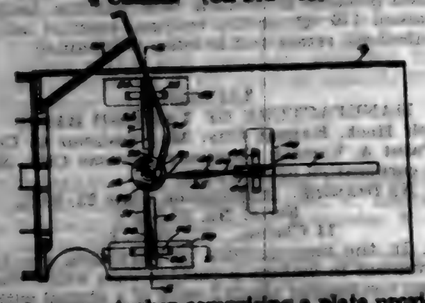
2,027,239

MANUFACTURE OF VARNISH RESINS, VARNISHES, AND LIKE COATING COMPOSITIONS

Adolf Hock, Kansas City, Mo., assignor to Cook Paint & Varnish Company, Kansas City, Mo., a corporation of Delaware

No Drawing. Application June 25, 1935, Serial No. 28,254

12 Claims. (Cl. 260—8)

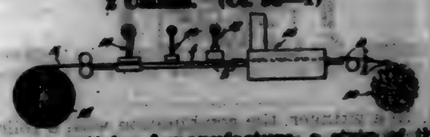


1. In the manufacture of varnishes, the improved process which comprises condensing 2 mols of a phenol with 1 mol. of a polybasic aromatic carboxylic acid in the presence of a condensing catalyst of the class consisting of the chloride of aluminum, iron, tin and zinc, heating the condensation product to partially resinify it, fusing 100 parts of said partially resinified condensation product with about 400 parts of a resin, adding sufficient polyhydric alcohol to esterify the molten material, heating the reaction mixture until the materials are mutually esterified and further resinification is effected, the heating being continued until a clear, substantially neutral, hard resin is obtained upon cooling, said resin so obtained being soluble in coal tar hydrocarbons, mineral spirits and drying oils.

2,027,340
TROMBONE
Frank Holton, Elkhorn, Wis., assignor to Frank Holton & Co., Elkhorn, Wis., a corporation of Illinois
Application March 22, 1934, Serial No. 716,869
3 Claims. (Cl. 84—396)

1. In a slide trombone a stocking for the inside tube, said stocking being provided with pockets for lubricant.

2,027,341
PAPER STACKER
Evelyn Hornbeck and Edward Hornbeck, Tulsa, Okla., assignors of one-fourth to Arch K. Krisle, Tulsa, Okla.
Application June 21, 1935, Serial No. 27,786
4 Claims. (Cl. 271—89)

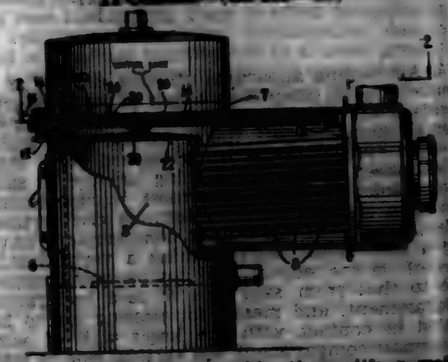


1. A paper stacker comprising a plate provided with guide ways, an oscillating wheel arranged beneath the plate and carrying oscillating shafts, shoes having portions projecting above said plate and depending guides guided by said guide ways, links having their inner ends screw threaded to said shafts, universal joints connecting the outer ends of the links to said guides, and means for oscillating said wheel.

2,027,342
PACKAGING COFFEE
Arthur G. Hopkins, Sherman, Tex.
Application February 5, 1932, Serial No. 655,115
1 Claim. (Cl. 206—46)

A package of air-affected granular material comprising a flexible tube of impervious material divided into elongated sections, the parts of the tube between the sections being hermetically sealed under vacuum to form a neck containing no material, each of said necks being of sufficient length to permit separation of the sections from each other without breaking the seals of any section, and each section before sealing being filled under vacuum to slightly less than full capacity with the material to be packaged and protected.

2,027,343
BLANK FOR CONTAINER CLOSURES AND METHOD OF MAKING THE SAME
Leon E. La Bombard, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a corporation of New York
Application September 5, 1934, Serial No. 742,778
2 Claims. (Cl. 93—1)

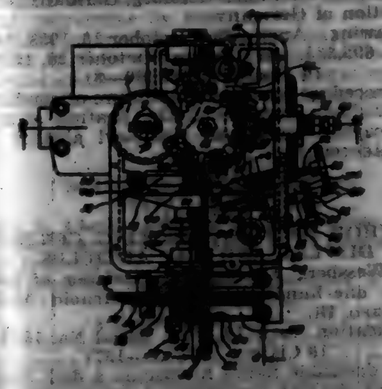


1. An article of manufacture, a strip of thin, flexible material comprising a series of connected and partially blanked bottle closures, and a disk of comparatively stiff material of substantial thickness permanently secured to each closure blank.

2,027,344
METHOD OF FORMING SLIP COVERS FOR CONTAINERS
Leon E. La Bombard, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a corporation of New York
Application September 5, 1934, Serial No. 742,779
4 Claims. (Cl. 93—55)

1. A method of forming slip covers for fibres containers, said slip covers comprising a cup shaped body member and a reinforcing band member consisting of applying a smooth, even and uniform coat of adhesive to the inner surface of the band; permitting the adhesive to dry; moistening one of said members, and while said member is moist, inserting the body member into the band member.

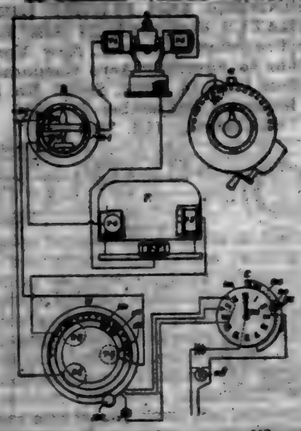
2,027,345
STEAM OR HOT WATER BOILER
John W. Lesbett, Geneva, N. Y., assignor to Fitzgibbons Boiler Company, Inc., New York, N. Y., a corporation of New York
Application December 21, 1932, Serial No. 648,256
11 Claims. (Cl. 122—32)



2. In a boiler the combination with a water heating unit projecting into the boiler below the water line of a thermostat also projecting into the boiler below the water line and means for directing a flow of water from around the water heating unit to the thermostat whereby the thermostat is responsive to changes to temperatures in the water immediately around the water heating unit.

11. A boiler having a combustion chamber and a water chamber thereabove with a horizontal crown sheet between said chambers, a water heating unit having water tubes extending horizontally above said crown sheet, and a generally horizontal deflector plate extending across a major portion of the boiler arranged to direct a current of hot water against the water heating unit.

2,027,346
REMOVAL OF WAX FROM HYDROCARBON OIL
Bernard Y. McCarty, Bayonne, N. Y., and William E. Shelton, Cambridge, Mass., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application November 30, 1931, Serial No. 578,268
9 Claims. (Cl. 196—19)



9. The process of dewaxing mineral lubricating oil which comprises mixing with the oil a selective solvent liquid composed of a mixture of an added oil solvent liquid and a wax anti-solvent liquid selected from the group consisting of the mono-alkyl ethers of ethylene and diethylene glycol up to and including the butyl ethers in such proportions that at temperatures of the order of −10° F. the mixture has substantially complete solvent action on the oil but substantially no solvent action on the wax, chilling the mixture to precipitate the wax, filtering the cold mixture in the presence of a filter-aid material to remove the wax, and removing the solvent from the resulting filtrate to produce low pour test oil.

2,027,347
PRINTING DEVICE FOR LUMBER
Henry H. Feyrsak, St. Paul, Minn., assignor to General Timber Service, Inc., St. Paul, Minn., a corporation of Delaware
Application December 8, 1931, Serial No. 579,214
14 Claims. (Cl. 101—231)

1. A printing device for lumber having in combination a rotary head arranged to print on a substantially vertical surface of lumber, a reservoir, a disk arranged to be partially submerged in printing fluid in said reservoir, an inking roll in contact with the periphery of said head, a plurality of distributing rollers of different diameters engaging the periphery of said inking roll, means for positively rotating said rollers and roll in timed relation to said head and means for transmitting printing fluid from said disk to said roll.

2,027,348
SIGHTING CONTROL FOR AIRCRAFT
Alexander Procoffeff-Seversky, New York, N. Y., assignor to Seversky Aero Corporation
Application April 19, 1932, Serial No. 551,191
Renewed October 6, 1934
43 Claims. (Cl. 33—46.5)

1. A sighting system for use with aircraft including a sight, a support therefor on which the sight is capable of universal movement, a direction indicator separate from the sight, means for communicating relative motion between the sight and its support to the direction indicator, a drift angle indicator and means for communicating the angle of drift from the drift indicator to the sight support.

18. In apparatus of the character described, a movable sight; a timing device having an element movable to predetermined position to indicate the moment of passing above a target; and means controlled by movement of the sight when trained on the target to set said timing device in operation to operate said element.

22. In apparatus of the character described, a direction indicator comprising, in combination, a support, an indicator mounted thereon, a differential mechanism for actuating said indicator, means for actuating one element of said differential mechanism to correspond to lateral movement of the sight relative to the craft, a swinging arm, means for swinging said arm to correspond to the roll of the craft, and means controlled by the movement of said arm for actuating another element of said differential mechanism.

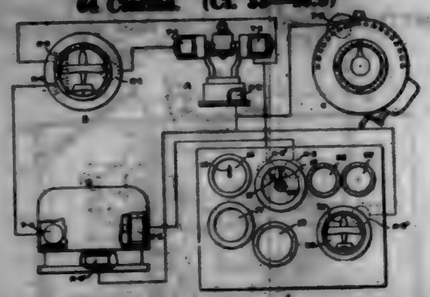
27. A stable base of the character described for use in a movable craft comprising, in combination, a rotatable support, a gyroscope mounted for universal pivotal movement thereon, gearing actuated by relative pivotal movement laterally of the craft between the gyroscope and the support, gearing actuated by relative pivotal movement longitudinally of the craft between the gyroscope and the support, a drift indicating device, and means controlled by the drift indicating device for rotating the support through an angle corresponding to the indicated drift.

32. In apparatus of the character described, a sight, a stable base, said sight and stable base being independent of each other and means con-

trolled jointly by the sight and stable base to indicate true changes in direction of the sight in a horizontal plane.

61. In apparatus of the character described for use in aircraft, a movable sight, a pilot's director, means for transmitting lateral movement of the sight to the pilot's director, means to modify the indications of the pilot's director in accordance with altitude and drift angle to cause the pilot to follow a line of travel above but a predetermined distance to one side of a target on which the sight is trained.

2,027,249



RANGE FINDING AND FLIGHT DIRECTING APPARATUS FOR USE IN AIRCRAFT

Alexander Procofieff-Seversky, New York, N. Y., assignor to Seversky Aero Corporation

Application June 13, 1931, Serial No. 545,089

Renewed September 21, 1934

64 Claims. (Cl. 33—46.5)

1. In a range angle calculating apparatus, in combination, a guide laterally adjustable to different positions to correspond to various altitudes, a slide on said guide, a movable sight arranged to be trained continuously upon a target, a motor for moving said slide along said guide, means automatically controlled by the movement of the sight for controlling said motor.

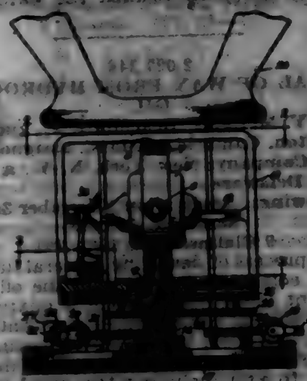
14. In apparatus of the character described, a movable sight arranged to be continuously trained upon a target, a pivoted arm movable in synchronism with said sight, means for moving the arm in synchronism with the sight, a slide, a motor arranged to move said slide and controlled by the pivoted arm, to maintain the slide in predetermined position relative to said arm, a calculator mechanism including a cam, means controlled by the rate of movement of said slide for actuating said cam.

20. In apparatus of the character described, in combination, a movable sight, a movable element, electrical means operable to actuate the movable element at one speed when the sight moves at a speed less than a predetermined speed and at a greater speed when the sight moves at a speed greater than said predetermined speed.

36. In apparatus of the character described, in combination, a pivoted sight arranged to be trained continuously on a target, a stable base arranged to maintain a constant position relative to the vertical independently of the pitching of the aircraft, a pivoted arm, means controlled by the sight and stable base for moving the pivoted arm in synchronism with the movement of the sight relative to the stable base, a speed indicator and means controlled by the movement of the arm to actuate the speed indicator to correspond to the rate of change of the cotangent of the angle of depression of the sight relative to the stable base.

42. In a range angle calculating apparatus, in combination, a sighting element, a follower movable in synchronism with the sighting element and controlled thereby, a range angle indicator and means controlled by the follower for actuating the range angle indicator.

2,027,250



APPARATUS FOR USE IN DIRECTING THE FLIGHT OF AIRCRAFT

Alexander Procofieff-Seversky, New York, N. Y., assignor to Seversky Aero Corporation

Application July 20, 1926, Serial No. 123,346

Renewed September 20, 1934

26 Claims. (Cl. 33—46.5)

1. Flight directing apparatus for use in aircraft comprising in combination, a sight arranged to be continuously trained on an objective, a device supporting said sight adjustable in accordance with the angle of drift of the craft, and means controlled automatically by the turning of the craft through a predetermined angle from a desired course for adjusting said device through an angle greater than the angle of turning of the craft.

2,027,251

PROCEDURE FOR THE MANUFACTURE OF CONDENSATION PRODUCTS

Walther Schrauth, Berlin-Dahlem, Germany, assignor to Deutsche Hydrierwerke Aktiengesellschaft, Berlin-Charlottenburg, Germany, a corporation of Germany

No Drawing. Application October 28, 1933, Serial No. 695,326. In Germany October 28, 1932

10 Claims. (Cl. 260—3)

1. Procedure for the manufacture of condensation products, comprising the heating of polybasic carbon acids and ricinoleyl alcohol (dioxyoctadecene).

2,027,252

METHOD OF CONSTRUCTING CERTAIN DISPLAY AND TOY ARTICLES

Peter Wennberg, Chicago, Ill., assignor of forty-nine one-hundredths to H. Arnold Michel, Chicago, Ill.

Application April 16, 1935, Serial No. 16,634

10 Claims. (Cl. 46—157)

1. A dressable figure for use as a doll, display model or the like comprising a substantially flat figure having a face, said figure being formed to present a peripheral outline of the predetermined object or creature represented by its face, a stiffening backing of similar outline to which said figure is attached, a resilient sheet secured only to said backing, and securing means extending from said sheet through said backing, said sheet being unsecured to said backing near the periph-

ery of the figure whereby to provide a cuff-groove between said sheet and said backing.

2,027,253

SAFE

Maurice B. Bennett, Leif Sylvester M. Archer, Stamford, Conn., assignors to The Yale & Towne Mfg. Co., Stamford, Conn., a corporation of Connecticut

Application July 21, 1933, Serial No. 681,719

4 Claims. (Cl. 109—5)

1. In a safe, a compartment having a door, a drawer in said safe, a partition between said compartment and drawer, a bolt having a latching end mounted in said partition, a lock for said door, means for operating said door lock and said bolt simultaneously, said bolt latching end being depressible by said drawer in one of the positions of said bolt whereby to permit the drawer to close and to be locked, said bolt and latching end being retractible as a unit upon release of the door lock whereby to release said drawer.

2,027,254

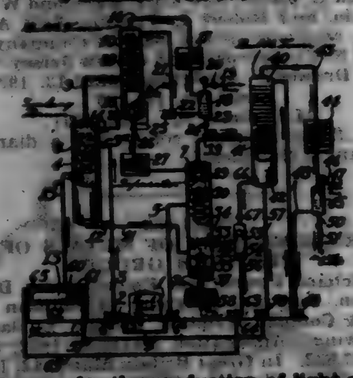
SOLVENT REFINING WITH NITRO-ALCOHOLS

Louis A. Clarke, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

No Drawing. Application November 2, 1933, Serial No. 696,539

4 Claims. (Cl. 196—11)

1. The method of refining hydrocarbon oil containing relatively paraffinic and relatively non-paraffinic constituents, including naphthenic, aromatic, and unsaturated bodies, to remove undesired relatively non-paraffinic constituents therefrom, which comprises extractively treating the oil with nitrobenzyl alcohol whereby the undesired constituents are separated from the oil as an extract soluble in the solvent liquid.



2,027,255

CRACKING PROCESS FOR HYDROCARBON OILS

Frank H. Edson, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware

Application December 14, 1932, Serial No. 647,189

5 Claims. (Cl. 196—58)

1. Process for the production of light oils from a heavy oil, which comprises passing a stream of the heavy oil from a source of supply, dividing the stream of oil into a plurality of parts, subjecting the parts to pressure, passing one of the parts under pressure into a conversion chamber, heating oil to a cracking temperature in a heating zone under pressure, passing the heated oil into the conversion chamber, separately withdrawing the vapors and liquid from the conversion chamber, condensing the vapors, contacting the liquids with the remaining part of the heavy oil, fractionating the mixture and separately recovering different boiling point fractions of the mixture, subjecting a lower and a higher boiling fraction to pressure, passing the lower boiling fraction of the mixture in a stream through the heating zone, passing the higher boiling fraction into the stream of lower boiling fraction after the stream has been heated to a cracking temperature, subjecting the mixture to heat and passing the mixture into said conversion chamber.

2,027,256

CONTROL OF FLUID PRESSURE DEVICES

Ralph Erling, Alexandria, Va.

Application March 13, 1934, Serial No. 715,297

10 Claims. (Cl. 192—38)

(Filed but not issued under the act of March 2, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The combination with a fluid pressure device having a cylinder, a piston therein, and movable means acting on said piston to vary the stroke thereof in said cylinder, of manually actuatable means for operating said movable means, and mechanism actuatable by fluid subjected to the pressure exerted in said cylinder connected to operate said movable means, said mechanism including an element having a neutral position wherein it prevents access of fluid under pressure to said mechanism, said element being mechanically connected to said manually actuatable means to be moved by operation of said manually

actuatable means to admit fluid to said mechanism in a direction to aid in the operation of said movable means.

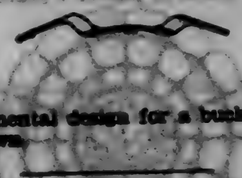
2,027,257
FLOTATION OF MINERALS
Frederick G. Moses, New York, Raymond W. Hess, Buffalo, and Robert L. Perkins, East Aurora, N. Y., assignors to The Barrett Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application May 13, 1927, Serial No. 191,260
24 Claims. (Cl. 209—166)

12. A flotation agent comprising a diaryl disulfide and a thiophenol.

2,027,258
ELECTRODEPOSITION OF METALS OF THE PLATINUM GROUP
Alan Richard Powell and Emyr Conwy Davies, London, England, assignors to Johnson Matthey & Company Limited, London, England
No Drawing. Application March 9, 1932, Serial No. 597,632. In Great Britain March 12, 1931
9 Claims. (Cl. 204—1)

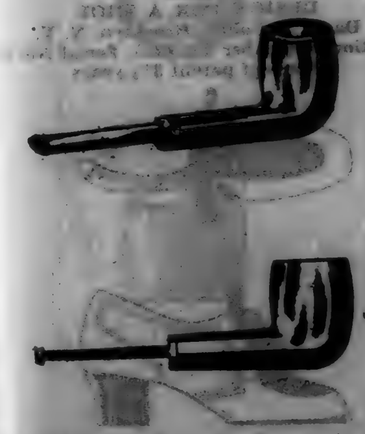
1. Process for the electro-deposition of metals of the group platinum, palladium and rhodium in which the plating bath comprises a solution of a soluble double sodium nitrite of the metal rendered slightly acid by the addition of a small quantity of a mineral acid the anion of which is neither oxidised at the anode nor reduced at the cathode during plating.

2,027,259
MUFFLER
Walter A. Wood, Detroit, and John D. Almen, Royal Oak, Mich., assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 30, 1932, Serial No. 645,621
Renewed March 6, 1934
1 Claim. (Cl. 181—46)

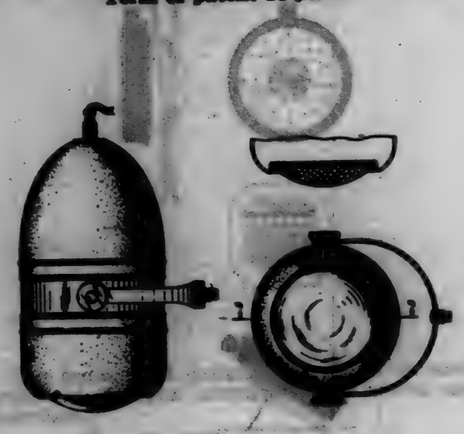


A muffler for silencing explosion noises for use with an internal combustion engine, including, a casing for the flow of exhaust gases, a series of baffle walls within the casing for breaking up sound waves of varying frequencies, a tube extending axially of the casing and being supported by said walls, a partition wall at an intermediate point within said tube providing on opposite sides thereof a pair of tuning chambers, each tuning chamber being of a pre-determined length equal to one quarter that of a certain sound wave of a constant frequency at all engine speeds, whereby to damp the wave train by out of phase reflection.

DESIGNS
JANUARY 7, 1930

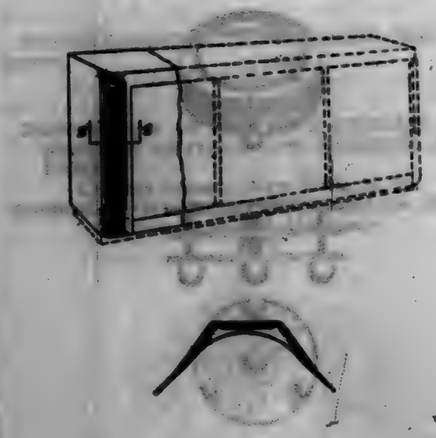


88,045
DESIGN FOR A BUCKLE
Lewis Alterson, New York, N. Y.
Application November 19, 1925, Serial No. 69,854
Term of patent 3½ years



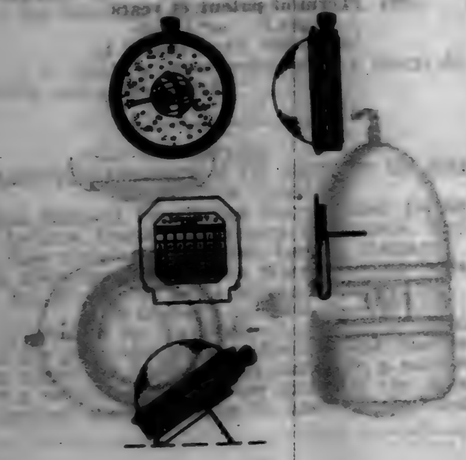
The ornamental design for a buckle, substantially as shown.

88,046
DESIGN FOR A TOBACCO PIPE
Montague Henry Barling, Camden Town, London, England, assignor to the firm B. Barling & Sons, London, England, a partnership composed of Walter Frederick Barling, Walter William Barling, and said Montague Henry Barling
Application January 3, 1935, Serial No. 54,765
In Great Britain December 14, 1934
Term of patent 14 years



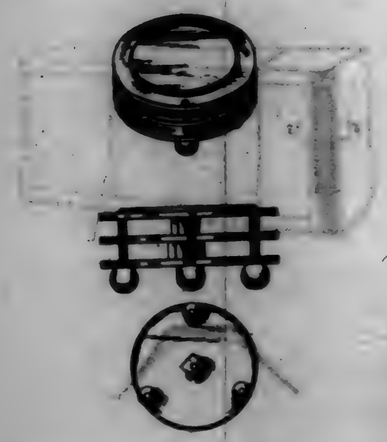
The ornamental design for a tobacco pipe, substantially as shown and described.

88,047
DESIGN FOR A SPOTLIGHT
Morris B. Bock, Woodmere, N. Y.
Application January 29, 1935, Serial No. 55,122
Term of patent 14 years



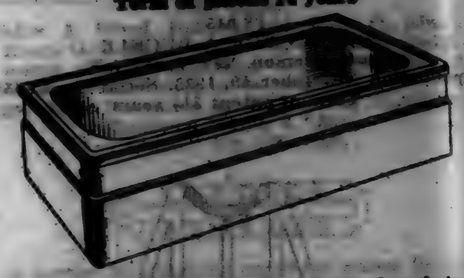
The ornamental design for a spotlight, as shown and described.

88,048
DESIGN FOR A CABINET
Samuel J. Block, Connersville, Ind., assignor to Steel Kitchens Corporation, Connersville, Ind., a corporation of Illinois
Application February 23, 1935, Serial No. 55,547
Term of patent 7 years



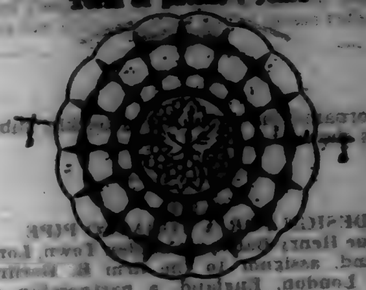
The ornamental design for a cabinet, substantially as shown and described.

98,049
DESIGN FOR A COMBINED PAPER WEIGHT, CLOCK, CALENDAR, AND SUPPORT THEREFOR
George W. Blow, New York, N. Y., assignor to Western Clock Company, Peru, Ill., a corporation of Illinois
Application August 9, 1935, Serial No. 58,832
Term of patent 7 years



The ornamental design for a combined paper weight, clock, calendar, and support therefor, as shown and described.

98,050
DESIGN FOR AN ELECTRIC HEATER
Emery Brush, Chicago, Ill., assignor to Moffat Sales Corporation, Chicago, Ill., a corporation of Illinois
Application May 6, 1935, Serial No. 52,769
Term of patent 3½ years



The ornamental design for an electric heater, substantially as shown.

98,051
DESIGN FOR A BATHTUB
John A. Callahan, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application April 26, 1935, Serial No. 16,181
Term of patent 14 years

The ornamental design for a bathtub, substantially as shown.

98,052
DESIGN FOR A PLATE
Joddie B. Clark, Dunkirk, Ind., assignor to Indiana Glass Company, Dunkirk, Ind., a corporation of Indiana
Application October 29, 1935, Serial No. 50,262
Term of patent 7 years

The ornamental design for a plate, as shown.

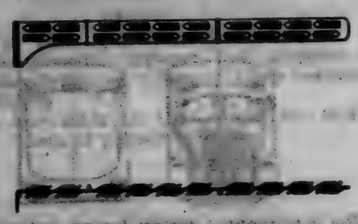
98,053
DESIGN FOR A SHOE
David B. Cohen, Brooklyn, N. Y.
Application November 20, 1935, Serial No. 50,610
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

98,054
DESIGN FOR A SHOE
Pasquale Colella, Nahant, Mass., assignor to Colella & Leighton Shoe Company, Lynn, Mass., a corporation of Massachusetts
Application November 15, 1935, Serial No. 50,486
Term of patent 3½ years

The ornamental design for a shoe substantially as shown and described.

98,055
DESIGN FOR A JAR
Benjamin F. Conner, West Hartford, Conn.
Application April 16, 1935, Serial No. 56,416
Term of patent 14 years



The ornamental design for a jar as shown and described.

98,056
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Edward J. Conroy, New Haven, Conn., assignor to International Silver Company, Meriden, Conn., a corporation of New Jersey
Application November 21, 1935, Serial No. 50,635
Term of patent 14 years

The ornamental design for a spoon or other article of flatware, substantially as shown and described.

98,057
DESIGN FOR A NECKTIE HOLDER
Fred R. Culver, Wilson, N. Y.
Application September 24, 1935, Serial No. 56,681
Term of patent 3½ years

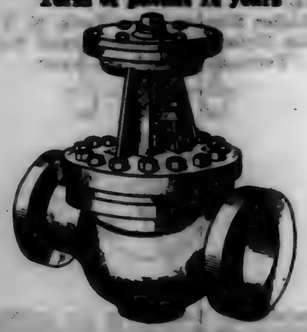
The ornamental design for a necktie holder, as shown.

98,058
DESIGN FOR AN APPLIQUE EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL
Charles Ramsey, New York, N. Y.
Application October 16, 1935, Serial No. 50,031
Term of patent 3½ years

The ornamental design for an applique emblem or similar article for wearing apparel, substantially as shown and described.

96,059
DESIGN FOR A SHOE
Samuel Epstein, New York, N. Y.
Application November 26, 1935, Serial No. 59,763
Term of patent 2½ years

The ornamental design for a shoe, substantially as shown.



96,060
DESIGN FOR AN AUTOMOBILE BODY OR SIMILAR ARTICLE
Robert M. Ferguson, Jr., Newark, N. J.
Application April 22, 1935, Serial No. 56,531
Term of patent 7 years

The ornamental design for an automobile body or similar article as shown and described.

96,061
DESIGN FOR A ROTARY VALVE
Victor E. Fiedin, Oak Park, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application October 30, 1935, Serial No. 59,272
Term of patent 14 years

The ornamental design for a rotary valve substantially as shown and described.

96,062
DESIGN FOR A DOLL BABY NOVELTY
A Lester Gabe, New York, N. Y., assignor to Kyt Guild, Inc., Utica, N. Y., a corporation of New York
Application November 25, 1935, Serial No. 64,128
Term of patent 3½ years

The ornamental design for a doll baby novelty as shown and described.

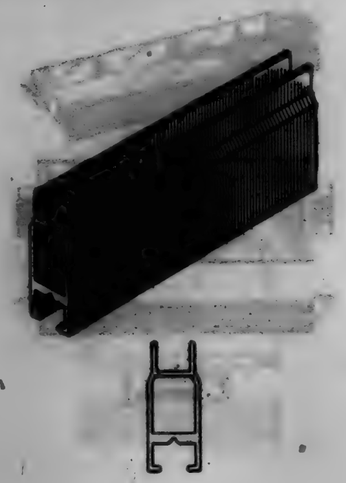
96,063
DESIGN FOR A SHOE
Herman Goldberg, Haverhill, Mass.
Application November 19, 1935, Serial No. 59,585
Term of patent 3½ years

The ornamental design for a shoe as shown.

96,064
DESIGN FOR A PLATE OR SIMILAR ARTICLE
John Edward Goodwin, Penrhyn Bay, Llandudno, North Wales, assignor to Josiah Wedgwood & Sons, Inc. of America, New York, N. Y., a corporation of New York
Application April 24, 1935, Serial No. 56,539
Term of patent 7 years

The ornamental design for a plate or similar article as shown.

96,065
DESIGN FOR A GLIDER
William G. Hardy, Crafton, Pa., assignor to The McKay Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 8, 1935, Serial No. 59,462
Term of patent 7 years



The ornamental design for a glider, as shown.

96,066
DESIGN FOR A COMBINED CASING, STAND, AND CAPPING DEVICE FOR A BOTTLING MACHINE
Monroe Harrison, Chicago, Ill.
Application August 24, 1935, Serial No. 58,194
Term of patent 14 years

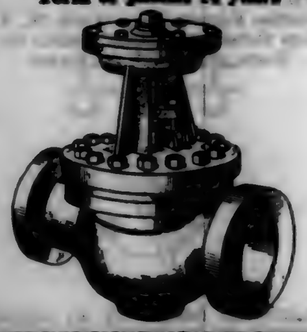
The ornamental design for a combined casing, stand, and capping device for a bottling machine, substantially as shown.

96,067
DESIGN FOR A METAL SASH RAIL
Hugh H. Hendrickson, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a corporation of Illinois
Application November 11, 1935, Serial No. 59,482
Term of patent 14 years

The ornamental design for a metal sash rail, substantially as shown.

96,859
DESIGN FOR A SHOE
Samuel Epstein, New York, N. Y.
Application November 26, 1935, Serial No. 59,761
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.



96,860
DESIGN FOR AN AUTOMOBILE BODY OR SIMILAR ARTICLE
Robert M. Ferguson, Jr., Newark, N. J.
Application April 23, 1935, Serial No. 56,321
Term of patent 7 years

The ornamental design for an automobile body or similar article as shown and described.

96,861
DESIGN FOR A ROTARY VALVE
Victor E. Flodin, Oak Park, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application October 30, 1935, Serial No. 59,272
Term of patent 14 years

The ornamental design for a rotary valve substantially as shown and described.

96,862
DESIGN FOR A DOLL BABY NOVELTY
A Lester Gaba, New York, N. Y., assignor to Kyt Guild, Inc., Utica, N. Y., a corporation of New York
Application November 23, 1934, Serial No. 54,128
Term of patent 3½ years

The ornamental design for a doll baby novelty as shown and described.

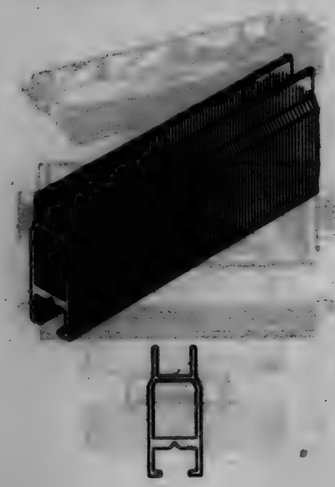
96,863
DESIGN FOR A SHOE
Herman Goldberg, Haverhill, Mass.
Application November 19, 1935, Serial No. 59,661
Term of patent 3½ years

The ornamental design for a shoe as shown.

96,864
DESIGN FOR A PLATE OR SIMILAR ARTICLE
John Edward Goodwin, Penrhyn Bay, Llandudno, North Wales, assignor to Josiah Wedgwood & Sons, Inc. of America, New York, N. Y., a corporation of New York
Application April 24, 1935, Serial No. 56,539
Term of patent 7 years

The ornamental design for a plate or similar article as shown.

96,865
DESIGN FOR A GLIDER
William G. Hardy, Crafton, Pa., assignor to The McKay Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 9, 1935, Serial No. 59,443
Term of patent 7 years



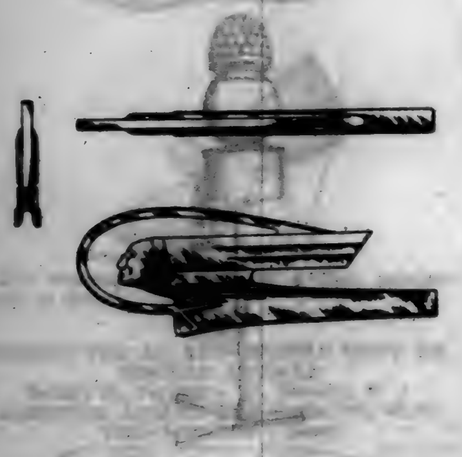
The ornamental design for a glider, as shown.

96,866
DESIGN FOR A COMBINED CASING, STAND, AND CAPPING DEVICE FOR A BOTTLING MACHINE
Monroe Harrison, Chicago, Ill.
Application August 24, 1935, Serial No. 58,194
Term of patent 14 years

The ornamental design for a combined casing, stand, and capping device for a bottling machine, substantially as shown.

96,867
DESIGN FOR A METAL SASH RAIL
Hugh H. Hendrickson, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a corporation of Illinois
Application November 11, 1935, Serial No. 59,482
Term of patent 14 years

The ornamental design for a metal sash rail, substantially as shown.



88,662

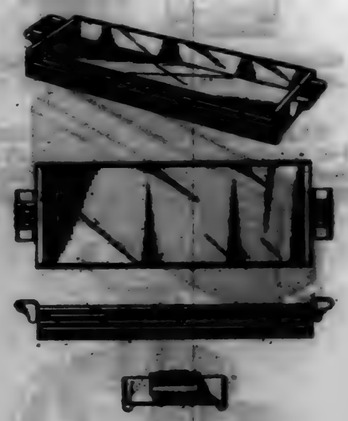
DESIGN FOR AN AUTOMOBILE RADIATOR ORNAMENT

Franklin Q. Hershey, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application September 30, 1935, Serial No. 58,757

Term of patent 7 years

The ornamental design for an automobile radiator ornament as shown.



88,663

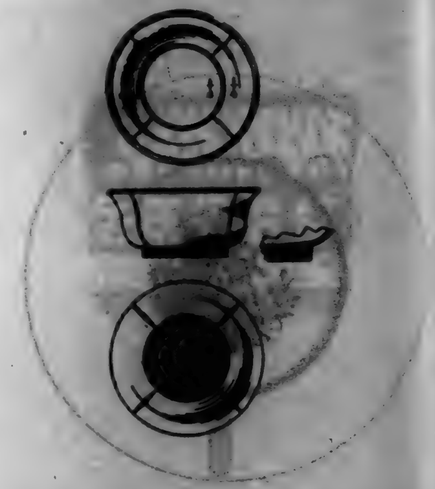
DESIGN FOR A TRAY OR SIMILAR ARTICLE

James H. Hershey, Chicago, Ill.

Application November 11, 1935, Serial No. 59,492

Term of patent 14 years

The ornamental design for a tray or similar article, substantially as shown.



88,670

DESIGN FOR A CEREAL BOWL OR SIMILAR ARTICLE

George L. Jenks, Chicago, Ill.

Application October 30, 1935, Serial No. 58,771

Term of patent 7 years

The ornamental design for a cereal bowl or similar article, substantially as shown and described.

88,671

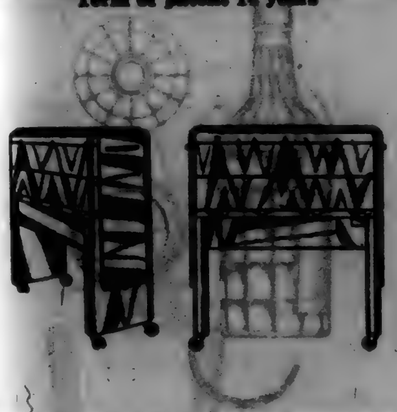
DESIGN FOR A SERVICE STAND FOR THE DISPLAY OF HORS D'OEUVRES

Alexander Kasak, New York, N. Y.

Application November 22, 1935, Serial No. 59,031

Term of patent 2½ years

The ornamental design for a service stand for the display of hors d'oeuvres substantially as shown.



88,672

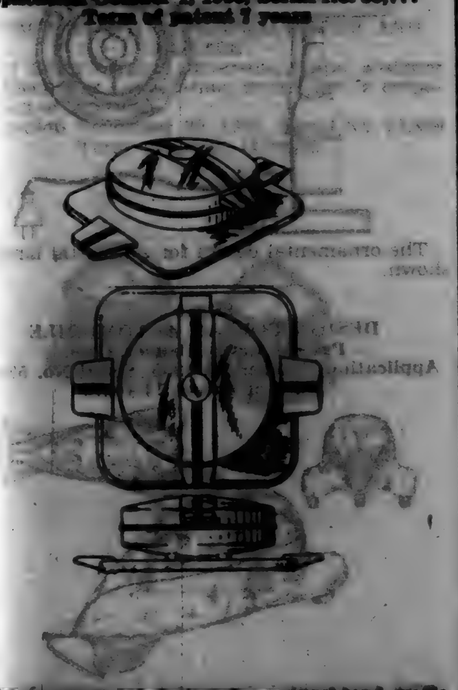
DESIGN FOR A CABINET FOR A DOMESTIC IRONING MACHINE

Gustav R. Koll, St. Joseph, Mich., assignor to Nineteen Hundred Corporation, Binghamton, N. Y., a corporation of New York

Application October 26, 1935, Serial No. 58,528

Term of patent 14 years

The ornamental design for a cabinet for a domestic ironing machine as shown.



88,673

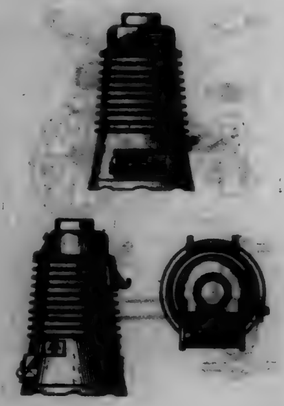
DESIGN FOR A COMBINED WAFFLE IRON AND TRAY

Andrew S. Knapp, St. Louis, Mo., assignor to Knapp-Monarch Company, St. Louis, Mo., a corporation of Missouri

Application October 1, 1935, Serial No. 58,777

Term of patent 7 years

The ornamental design for a combined waffle iron and tray substantially as shown.



88,674

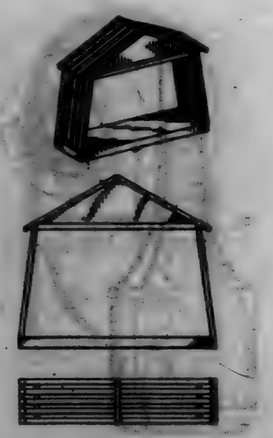
DESIGN FOR A BROODER STOVE

Leland G. Knapp, Chicago, Ill., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill., a corporation of Illinois

Application January 10, 1935, Serial No. 54,783

Term of patent 7 years

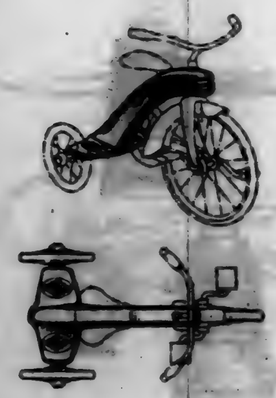
The ornamental design for a brooder stove, as shown.



88,675

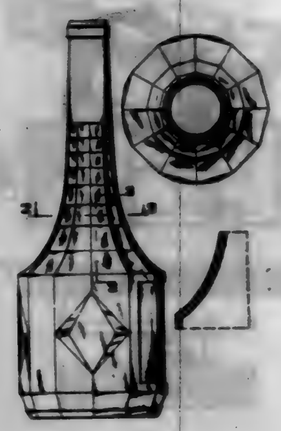
DESIGN FOR A DRESS DISPLAY CASE

Albert M. Knapp, Philadelphia, Pa.



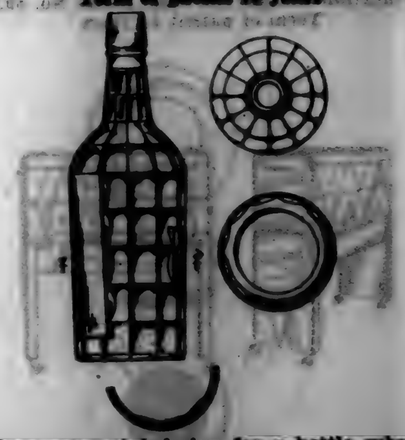
Application October 22, 1935, Serial No. 58,185

Term of patent 7 years



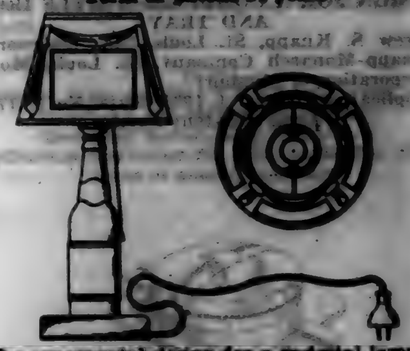
The ornamental design for a dress display case as shown.

88,976
DESIGN FOR A VELOCIPEDE
Herman L. Kraeft, Cleveland Heights, Ohio, assignor to The Murray Ohio Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application June 18, 1935, Serial No. 57,212
Term of patent 7 years



The ornamental design for a velocipede substantially, as shown.

88,977
DESIGN FOR A BOTTLE
George H. Laird, West Medford, Mass., assignor to C. H. Graves & Sons Company, Boston, Mass., a corporation of Massachusetts
Application November 13, 1935, Serial No. 59,532
Term of patent 14 years

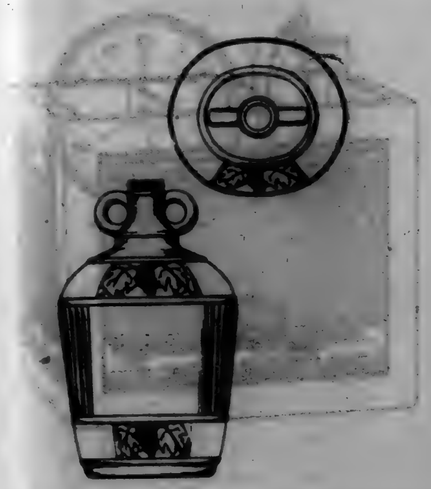


The ornamental design for a bottle substantially as shown and described.

88,978
DESIGN FOR A BOTTLE
George H. Laird, West Medford, Mass., assignor to C. H. Graves & Sons Company, Boston, Mass., a corporation of Massachusetts
Application November 13, 1935, Serial No. 59,531
Term of patent 14 years

The ornamental design for a bottle substantially as shown and described.

88,979
DESIGN FOR A PEDESTAL LAMP
Louis Levenson, San Francisco, Calif.
Application October 31, 1935, Serial No. 59,381
Term of patent 14 years

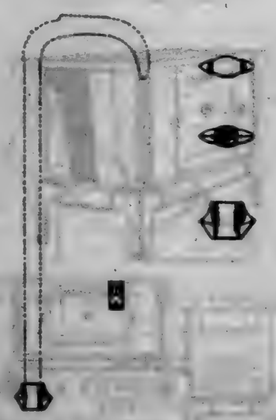


The ornamental design for a pedestal lamp, as shown.

88,980
DESIGN FOR AN AUTOMOBILE
Paul M. Lewis, Denver, Colo.
Application October 31, 1935, Serial No. 59,390
Term of patent 14 years

The ornamental design for an automobile, as shown.

88,981
DESIGN FOR A JUG
Arnold J. Levenson, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 8, 1935, Serial No. 59,451
Term of patent 14 years



The ornamental design for a jug substantially as shown and described.

88,982
DESIGN FOR A COMBINED BRUSH AND NOZZLE
Gustaf Einar Lofgren, Riverside, Conn., assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware
Application November 29, 1935, Serial No. 59,820
Term of patent 14 years

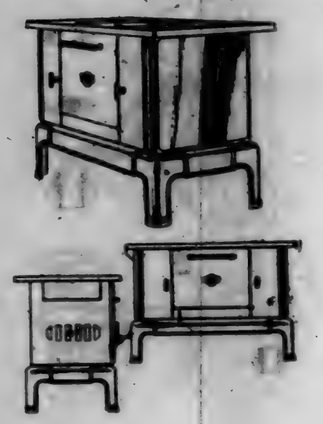
The ornamental design for a combined brush and nozzle as shown.

88,983
DESIGN FOR A WALKING STICK
Louis G. McCurtin, Maywood, N. J.
Application March 23, 1935, Serial No. 56,047
Term of patent 3½ years

The ornamental design for a walking stick, as shown and described.

88,984
DESIGN FOR A GAME BOARD
Raymond H. Cubrink, Los Angeles, Calif.
Application November 16, 1935, Serial No. 59,614
Term of patent 7 years

The ornamental design for a game board as shown.



88,885

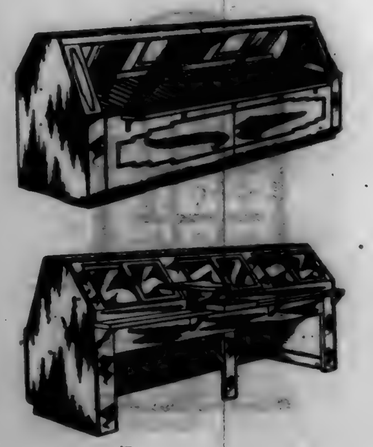
DESIGN FOR A SOLID FUEL COOK STOVE

George E. Pickup, Newark, Ohio, assignor to The Welsbo Company, Newark, Ohio, a corporation of Ohio

Application November 1, 1935, Serial No. 59,315

Term of patent 7 years

The ornamental design for a solid fuel cook stove, substantially as shown.



88,886

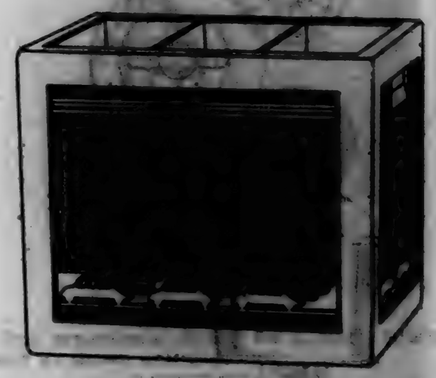
DESIGN FOR A SHOWCASE

Frank L. Pollard, Oakland, Calif.

Application October 26, 1935, Serial No. 59,214

Term of patent 3½ years

The ornamental design for a show-case as shown.



88,887

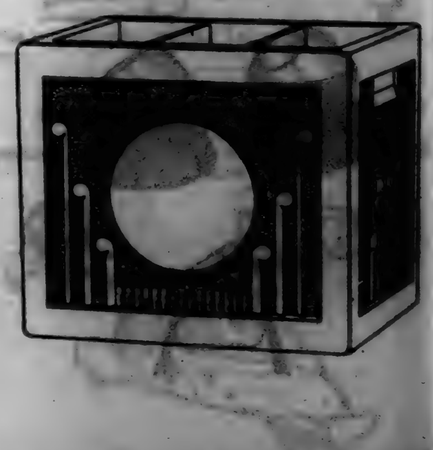
DESIGN FOR A STORAGE BATTERY CASE

Oliver O. Risser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio

Application November 16, 1935, Serial No. 59,671

Term of patent 7 years

The ornamental design for a storage battery case, as shown and described.



88,888

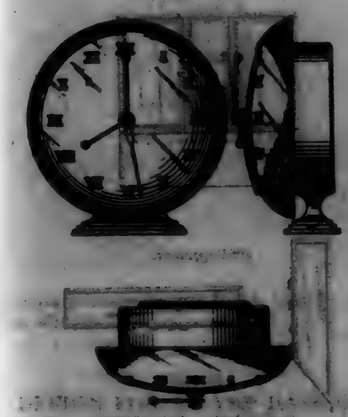
DESIGN FOR A STORAGE BATTERY CASE

Oliver O. Risser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio

Application November 16, 1935, Serial No. 59,672

Term of patent 7 years

The ornamental design for a storage battery case, as shown and described.



88,889

DESIGN FOR A CLOCK

Arnold E. Rittlesberg, New Rochelle, N. Y.

Application November 1, 1935, Serial No. 59,317

Term of patent 14 years

The ornamental design for a clock, as shown.

88,890

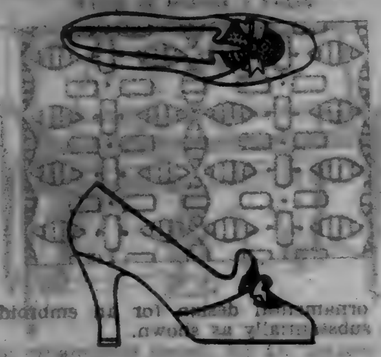
DESIGN FOR A BRASSIERE

William Rosenthal, New York, N. Y., assignor to Maiden Form Brassiere Company, Inc., New York, N. Y., a corporation of New York

Application November 15, 1935, Serial No. 59,524

Term of patent 14 years

The ornamental design for a brassiere, as shown.



88,891

DESIGN FOR A SHOE

Benjamin B. Gilmartin, Brooklyn, N. Y.

Application November 20, 1935, Serial No. 59,590

Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

88,892

DESIGN FOR A POWDER BOX OR SIMILAR ARTICLE

Jacob S. Sherman, Chicago, Ill.

Application November 11, 1935, Serial No. 59,496

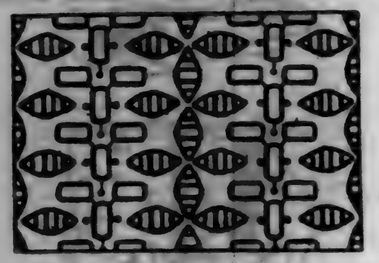
Term of patent 14 years

The ornamental design for a powder box or similar article, substantially as shown.

88,893

DESIGN FOR AN EMBROIDERED FABRIC

Louis A. Hill, New York, N. Y.



Application December 13, 1935, Serial No. 60,035

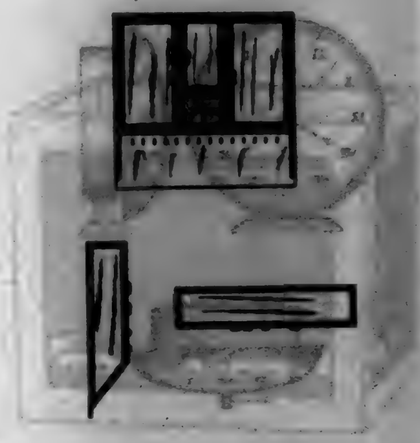
Term of patent 3½ years

The ornamental design for an embroidered fabric, substantially as shown.

98,096
DESIGN FOR AN EMBROIDERED FABRIC
Louis A. Hill, New York, N. Y.
Application December 13, 1935, Serial No. 59,617
Term of patent 3½ years

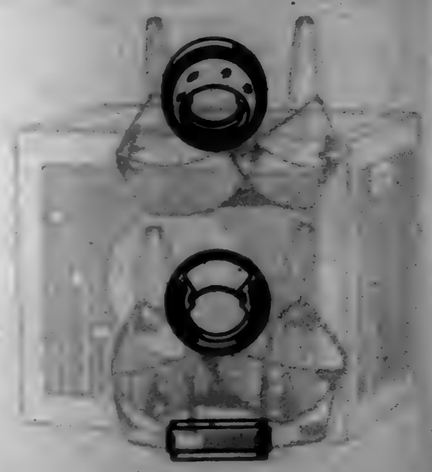
The ornamental design for an embroidered fabric, substantially as shown.

98,095
DESIGN FOR AN EAR DRUM PROTECTOR
Nat P. Stechler, New York, N. Y.
Application November 26, 1935, Serial No. 59,749
Term of patent 14 years



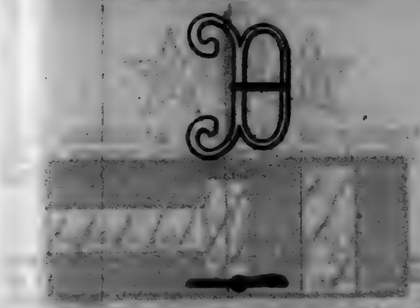
The ornamental design for an ear drum protector as shown.

98,098
DESIGN FOR A BEVERAGE COOLER
George V. Steffens, Clayton, Mo.
Application October 17, 1935, Serial No. 59,097
Term of patent 14 years



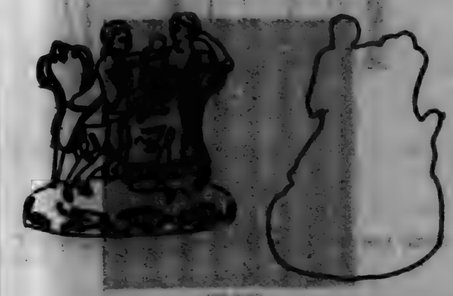
The ornamental design for a beverage cooler as shown and described.

98,097
DESIGN FOR A WALL CABINET
Ralph W. Swanson, Mount Pleasant, Mich.
Application August 1, 1935, Serial No. 57,251
Term of patent 14 years



The ornamental design for a wall cabinet, as shown.

98,093
DESIGN FOR A CASING FOR FLEXIBLE MEASURING RULES
Frederick A. Volk, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a corporation of Connecticut
Application April 20, 1935, Serial No. 55,569
Term of patent 14 years



The ornamental design for a casing for flexible measuring rules, as shown.

98,099
DESIGN FOR A BUCKLE
John J. Walsh, Maplewood, Mo., assignor to Hilton Shoe Company, St. Louis, Mo., a corporation of Missouri
Application November 5, 1935, Serial No. 59,306
Term of patent 3½ years

The ornamental design for a buckle, substantially as shown.

98,100
DESIGN FOR A LAMP BASE OR SIMILAR ARTICLE
Ruth Weidmann, New York, N. Y.
Application November 8, 1935, Serial No. 59,427
Term of patent 3½ years

The ornamental design for a lamp base or similar article, substantially as shown.

98,101
DESIGN FOR A BUCKLE
Harland F. Wright, Woodside, N. Y.
Application November 16, 1935, Serial No. 59,816
Term of patent 3½ years

The ornamental design for a buckle substantially as shown.

98,102
DESIGN FOR AN UPRIGHT PIANO
William Zaiser, Rockville Centre, N. Y., assignor to Winter & Co., a corporation of New York
Application November 7, 1935, Serial No. 59,419
Term of patent 7 years

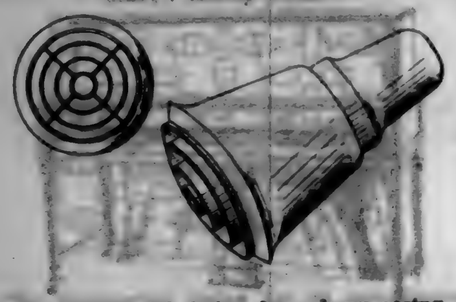
The ornamental design for an upright piano substantially as shown.

98,103
DESIGN FOR AN UPRIGHT PIANO
William Zaiser, Rockville Centre, N. Y., assignor to Winter & Co., a corporation of New York
Application November 7, 1935, Serial No. 59,420
Term of patent 7 years

The ornamental design for an upright piano substantially as shown.

98,104
DESIGN FOR AN UPRIGHT PIANO
William Zaiser, Rockville Centre, N. Y., assignor to Winter & Co., a corporation of New York
Application November 7, 1935, Serial No. 59,421
Term of patent 7 years

The ornamental design for an upright piano substantially as shown.



98,105

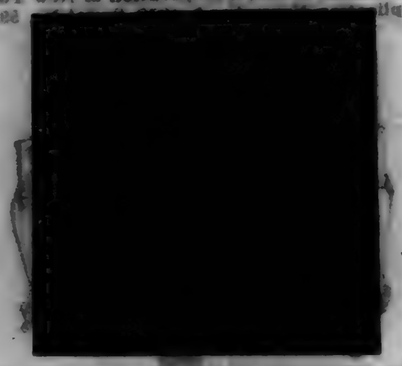
DESIGN FOR A LAMP CASING

Albert L. Arenberg, Chicago, Ill.

Application January 6, 1936, Serial No. 59,246

Term of patent 14 years

The ornamental design for a lamp casing, as shown.



98,106

DESIGN FOR LACE

George D. Bowen, Philadelphia, Pa.

Application December 13, 1935, Serial No. 59,038

Term of patent 3½ years

The ornamental design for lace, substantially as shown.

98,107

DESIGN FOR A FLEXIBLE POCKET RECEPTACLE

Warren R. Denton, Longmeadow, Mass.

Application November 22, 1935, Serial No. 59,709

Term of patent 14 years

The ornamental design for a flexible pocket receptacle substantially as shown and described.

98,108

DESIGN FOR A FLEXIBLE POCKET RECEPTACLE

Warren R. Denton, Longmeadow, Mass.

Application November 27, 1935, Serial No. 59,800

Term of patent 14 years

The ornamental design for a flexible pocket receptacle substantially as shown and described.

98,109

DESIGN FOR A TEXTILE FABRIC

Osmond Cubet, New York, N. Y.

Application September 23, 1935, Serial No. 59,291

Term of patent 3½ years

The ornamental design for a textile fabric substantially as shown and described.

98,110

DESIGN FOR AN APPLIQUE EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL

Charles Ramsey, New York, N. Y.

Application October 16, 1935, Serial No. 59,025

Term of patent 3½ years

The ornamental design for an applique emblem or similar article for wearing apparel, substantially as shown and described.

98,111

DESIGN FOR AN APPLIQUE EMBLEM OR SIMILAR ARTICLE FOR WEARING APPAREL

Charles Ramsey, New York, N. Y.

Application October 16, 1935, Serial No. 59,029

Term of patent 3½ years

The ornamental design for an applique emblem or similar article for wearing apparel, substantially as shown and described.

98,112

DESIGN FOR A LIGHTING UNIT

Joseph W. Gosling, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application November 24, 1934, Serial No. 54,145

Term of patent 14 years

The ornamental design for a lighting unit, as shown.

98,113

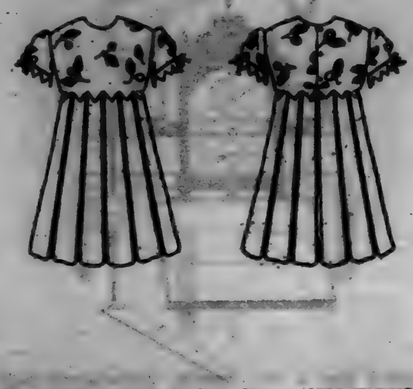
DESIGN FOR A TOILET SEAT

William C. Greenlger, Columbus, Ohio, assignor to John B. Pierce Foundation, New York, N. Y., a corporation of New York

Application May 20, 1935, Serial No. 56,900

Term of patent 14 years

The ornamental design for a toilet seat, as shown.



98,114

DESIGN FOR A DRESS

René Hubert, Hollywood, Calif., assignor to Rene-Hubert, Inc., Philadelphia, Pa., a corporation of Pennsylvania

Application November 6, 1935, Serial No. 59,351

Term of patent 3½ years

The ornamental design for a dress as shown and described.

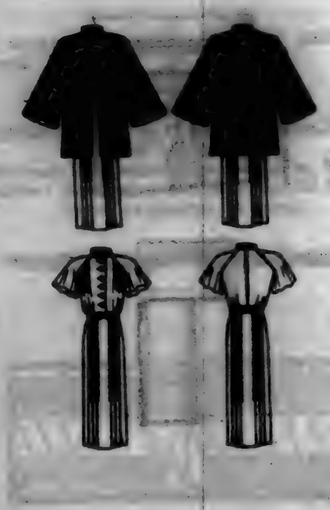
98,115

DESIGN FOR A PIANO CASE

Gardner C. Kavanagh, Rochester, N. Y., assignor to Aeolian American Corporation, East Rochester, N. Y., a corporation of New York

Application November 2, 1935, Serial No. 59,219

Term of patent 14 years

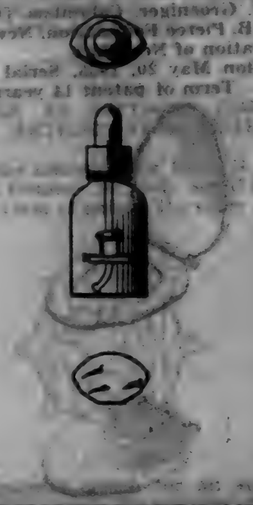


The ornamental design for a piano case as shown.

98,116
DESIGN FOR A MASS CARD HOLDER
William F. Lahn, Chicago, Ill., assignor to Holland Brass Works, Incorporated, Chicago, Ill., a corporation of Illinois
Application April 4, 1935, Serial No. 98,116
Term of patent 7 years

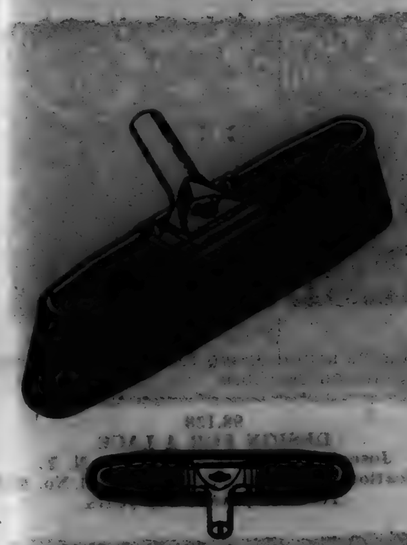
The ornamental design for a mass card holder, as shown.

98,117
DESIGN FOR AN ENSEMBLE DRESS
Emil Schwartz, New York, N. Y.
Application November 12, 1935, Serial No. 99,823
Term of patent 3½ years



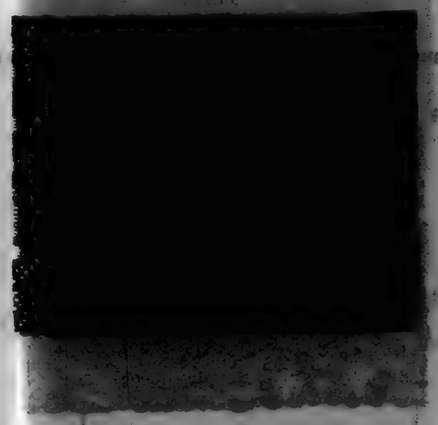
The ornamental design for an ensemble dress, substantially as shown.

98,118
DESIGN FOR AN ENSEMBLE DRESS
Emil Schwartz, New York, N. Y.
Application November 12, 1935, Serial No. 99,824
Term of patent 3½ years



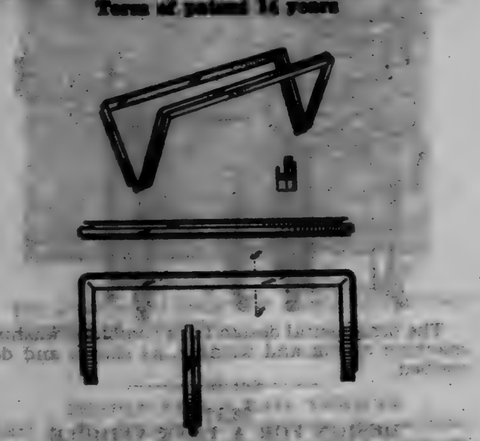
The ornamental design for an ensemble dress, substantially as shown, and described.

98,119
DESIGN FOR A COMBINATION BOTTLE AND DROPPER
Nat P. Stockler, New York, N. Y.
Application September 12, 1935, Serial No. 98,[illegible]
Term of patent 14 years



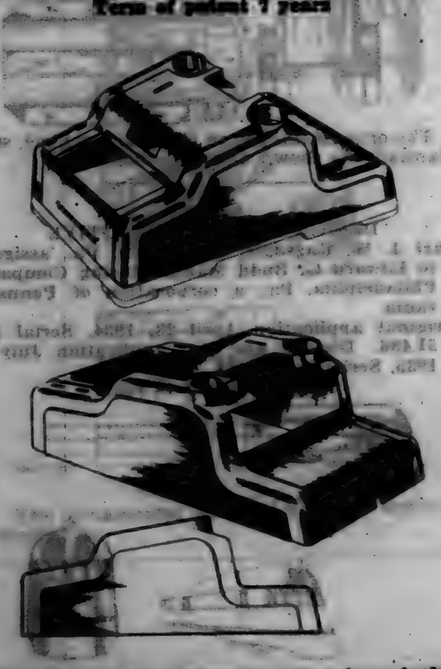
The ornamental design for a combination bottle and dropper, as shown and described.

98,120
DESIGN FOR A FLOOR BRUSH
Henry Cave, Hartford, Conn.
Application February 13, 1935, Serial No. 98,458
Term of patent 14 years



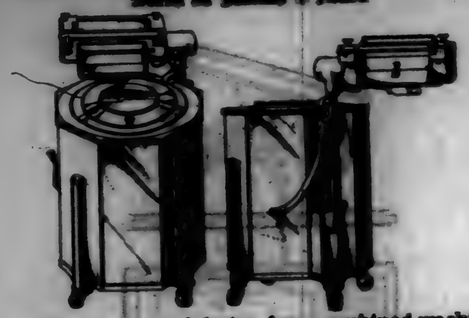
The ornamental design for a floor brush, as shown.

98,121
DESIGN FOR A LACE
Henry Glabel, New York, N. Y.
Application December 14, 1935, Serial No. 99,675
Term of patent 3½ years



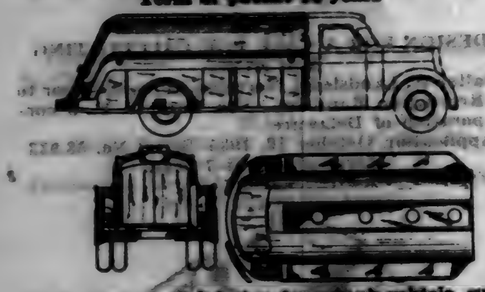
The ornamental design for a lace, substantially as shown.

98,122
DESIGN FOR A BAG FRAME
William C. Haring, Millburn Township, Essex County, N. J., assignor to The J. E. Morgott Company, Newark, N. J., a corporation of Delaware
Application November 4, 1935, Serial No. 99,276
Term of patent 14 years



The ornamental design for a bag frame, as shown and described.

98,123
DESIGN FOR A CASE FOR CALCULATING MACHINES
Walter W. Landsiedel, Norwood, Ohio, assignor to Remington Rand Inc., New York, N. Y., a corporation of Delaware
Application October 10, 1935, Serial No. 98,933
Term of patent 7 years



The ornamental design for a case for calculating machines as shown and described.

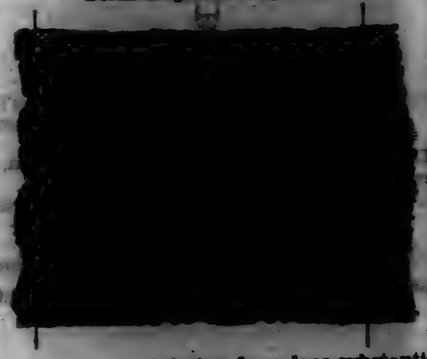
98,124
DESIGN FOR A COMBINED WASHING MACHINE CASING AND WRINGER
Arthur E. Peters, Fort Wayne, Ind., assignor to Horton Manufacturing Company, Fort Wayne, Ind., a corporation of Indiana
Application November 23, 1935, Serial No. 49,525
Term of patent 7 years

The ornamental design for a combined washing machine casing and wringer, as shown and described.

98,125
DESIGN FOR A TANK VEHICLE
Frederick G. Thwaits, Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application November 16, 1934, Serial No. 54,941
Term of patent 14 years

The ornamental design for a tank vehicle, substantially as shown and described.

98,126
DESIGN FOR A LOCOMOTIVE
Earl J. W. Ragsdale, Norristown, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Original application April 23, 1934, Serial No. 51,494. Divided and this application July 2, 1935, Serial No. 27,422
Term of patent 14 years

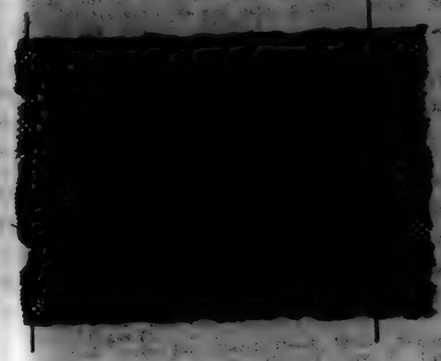


The ornamental design for a locomotive substantially as shown and described.

98,127
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 13, 1935, Serial No. 49,[illegible]
Term of patent [illegible]

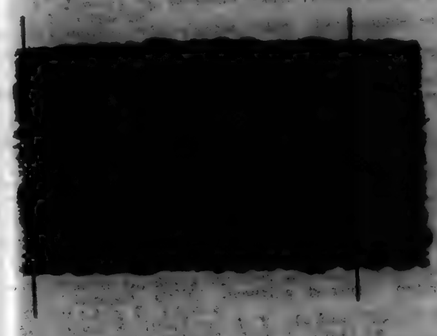
The ornamental design for a lace substantially as shown and described.

98,128
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 11, 1935, Serial No. 49,[illegible]
Term of patent [illegible]



The ornamental design for a lace substantially as shown and described.

98,129
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 13, 1935, Serial No. 49,[illegible]
Term of patent [illegible]

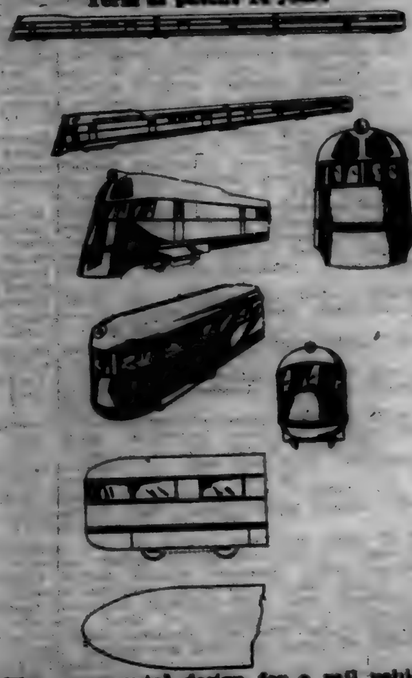


The ornamental design for a lace substantially as shown and described.

98,130
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 13, 1935, Serial No. 49,645
Term of patent 3½ years

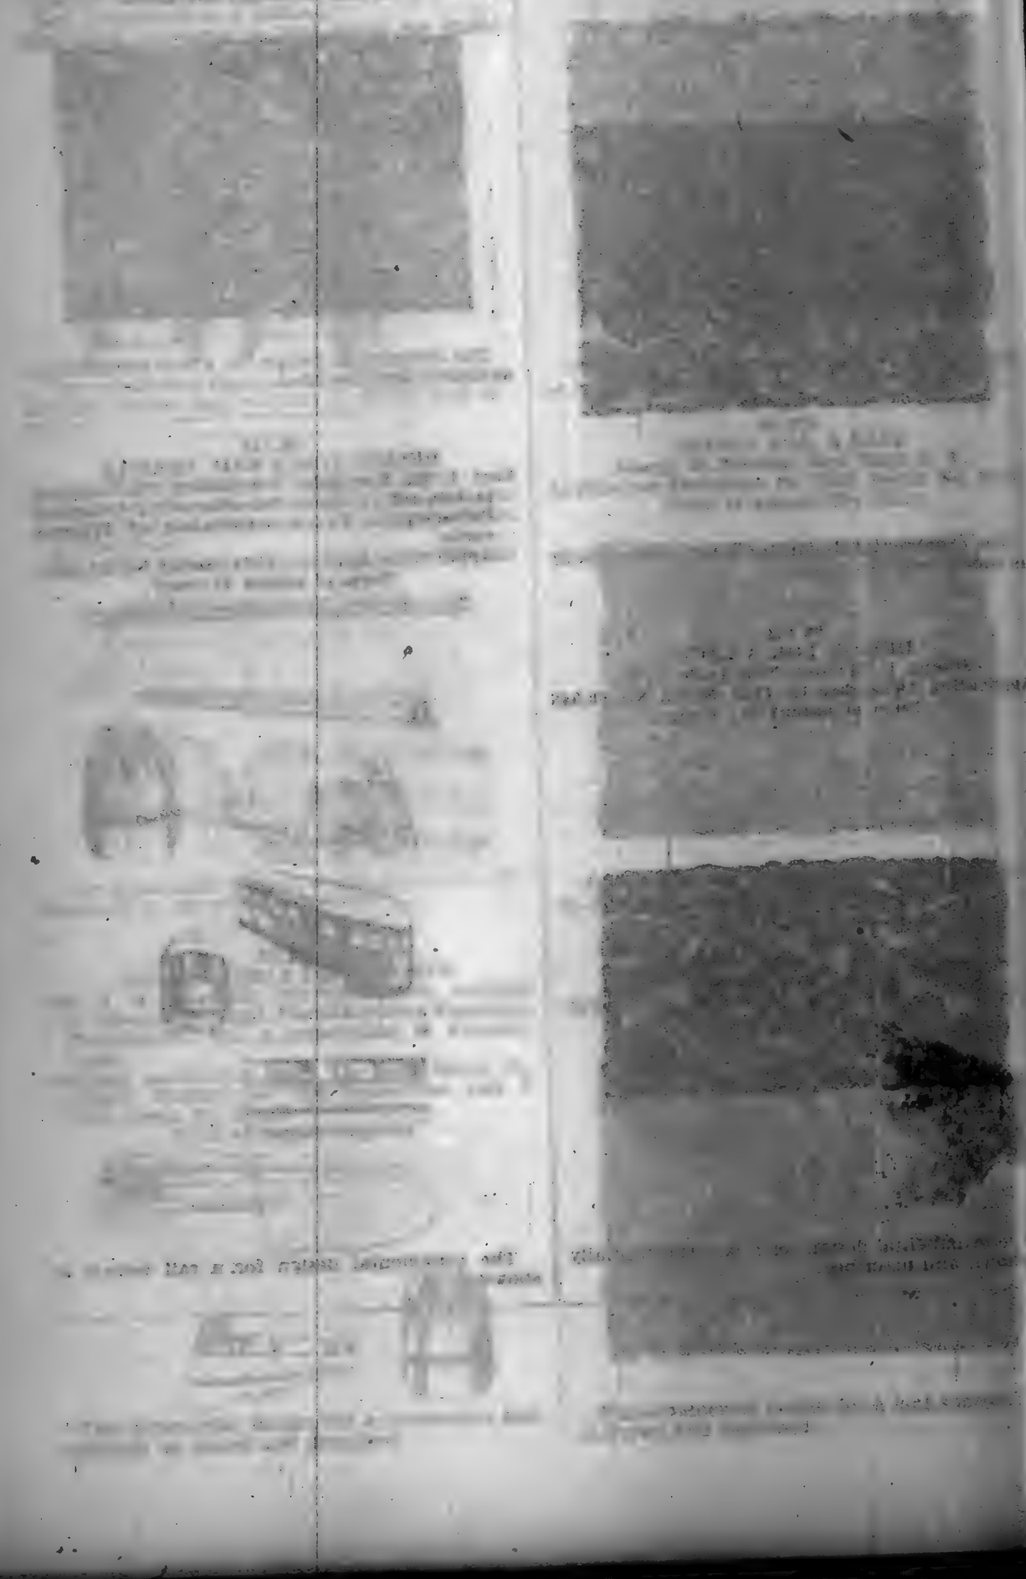
The ornamental design for a lace substantially as shown and described.

98,131
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 13, 1935, Serial No. 49,646
Term of patent 3½ years



The ornamental design for a lace substantially as shown and described.

98,132
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 14, 1935, Serial No. 49,671
Term of patent 3½ years



The ornamental design for a lace substantially as shown and described.

98,133
DESIGN FOR A RAIL VEHICLE
Earl J. W. Ragsdale, Norristown, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 23, 1934, Serial No. 51,486
Term of patent 14 years

The ornamental design for a rail vehicle as shown.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907]

Wiener, Joseph D., New York, N. Y. Lace. 98,131; Jan. 7.
Wiener, Joseph D., New York, N. Y. Lace. 98,132; Jan. 7.
Winter & Co. (See Zaiser, William, assignor.)
Wright, Harland F., Woodside, N. Y. Buckle. 98,101; Jan. 7.
Zaiser, William, Rockville Centre, N. Y., assignor to Winter & Co. Upright piano. 98,102; Jan. 7.
Zaiser, William, Rockville Centre, N. Y., assignor to Winter & Co. Upright piano. 98,103; Jan. 7.
Zaiser, William, Rockville Centre, N. Y., assignor to Winter & Co. Upright piano. 98,104; Jan. 7.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 7TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abramson, John H., and H. C. Swanson, assignor to Greenlee Bros. & Co., Rockford, Ill. Tubular boring tool. 2,027,130; Jan. 7.
Adams, John H., Seattle, Wash. Nonslipping hairpin. 2,026,706; Jan. 7.
Agfa Ansco Corporation. (See Goldhammer, Leo., assignor.)
Agfa Ansco Corporation. (See Kipphan, Karl, assignor.)
Air-Way Electric Appliance Corporation. (See Riebel, Frederick, Jr., assignor.)
Aktiengesellschaft Brown Boveri & Cie. (See Brynhildsen, C., and Kern, assignors.)
Alabama Asphaltic Limestone Company. (See Counselman, Joseph H., assignor.)
Alexander Wacker, Dr., Gesellschaft fur Electrochemische Industrie, G. m. b. H. (See Gruber, Wolfgang, assignor.)
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. Torque amplifying system. 2,027,140; Jan. 7.
Alfreda, Torris H., assignor to H. J. Taylor, Park Ridge, Ill. Emulsifying apparatus. 2,026,604; Jan. 7.
Aliano, Peter, assignor of 40 percent to J. Miles, Brooklyn, N. Y. Automobile body. 2,027,141; Jan. 7.
Allen, Charles B., Arvada, Colo. Door opening and closing device. 2,026,956; Jan. 7.
Allen, Edgar W., Elden, Mo. Storage battery. 2,027,982; Jan. 7.
Alley, John D., Pittsburgh, Pa., assignor to American Brakeblok Corporation, New York, N. Y. Making composition friction elements. 2,016,767; Jan. 7.
Allis-Chalmers Manufacturing Company. (See Newhouse, Ray C., assignor.)
Allis-Chalmers Manufacturing Company. (See Wilkinson, Nathan, assignor.)
Allison, John T. (See Cleveland, C. H., Heine, and Allison.)
Allison, Kenneth C. (See Dressel, H. M., and Allison.)
Allison, Sewell W., West Orange, N. J., and J. B. McKim, Douglas Manor, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone exchange system. 2,027,142; Jan. 7.
Almen, John O. (See Wood, W. A., and Almen.)
Aluminum Company of America. (See Dean, W. A., and Janeura, assignors.)
Aluminum Company of America. (See Fink, William L., assignor.)
Aluminum Company of America. (See Hopkins, Howard L., assignor.)
Aluminum Company of America. (See Kempf, L. W., and Dean, assignors.)
Amco, Incorporated. (See Geer, Paul L., assignor.)
American Brakeblok Corporation. (See Alley, John D., assignor.)
American Can Company. (See Beck, Neils P., assignor.)
American Can Company. (See Foss, Fred G., assignor.)
American Can Company. (See Hothersall, John M., assignor.)
American Can Company. (See Taylor, William R., assignor.)
American Can Company. (See Young, John M., assignor.)
American Cyanamid & Chemical Corporation. (See Harding, W. H., and Montgomery, assignors.)
American Fixture & Showcase Manufacturing Company. (See Schott, Peter, Jr., assignor.)
American Hyalsol Corporation. (See Bertsch, Heinrich, assignor.)
American Lurgi Corporation. (See Debesh, Carl P., assignor.)
American Seating Company. (See Barrett, Glenn J., assignor.)
American Smelting and Refining Company. (See Fleming, Edward P., assignor.)
American Steel Foundries. (See Hodgsock, William C., assignor.)
American Stove Company. (See Stockstrom, A., and Brodbeck, assignors.)
American Telephone and Telegraph Company. (See Mitchell, Dorse, assignor.)
American Telephone and Telegraph Company. (See Stone, John S., assignor.)
American Television Laboratories, Inc. (See DeForest Lee, assignor.)
Anderson Boyes & Company Limited. (See Pascoe, E. F., Hornsby, and Harrison, assignors.)
Anderson, Lewis H., assignor to Standard Oil Company, Chicago, Ill. Barrel seal. 2,027,143; Jan. 7.
Antisell, Frank L., Wilkinsburg, assignor to Copperweld Steel Company, Glassport, Pa. Working and treating metals. 2,026,866; Jan. 7.
Antogiovanni, Ugo. (See Dumble, William H., assignor.)
Archer, Sylvanus M. (See Bennett, M. D., and Archer.)
Arrington, Arthur P., Willoughby, assignor to The Euclid Road Machinery Company, Euclid, Ohio. Axle unit. 2,027,218; Jan. 7.
Aronson, Meyer L., assignor of one-half to W. Sachs, Hartford, Conn. Attachment for rulers. 2,026,768; Jan. 7.
Arther, James H. (See Belter, D. I., and Arthur.)
Associated Electric Laboratories, Inc. (See McCarthy, Daniel J., assignor.)
Athey Truss Wheel Co. (See Kuehar, Joseph, assignor.)
Atkinson, Ernest, Toronto, Ontario, Canada. Insect trap. 2,027,011; Jan. 7.
Atlantic Refining Company, The. (See Birkhimer, Edwin R., assignor.)
Attick, Purdy E., and J. J. Bosshard, Chicago, assignors to Brasco Manufacturing Company, Harvey, Ill. Store front construction. 2,027,061; Jan. 7.
Atwood, Francis C., Newton, Mass. Producing mica products. 2,027,062; Jan. 7.
Austin, Walter M., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit breaker. 2,027,219; Jan. 7.
Austro-Daimler-Puchwerke A. G. (See Hacker, Oskar, assignor.)
Austro-Daimler-Puchwerke A. G. (See Hacker, Oskar, assignor.)
Automatic Products Corporation. (See Wetsel, Theodore A., assignor.)
Automatic Sprinkler Company of America. (See Lowe, H. A., and Hamilton, assignors.)
Bach, Neils P., Geneva, assignor to American Can Company, New York, N. Y. Can feeding mechanism. 2,026,811; Jan. 7.
Back, Alfred, Reichenberg, Czechoslovakia, and J. Krautschneider, Hudson Bay Junction, Saskatchewan, Canada. Continuously variable change-speed gear. 2,026,928; Jan. 7.
Backs, John C., Howell, Mich. Heater and ventilator for motor vehicles. 2,026,929; Jan. 7.
Baer, John M., assignor to The Guardite Corporation, Chicago, Ill. Container. 2,027,083; Jan. 7.
Bahr-Manning Corporation. (See Schacht, Elmer C., assignor.)
Baka, Louis E., Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Formation of lauge compounds. 2,027,144; Jan. 7.
Baker, Donald J., Hartford, Conn. Television system and method. 2,026,725; Jan. 7.
Baker Ice Machine Co. Inc. (See Schneider, Albert E., assignor.)
Baldwin Southwark Corporation. (See Neeson, Charles R., assignor.)
Balfour L. G. Company. (See Niven, H. A., and Kilf, assignors.)
Ball, Charles A., assignor to Chicago Belting Company, Chicago, Ill. Apparatus for treating adhesive. 2,026,726; Jan. 7.
Barber-Colman Company. (See Sadtler, Chester B., assignor.)
Becker, Frederic R., Georgetown, Mass. Pencil. 2,026,815; Jan. 7.
Barnes, William B., Indianapolis, Ind. Oiling means for planetary transmission. 2,027,012; Jan. 7.
Barnes, William R., Indianapolis, Ind. Transmission. 2,027,013; Jan. 7.
Barnhart, George E., Pasadena, Calif. Airfoil construction. 2,026,727; Jan. 7.
Barnhart, George E., Pasadena, Calif. Airfoil construction for airplanes. 2,026,728; Jan. 7.
Barrett Company, The. (See Eckert, Clarence R., assignor.)
Barrett Company, The. (See Moses, F. G., Hess, and Perkins, assignors.)
Barrett, Glenn J., assignor to American Seating Company, Grand Rapids, Mich. Supporting rack. 2,026,858; Jan. 7.
Barthing, Hermann, Bielefeld, Germany. Row of houses with displaced gangways. 2,026,864; Jan. 7.
Bashor, Julius D., Port Jervis, N. Y. Carburetor. 2,027,268; Jan. 7.
Baskin, Edwin T., Kansas City, Mo. Three fingered mitten. 2,027,084; Jan. 7.
Basnick Company, The. (See Logie, Thomas T., assignor.)
Bates, Ralph L., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Valve for shock absorbers. 2,026,760; Jan. 7.
Bauer, Ernest K., assignor to Bigelow-Sanford Carpet Co. Inc., Thompsonville, Conn. Hand spreader for placing an adhesive on the back of carpets and rugs. 2,027,221; Jan. 7.

Batchman, George W., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Electric cable. 2,027,222; Jan. 7.

Bauroth, Walter J., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Fuse and switch receptacle. 2,026,927; Jan. 7.

Bausch & Lomb Optical Company. (See Bausch, William, assignor.)

Bausch, William, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Making ophthalmic lenses. 2,026,606; Jan. 7.

Baynes, Edward C., Birmingham, Mich. Sheet metal nut and making same. 2,026,889; Jan. 7.

Beasley, Charles B., San Diego, Calif. Reel. 2,026,965; Jan. 7.

Becker, Bernard C. (See White, H. B., and Becker.)

Becker, Karl, Berlin-Steglitz, K. Schröter, Berlin-Lichtenberg, and H. Wolf, Berlin, Germany, assignors, by mesne assignments, to General Electric Company, Schenectady, N. Y. Sintered hard metallic alloy. 2,026,958; Jan. 7.

Beebe, Jesse, Tulsa, Okla. Sight attachment for car or other tanks. 2,027,145; Jan. 7.

Beechey, Horace G. St. V. (See Morrell, S. T., and Beechey.)

Behlmer, Otto, Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y. Making gasoline. 2,027,014; Jan. 7.

Behr-Manning Corporation. (See Buckner, Orville S., assignor.)

Behr-Manning Corporation. (See Schacht, Elmer C., assignor.)

Bekemans, Joseph A. (See Jackson, T. J., and Bekemans.)

Bell, David. (See Wallace, W. E., and Bell.)

Bell, Gertrude F., administratrix. (See Bell, Walter M., assignor.)

Bell Laboratories, Incorporated. (See Harrison, Henry C., assignor.)

Bell Punch Printing Company. (See Webb, Christopher F., assignor.)

Bell Telephone Laboratories, Incorporated. (See Allison, S. W., and McKim, assignors.)

Bell Telephone Laboratories, Incorporated. (See Harrison, Henry C., assignor.)

Bell Telephone Laboratories, Incorporated. (See Lalico, Joseph P., assignor.)

Bell Telephone Laboratories, Incorporated. (See Myers, Oscar J., assignor.)

Bell Telephone Laboratories, Incorporated. (See Powell, Albert C., assignor.)

Bell Telephone Laboratories, Incorporated. (See Smythe, Edwin H., assignor.)

Bell, Walter M., deceased, Chicago, Ill., G. F. Bell, administratrix of said Walter M. Bell, assignor to G. F. Bell. Pump. 2,027,015; Jan. 7.

Benade, Walther, Dessau-in-Anhalt, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Pyrazolone azo dyes and their production. 2,026,861; Jan. 7.

Bender, Carl, Cologne-Lindenthal, Germany. Grip mechanism for cableways. 2,026,960; Jan. 7.

Bendix Aviation Corporation. (See Carbonara, Victor E., assignor.)

Benham, Frank L., assignor to Ohio Seamless Tube Company, Shelby, Ohio. Apparatus for reducing and elongating tubes. 2,026,666; Jan. 7.

Bennett, Alexander H., London, England. Manufacture of acid calcium citrate. 2,027,264; Jan. 7.

Bennett, Maurice D., and H. M. Archer, assignors to The Yale & Towne Mfg. Co., Stamford, Conn. Safe. 2,027,362; Jan. 7.

Bennett, Theodore A., Chicago, Ill. Antigunmeter. 2,026,607; Jan. 7.

Benson, George O., Niagara Falls, N. Y. Clamping device. 2,027,220; Jan. 7.

Bergman, George W., Evanston, Ill. Signal. 2,026,770; Jan. 7.

Bertsch, Heinrich, Chemnitz, Germany, assignor, by mesne assignments, to American Hyalsol Corporation, Wilmington, Del. Soap preparation. 2,026,816; Jan. 7.

Bertsch, Heinrich, assignor to H. Th. Böhme, Aktiengesellschaft, Chemnitz, Germany. Process for the making of dye baths and printing colors for naphthol dyeing. 2,026,817; Jan. 7.

Bigelow-Sanford Carpet Co. (See Bauer, Ernest K., assignor.)

Bigelow-Sanford Carpet Co. Inc. (See Phoenix, Ernest T., assignor.)

Bingham, Eugene C., Easton, Pa. Window construction. 2,027,016; Jan. 7.

Bircher Co., The. (See Keiser, Arthur J., assignor.)

Birkhimer, Edwin R., assignor to The Atlantic Refining Company, Philadelphia, Pa. Hydrocarbon oil treatment. 2,026,812; Jan. 7.

Bishop & Babcock Sales Company, The. (See Koepke, Edward C., assignor.)

Bispham, Mabel A., Los Angeles, Calif. Fastening device. 2,026,930; Jan. 7.

Bissell, Carey K. (See Bissell, James E., and C. K.)

Bissell, James E., Brooklyn, N. Y., and C. K. Bissell, Elizabeth, N. J. Salting edible nuts. 2,026,818; Jan. 7.

Björklund, Alrik. (See Flisberg, E. A. M., and Björklund.)

Black, William A., New Richmond, Wis. Barrel truck. 2,027,265; Jan. 7.

Blandon Manufacturing Company, The. (See Myers, Don D., assignor.)

Black, Grayton K. (See Smith, F. H., and Black.)

Blatch, Francis H. (See Mennie, W. C., and Blatch.)

Blumenfeld, Joseph, Paris, France, and M. Hajny, Kralupy nad Czechoslovakia, assignors to Krebs Pigment & Color Corporation, Newark, N. J. Preparation of titanium pigments. 2,026,867; Jan. 7.

Bly, Ernest W., and H. H. Latey, Cleveland, Ohio. Nut reaming machine. 2,027,168; Jan. 7.

Bogaty, Hermann S., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Conveyer structure. 2,027,200; Jan. 7.

Bögemann, Max, Cologne-Mülheim, assignor to J. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Nitrogenous sulphonic acids and process of producing same. 2,026,969; Jan. 7.

Böhme, H. Th., Aktiengesellschaft. (See Bertsch, Heinrich, assignor.)

Bilmer, Henry, Jr., Woodbury Heights, and S. S. Lippincott, Palmyra, assignors to "Penlastic" Gasket Co., Camden, N. J. Gasket centering means. 1,927,284; Jan. 7.

Bonney, William H., Grosse City, Oreg. Liquid dispensing device. 2,026,818; Jan. 7.

Bonnhard, John J. (See Attick, P. E., and Bonnhard.)

Boston Machine Works Company. (See Capwell, Walter P., assignor.)

Boutwick, Myron A., Spokane, Wash., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Direct trip device. 2,027,221; Jan. 7.

Boswell, Maitland C., Toronto, Ontario, Canada. Preparing a catalyst for the reduction of sulphur dioxide. 2,026,819; Jan. 7.

Bowen, Herbert C., assignor to Hydraulic Brake Company, Detroit, Mich. Compound cylinder. 2,027,267; Jan. 7.

Bradley, Eric M., Cincinnati, assignor to National Pumps Corporation, Dayton, Ohio. Liquid dispensing apparatus. 2,026,950; Jan. 7.

Bradley Lumber Company of Arkansas. (See Blackwell, Byrd C., assignor.)

Braibanti, Giuseppe. (See Braibanti, Mario and G.)

Braibanti, Mario and G., Milan, Italy. Machine for preparing pastes. 2,026,967; Jan. 7.

Branch, Leslie R. T., Ilford, England, assignor to Eastman Kodak Company, Rochester, N. Y. Motion picture camera and projector. 2,026,960; Jan. 7.

Brandtjen & Kluge, Inc. (See Kluge, Abel and E., assignors.)

Brasco Manufacturing Company. (See Attick, P. E., and Bonnhard, assignors.)

Brashears, Maurice L., Washington, D. C. Card holder. 2,027,060; Jan. 7.

Bray, Ulric E., Los Angeles, and C. H. Swift, Glendale, assignors to Union Oil Company of California, Los Angeles, Calif. Production of lubricating oil. 2,026,722; Jan. 7.

Brehmer, Gebrüder. (See Kleinschmitt, O., and Muller.)

Brett, George P., Leeds, England, assignor to Radio Corporation of America. Electrical oscillation generator. 2,027,011; Jan. 7.

Briggs Manufacturing Company. (See Marshall, William, assignor.)

Brigham, Edmund H. (See Stever, O. H., and Brigham.)

Bright Star Battery Company. (See Corigliano, P., and Platzman, assignors.)

Brinkman, Louis H., Glen Ridge Borough, N. J. Corrugating machine. 2,027,013; Jan. 7.

British Steel Piling Company, The. (See Wilcox, Duncan M., assignor.)

Brodbeck, Elmer H. (See Stockstrom, A., and Brodbeck.)

Brodsky, Milton. (See Goeltz, W. L., and Brodsky.)

Brodt, Mercedes K., Lakewood, Ohio. Pad and cover. 2,026,961; Jan. 7.

Brookby, Andrew C., Mount Morris, Mich. Reversible name plate and holder. 2,027,096; Jan. 7.

Brown, George D., and G. M. Myers, Rusty Glo, Pa. Safety switch. 2,026,962; Jan. 7.

Brown, L. J. (See Jeffries, Orea L., assignor.)

Brunen, Herman A., and L. W. Cavert, assignors to Rohm & Haas Company, Philadelphia, Pa. Hydroaromatic alcohol. 2,026,969; Jan. 7.

Bryant, Roy B., Dallas, Tex. Automatic phonograph. 2,026,836; Jan. 7.

Bryce, James W., Bloomfield, N. J., assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y. Scale. 2,027,019; Jan. 7.

Brynhildsen, Christen, Baden, and B. Kern, Ennetbaden, assignors to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland. Electron discharge device control system. 2,026,771; Jan. 7.

Buck, Richard C., Yonkers, N. Y. Window shade. 2,026,669; Jan. 7.

Buckner, Orville S., Westboro, Mass., assignor to Behr-Manning Corporation, Troy, N. Y. Abrasive sheet and making the same. 2,027,067; Jan. 7.

Budd Wheel Company. (See Farr, Warren H., assignor.)

Bullinger, Wilhelm K. (See Miller, Ralph W., assignor.)

Burke, Ethyln M. (See Burke, John E., assignor.)

Burke, John E., assignor to H. M. Burke, Fond du Lac, Wis. Hanger for playground swings. 2,026,670; Jan. 7.

Burns, Charles E., assignor to Vanity Fair Silk Mills, Reading, Pa. Warp knit girdle with integral supporting panels. 2,026,962; Jan. 7.

Burns, Edward Lee Angeles, and H. P. Wickersham, Huntington Park, Calif. Balancable pivoting seat. 2,026,981; Jan. 7.

Buse, Edwin G., and E. W. Gibson, assignors to Chicago Railway Equipment Company, Chicago, Ill. Third point support shoe. 2,027,147; Jan. 7.

Butterfield, Emory H., Davenport, Iowa, assignor of one-half to Leland K. Ford, Chicago, Ill. Metal lacing. 2,026,671; Jan. 7.

Byers, Horace G. (See Scott, W., and Byers.)

Byron-Jackson Co. (See Chesnut, J. D., and Herrel, assignors.)

Cairns, Edward, Mountclair, N. J. Cabinet for collapsible tubes. 2,026,864; Jan. 7.

Calafati, Salvator S., Jr., et al. (See Calafati, Salvator S., assignor.)

Calafati, Salvator S., assignor of three-fourths to S. S. Calafati, Jr., and one-fourth to J. M. Cole, New York, N. Y. Roof construction. 2,026,699; Jan. 7.

Calco Chemical Co., Inc., The. (See Johnson, Edward S., assignor.)

Calcyanide Products Corporation. (See Hinds, William W., assignor.)

Caldwell, Frank W., West Hartford, and H. Martin, Hartford, Conn., assignors to United Aircraft Corporation. Propeller control mechanism. 2,026,814; Jan. 7.

Cameron, Donald R. (See Hale, G. C., and Cameron.)

Campbell, John, and E. G. Quinn, Glens Falls, assignors to International Paper Company, New York, N. Y. Producing a cellulose product. 2,026,969; Jan. 7.

Cannon, John W., Plainfield, N. J. Oil burner. 2,026,970; Jan. 7.

Capstaff, John G., assignor to Eastman Kodak Company, Rochester, N. Y. Film for color photography. 2,026,964; Jan. 7.

Carbonara, Victor E., Rockville Center, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Altimeter. 2,027,068; Jan. 7.

Carmody, William H. (See Rockwell, C. A., and Carmody.)

Carpenter, Marion S., Nutley, and M. C. Kunz, Montclair, N. J., assignors to Givaudan-Delawanna, Inc., New York, N. Y. Preparation of protocatechuic aldehyde. 2,027,149; Jan. 7.

Carr, J. K., et al. (See Rogers, Clifford H., assignor.)

Carraway, Marshall L., Malvern, Ark. Swing. 2,027,089; Jan. 7.

Carter, Philip S., Port Jefferson, N. Y., assignor to Radio Corporation of America. Directional antenna. 2,027,020; Jan. 7.

Carter, William W., Needham, assignor to Brayton Motion, Fall River, Mass. Supporting matter in manufactured material. 2,027,090; Jan. 7.

Cartlidge, Frank, assignor to Goodman Manufacturing Company, Chicago, Ill. Loading machine. 2,027,091; Jan. 7.

Candor, Robert R., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigerating apparatus. 2,027,223; Jan. 7.

Cawley, Aloysius J., Pittston, Pa. Television apparatus. 2,026,610; Jan. 7.

Celanese Corporation of America. (See Khanolia, K., and Ward, assignors.)

Celanese Corporation of America. (See Olpin, Henry C., assignor.)

Celanese Corporation of America. (See Stafford, Charles E., assignor.)

Chadwick, Lee R., Shaker Heights Village, M. Resek, Cleveland Heights, and J. A. Dahlstrom, Ray Village, assignors to Perfection Stove Company, Cleveland, Ohio. Thermostatically adjusted draft regulator. 2,026,864; Jan. 7.

Chandler & Price Company, The. (See Tyler, H. K., and Reichart, assignors.)

Chase Companies, Incorporated, The. (See Surfleet, Morris E., assignor.)

Chase, Theron P., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Composite piston. 2,026,611; Jan. 7.

Chase, Theron P., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Manufacture of composite pistons. 2,026,612; Jan. 7.

Checchi, Samuel J. (See Dunkle, William H., assignor.)

Chesnut, John D., and H. K. Herrel, assignors to Byron-Jackson Co., Los Angeles, Calif. Tong. 2,026,514; Jan. 7.

Chicago Belting Company. (See Ball, Charles A., assignor.)

Chicago Flexible Shaft Company. (See McArdle, M. W., and Jeppesen, assignors.)

Chicago Forging & Manufacturing Co. (See Myers, Norton A., assignor.)

Chicago Railway Equipment Company. (See Bonse, R. G., and Ekholm, assignors.)

Chireix, Henri, and R. Villem, assignors to Compagnie Generale de Telegraphie Sans Fil, Paris, France. Secrecy system. 2,026,613; Jan. 7.

Christensen, Wiels A., South Euclid, Ohio. Power cylinder. 2,026,672; Jan. 7.

Christian, Joseph D., San Francisco, Calif. Electric power unit. 2,027,149; Jan. 7.

Cincinnati Time Recorder Company, The. (See Streckfuss, Elmer G., assignor.)

Cisor, Benjamin F., Los Angeles, Calif. Combination fork. 2,026,932; Jan. 7.

Claassen, Alois A., assignor of one-half to J. L. Hyland, Chicago, Ill. Treating matter, steel. 2,027,300; Jan. 7.

Clark, Gabriel, trustee, et al. (See Loveridge, F. H., and Smythe.)

Clarke, Louis A., Pinhill, assignor to The Texas Company, New York, N. Y. Solvent refining with nitro-alcohols. 2,027,354; Jan. 7.

Cleghorn, Albert E., Brooklyn, assignor to Travatex Products Corporation, New York, N. Y. Manufacture of decoratively colored articles. 2,027,021; Jan. 7.

Cleveland, Charles M., C. A. Heine, and J. T. Allison, Minneapolis, Minn. Apparatus for renewing worn valve seats. 2,026,821; Jan. 7.

Clifford, Albert M., Stow, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Antioxidant. 2,026,817; Jan. 7.

Close, Isaac H., Oakland, Calif. Spark plug. 2,026,912; Jan. 7.

Clouse, William L., assignor to The National Machinery Company, Tiffin, Ohio. Bolt making machine. 2,026,823; Jan. 7.

Coffey, Samuel, and J. B. Schofield, Huddersfield, England, assignors to Imperial Chemical Industries Limited. Derivatives of urea. 2,027,150; Jan. 7.

Cole, John M., et al. (See Calafati, Salvator S., assignor.)

Columbus McKinnon Chain Corporation. (See Stahl, F. E., and Waterstrat, assignors.)

Compagnie Generale de Telegraphie Sans Fil. (See Chireix, H., and Villem, assignors.)

Compagnie Generale de Telegraphie Sans Fil. (See Ponte, Maurice, assignor.)

Compton, Charles A., Menlo Park, Calif. Oil filter for restaurants. 2,026,867; Jan. 7.

Conklin, James W., Rocky Point, N. Y., assignor to Radio Corporation of America. Fading elimination. 2,027,022; Jan. 7.

Continental Optical Company. (See Lauber, J. A., and Schupaack, assignors.)

Conway, Martin J., Coatesville, Pa. Apparatus for making open-hearth steel. 2,027,151; Jan. 7.

Conselman, Joseph H., assignor to Alabama Asphaltic Limestone Company, Birmingham, Ala. Paving composition and producing same. 2,026,614; Jan. 7.

Cook Paint & Varnish Company. (See Heck, Adolf, assignor.)

Cook Paint & Varnish Company. (See Heck, Adolf, assignor.)

Cooper-Bessemer Corporation. (See Gehres, Hewitt A., assignor.)

Cooper, Ellis W., Los Angeles, Calif. Cable clamp. 2,026,824; Jan. 7.

Cooper, Glenn A., assignor to Cruver Manufacturing Company, Chicago, Ill. Method and apparatus for converting solid articles into tubular structures. 2,027,152; Jan. 7.

Copperweld Steel Company. (See Antheil, Frank L., assignor.)

Corigliano, Peter, St. Albans, and L. Platzman, Brooklyn, N. Y., assignors to Bright Star Battery Company, Hoboken, N. J. Dry cell. 2,026,615; Jan. 7.

Cornell, Edward S., Jr., Larchmont, N. Y. One-handed lip stick. 2,026,868; Jan. 7.

Cornell Iron Works, Inc. (See Cornell, Milton L., assignor.)

Cornell, Milton L., New York, assignor to Cornell Iron Works, Inc., Long Island City, N. Y. Overhead-acting gille. 2,027,153; Jan. 7.

Coulter, James, Bridgeport, Conn. Multiple spindle boring machine. 2,027,023; Jan. 7.

Coupland, Richard C., United States Army, Norfolk, Va. Trigger motor. 2,026,518; Jan. 7.

Covert, Lloyd W. (See Bruson, H. A., and Covert.)

Cromar Co., The. (See Dittmar, Irvin F., assignor.)

Crouman, Loring P., Maplewood, assignor to Gardner Company, Orange, N. J. Paper guide device. 2,026,860; Jan. 7.

Cramaine, Chester W., assignor to Eastman Kodak Company, Rochester, N. Y. Automatic film stop for cameras. 2,027,332; Jan. 7.

Cramaine, Chester W., assignor to Eastman Kodak Company, Rochester, N. Y. Camera construction. 2,027,333; Jan. 7.

Cruver Manufacturing Company. (See Cooper, Glenn A., assignor.)

Curran, Charles W., and W. H. Funk, Spokane, Wash. Signal. 2,026,963; Jan. 7.

Curtis, Harry A., Knoxville, Tenn., assignor to Tennessee Valley Authority, Wilson Dam, Ala. Apparatus for making phosphoric acid. 2,026,510; Jan. 7.

Cushing, Abraham D., Woodsville, N. H. Finger cuff. 2,026,966; Jan. 7.

Dahlstrom, John A. (See Chadwick, L. R., Resek, and Dahlstrom.)

Daimler-Benz Aktiengesellschaft. (See Nallinger, Fritz, assignor.)

Dalton, Samuel J., Jackson, Miss. Traffic stripe machine. 2,026,670; Jan. 7.

Dana, Carl L., Milwaukee, Wis., assignor of one-half to W. F. Dana, Saginaw, Mich., and one-half to L. R. and M. A. Smith, Wauwatosa, Wis. Lubricator. 2,027,024; Jan. 7.

Dana, William F., et al. (See Dana, Carl L., assignor.)

David, Bruce W., Cleveland Heights, assignor to R. H. Kinkead, Shaker Heights, Ohio. Indicating device for arc welding. 2,027,224; Jan. 7.

Davies, Emyr C. (See Powell, A. M., and Davies.)

Deutschen Hydrierwerke Aktiengesellschaft. (See Schranth, Walther, assignor.)

Davis, James H., and J. C. Lemming, Dayton, Ohio, assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich. Making a pivot bearing. 2,026,774; Jan. 7.

Davis, Jesse H., Baltimore, Md. Preserving grain in storage. 2,027,268; Jan. 7.

Davis, Joseph R., Clarksburg, W. Va. Internal combustion engine. 2,026,536; Jan. 7.

Dean, Walter A. (See Kempf, L. W., and Dean.)

Dean, Walter A., and C. G. Jancura, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,549; Jan. 7.

Dean, Walter A., and C. G. Jancura, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,550; Jan. 7.

Dean, Walter A., and C. G. Jancura, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,577; Jan. 7.

Dean, Walter A., and C. G. Jancura, Cleveland, Ohio, assignors to Aluminum Company of America, New Kensington, Pa. Free cutting alloys. 2,026,578; Jan. 7.

Dean, Walter A., and C. G. Jancura, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,579; Jan. 7.

De Boer, Jan H., and M. C. Teves, Eindhoven, Netherlands, assignors to Radio Corporation of America. Photo-electric device. 2,027,025; Jan. 7.

Debuch, Carl P., Frankfort-on-the-Main, Germany, assignor to American Largi Corporation, New York, N. Y. Sulphating the non-ferrous metals contained in ferruginous sulphide ores or roasts. 2,026,776; Jan. 7.

Dedmon, Arthur N., Milan, Tenn. Collapsible crate. 2,026,871; Jan. 7.

Deere & Company. (See Neighbour, Leonard R., assignor.)

De Florez, Luis, Pomfret, Conn., assignor to The Texas Company, New York, N. Y. Treatment of hydrocarbon oils. 2,027,324; Jan. 7.

De Forest, Lee, Hollywood, Calif., assignor to American Television Laboratories, Inc. Television receiving method and apparatus. 2,026,872; Jan. 7.

De Land, Earl, West Eaton, N. Y. Pulley attachment. 2,026,673; Jan. 7.

De Laney, Wallace W., assignor to The Seamless Rubber Company, Inc., New Haven, Conn. Self-lubricating inflating needle. 2,026,963; Jan. 7.

Dequer, John H., Los Angeles, Calif. Device for milling and separating ores. 2,026,835; Jan. 7.

Derman, Harry, Laurelton, L. I., N. Y. Cabinet, chest, and the like. 2,027,154; Jan. 7.

De Rose, Ralph, New York, N. Y. Ornament. 2,026,934; Jan. 7.

Dery, Wilfred G. (See Keller, H. H., and Dery.)

Devers, Philip K., Lynn, Mass., assignor to General Electric Company. Apparatus for and method of fusing vitreous material. 2,027,155; Jan. 7.

Devine, James H., Ste. Genevieve, assignor to Dev-Insular Company, St. Louis, Mo. Lunch box. 2,026,967; Jan. 7.

Dev-Insular Company. (See Devine, James H., assignor.)

De Weert, Henry. (See Jenswold, G. M., and De Weert.)

Dike, Paul H., assignor to Leeds & Northrup Company, Philadelphia, Pa. Precision resistance. 2,026,616; Jan. 7.

Dillon, Hugh J., Highland Park, Mich. Frameless tank vehicle. 2,026,626; Jan. 7.

Dillon, Hugh J., Highland Park, Mich. Transmission mechanism. 2,026,627; Jan. 7.

Dirkes, Robert F., Jamaica, N. Y., and E. R. Wheeler, North Plainfield, N. J., assignors to The Western Union Telegraph Company, New York, N. Y. Control means for telegraph printers and projectors. 2,027,026; Jan. 7.

Dittmar, Irvin F., assignor to The Cromar Co., Williamsport, Pa. Machine for coating stripe of lumber. 2,026,521; Jan. 7.

Dopp, Frank B., St. Louis, Mo., assignor to Perma Corporation. Work support for a lasted shoe. 2,027,027; Jan. 7.

Dowden, William L., Brooklyn, N. Y., assignor to Radio Corporation of America. Apparatus for making composite talking motion pictures. 2,027,028; Jan. 7.

Douglas, James K., assignor to The Oilgear Company Milwaukee, Wis. Hydraulic transmission. 2,026,776; Jan. 7.

Dowell, Alvin Y., Hastings-on-Hudson, assignor to Servel, Inc., New York, N. Y. Combination receptacle for refrigerators. 2,027,062; Jan. 7.

Downs, Charles R., Old Greenwich, Conn., assignor to Weiss and Downs, Inc., New York, N. Y. Method and apparatus for conditioning air. 2,026,935; Jan. 7.

Downs, Charles R., Old Greenwich, Conn., assignor to Weiss and Downs, Inc., New York, N. Y. Method and apparatus for conditioning air. 2,026,936; Jan. 7.

Downs, Charles R., Old Greenwich, Conn., assignor to Weiss and Downs, Inc., New York, N. Y. Deodorized calcium chloride. 2,027,063; Jan. 7.

Downs, Charles R., Old Greenwich, Conn., assignor to Weiss and Downs, Inc., New York, N. Y. Method and apparatus for dehumidifying air. 2,027,064; Jan. 7.

Drath, Paul. (See Hope, E. N., and Drath.)

Dressel, Henry M., assignor to Oak Manufacturing Company, Chicago, Ill. Electrical apparatus. 1,956,779; Jan. 7.

Dressel, Henry M., Chicago, and K. C. Allison, Arlington Heights, assignors to Oak Manufacturing Company, Chicago, Ill. Electrical switch. 2,026,778; Jan. 7.

Dreyfus, Henry, London, England. Manufacture of artificial filaments or threads. 2,026,780; Jan. 7.

Dreyfus, Henry, London, England. Production of unsaturated hydrocarbons from paraffine. 2,026,781; Jan. 7.

Dumble, William H., East Bakersfield, assignor to Tip Antonioiovanni, Bakersfield, Calif. Automatic variable speed transmission. 2,026,777; Jan. 7.

Dumble, William H., Bakersfield, assignor of one-half to S. J. Checchi, Bakersfield, Calif. Fishing tool. 2,026,778; Jan. 7.

Dunn, William G., Clarinda, Iowa. Wind driven generator structure. 2,026,628; Jan. 7.

Dupler, Raymond R., Toledo, Ohio. Globe mounting. 2,027,150; Jan. 7.

Du Pont, E. I., de Nemours & Company. (See Rake, Lewis S., assignor.)

Du Pont, E. I., de Nemours & Company. (See Engelmann, Max, assignor.)

Du Pont, E. I., de Nemours & Company. (See Etselmiller, Robert E., assignor.)

Du Pont, E. I., de Nemours & Company. (See Irkman, Frank W., assignor.)

Du Pont, E. I., de Nemours & Company. (See Lester, Wilbur A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Scott, Herman D., assignor.)

Du Pont, E. I., de Nemours & Company. (See Smith, F. H., and Black, assignors.)

Dux, John E., Jacksonville, Fla. Softening bleached and dyed rosins. 2,026,878; Jan. 7.

Eastman Kodak Company. (See Branch, Leslie E. T., assignor.)

Eastman Kodak Company. (See Capstaff, John G., assignor.)

Eastman Kodak Company. (See Hughey, Carter J., assignor.)

Eastman Kodak Company. (See Crumrine, Chester W., assignor.)

Eastman Kodak Company. (See Lyman, Donald F., assignor.)

Eastman Kodak Company. (See Malm, Carl J., assignor.)

Eastman Kodak Company. (See Malm, C. J., and Fletcher, assignors.)

Eastman Kodak Company. (See Malm, C. J., and Fletcher, assignors.)

Eastman Kodak Company. (See McNally, J. G., and Sweet, assignors.)

Eastman Kodak Company. (See Stewart, Donald H., assignor.)

Eastman Kodak Company. (See Wittel, Otto, assignor.)

Eaton, Milton, Shawinigan Falls, Quebec, Canada. Preventing arcing of the contacts of electrical regulating instruments. 2,026,617; Jan. 7.

Eckert, Clarence R., Englewood, N. J., assignor to The Barrett Company, New York, N. Y. Self-spacing siding. 2,027,029; Jan. 7.

Edgerton Manufacturing Co., The. (See Hall, Omer L., assignor.)

Edson, Frank H., Baton Rouge, La., assignor to Standard Oil Development Company. Cracking process for hydrocarbon oils. 2,027,450; Jan. 7.

Edwards, Samuel H., Richmond, assignor to Standard Oil Company of California, San Francisco, Calif. Pressure still header. 2,026,674; Jan. 7.

Edwards, William A., Santa Barbara, Calif. Method and apparatus for controlling photographic exposure. 2,026,675; Jan. 7.

Egry Register, The. (See Pfeifer, William C., assignor.)

Einwaechter, Frederick H., Jr., West Hazlehurst, Md. Locomotive pilot, bumper, deck plate, and coupler structure. 2,027,200; Jan. 7.

Eisen, Jay B., Yonkers, assignor to Ferdinand Gutmann & Co., Brooklyn, N. Y. Container closure. 2,026,997; Jan. 7.

Elsener, Charles W., Chicago, Ill., assignor to Rotary Lift Company, Memphis, Tenn. Lift. 2,026,938; Jan. 7.

Eitel, William W., and J. McCullough, San Bruno, assignors to Heintz & Kaufman, Ltd., San Francisco, Calif. Keying circuit. 2,026,874; Jan. 7.

Eitzen, August D., assignor to News Projection Corporation, New York, N. Y. Stock quotation projecting device. 2,026,523; Jan. 7.

Ekholm, Herbert W. (See Bussa, H. G., and Ekholm.)

Elastic Stop Nut Corporation. (See Swanstrom, Arthur C., assignor.)

Electric Storage Battery Company, The. (See Smith, Edward W., assignor.)

Electrolux Corporation. (See Forsberg, Axel A., assignor.)

Ellinger, Flora, Milwaukee, Wis. Pie pan. 2,026,889; Jan. 7.

Ellis, Carleton, Montclair, and W. P. ter Horst, Wayne, N. J., assignors to Ellis-Foster Company, Bulphur containing plastic and mating same. 2,026,876; Jan. 7.

Ellis-Foster Company. (See Ellis, C., and ter Horst, assignors.)

Engelmann, Max, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Triacetine compound. 2,027,040; Jan. 7.

Engelmann, Max, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Cellulose compound. 2,027,041; Jan. 7.

Enterprise Aluminum Company. (See Smith, James M., assignor.)

Enterprise Aluminum Company, The. (See Krause, Richard F., assignor.)

Erdman, Earl H., assignor to Mullins Manufacturing Corporation, Salem, Ohio. Strain release for wringers. 2,027,526; Jan. 7.

Erickson, Hjalmar, Bessemer Township, Gogebic County, Mich. Self-locking door operating mechanism. 2,026,878; Jan. 7.

Erling, Ralph, Alexandria, Va. Control of feed pressure devices. 2,027,556; Jan. 7.

Etselmiller, Robert E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Esters of N-P-Aminoaryl-carbamic acids and producing the same. 2,026,618; Jan. 7.

Etselmiller, Robert E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing N-p-Amino-aryl-Carbamic acids. 2,026,619; Jan. 7.

Euclid Road Machinery Company, The. (See Armington, Arthur F., assignor.)

Evans, Owen B., assignor to The United Gas Improvement Company, Philadelphia, Pa. Manufacture of carbureted water gas with heavy oil. 2,026,877; Jan. 7.

Everhard, Harry H., Canton, Ohio. Casement window screen. 2,026,880; Jan. 7.

Ewell, Charles C., Dyer, Tenn. Crate. 2,026,998; Jan. 7.

Exhibit Supply Company. (See McClellan, Herbert, assignor.)

Fairchild, Glen G. (See Leake, J. M., and Fairchild.)

Faith Mfg. Co. (See Faith, S., and Klaasterner, assignors.)

Faith, Stephen, and S. Klaasterner, assignors to Faith Mfg. Co., Chicago, Ill. Automobile accessory. 2,026,779; Jan. 7.

Farbenindustrie, I. G. Aktiengesellschaft. (See Lemmet, W., and Eckelmer, assignors.)

Farley, Joseph A., West Hartford, Conn. Pneumatic screwyer. 2,026,782; Jan. 7.

Farr, Edward A., assignor, by mesne assignments, to Manning Bowman & Co., Meriden, Conn. Sandwich tray and the like. 2,027,022; Jan. 7.

Farr, Warren H., Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Making brake drums. 2,026,878; Jan. 7.

Fast, Gustave, assignor to Gustave Fast Engineering Corporation, Annapolis, Md. Friction clutch. 2,026,783; Jan. 7.

Fast, Gustave, Engineering Corporation. (See Fast, Gustave, assignor.)

Feedrail Corporation. (See Glasgow, Ernest M., assignor.)

Fellers, Carl R., Amherst, Mass. Canning of crab meat. 2,027,270; Jan. 7.

Ferguson, Hugh J., Vancouver, British Columbia, Canada. Submarine drill. 2,026,579; Jan. 7.

Ferguson, John L., Joliet, Ill. Apparatus for pulling cereals. 2,026,734; Jan. 7.

Farnseh Aktien Gesellschaft. (See Schubert, Georg, assignor.)

Field, Arthur B., London, England. Production of negatives with photographic images thereon of enhanced quality. 2,027,271; Jan. 7.

Fiet, William L., Oakmont, assignor to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,551; Jan. 7.

Finn, Sydney J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Last manufacture. 2,026,620; Jan. 7.

Fisher Scientific Company. (See Matuszak, Maryan P., assignor.)

Fisher, Webster H. (See Malm, E. J., and Fisher.)

Fitz Gerald, Alan E., Wynnewood, Pa. Magnetic amplifier. 2,027,311; Jan. 7.

Fitz Gerald, Alan E., Wynnewood, Pa. Magnetic amplifying and control system. 2,027,312; Jan. 7.

Fitzgibbons Boiler Company. (See Lockett, John W., assignor.)

Flaws, John, Jr., Cleveland Heights, Ohio, assignor to General Electric Company. Detection device. 2,027,157; Jan. 7.

Fleming, Edward P., Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y. Roasting sulphide ores. 2,026,621; Jan. 7.

Fleming, Edward P., Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y. Roasting sulphide ores. 2,026,622; Jan. 7.

Fletcher, Charles L. (See Malm, C. J., and Fletcher.)

"Flexitallic" Gasket Co. (See Eshaner, E., Jr., and Lippincott, assignors.)

Flersher, Maurice H., and J. Ostlyn, Buffalo, assignors to National Aniline & Chemical Company, Inc., New York, N. Y. Vat dyestuff paste and producing the same. 2,026,623; Jan. 7.

Flieeberg, Erhard A. M., Appelvilken, Stockholm, and A. Björklund, Goteborg, Sweden; said Björklund assignor to said Fliesberg. Transmission gear. 2,026,880; Jan. 7.

Flood Company, The. (See Flood, E. D., and Hannum, assignors.)

Flood, Earl D., and J. A. Hannum, Cleveland Heights, assignors to The Flood Company, Cleveland, Ohio. Coating composition. 2,027,025; Jan. 7.

Flood, Herbert B., Cambridge, Ohio. Coffee making device. 2,027,272; Jan. 7.

Flower, Wesley H., East Liverpool, Ohio. Manufacture of earthenware. 2,026,624; Jan. 7.

Flynn, Edward D., New Rochelle, N. Y., assignor, by mesne assignments, to Oliver United Filters Incorporated, San Francisco, Calif. Treatment of sewage. 2,026,960; Jan. 7.

Ford, Eugene A., Scarsdale, assignor to International Business Machines Corporation, New York, N. Y. Card analyzing machine. 2,027,033; Jan. 7.

Ford, Leland E. (See Butterfield, Emory E., assignor.)

Forlaw, Richard J., New York, N. Y. Exercising apparatus. 2,027,273; Jan. 7.

Forsberg, Axel A., Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del. Vacuum cleaner. 2,027,158; Jan. 7.

Foss, Fred O., Hillside, N. J., assignor to American Can Company, New York, N. Y. Apparatus for packing. 2,026,523; Jan. 7.

Foster, Edwin E., Austin, Tex. Mechanical movement. 2,027,275; Jan. 7.

Foster, Edwin E., Austin, Tex. Ironing device. 2,027,274; Jan. 7.

Franklin Railway Supply Company. (See Roberts, Montague H., assignor.)

Fraser, Eugene B. (See Moore, Guy S., assignor.)

Frederick Post Company, The. (See Hinman, Walker M., assignor.)

French Oil Mill Machinery Co., The. (See Stacy, Thomas F., assignor.)

Frey, Howard A., assignor to Locke Insulator Corporation, Baltimore, Md. Fused grading shield. 2,027,301; Jan. 7.

Fridolph, Maude C., Los Angeles, Calif. Garment. 2,026,524; Jan. 7.

Frostad, George O., Cadaby, Wis., assignor, by mesne assignments, to Sutherland Paper Company, Kalamazoo, Mich. Method of and apparatus for performing mechanical operations on moving work. 2,026,790; Jan. 7.

Fuller, Thomas J. D., Jr., Cambridge, Mass. Edge-illuminated sign. 2,027,034; Jan. 7.

Fulton, Alden W., Kansas City, Mo. Gas burner construction. 2,027,159; Jan. 7.

Funk, William E. (See Currah, C. W., and Funk.)

Furay, Richard H., San Francisco, Calif. Vacuum tube oscillator. 2,027,160; Jan. 7.

Gagne, Gideon E., assignor to Snap-on Tools, Inc., Kenosha, Wis. Tube flaring tool. 2,027,161; Jan. 7.

Gair, Robert Company. (See Weiss, Arthur J., assignor.)

Galion Metallic Vault Company, The. (See Smith, Ralph E., assignor.)

Gardner, Company. (See Crossman, Loring P., assignor.)

Gasmold Sign Corporation. (See Piper, William B., assignor.)

Gaston, Donald H., Fort Wayne, Ind., assignor to General Electric Company. Refrigerator. 2,027,318; Jan. 7.

Geer, Paul L., assignor to Amco, Incorporated, Pittsburgh, Pa. Vertical glass annealing leer. 2,026,781; Jan. 7.

Gehres, Hewitt A., assignor to Cooper-Bessemer Corporation, Mt. Vernon, Ohio. Wrist pin bearing construction. 2,027,035; Jan. 7.

Geiger, Frederick, Drexel Hill, assignor to Wall & Ochs, Philadelphia, Pa. Chart display apparatus. 2,026,881; Jan. 7.

General Aniline Works, Inc. (See Muth, Friedrich, assignor.)

General Aniline Works, Inc. (See Schnitzspahn, Karl, assignor.)

General Aniline Works, Inc. (See Benade, Walther, assignor.)

General Aniline Works, Inc. (See Taube, C. and Hilger, assignors.)

General Electric Company. (See Alexanderson, Ernst F. W., assignor.)

General Electric Company. (See Widerše, Rolf, assignor.)

General Electric Company. (See Becker, K., Schröter, and Wolff, assignors.)

General Electric Company. (See Devers, Philip K., assignor.)

General Electric Company. (See Flaws, John, Jr., assignor.)

General Electric Company. (See Gaston, Donald H., assignor.)

General Electric Company. (See Kallenbach, George K., assignor.)

General Electric Company. (See Searing, Hudson R., assignor.)

General Electric Company. (See Starr, Frank M., assignor.)

General Electric Company. (See Wood, Alexander P., assignor.)

General Electric Corporation. (See McLachlan, Willard J., assignor.)

General Motors Corporation. (See Candor, Robert R., assignor.)

General Motors Corporation. (See Wood, W. A., and Almen, assignors.)

General Motors Corporation. (See Bates, Ralph I., assignor.)

General Motors Corporation. (See Chase, Thomas P., assignor.)

General Motors Corporation. (See Davis, J. H., and Leming, assignors.)

General Motors Corporation. (See Geyer, Harvey D., assignor.)

General Motors Corporation. (See Nance, James J., assignor.)

General Motors Corporation. (See Rice, Herbert C., assignor.)

General Motors Corporation. (See Watson, James B., assignor.)

General Motors Corporation. (See Weldon, Chichester P., assignor.)

General Timber Service, Inc. (See Paysatt, Henry H., assignor.)

Germundsson, Agne K. H., Stockholm, Sweden. Automatic calendar. 2,026,882; Jan. 7.

Gerow, James W., Reno, Nev. Nail file. 2,026,870; Jan. 7.

Geyer, Harvey D., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Resilient mounting unit. 2,026,625; Jan. 7.

Gilbert, A. C., Company, The. (See Gilbert, A. C., and Morse, assignors.)

Gilbert, Alfred C., North Haven, and S. P. Morse, East Haven, assignors to The A. C. Gilbert Company, New Haven, Conn. Kitchen utility device. 2,027,036; Jan. 7.

Gillilan, Paul M., assignor to Shellmar Products Company, Chicago, Ill. Container. 2,026,626; Jan. 7.

Gill, Augustus H., Belmont, assignor to The Gill Corporation, Cambridge, Mass. Treatment of textile fibers. 2,026,785; Jan. 7.

Gill Corporation, The. (See Gill, Augustus H., assignor.)

Gill, Harry R., Ashland, Ohio. Inflatable toy. 2,027,225; Jan. 7.

Gill, Lowell O., assignor to A. E. Staley Manufacturing Company, Decatur, Ill. Treatment of soy beans. 2,026,670; Jan. 7.

Gillespie, Charles P., Houston, assignor of one-fourth to J. R. Turnbull, and one-fourth to E. A. Irwin, Harris County, Tex. Well packer. 2,026,883; Jan. 7.

Gilman, George H., Newark, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Portable drilling rig. 2,026,627; Jan. 7.

Gilmore, Delbert B., Erie, assignor to Hookless Fastener Company, Meadville, Pa. Slider for slide fasteners. 2,027,327; Jan. 7.

Gipe, Harrison S., York, assignor to Quinlan Pretzel Co. Inc., Reading, Pa. Pretzel forming machine. 2,026,896; Jan. 7.

Givaudan-Delawanna, Inc. (See Carpenter, M. S., and Kunz, assignors.)

Glasgow, Ernest M., Towaco, N. J., assignor, by mesne assignments, to Feedrail Corporation, New York, N. Y. Electric trolley construction. 2,026,894; Jan. 7.

Goddard, Robert H., Roswell, N. Mex. Aircraft. 2,026,865; Jan. 7.

Goetts, William L., Caldwell, N. J., and M. Brodsky, Bronx, N. Y.; said Goetts assignor to said Brodsky. Building unit. 2,026,898; Jan. 7.

Goldhammer, Leo, Munich, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Folding camera. 2,026,677; Jan. 7.

Goldman, Julius, Los Angeles, Calif. Landing apparatus for airplanes. 2,027,162; Jan. 7.

Goldsborough, Shirley L., East Orange, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Impedance relay system. 2,027,220; Jan. 7.

Gossett, Robert E., Los Angeles, Calif. Body vibrator. 2,026,827; Jan. 7.

Goodman Manufacturing Company. (See Cartlidge, Frank, assignor.)

Gorton, George, Machine Company. (See Henkes, Peter M., assignor.)

Gossett, Lee C., Fairmount, Ind. Cultivating implement. 2,026,987; Jan. 7.

Gottlieb, Ethel, Newark, N. J. Ventilated spectacles or eyeglasses. 2,027,057; Jan. 7.

Gouverneur, Minor F. H., assignor to Locke Insulator Corporation, Baltimore, Md. Clay homogenizing method and apparatus. 2,026,782; Jan. 7.

Graebner, Otto F., Detroit, Mich., assignor to The Murray Corporation of America. Roof construction. 2,027,163; Jan. 7.

Graf, Steve, Detroit, Mich. Target game. 2,026,881; Jan. 7.

Granger, Albert, Burlingame, Calif. Boat propelling device. 2,026,868; Jan. 7.

Gray, Daniel M., and J. J. Williams, assignors to Hazel-Atlas Glass Company, Wheeling, W. Va. Cushion fit cap. 2,026,889; Jan. 7.

Gray Telephone Pay Station Company, The. (See Long, George A., assignor.)

Gray, Wallace M., Cincinnati, Ohio. Shelf-type lubricator. 2,027,227; Jan. 7.

Green, Samuel G., Gray, Ga. Packed joint for guns. 2,026,522; Jan. 7.

Greenan, Max, New York, N. Y. Dipped-bridge lamp shade or similar article and making the same. 2,026,980; Jan. 7.

Greene, Daniel A., Flint, Mich. Window glass channel. 2,026,971; Jan. 7.

Greene, Daniel A., Flint, Mich. Window glass guide. 2,026,972; Jan. 7.

Greene, Daniel A., Flint, Mich. Window glass guide. 2,026,973; Jan. 7.

Greenlee Bros. & Co. (See Abramsson, J. E., and Gunnard, assignors.)

Gregory, Carey G., Los Angeles, Calif. Combined hair net and bottle. 2,026,529; Jan. 7.

Griffith-Hope Company. (See Hope, S. H., and Drath, assignors.)

Gross, Alexander, Berlin, Germany. Sweep-cap or comb with brush. 2,026,890; Jan. 7.

Grothey, Ivan W., Laconia, N. H., assignor to Scott & Williams, Incorporated, New York, N. Y. Dial for knitting machines. 2,027,276; Jan. 7.

Gruber, Wolfgang, Burghausen, assignor to Dr. Alexander Wacker Gesellschaft für Electrochemische Industrie G. m. b. H., Munich, Germany. Manufacture of wooly threads. 2,026,736; Jan. 7.

Grubman, Leo J., Belle Harbor, assignor to Morgan Corporation, New York, N. Y. Molding of dolls' heads and the like. 2,027,134; Jan. 7.

Grubman, Leo J., Belle Harbor, assignor to Morgan Corporation, New York, N. Y. Molding of dolls' heads and the like. 2,027,135; Jan. 7.

Grunig, Bernhard. (See Tratsch, W. A., and Grunig.)

Guardite Corporation, The. (See Bass, John M., assignor.)

Gulley, John O., Arlington City, Kans. Air conditioning apparatus. 2,026,974; Jan. 7.

Gurney, Daniel. (See Klay, W. S., and Gurney.)

Guttmann, Ferdinand & Co. (See Hesse, Jay R., assignor.)

Habana, Erich, Berlin, Germany. Contact device. 2,027,277; Jan. 7.

Hacker, Oskar, assignor to the firm Austro-Daimler-Puchwerke A. G., Wiener-Neustadt, Austria. Rail wheel. 2,027,302; Jan. 7.

Hacker, Oskar, assignor to Austro-Daimler-Puchwerke A. G., Wiener-Neustadt, Austria. Running gear. 2,027,303; Jan. 7.

Hacker, Oskar, assignor to Austro-Daimler-Puchwerke A. G. Wiener-Neustadt, Austria. Running gear for vehicles. 2,027,304; Jan. 7.

Hadaway, John B., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for rounding and channeling soles. 2,026,622; Jan. 7.

Haddock, Norman H., Blackley, P. Lodge, Manchester, and R. Robinson, Oxford, England, assignors to Imperial Chemical Industries Limited. Cyanine intermediate. 2,026,620; Jan. 7.

Hager, Wilbur V. (See Hager, Wilson T., assignor.)

Hager, Wilson T., assignor to W. V. Hager, Ervinna, Pa. Incubator. 2,026,588; Jan. 7.

Halbe, Peter. (See Smithwick, H., and Halbe.)

Hale, George C., and D. R. Cameron, Dover, N. J. Propellent powder. 2,026,951; Jan. 7.

Hall, Omer E., Paoli, assignor to The Edgerton Manufacturing Co., Plymouth, Ind. Basket web assembling machine. 2,026,733; Jan. 7.

Hamilton, John B. (See Lowe, E. A., and Hamilton.)

Hammer, Alfred L., Boston, Mass. Utility light and test lamp. 2,027,596; Jan. 7.

Hannum, John A. (See Wood, R. D., and Hannum.)

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Keying. 2,027,068; Jan. 7.

Hanson, Gustaf L., assignor to National Broach & Machine Company, Detroit, Mich. Machine for testing accuracy of gears. 2,026,764; Jan. 7.

Hanson, Milton E., Collingswood, N. J., assignor to B. F. Sturtevant Company, Inc., Hyde Park, Boston, Mass. Refrigeration apparatus. 2,027,826; Jan. 7.

Hanson, Milton E., Collingswood, N. J., assignor to B. F. Sturtevant Company, Inc., Hyde Park, Boston, Mass. Air conditioning system. 2,027,097; Jan. 7.

Harbison-Walker Refractories Company. (See Hemphrey, Dwight E., assignor.)

Harding, William H., Flushing, N. Y., and A. W. Montgomery, Cedarhurst, Ga., assignors to American Cyanamid & Chemical Corporation, New York, N. Y. Rodsizing and making the same. 2,027,166; Jan. 7.

Harris, Artie B., Kansas City, Mo. Shearing device. 2,026,630; Jan. 7.

Harris, Benjamin E., Chicago, Ill. Confection. 2,027,191; Jan. 7.

Harris, Benjamin E., Chicago, Ill. Phosphoric acid esters of fatty acid monoglycerides. 2,026,765; Jan. 7.

Harris, Benjamin E., and M. C. Reynolds, Chicago, Ill. Ray product. 2,026,631; Jan. 7.

Harrison, George W. H. (See Pearce, R. F., Hornsby, and Harrison.)

Harrison, Henry C., Port Washington, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Vibration translating device. 2,027,169; Jan. 7.

Harrison, Henry C., Port Washington, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Vibration translating device. 2,027,189; Jan. 7.

Hartwell, Ralf L., Orange, assignor to Metal Textile Corporation, West Orange, N. J. Pot cloth. 2,026,681; Jan. 7.

Haun, Joye C., Manhattan Beach, Calif. Selective channel cleaning and lubricating system for lubrication valves. 2,026,591; Jan. 7.

Haupt, Albertus H., Somerset West, Union of South Africa, assignor to Imperial Chemical Industries Limited. Method and apparatus for wrapping cylindrical articles. 2,026,582; Jan. 7.

Haupt, Albertus H., Somerset West, Union of South Africa, assignor to Imperial Chemical Industries Limited. Apparatus for cutting paper or other material. 2,026,586; Jan. 7.

Haworth, Mack B., Pittsburgh, Pa., assignor to The Jeffrey Manufacturing Company. Apparatus for separating materials by fluid streams. 2,026,633; Jan. 7.

Hayford, Benjamin L., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit-breaker apparatus. 2,027,236; Jan. 7.

Hazel-Atlas Glass Company. (See Gray, D. M., and Williams, assignors.)

Haseltine, George, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for operating upon shoe parts. 2,026,634; Jan. 7.

Heck, Adolf, assignor to Cook Paint & Varnish Company, Kansas City, Mo. Manufacture of resins. 2,027,237; Jan. 7.

Heck, Adolf, assignor to Cook Paint & Varnish Company, Kansas City, Mo. Manufacture of varnish resins. 2,027,238; Jan. 7.

Heck, Adolf, assignor to Cook Paint & Varnish Company, Kansas City, Mo. Manufacture of varnish resins, varnishes and like coating compositions. 2,027,239; Jan. 7.

Hedgcock, William C., Wilmette, assignor to American Steel Foundries, Chicago, Ill. Truck. 2,026,634; Jan. 7.

Hefner, Raymond L., Hickory, N. C. Pavement marking machine. 2,026,673; Jan. 7.

Heine, Charles H. (See Cleveland, C. H., Heine, and Allison.)

Heinlein, Eugen, Berlin, Germany. Method of manufacturing thin-walled shaped bodies. 2,027,314; Jan. 7.

Heintz & Kaufman, Ltd. (See Bitel, W. W., and McCullough, assignors.)

Heintz & Kaufman, Ltd. (See Heintz, Ralph M., assignor.)

Heintz, Ralph M., Palo Alto, assignor to Heintz & Kaufman, Ltd., San Francisco, Calif. High frequency generator. 2,026,592; Jan. 7.

Heller, Paul E., Newark, N. J. File and making the same. 2,027,022; Jan. 7.

Heller, Paul E., Newark, N. J. Carved tooth file. 2,027,643; Jan. 7.

Helms, Harry W., Detroit, Mich., assignor to Highway Trailer Company, Edgerton, Wis. Hoist for semi-trailers. 2,027,008; Jan. 7.

Hemingway, Marcus R., New Haven, Conn. Doorcheck. 2,027,170; Jan. 7.

Henderson, Weldon, D. Hollywood, Calif. Dispensing fountain brush. 2,026,812; Jan. 7.

Hendryx, Dwight S., Assignor to Hartzell-Walker Refractories Company, Pittsburgh, Pa. Shaping refractory articles. 2,026,943; Jan. 7.

Henkes, Peter M., Racine, assignor to George Gorton Machine Company, Racine, Wis. Stylus mounting for reproducing and engraving machines. 2,026,896; Jan. 7.

Henry, Donald B., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Vapor electric device. 2,026,941; Jan. 7.

Hermann Manufacturing Company, The. (See Hermann, W. H., and Wessel, assignors.)

Hermann, Walter H., and L. H. Wessel, assignors to The Hermann Manufacturing Company, Lancaster, Ohio. Machine for refining paper stock and pulp. 2,027,041; Jan. 7.

Hertel, Richard F. (See Clausen, J. D., and Hertel.)

Hess, Raymond W. (See Moore, F. G., Hess, and Perkins.)

Hicks, Elmer H. (See Hammond, E. M., and Hicks.)

Higgins, Lorraine L., Dedham, assignor to B. F. Sturtevant Company, Inc., Boston, Mass. Heat exchange apparatus. 2,027,315; Jan. 7.

Higgins, Pattillo, San Antonio, Tex. Flowspout drain plug. 2,026,879; Jan. 7.

Highway Trailer Company. (See Helms, Harry W., assignor.)

Hilger, Josef. (See Taube, C., and Hilger.)

Hill, Rowland. Stanley, Manchester, England, assignor to Imperial Chemical Industries Limited. Manufacture of acrylic acid. 2,026,594; Jan. 7.

Hillis, David E., Detroit, Mich., assignor, by mesne assignments, to Tryton Engineering Corporation, Cleveland, Ohio. Divisional feeder. 2,027,171; Jan. 7.

Hills, Sidney C., London, England, assignor to Radio Corporation of America. Automatic alarm device. 2,026,635; Jan. 7.

Hinds, William W., Kansas City, Mo., assignor, by mesne assignments, to Calcyanide Products Corporation. Apparatus for and method of fumigating. 2,027,045; Jan. 7.

Hinman, Walter M., assignor to The Friedrich Post Company, Chicago, Ill. Accelerated drum printing and materials therefor. 2,027,328; Jan. 7.

Hirsch, Samuel, and H. Brandes, assignors to Wilbo Patent Holding Co., Inc., New York, N. Y. Transfer printing and coating mechanism for ramification bag forming machines. 2,027,048; Jan. 7.

Hochwalt, Carroll A. (See Thomas, C. A., and Hochwalt.)

Hochwalt, Carroll A., and W. H. Carmody, assignors, by mesne assignments, to W. S. Tothill, Dayton, Ohio. Aging of whiskey. 2,027,099; Jan. 7.

Hochwalt, Carroll A., Dayton, Ohio, and C. A. Thomas, Wayne, Pa., assignors, by mesne assignments, to M. S. Talbott, Dayton, Ohio. Method of aging whisky. 2,027,100; Jan. 7.

Hoefer, Clarence W. (See Toy, Wesley H., assignor.)

Hofer, Rudolf, and W. Kammerer, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Manhattan, assignor

Irmscher, Hans, assignor to Millis Patent Holding Co. Inc., New York, N. Y. Reeling device for tag forming machines. 2,026,697; Jan. 7.

Irmscher, Hans, assignor to Millis Patent Holding Co. Inc., New York, N. Y. Bag forming machine. 2,027,172; Jan. 7.

Irwin, Joseph A., Cleveland, Ohio. Building construction fabricating device. 2,026,835; Jan. 7.

Irwin, Richard A., et al. (See Gillespie, Charles P., assignor.)

Isbell Porter Company. (See Warner, Arthur W., assignor.)

Jackson, Thomas J., and J. A. Bohemans, Livingston, Mont. Flue cleaning machine. 2,027,178; Jan. 7.

Jacobs, Charles T., New Providence Township, Union County, N. J., assignor to Miessner Inventions, Inc. Method and apparatus for the production of music. 2,027,075; Jan. 7.

Jacobson, Erik W., assignor of one-half to C. F. Nelson, Chicago, Ills. Flue cleaner. 2,026,680; Jan. 7.

Jaeger, William H., Trenton, N. J. Safe. 2,026,977; Jan. 7.

Jancura, Charles G. (See Dean, W. A., and Jancura.)

Jannsens, Peter A., Chicago, Ill. Measuring device. 2,026,681; Jan. 7.

Jeffrey Manufacturing Company, The. (See Haworth, Walter J., assignor.)

Jeffrey Manufacturing Company, The. (See Haworth, Mack E., assignor.)

Jeffries, Oren L., assignor of one-half to L. J. Brown, Columbus, Ohio. Apparatus for playing games. 2,026,682; Jan. 7.

Jennings, James W., Providence, R. I. Salt shaker or the like. 2,026,738; Jan. 7.

Jensen, Henry M., United States Navy. Navigational instrument. 2,026,537; Jan. 7.

Jensen, Henry M., United States Navy. Hour interval calculator. 2,026,538; Jan. 7.

Jeserwold, Gerwal M., and H. DeWeert, Chicago, Ill. Toy pistol. 2,026,698; Jan. 7.

Jeppesen, Ivar. (See McArdle, M. W., and Jeppesen.)

Jester, John M., Washington, D. C. Releasing clamp. 2,026,976; Jan. 7.

Johannsen, Friedrich, Magdeburg, assignor to the firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Treating ferriferous ores. 2,026,683; Jan. 7.

Johansson, Carl E., Detroit, Mich. Demonstration apparatus. 2,026,664; Jan. 7.

Johnson, Edward S., New Rochelle, N. Y., assignor to The Calco Chemical Co. Inc., Bound Brook, N. J. Catalyst. 2,027,316; Jan. 7.

Johnson, Forrest F., assignor to The Spencer Manufacturing Co., Spencer, Ohio. Balanced driving head for marking machines. 2,027,174; Jan. 7.

Johnson, Frank W., Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing pigments of the indanthrene series. 2,026,637; Jan. 7.

Johnson, Godwin H., New York, N. Y. Sash and window frame. 2,026,686; Jan. 7.

Johnson, Gustaf E., and G. Lowenberg, assignors to Metal Specialties Manufacturing Company, Chicago, Ill. Spraying device. 2,027,103; Jan. 7.

Johnson, James P., Shaker Heights, Ohio. Pump. 2,026,720; Jan. 7.

Johnson Matthey & Company Limited. (See Powell, A. R., and Davies, assignors.)

Jones, Ernest F., London, England. Apparatus for production of steel tubes and other sections. 2,026,979; Jan. 7.

Jones, Harry C., New York, N. Y. Negative holder. 2,026,836; Jan. 7.

Jones, Lloyd T. (See Kennedy, H. E., Retsemund, and Jones.)

Jorgensen, Bernhardt, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Lasting machine. 2,026,539; Jan. 7.

Joy, Henry B., Grosse Pointe Farms, Mich. Electric switch mechanism. 2,026,960; Jan. 7.

Kahnt, Hilla, Chicago, Ill. Massaging and bathing apparatus. 2,026,981; Jan. 7.

Kahr, John S. (See Kahr, Martin and J. S.)

Kahr, Martin and J. S., Milwaukee, Wis., said J. S. Kahr assignor to said Martin Kahr. Hydraulic device for oil well pumping. 2,027,104; Jan. 7.

Kallenbach, George K., Schenectady, N. Y., assignor to General Electric Company. Grid construction of electric discharge devices. 2,027,176; Jan. 7.

Kaufman, John, et al. (See Rogers, Clifford H., assignor.)

Kaufman, John J., Elkins Park, assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Loom harness. 2,026,787; Jan. 7.

Keiser, Arthur J., deceased, by E. E. Keiser, Greece, N. Y., administratrix, assignor to The Bircher Co., Inc., Rochester, N. Y. Envelope opening machine. 2,027,045; Jan. 7.

Keiser, Esther E., administratrix. (See Keiser, Arthur J.)

Kelley, John B., Larchmont, N. Y. Hair drier. 2,026,942; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,540; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,541; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,542; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,543; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,544; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,545; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,546; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,547; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,548; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,555; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,554; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,555; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,556; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,557; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,558; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,559; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,560; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,561; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,562; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,563; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,564; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,565; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,566; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,567; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,568; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,569; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,570; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,571; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,572; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,573; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,574; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,575; Jan. 7.

Kempf, Louis W., and W. A. Dean, Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa. Free cutting alloys. 2,026,576; Jan. 7.

Kennedy, George H., Jr., Worcester, assignor to United States Envelope Company, Springfield, Mass. Envelope. 2,026,527; Jan. 7.

Kennedy, Harry R., M. A. Retsemund, and L. T. Jones, Berkeley, Calif., assignors to Union Carbide and Carbon Research Laboratories, Inc. Arc welding. 2,026,943; Jan. 7.

Kern, Erwin. (See Brynhildsen, C., and Kern.)

Kerone, Edward B. W. (See Olsen, F., Tilsitzis, and Kerone.)

Kersmer, Ernest. (See Kepper, W., and Kersmer.)

Kiff, Earl. (See Nixon, H. T., and Kiff.)

Kimball, Richard L., Forest Hills, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. System of control. 2,027,234; Jan. 7.

King, James F., Cranston, R. I. Making pipe coupling parts. 2,027,176; Jan. 7.

Kingman, Russell E., Orange, assignor to Metal Textile Corporation, West Orange, N. J. Scouring implement. 2,026,655; Jan. 7.

Kinson, Jesse H., Coal Fork, W. Va. Safety scotch hook. 2,026,982; Jan. 7.

Kinkead, Robert H. (See David, Bruce W., assignor.)

Kinsella, Edward, and R. J. Ward, Spondon, near Derby, England, assignors to Celanese Corporation of America. Extrusion apparatus. 2,026,740; Jan. 7.

Kints, Earl E., Bucyrus, Ohio. Shield. 2,026,741; Jan. 7.

Kiopham, Karl, Dessau, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Retouching photographic films or plates. 2,026,890; Jan. 7.

Kirby, Charles H., assignor to Marvel Carburetor Company, Flint, Mich. Carburetor. 2,026,788; Jan. 7.

Kirley, Arthur A., New York, N. Y. Bolt. 2,026,698; Jan. 7.

Klasstorner, Samuel. (See Faith, S., and Klasstorner.)

Klay, Walter S., and D. Garner, assignors to Landis Tool Company, Waynesboro, Pa. Work chuck. 2,026,630; Jan. 7.

Kleinschmidt, Oscar, and O. Meller, assignors to Gebrueder Brehmer, Leipzig-Plagwitz, Germany. Mechanism for separating the hooks of an interconnected hook-pad. 2,027,108; Jan. 7.

Klemperer, Hans, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Voltage regulation inverter. 2,027,225; Jan. 7.

Kluge, Abel and E., assignors to Brandtjen and Kluge, St. Paul, Minn. File lowering device for printing presses. 2,027,177; Jan. 7.

Kluge, Eneval. (See Kluge, A. and E.)

Knause, Edward, Sacramento, Calif. Governor. 2,026,742; Jan. 7.

Knight, Arthur H., Ashton-on-Mersey, Sale, England, assignor to Imperial Chemical Industries Limited. Diazo dyestuffs and their production. 2,027,178; Jan. 7.

Knight, Donald B., Brooklyn, N. Y., assignor, by mesne assignments, to Servel, Inc., Dover, Del. Absorption refrigerating apparatus. 2,027,104; Jan. 7.

Knight, John B., Jr., New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a corporation of Delaware. Receiving and amplifying electric signals. 2,026,944; Jan. 7.

Kodama, Kenta, Fukui, Japan. Manufacturing refined pulp from straw of gramineaceous plants. 2,026,900; Jan. 7.

Koehler Manufacturing Company. (See Wheat, Grant, assignor.)

Koepke, Edward C., assignor to The Bishop & Babcock Sales Company, Cleveland, Ohio. Refrigerating means and method. 2,026,833; Jan. 7.

Kohler, Herman H., and W. G. Dery, Amsterdam, N. Y. Roller shade. 2,027,107; Jan. 7.

Korte, Charles, Teaneck, assignor to Lowe Paper Company, Ridgefield, N. J. Bottle carrier. 2,026,525; Jan. 7.

Krause, Richard F., assignor to The Enterprise Aluminum Company, Massillon, Ohio. Teakettle spout. 2,026,839; Jan. 7.

Krautschneider, Josef. (See Back, A., and Krautschneider.)

Krebs Pigment & Color Corporation. (See Blumenfeld, J., and Mayer, assignors.)

Kriete, Arch E. (See Hornbeck, Evelyn and E., assignors.)

Kroff, Leonard D., Sterling, Ill. Game. 2,026,580; Jan. 7.

Krupp, Fried. Grusonwerk Aktiengesellschaft. (See Johannsen, Friedrich, assignor.)

Krupp, Fried. Grusonwerk Aktiengesellschaft. (See Schön, Karl, assignor.)

Kuchar, Joseph, assignor to Athey Truss Wheel Co., Chicago, Ill. Draft appliance. 2,027,046; Jan. 7.

Kuehling, Herman, Snyder, N. Y. Cock or valve. 2,027,166; Jan. 7.

Kummerer, Wilhelm. (See Hofer, R., and Kummerer.)

Kunz, Eric C. (See Carpenter, M. S., and Kunz.)

Kurtz, Clinton J., San Diego, Calif. Spray nozzle. 2,026,749; Jan. 7.

La Bombard, Leon E., assignor to Oswego Falls Corporation, Fulton, N. Y. Blank for container closures and making the same. 2,027,343; Jan. 7.

La Bombard, Leon E., assignor to Oswego Falls Corporation, Fulton, N. Y. Method of forming slip covers for containers. 2,027,344; Jan. 7.

Lack, Arnold, assignor to E. H. Shanley, Chicago, Ill. Piston. 2,027,179; Jan. 7.

Laico, Joseph P., Brooklyn, assignor to Ball Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge device. 2,027,136; Jan. 7.

Laico, Joseph P., Brooklyn, assignor to Ball Telephone Laboratories, Incorporated, New York, N. Y. Sealing-in machine. 2,027,181; Jan. 7.

Lakewest Corporation, The. (See Youngdahl, Francis R., assignor.)

La Marsh, Charles W., Alton, Ill. Loading and unloading shelf structure. 2,027,276; Jan. 7.

Landis Tool Company. (See Klay, W. S., and Garner, assignors.)

Lane, George S., Passaic, N. J., assignor to Raybestos-Manhattan, Inc. Clutch mechanism. 2,026,945; Jan. 7.

Lane, John T., Los Angeles, Calif. Claw bar. 2,026,581; Jan. 7.

Lappe, Friedrich, Obernburg-on-the-Main, Germany, assignor to North American Rayon Corporation, New York, N. Y. Process and apparatus for the manufacture of artificial silk. 2,027,047; Jan. 7.

Lauber, John A., and R. M. Schupbach, assignors to Continental Optical Company, Inc., Rochester, N. Y. Eyeglass construction. 2,027,109; Jan. 7.

Lawrenson, Judge P., Houston, Tex. Combined freight and tank vehicle. 2,026,687; Jan. 7.

Lawry, Rolla, Greenwich, Conn., assignor to Louis Philippe, Inc., Chicago, Ill. Cosmetic applicator. 2,027,288; Jan. 7.

Lazier, Wilbur A., Marshallton, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydrogenation of aliphatic alcohols and esters. 2,027,182; Jan. 7.

Leahy, Michael J., Fort Worth, Tex. Production of carbon bisulphide. 2,026,840; Jan. 7.

Leake, James M. and G. G. Fairchild, Toledo, Ohio. Shipping cases. 2,026,901; Jan. 7.

Lebert, Alfred, Duesseldorf-Morsenbroich, Germany. Balancing machine. 2,026,688; Jan. 7.

Le Comte & Co. (See Le Comte, Victor K., assignor.)

Le Comte, Victor K., Forest Hills, assignor to Le Comte & Co., Inc., Brooklyn, N. Y. Container. 2,026,946; Jan. 7.

Ledin, Sven H. (See Öman, E., and Ledin.)

Lee, William J., Lockport, assignor to The Western Block Company, Lockport, N. Y. Snatch block. 2,027,279; Jan. 7.

Leeds & Northrup Company. (See Dike, Paul H., assignor.)

Legge, Alfred G., Brockton, Mass. Shoe form. 2,027,048; Jan. 7.

Leibing Automotive Devices, Incorporated. (See Leibing, William E., assignor.)

Leibing, William E., Sausalito, assignor to Leibing Automotive Devices, Incorporated, San Francisco, Calif. Method and apparatus for governing flow lines. 2,026,947; Jan. 7.

Leibing, William E., Sausalito, assignor to Leibing Automotive Devices, Incorporated, San Francisco, Calif. Method and apparatus for governing flow lines. 2,026,948; Jan. 7.

Leinweber, William H., Chicago, Ill. Blower. 2,026,689; Jan. 7.

Leinweber, William H., Chicago, Ill. Fluid operating propeller. 2,027,050; Jan. 7.

Lemming, John C. (See Davis, J. H., and Lemming.)

Leslie, George W. D., Sydney, New South Wales, Australia. Railway axle journal lubricator. 2,027,110; Jan. 7.

Lesti, Arnold, Los Angeles, Calif. Electric translating device for musical instruments. 2,026,841; Jan. 7.

Lets Manufacturing Company, The. (See Holland-Lets, John, assignor.)

Le Vecconte, Lester E., Irwin, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Pilot-wire protection for transmission lines. 2,027,237; Jan. 7.

Levy, Michael, Brooklyn, N. Y. Wheeled toy. 2,027,049; Jan. 7.

Libbey-Owens-Ford Glass Company. (See McDaniel, Willard C., assignor.)

Libbey-Owens-Ford Glass Company. (See Watkins, George B., assignor.)

Linderman, Garrett B., Jr. (See Stuart, K., and Linderman, Jr.)

Lindemann, Carl, Company. (See Lindemann, Carl, assignor.)

Lindemann, Carl, Hackensack, assignor to Carl Lindemann Company, Inc., Jersey City, N. J. Venetian blind bracket. 2,027,230; Jan. 7.

Lindstrom, Ture, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Circuit breaker. 2,027,238; Jan. 7.

Lipman, Carl E. L., assignor to Lipman Patents Corporation, Chicago, Ill. Refrigerator. 2,027,183; Jan. 7.

Lipman Patents Corporation. (See Lipman, Carl E. L., assignor.)

Lippincott, Stanley S. (See Böhmer, H., Jr., and Lippincott.)

Lippitt, Stephen W., Cleveland, Ohio. Knitting machine. 2,026,744; Jan. 7.

Lista, Louis J., Mount Shasta, Calif. Food grinder. 2,027,281; Jan. 7.

Locke Insulator Corporation. (See Frey, Howard A., assignor.)

Locke Insulator Corporation. (See Gouverneur, Minor F. H., assignor.)

Lockett, John W., Oswego, assignor to Fitzgibbons Boiler Company, Inc., New York, N. Y. Steam or hot water boiler. 2,027,845; Jan. 7.

Lodge, Frank. (See Haddock, N. H., Lodge, and Robinson.)

Logie, Thomas T., assignor to The Bassick Company, Bridgeport, Conn. Hood catch. 2,026,640; Jan. 7.

Long, Elmer C., Grosse Pointe Park, Mich. Piston for internal combustion motors. 2,026,789; Jan. 7.

Long, George A., assignor to The Gray Telephone Pay Station Company, Hartford, Conn. Coin keeper for telephone toll collecting apparatus. 2,026,961; Jan. 7.

Lommel, Wilhelm, Leverkusen-Wiesdorf, and R. Schreiner, Leverkusen-I. G. Werk, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Vulcanization accelerator. 2,027,194; Jan. 7.

Long, Thomas H., Irwin, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Grid-glow tube position relay combination. 2,027,239; Jan. 7.

Loomis, Everts G., Newark, N. J. Mixing machine. 2,027,185; Jan. 7.

Looney, Mark E., Watertown, Mass. Window. 2,027,240; Jan. 7.

Loveridge, Frederick H., deceased, Coldwater, Mich., and E. H. Smythe, Evanston, Ill., G. L. Clark, and H. L. Loveridge, trustees. Card index and the like. 2,026,582; Jan. 7.

Loveridge, Herman L., trustee, et al. (See Loveridge, F. H., and Smythe.)

Lowe, Charles R., Detroit, Mich., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Lock. 2,027,186; Jan. 7.

Lowe, Ernest A., and J. R. Hamilton, Cleveland Heights, assignors to Automatic Sprinkler Company of America, Cleveland, Ohio. Fire extinguishing and alarm apparatus. 2,027,051; Jan. 7.

Lowe Paper Company. (See Korte, Charles, assignor.)

Lowenberg, Gisbert. (See Johnson, G. R., and Lowenberg.)

Lowry, Erwin F., Williamsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Thermionic discharge device. 2,027,241; Jan. 7.

Luchett, William S., New York, N. Y. Fruit basket. 2,027,052; Jan. 7.

Luna, Rome A., San Francisco, Calif. Illuminated sign letter. 2,027,187; Jan. 7.

Lutzy, Harry H. (See Bly, R. W., and Lutzy.)

Lyman, Donald P., assignor to Eastman Kodak Company, Rochester, N. Y. Film magazine. 2,026,964; Jan. 7.

Lyon Cover Company. (See Short, Bladen M., assignor.)

Macdonald, Lester B., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method of and machine for use in the manufacture of shoes. 2,026,641; Jan. 7.

MacIlvain, Herbert. (See Mall, J. E., Sr., and MacIlvain.)

Madland, Gabriel, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 2,027,242; Jan. 7.

Magnesium Development Corporation. (See Paine, Roy F., assignor.)

Malm, Carl J., and C. L. Fletcher, assignors to Eastman Kodak Company, Rochester, N. Y. Changing the solubility of mixed esters of cellulose and the product resulting therefrom. 2,026,589; Jan. 7.

Malm, Carl J., and W. H. Fisher, assignors to Eastman Kodak Company, Rochester, N. Y. Manufacture of aliphatic acid anhydrides. 2,026,965; Jan. 7.

Malm, Carl J., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of high viscosity mixed esters of cellulose. 2,026,966; Jan. 7.

Manahan, Joseph A., Boston, Mass. Liberating fibers. 2,026,584; Jan. 7.

Manhoff, Henry J., Wichita, Kans. Rotor for hammer mills. 2,026,790; Jan. 7.

Manley Products Corp. See Manley, Robert E., assignor.)

Manley, Robert E., assignor to Manley Products Corp., York, Pa. Motorized drive. 2,027,111; Jan. 7.

Manning, Bowman & Co. (See Farr, Edward A., assignor.)

Manning, Joseph A., Pawtucket, R. I. Doll head. 2,026,590; Jan. 7.

Manning, James, Trenton, N. J. Electric motor. 2,026,[illegible]; Jan. 7.

Manning, James, Trenton, N. J. Field mounting for d[illegible]mo-electric machines. 2,026,643; Jan. 7.

Marpon Corporation. (See Grubman, Leo J., assignor.)

Marinsky, Davis. (See Morin, L. H., and Marinsky.)

Marshall, William, assignor to Briggs Manufacturing Company, Detroit, Mich. Trim panel assembly. 2,026,595; Jan. 7.

Martel, Edgar J., Laconia, N. H. Knitting machine. 2,026,745; Jan. 7.

Martin Brothers Electric Company, The. (See Martin, Wendell L., assignor.)

Martin, Eric. (See Caldwell, F. W., and Martin.)

Martin, Wendell L., Cleveland, Ohio. Drier. 2,026,981; Jan. 7.

Martin, Wendell L., assignor to The Martin Brothers Electric Company, Cleveland, Ohio. Drying apparatus. 2,026,982; Jan. 7.

Marvel Carburetor Company. (See Kirby, Charles H., assignor.)

Maschinenfabrik Augsburg-Nurnberg A. G. (See Pietschtick, Gustav, assignor.)

Mason, Donald W., Eugene, Oreg. Tire and rim. 2,027,223; Jan. 7.

Mathieson Alkali Works, Inc., The. (See Petros, Gregory A., assignor.)

Matteucci, Meryem F., assignor to Fisher Scientific Company, Pittsburgh, Pa. Gas analysis apparatus. 2,026,648; Jan. 7.

Mayer, Joseph C., Cleveland, Ohio. Baseball game. 2,026,701; Jan. 7.

Mayer, Max. (See Brunenfeld, J., and Mayer.)

Maynes, Hyla F. (See Maynes, Myra F., assignor.)

Maynes, Emma C. (See Maynes, Myra F., assignor.)

Maynes, Hyla F., assignor of one-half to R. C. Maynes, North Tonawanda, N. Y. Fishing reel. 2,027,035; Jan. 7.

Maynes, Hyla F., assignor of one-half to R. C. Maynes, North Tonawanda, N. Y. Fishing reel. 2,027,036; Jan. 7.

Maynes, Hyla F., assignor of one-half to R. C. Maynes, North Tonawanda, N. Y. Reel structure. 2,027,208; Jan. 7.

McArdle, Michael W., and L. Jeppesen, assignors to Chicago Flexible Shaft Company, Chicago, Ill. Combined slicer, shredder and dicer. 2,026,601; Jan. 7.

McCarthy, Daniel J., Elgin, assignor to Associated Electric Laboratories, Inc., Chicago, Ill. Highway crossing signaling system. 2,027,166; Jan. 7.

McCarty, Bernard T., Bennett, N. Y., and W. B. Skelton, Cambridge, Mass., assignors to The Texas Company, New York, N. Y. Removal of wax from hydrocarbon oil. 2,027,046; Jan. 7.

McClellan, Herbert, Los Angeles, Calif., assignor to Exhibit Supply Company, Chicago, Ill. Gauge apparatus. 2,026,602; Jan. 7.

McCormick, David, Bradford, Pa. Pressure controlling device for gasoline pumps. 2,026,690; Jan. 7.

McCullough, Jack. (See Mott, W. W., and McCullough.)

McDaniel, Willard C., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Pressing apparatus. 2,026,692; Jan. 7.

McFadden, William G., Akron, Ohio. Hydraulic roll adjuster mechanism. 2,027,283; Jan. 7.

McGill, Charles S., assignor to McGill Manufacturing Company, Valparaiso, Ind. Portable incandescent lamp. 2,026,792; Jan. 7.

McGill Manufacturing Company. (See McGill, Charles S., assignor.)

McKee, Garnet W., Rockford, Ill. Pressure regulator. 2,026,793; Jan. 7.

McKim, James R. (See Allison, R. W., and McKim.)

McLachlan, Willard J., Scotia, N. Y., assignor to General Electric Corporation. Control and protection of electric circuits. 2,027,189; Jan. 7.

McLaine, Michael L., Dunmore, Pa. Stove grate. 2,026,983; Jan. 7.

McLean, Charles E., Methuen, assignor to Pittsburgh-Plymouth Mills Corporation, Lawrence, Mass. Composite yarn and fabric. 2,026,686; Jan. 7.

McMahan, Arthur B., Long Beach, Calif. Neon tube support. 2,026,949; Jan. 7.

McNally, James G., and E. S. Sweet, assignors to Eastman Kodak Company, Rochester, N. Y. Laminated glass. 2,026,967; Jan. 7.

McNish, Alexander F., Perth, Scotland. Glass forming machine. 2,026,694; Jan. 7.

McVeagh, Thomas C., Honolulu, Territory of Hawaii. Securing device. 2,099,896; Jan. 7.

Mears, Hastan A., assignor to Chicago Forging & Manufacturing Co., Chicago, Ill. Hoof brush. 2,026,695; Jan. 7.

Meaden, William C., Scranton, and F. H. Smith, Hazleton, Pa., said Smith assignor to Wilmot Engineering Company, Hazleton, Pa. Separating and washing apparatus. 2,026,908; Jan. 7.

Merriam, Hilda D., Chicago, Ill. Dust cloth. 2,027,113; Jan. 7.

Mesnick, Charles, Brentwood, N. Y. Armature for magnetic movements. 2,026,996; Jan. 7.

Metal Specialties Manufacturing Company. (See Johnson, G. E., and Lowenberg, assignors.)

Metal Textile Corporation. (See Hartwell, Ralf L., assignor.)

Metal Textile Corporation. (See Kingman, Russell B., assignor.)

Meutsch, Charles C., Buffalo, N. Y. Parachute-type seat. 2,026,843; Jan. 7.

Meyer, Fred C., Paterson, and G. E. Moritz, East Paterson, assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. Joint for electric cables. 2,026,727; Jan. 7.

Michel, H. Arnold. (See Weenberg, Peter, assignor.)

Meyer, Jerome S. (See Rosenthal, L. W., and Meyer.)

Miessner, Benjamin F., assignor to Miessner Inventions, Inc., Short Hills, N. J. Amplifier system. 2,027,044; Jan. 7.

Miessner, Benjamin F., Millburn, N. J., assignor to Miessner Inventions, Inc. Apparatus for the production of music. 2,027,046; Jan. 7.

Miessner Inventions, Inc. (See Jacobs, Charles T., assignor.)

Miessner Inventions, Inc. (See Miessner, Benjamin F., assignor.)

Miessner Inventions, Inc. (See Tierling, Oskar, assignor.)

Milan, Jessie. (See Allison, Peter, assignor.)

Miller, Edward J., Springfield, Long Island, N. Y. Suspension attachment for bottle-necked vessels. 2,026,597; Jan. 7.

Miller, Ralph W., Glendale, assignor of one-half to W. H. Ballinger, Los Angeles, Calif. Reel seat for fishing rods. 2,027,248; Jan. 7.

Mills Patent Holding Co., Inc. (See Hirsch, S., and Brucker, assignors.)

Mills Patent Holding Co. (See Brueckner, Hugo, assignor.)

Millinger, August, Louisville, Ky. Adjustable locking, holding, and tightening device. 2,027,118; Jan. 7.

Minahan, James L., San Antonio, Tex. Controlling valve. 2,026,844; Jan. 7.

Miner, Robert G., assignor to The Texas Company, La Grange, Wis. Valve. 2,027,190; Jan. 7.

Miranta, August, Tacoma, Wash. Arch support and pain protector. 2,027,035; Jan. 7.

Mitchell, Doren, Bound Brook, N. J., assignor to American Telephone and Telegraph Company. Signaling system. 2,026,696; Jan. 7.

Moffitt, George R. (See Meyer, F. C., and Moffitt.)

Monteith, Roy C., Hibbert, Ind. Brush holder. 2,026,644; Jan. 7.

Montgomery, Albert W. (See Harding, W. H., and Montgomery.)

Moore, Guy S., Chester, N. H., assignor of one-third to H. B. Fraser, Lynn, Mass. Rack. 2,026,746; Jan. 7.

Moore, Roscoe, Kingston, Pa. Drive for shaker conveyers. 1,027,234; Jan. 7.

Moorman, Albert G., New York, N. Y. Ball rolling game. 2,027,244; Jan. 7.

Morin, Louis H., and D. Marinsky, assignors to Whitehall Patents Corporation, New York, N. Y. Manufacturing fastener devices. 2,026,904; Jan. 7.

Morrell, John A., Greer, S. C. Semi-fixed reverse motion for pickers. 1,026,900; Jan. 7.

Morrell, Sarmuel T., and H. G. St. V. Beachey, Auckland, New Zealand. Printing cylinder of rotary duplicating machines. 2,026,909; Jan. 7.

Morrill, Frank R., assignor to The James Hunter Machine Company, North Adams, Mass. Tenter drier. 2,027,217; Jan. 7.

Morrison, Montford, Montclair, N. J., assignor to Westinghouse X-Ray Company, Inc. Radiographic plate changer. 2,026,907; Jan. 7.

Morrissey, William J., Brooklyn, N. Y. Combination projector and sound-reproducing assembly. 2,027,191; Jan. 7.

Morse, Leland B., Chicago, Ill. Laundry package. 1,026,645; Jan. 7.

Morse, Shirley F. (See Gilbert, A. C., and Morse.)

Morton, Brayton. (See Carter, William W., assignor.)

Moses, Frederick G., New York, H. W. Hess, Buffalo, and R. L. Perkins, East Aurora, assignors to The Barrett Company, New York, N. Y. Flotation of minerals. 2,027,357; Jan. 7.

Mostkoff, Morris, New York, N. Y. Automobile tire. 2,027,056; Jan. 7.

Motor Wheel Corporation. (See Horn, Harry J., assignor.)

Mudy, Glenn, Scarsdale, N. Y. Refrigerating system. 2,027,192; Jan. 7.

Mull, Joseph E., Sr., Philadelphia, and H. MacIlvain, Upper Darby Township, Delaware County, Pa. Cap for collapsible tubes and the like. 2,026,646; Jan. 7.

Muller, Oskar. (See Kleinschmidt, O., and Muller.)

Mullins Manufacturing Corporation. (See Redman, Earl H., assignor.)

Munters, Carl G., Stockholm, Sweden, assignor, by mesne assignments, to Servel, Inc., Dover, Del. Refrigeration. 2,027,057; Jan. 7.

Murray Corporation of America, The. (See Gradisar, Otto F., assignor.)

Murray Corporation of America, The. (See Westhaver, Fred J., assignor.)

Muscle Foundation Incorporated. (See Musher, Sidney, assignor.)

Musher, Sidney, assignor to Muscle Foundation Incorporated, New York, N. Y. Prevention of exhaustion. 2,026,697; Jan. 7.

Muth, Friedrich, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Waterinsoluble azodyestuffs. 2,026,908; Jan. 7.

Muth, Herbert, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany. Thermostat arrangement. 2,027,193; Jan. 7.

Myers, Don D., Toledo, Ohio, assignor to The Blandon Manufacturing Company. Table. 2,026,998; Jan. 7.

Myers, George M. (See Brown, G. D., and Myers.)

Myers, Oscar, Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,027,194; Jan. 7.

Nall, Elmer L., Wheaton, Ill. Dispenser for oil cans. 2,026,585; Jan. 7.

Nallinger, Fritz, Stuttgart, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart-Untertürkheim, Germany. Springing arrangement for vehicles. 2,026,909; Jan. 7.

Nance, James J., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigerating apparatus. 2,027,226; Jan. 7.

National Aniline & Chemical Company. (See Fleysher, M. H., and Ogilvie, assignors.)

National Aniline & Chemical Co. (See Ogilvie, James, assignor.)

National Breech & Machine Company. (See Hansen, Gustaf L., assignor.)

National Cash Register Company, The. (See Sedgebury, Herman F., assignor.)

National Machinery Company, The. (See Clarke, William L., assignor.)

National Pneumatic Company. (See Weigele, Albert E., assignor.)

National Pumps Corporation. (See Bradley, Eric H., assignor.)

National Traffic Signal Company. (See Olafson, Alvin O., assignor.)

Neeser, Charles R., New Rochelle, N. Y., assignor to Baldwin Southwark Corporation. Method and apparatus for air conditioning. 2,027,068; Jan. 7.

Neighbour, Leonard E., assignor to Deere & Company, Moline, Ill. Elevator. 2,026,794; Jan. 7.

Nelson, Albert C., Flushing, N. Y., assignor to Westinghouse X-Ray Company, Inc. Immobilization belt for X-ray apparatus. 2,027,218; Jan. 7.

Nelson, Carl F. (See Jacobson, Erik W., assignor.)

Nelson, Gustav R., De Kalb, assignor to Wurlitzer Grand Piano Company, De Kalb, Ill. Box and making it. 2,026,699; Jan. 7.

Nemeth, William P. B., North Arlington, N. J. Gravity thermal dilator. 2,026,747; Jan. 7.

Newhouse, Ray C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Combination drier and kiln unit. 2,027,059; Jan. 7.

News Projection Corporation. (See Bitzer, August D., assignor.)

Nicholson, Frank H., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway traffic controlling apparatus. 2,027,246; Jan. 7.

Niven, Henry A., and H. Kiff, assignors to L. G. Balfour Company, Attleboro, Mass. Finger ring. 2,027,060; Jan. 7.

North American Rayon Corporation. (See Lappe, Friedrich, assignor.)

Norton Company. (See Webster, Duane R., assignor.)

Oak Manufacturing Company. (See Dressel, Henry M., assignor.)

Oak Manufacturing Company. (See Dressel, H. M., and Allison, assignors.)

Ogilvie, James. (See Fleysher, M. H., and Ogilvie.)

Ogilvie, James, Buffalo, assignor to National Aniline & Chemical Co. Inc., New York, N. Y. Production of halogenated indanthrenes. 2,026,647; Jan. 7.

Ohio Seamless Tube Company. (See Benham, Frank L., assignor.)

Oliver Company, The. (See Douglas, James K., assignor.)

Okonite-Callender Cable Company, The. (See Meyer, F. C., and Moffitt, assignors.)

Olafson, Alvin O., assignor to National Traffic Signal Company, St. Paul, Minn. Timer. 2,026,648; Jan. 7.

Oldberg, Sidney, Detroit, Mich. Silencer. 2,026,795; Jan. 7.

Olsenthesis Company, The. (See Stover, O. H., and Brigham, assignors.)

Oliver United Filters Incorporated. (See Flynn, Edward D., assignor.)

Olpin, Henry C., Spondon, near Derby, England, assignor to Celanese Corporation of America. Ar-N-(Nitrophenyl)-tetrahydro-naphthylamines and preparing same. 2,026,748; Jan. 7.

Olsen, Fredrick, O. C., Tibbitts, and E. B. W. Kerose, Alton, assignors to Western Cartridge Company, East Alton, Ill. Manufacture of smokeless powders. 2,027,114; Jan. 7.

Olsen, Reuben A., Excelsior, Minn. Hair drier. 2,027,061; Jan. 7.

Olsen, Wilfred, Blackfoot, Idaho. Separator for seeds or the like. 2,026,910; Jan. 7.

Olson, Carl G., assignor to Illinois Tool Works, Chicago, Ill. Gear testing machine. 2,026,649; Jan. 7.

Olsson, Nils G. (See Ratcliff, Charles J., assignor.)

Omnia, Erik, Stockamd, and S. H. Ledin, Stockholm, assignors to Industriaktiebolaget, Stockholm, Sweden. Method and apparatus for concentrating brisk-foaming solutions. 2,027,115; Jan. 7.

Osmond, Rudolph F., Chicago, Ill. Wood joint and corner construction. 2,026,980; Jan. 7.

Oronoque Oil Burner Corporation. (See Holmes, Leslie W., assignor.)

Osgood, Walter F., Malden, assignor to Boston Machine Works Company, Lynn, Mass. Tape-applying machine. 2,026,911; Jan. 7.

Ostermann, Rudolf M., Kenilworth, Ill., assignor to The Superheater Company, New York, N. Y. Deconcentrator for locomotive boilers. 2,026,951; Jan. 7.

Oswego Falls Corporation. (See La Bombard, Leon E., assignor.)

Oswego Falls Corporation. (See La Bombard, Leon E., assignor.)

Owbridge, William A., Coventry, England. Ring holding apparatus. 2,027,116; Jan. 7.

Pacific Machinery Company. (See Thompson, Albert E., assignor.)

Packard Motor Car Company. (See Van Ranst, Cornelius W., assignor.)

Paine, Roy E., Cleveland, Ohio, assignor to Magnesium Development Corporation. Alloy. 2,026,589; Jan. 7.

Paine, Roy E., Cleveland, Ohio, assignor to Magnesium Development Corporation. Alloy. 2,026,590; Jan. 7.

Lang, Elmer C., Grosse Pointe Park, Mich. Piston for internal combustion motors. 2,026,789; Jan. 7.

Lang, George A., assignor to The Gray Telephone Pay Station Company, Hartford, Conn. Coin hopper for telephone toll collecting apparatus. 2,026,985; Jan. 7.

Lemmel, Wilhelm, Leverkusen-Wiesdorf, and R. Schröter, Leverkusen-I. G. Werk, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Vulcanization accelerator. 2,027,184; Jan. 7.

Long, Thomas H., Irwin, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Grid-glow tube position relay combination. 2,027,239; Jan. 7.

Loomis, Evarts G., Newark, N. J. Mixing machine. 2,027,185; Jan. 7.

Looney, Mark E., Watertown, Mass. Window. 2,027,240; Jan. 7.

Loveridge, Frederick H., deceased, Coldwater, Mich., and R. H. Smythe, Evanston, Ill., G. L. Clark, and H. L. Loveridge, trustees. Card index and the like. 2,026,582; Jan. 7.

Loveridge, Herman L., trustee, et al. (See Loveridge, F. H., and Smythe.)

Lowe, Charles R., Detroit, Mich., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Lock. 2,027,186; Jan. 7.

Lowe, Ernest A., and J. H. Hamilton, Cleveland Heights, assignors to Automatic Sprinkler Company of America, Cleveland, Ohio. Fire extinguishing and alarm apparatus. 2,027,061; Jan. 7.

Lowe Paper Company. (See Korte, Charles, assignor.)

Lowenberg, Gisbert. (See Johnson, G. E., and Lowenberg.)

Lowry, Erwin P., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Thermionic discharge device. 2,027,241; Jan. 7.

Lockett, William S., New York, N. Y. Fruit basket. 2,027,052; Jan. 7.

Luna, Rose A., San Francisco, Calif. Illuminated sign letter. 2,027,187; Jan. 7.

Lutty, Harry H. (See Bly, E. W., and Lutty.)

Lyman, Donald F., assignor to Eastman Kodak Company, Rochester, N. Y. Film magazine. 2,026,964; Jan. 7.

Lyon Cover Company. (See Short, Bladen M., assignor.)

Macdonald, Lester E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method of and machine for use in the manufacture of shoes. 2,026,641; Jan. 7.

MacIlvain, Herbert. (See Mull, J. K., Sr., and MacIlvain.)

Madland, Gabriel, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 2,027,242; Jan. 7.

Magnesium Development Corporation. (See Paine, Roy E., assignor.)

Malm, Carl J., and C. L. Fletcher, assignors to Eastman Kodak Company, Rochester, N. Y. Changing the solubility of mixed esters of cellulose and the product resulting therefrom. 2,026,583; Jan. 7.

Malm, Carl J., and W. H. Fisher, assignors to Eastman Kodak Company, Rochester, N. Y. Manufacture of aliphatic acid anhydrides. 2,026,965; Jan. 7.

Malm, Carl J., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of high viscosity mixed esters of cellulose. 2,026,966; Jan. 7.

Manahan, Joseph A., Boston, Mass. Liberating fibers. 2,026,584; Jan. 7.

Manroff, Henry J., Wichita, Kans. Rotor for hammer mills. 2,026,790; Jan. 7.

Manley Products Corp. See Manley, Robert E., assignor.)

Manley, Robert E., assignor to Manley Products Corp., York, Pa. Motorized drive. 2,027,111; Jan. 7.

Manning, Bowman & Co. (See Farr, Edward A., assignor.)

Manning, Joseph A., Pawtucket, R. I. Doff head. 2,026,990; Jan. 7.

Mannix, James, Trenton, N. J. Electric motor. 2,026,642; Jan. 7.

Mannix, James, Trenton, N. J. Field mounting for dynamo-electric machines. 2,026,643; Jan. 7.

Margon Corporation. (See Grabman, Leo J., assignor.)

Marinsky, Davis. (See Martin, L. B., and Marinsky.)

Marshall, William, assignor to Briggs Manufacturing Company, Detroit, Mich. Trim panel assembly. 2,026,595; Jan. 7.

Martel, Edgar J., Laconia, N. H. Knitting machine. 2,026,745; Jan. 7.

Martin Brothers Electric Company, The. (See Martin, Wendell L., assignor.)

Martin, Erle. (See Caldwell, F. W., and Martin.)

Martin, Wendell L., Cleveland, Ohio. Drier. 2,026,891; Jan. 7.

Martin, Wendell L., assignor to The Martin Brothers Electric Company, Cleveland, Ohio. Drying apparatus. 2,026,892; Jan. 7.

Marvel Carbureter Company. (See Kirby, Charles H., assignor.)

Maschinenfabrik Augsburg-Nurnberg A. G. (See Pietschk, Gustav, assignor.)

Mason, Donald W., Eugene, Oreg. Tire and rim. 2,027,282; Jan. 7.

Mathieson Alkali Works, Inc., The. (See Petree, Gregory A., assignor.)

Matteucci, Mariam P., assignor to Fisher Scientific Company, Pittsburgh, Pa. Gas analysis apparatus. 2,026,642; Jan. 7.

Mayer, Joseph C., Cleveland, Ohio. Baseball game. 2,026,721; Jan. 7.

Mayer, Max. (See Rosenfeld, J., and Mayer.)

Maynes, Emma C. (See Maynes, Hyla F., assignor.)

Maynes, Emma G. (See Maynes, Hyla F., assignor.)

Maynes, Hyla F., assignor of one-half to E. C. Maynes, North Tonawanda, N. Y. Fishing reel. 2,027,243; Jan. 7.

Maynes, Hyla F., assignor of one-half to E. C. Maynes, North Tonawanda, N. Y. Fishing reel. 2,027,244; Jan. 7.

Maynes, Hyla F., assignor of one-half to E. C. Maynes, North Tonawanda, N. Y. Reel structure. 2,027,245; Jan. 7.

McArdle, Michael W., and I. Jeppeson, assignors to Chicago Flexible Shaft Company, Chicago, Ill. Combined slicer, shredder and dicer. 2,026,681; Jan. 7.

McCarthy, Daniel J., Main, assignor to Associated Electric Laboratories, Inc., Chicago, Ill. Highway crossing signaling system. 2,027,120; Jan. 7.

McCarty, Bernard W., Beacon, N. Y., and W. H. Shelton, Cambridge, Mass., assignors to The Texas Company, New York, N. Y. Removal of wax from hydrocarbon oil. 2,027,246; Jan. 7.

McClellan, Herbert, Los Angeles, Calif., assignor to Exhibit Supply Company, Chicago, Ill. Gauge apparatus. 2,026,993; Jan. 7.

McCormick, David, Dunmore, Pa. Pressure controlling device for gasoline pumps. 2,026,690; Jan. 7.

McCullough, Jack. (See Mott, W. W., and McCullough.)

McDaniel, Willard C., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Pressing apparatus. 2,026,997; Jan. 7.

McFaddan, William G., Hyde, Ohio. Hydraulic roll adjuster mechanism. 2,027,353; Jan. 7.

McGill, Charles S., assignor to McGill Manufacturing Company, Valparaiso, Ind. Portable incandescent lamp. 2,026,702; Jan. 7.

McGill Manufacturing Company. (See McGill, Charles S., assignor.)

McKee, Garrat W., Rockford, Ill. Pressure regulator. 2,026,758; Jan. 7.

McKim, James E. (See Allison, S. W., and McKim.)

McLachlan, Willard J., Bowie, N. Y., assignor to General Electric Corporation. Control and protection of electric circuits. 2,027,180; Jan. 7.

McLaine, Michael J., Dunmore, Pa. Stove grate. 2,026,993; Jan. 7.

McLean, Charles E., Methuen, assignor to Patrhogue-Plymouth Mills Corporation, Lawrence, Mass. Compound yarn and fabric. 2,026,698; Jan. 7.

McMahan, Arthur E., Long Beach, Calif. Mass tube support. 2,026,949; Jan. 7.

McNally, James G., and S. G. Sweet, assignors to Eastman Kodak Company, Rochester, N. Y. Laminated glass. 2,026,967; Jan. 7.

McNish, Alexander F., Perth, Scotland. Glass forming machine. 2,026,894; Jan. 7.

McVeagh, Thomas C., Honolulu, Territory of Hawaii. Securing device. 2,026,586; Jan. 7.

Moore, Norton A., assignor to Chicago Flanging & Manufacturing Co., Chicago, Ill. Hood latch. 2,026,895; Jan. 7.

Mosher, William C., Scranton, and F. H. Slater, Hazleton, Pa., said Hitch assignor to Wilmot Engineering Company, Hazleton, Pa. Separating and washing apparatus. 2,026,905; Jan. 7.

Morrison, Hilda D., Chicago, Ill. Dust cloth. 2,027,112; Jan. 7.

Mosnick, Charles, Brentwood, N. Y. Armature for magnetic movements. 2,026,984; Jan. 7.

Metal Specialties Manufacturing Company. (See Johnson, G. E., and Lowenberg, assignors.)

Metal Textile Corporation. (See Hartwell, Ralf L., assignor.)

Metal Textile Corporation. (See Klingman, Russell B., assignor.)

Meutsch, Charles C., Buffalo, N. Y. Furniture spring seat. 2,026,943; Jan. 7.

Meyer, Fred C., Paterson, and G. E. Moffitt, East Paterson, assignors to The Okonite-Callender Cable Company, Incorporated, Paterson, N. J. Joint for electric cables. 2,026,587; Jan. 7.

Michel, H. Arnold. (See Weinberg, Peter, assignor.)

Meyer, Jerome S. (See Rosenthal, L. W., and Meyer.)

Miessner, Benjamin F., assignor to Miessner Inventions, Inc., Short Hills, N. J. Amplifier system. 2,027,054; Jan. 7.

Miessner, Benjamin F., Millburn, N. J., assignor to Miessner Inventions, Inc. Apparatus for the production of music. 5,027,074; Jan. 7.

Miessner Inventions, Inc. (See Jacobs, Charles T., assignor.)

Miessner Inventions, Inc. (See Miessner, Benjamin F., assignor.)

Miessner Inventions, Inc. (See Vlastimil, Ostner, assignor.)

Miles, Jennie. (See Allman, Fenno, assignee.)

Miller, Edward J., Springfield, Long Island, N. Y. Suspension attachment for incandescent mantle. 2,026,968; Jan. 7.

Miller, Ralph W., Glendale, assignor of one-half to W. H. Ballinger, Los Angeles, Calif. Reel seat for fishing rods. 2,027,248; Jan. 7.

Millie Patent Holding Co. Inc. (See Hirsch, S., and Brincher, assignors.)

Millie Patent Holding Co. (See Brandner, Hans, assignor.)

Millinger, August, Louisville, Ky. Adjustable locking, holding, and tightening device. 2,027,113; Jan. 7.

Minahan, James L., San Antonio, Tex. Controlling valve. 2,026,644; Jan. 7.

Miner, Robert G., assignor to The Texas Company, La Crosse, Wis. Valve. 2,027,190; Jan. 7.

Mirents, August, Tacoma, Wash. Arch support and ankle protector. 2,027,055; Jan. 7.

Mitchell, Doren, Bound Brook, N. J., assignor to American Telephone and Telegraph Company. Signaling system. 2,026,894; Jan. 7.

Moffitt, George H. (See Meyer, F. C., and Moffitt.)

Monteith, Roy C., Elkhart, Ind. Brush holder. 2,026,644; Jan. 7.

Montgomery, Albert W. (See Harding, W. H., and Montgomery.)

Moore, Guy S., Chester, N. H., assignor of one-third to R. B. Fraser, Lynn, Mass. Rack. 2,026,748; Jan. 7.

Moore, Roscoe, Kingston, Pa. Drive for shaker conveyers. 2,027,284; Jan. 7.

Moorman, Albert S., New York, N. Y. Ball rolling game. 2,027,344; Jan. 7.

Morin, Louis H., and D. Marinsky, assignors to Whitehall Patents Corporation, New York, N. Y. Manufacturing fastener devices. 2,026,904; Jan. 7.

Morrell, John A., Greer, S. C. Sensitized drawer motion for pickers. 2,026,905; Jan. 7.

Morrell, Samuel T., and H. G. St. V. Beechey, Auckland, New Zealand. Printing cylinder of rotary duplicating machines. 2,026,906; Jan. 7.

Morrill, Frank B., assignor to The James Hunter Machine Company, North Adams, Mass. Tenter drier. 2,027,317; Jan. 7.

Morrison, Montford, Montclair, N. J., assignor to Westinghouse X-Ray Company, Inc. Radiographic plate changer. 2,026,907; Jan. 7.

Morrissey, William J., Brooklyn, N. Y. Combination projector and sound-reproducing assembly. 2,027,191; Jan. 7.

Morse, Leland E., Chicago, Ill. Laundry package. 2,026,645; Jan. 7.

Morse, Shirley P. (See Gilbert, A. C., and Morse.)

Morton, Brayton. (See Carter, William W., assignor.)

Moses, Frederick G., New York, E. W. Heal, Buffalo, and R. L. Perkins, East Aurora, assignors to The Barrett Company, New York, N. Y. Flotation of minerals. 2,027,357; Jan. 7.

Moestkof, Morris, New York, N. Y. Automobile tire. 2,027,056; Jan. 7.

Motor Wheel Corporation. (See Horn, Harry J., assignor.)

Mumy, Olsen, Scarsdale, N. Y. Refrigerating system. 2,027,192; Jan. 7.

Mull, Joseph K., Sr., Philadelphia, and H. MacIlvain, Upper Darby Township, Delaware County, Pa. Can for sanitable refuse and the like. 2,026,646; Jan. 7.

Muller, Cesar. (See Kleinschmidt, O., and Muller.)

Mullins Manufacturing Corporation. (See Hartman, Karl H., assignor.)

Munters, Carl G., Stockholm, Sweden, assignor, by mesne assignments, to Servel, Inc., Dover, Del. Refrigeration. 2,027,057; Jan. 7.

Murray Corporation of America, The. (See Goodmer, Otto F., assignor.)

Murray Corporation of America, The. (See Westrope, Fred J., assignor.)

Musher Foundation Incorporated. (See Musher, Sidney, assignor.)

Musher, Sidney, assignor to Musher Foundation Incorporated, New York, N. Y. Prevention of oxidation. 2,026,697; Jan. 7.

Muth, Friedrich, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Watermastable anodyestuffs. 2,026,908; Jan. 7.

Muth, Herbert, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany. Thermostat arrangement. 2,027,193; Jan. 7.

Myers, Don D., Toledo, Ohio, assignor to The Blaylock Manufacturing Company. Table. 2,026,909; Jan. 7.

Myers, George H. (See Brown, C. D., and Myers.)

Myers, Oscar, Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,027,194; Jan. 7.

Nall, Elmer J., Wheaton, Ill. Dispenser for oil cans. 2,026,986; Jan. 7.

Nallinger, Fritz, Stuttgart, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart-Unterturkheim, Germany. Springing arrangement for vehicles. 2,027,059; Jan. 7.

Nance, James J., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigerating apparatus. 2,027,265; Jan. 7.

National Aniline & Chemical Company. (See Fleysher, M. H., and Ogilvie, assignors.)

National Aniline & Chemical Co. (See Ogilvie, James, assignor.)

National Broach & Machine Company. (See Hansen, Gustof L., assignor.)

National Cash Register Company, The. (See Sedgebury, Herman F., assignor.)

National Machinery Company, The. (See Clouse, William L., assignor.)

National Pneumatic Company. (See Weigele, Albert E., assignor.)

National Pumps Corporation. (See Bradley, Eric H., assignor.)

National Traffic Signal Company. (See Olafson, Alvin O., assignor.)

Nesson, Charles R., New Rochelle, N. Y., assignor to Baldwin Southwark Corporation. Method and apparatus for air conditioning. 2,027,058; Jan. 7.

Neighbour, Leonard R., assignor to Deere & Company, Moline, Ill. Elevator. 2,026,794; Jan. 7.

Nelson, Albert C., Flushing, N. Y., assignor to Westinghouse X-Ray Company, Inc. Immobilization belt for X-ray apparatus. 2,027,318; Jan. 7.

Nelson, Carl F. (See Jacobson, Erik W., assignor.)

Nelson, Gustav R., De Kalb, assignor to Wurlitzer Grand Piano Company, De Kalb, Ill. Box and making it. 2,026,698; Jan. 7.

Nemsick, William F. E., North Arlington, N. J. Gravity thermal dilator. 2,026,747; Jan. 7.

Newhouse, Ray C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Combination drier and kiln unit. 2,027,059; Jan. 7.

News Projection Corporation. (See Hitzen, August D., assignor.)

Nicholson, Frank H., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway traffic controlling apparatus. 2,027,246; Jan. 7.

Niven, Henry A., and E. Kiff, assignors to L. G. Balfour Company, Attleboro, Mass. Finger ring. 2,027,060; Jan. 7.

North American Rayon Corporation. (See Lappe, Friedrich, assignor.)

Norton Company. (See Webster, Duane H., assignor.)

Oak Manufacturing Company. (See Dressel, Henry M., assignor.)

Oak Manufacturing Company. (See Dressel, H. M., and Allison, assignors.)

Ogilvie, James. (See Fleysher, M. H., and Ogilvie.)

Ogilvie, James, Buffalo, assignor to National Aniline & Chemical Co. Inc., New York, N. Y. Production of halogenated indanthrenes. 2,026,647; Jan. 7.

Ohio Seamless Tube Company. (See Benham, Frank L., assignor.)

Oilgear Company, The. (See Douglas, James K., assignor.)

Okonite-Callender Cable Company, The. (See Meyer, F. C., and Moffitt, assignors.)

Olafson, Alvin O., assignor to National Traffic Signal Company, St. Paul, Minn. Timer. 2,026,648; Jan. 7.

Oldberg, Sidney, Detroit, Mich. Silencer. 2,026,795; Jan. 7.

Okonite Company, The. (See Stever, O. H., and Brigham, assignors.)

Oliver United Filters Incorporated. (See Flynn, Edward D., assignor.)

Ollis, Henry C., Spondon, near Derby, England, assignor to Celanese Corporation of America. Ar-N-(Nitrophenyl)-tetrahydro-naphthylamines and preparing same. 2,026,748; Jan. 7.

Olsen, Fredrich, G. C. Tibbitts, and E. B. W. Kerone, Alton, assignors to Western Cartridge Company, East Alton, Ill. Manufacture of smokeless powders. 2,027,114; Jan. 7.

Olsen, Reuben A., Excelsior, Minn. Hair drier. 2,027,061; Jan. 7.

Olson, Wilfred, Blackfoot, Idaho. Separator for seeds or the like. 2,026,910; Jan. 7.

Olson, Carl G., assignor to Illinois Tool Works, Chicago, Ill. Gear testing machine. 2,026,649; Jan. 7.

Olsson, Nils G. (See Ratelle, Charles J., assignor.)

Omes, Erik, Stocksund, and S. H. Ledin, Stockholm, assignors to Industrikemiska Aktiebolaget, Stockholm, Sweden. Method and apparatus for concentrating brisk-foaming solutions. 2,027,116; Jan. 7.

Osgood, Rudolph F., Chicago, Ill. Wood joist and corner construction. 2,026,650; Jan. 7.

Oronoque Oil Burner Corporation. (See Holmes, Leslie W., assignor.)

Osgood, Walter P., Malden, assignor to Boston Machine Works Company, Lynn, Mass. Tape-applying machine. 2,026,911; Jan. 7.

Ostermann, Rudolf M., Kenilworth, Ill., assignor to The Superheater Company, New York, N. Y. Deconcentrator for locomotive boilers. 2,026,951; Jan. 7.

Oswego Falls Corporation. (See La Bombard, Leon E., assignor.)

Oswego Falls Corporation. (See La Bombard, Leon E., assignor.)

Oxbridge, William A., Coventry, England. Ring holding apparatus. 2,027,116; Jan. 7.

Pacific Machinery Company. (See Thompson, Albert B., assignor.)

Packard Motor Car Company. (See Van Ranst, Cornelius W., assignor.)

Paine, Roy E., Cleveland, Ohio, assignor to Magnesium Development Corporation. Alloy. 2,026,589; Jan. 7.

Paine, Roy E., Cleveland, Ohio, assignor to Magnesium Development Corporation. Alloy. 2,026,590; Jan. 7.

Paine, Ray E., Cleveland, Ohio, assignor to Magnetism Development Corporation. Alloy. 2,026,581; Jan. 7.

Paine, Roy E., Cleveland, Ohio, assignor to Magnetism Development Corporation. Alloy. 2,026,582; Jan. 7.

Parker, Arthur L., Cleveland, Ohio. Forming seamless tube couplings. 2,027,285; Jan. 7.

Parker, Henry C. (See Wyvcaver, Floyd J., assignor.)

Parkin, Thomas D., Broomfield, near Chelmsford, and E. S. Webb, London, England, assignors to Radio Corporation of America. Electrical instrument. 2,027,195; Jan. 7.

Parks, Fred M., Murrysville, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Motor control system. 2,027,247; Jan. 7.

Partlow Corporation, The. (See Partlow, Howard W., assignor.)

Partlow, Howard W., Utica, N. Y., assignor to The Partlow Corporation, New Hartford, Conn. Thermal-electric control. 2,026,699; Jan. 7.

Patchogue-Plymouth Mills Corporation. (See McLean, Charles E., assignor.)

Payne, Donald E., assignor to Standard Oil Company, Chicago, Ill. Dewaxing. 2,026,651; Jan. 7.

Payne, Percy C., St. Louis, Mo. Book holder and marker. 2,026,796; Jan. 7.

Payseur, Henry H., assignor to General Timber Service, Inc., St. Paul, Minn. Printing device for lumber. 2,027,247; Jan. 7.

Peake, Edward S., East Columbus, Ohio. Paper cap ammunition for toy pistols. 2,027,117; Jan. 7.

Pearl, Herman H., Garden City, N. Y. Utensil cover. 2,026,700; Jan. 7.

Pearl, Herman H., Floral Park, N. Y. Utensil cover. 2,026,701; Jan. 7.

Peterson, Erick, Minneapolis, Minn. System for the remote operation of power plants. 2,026,593; Jan. 7.

Pendergast, Overton W., Terre Haute, Ind. Calendar. 2,027,286; Jan. 7.

Perfection Stove Company. (See Chadwick, L. S., Rook, and Dahlstrom, assignors.)

Perkins, Robert L. (See Moses, P. G., Hess, and Perkins.)

Perma Corporation. (See Dopp, Frank R., assignor.)

Pescod, Richard F., H. R. Hornsby, Birtley, and G. W. N. Harrison, Low Fell, England, assignors to Anderson, Boyes & Company Limited, Motherwell, Lanarkshire, Scotland. Coal-cutting machine. 2,026,702; Jan. 7.

Pester, Ray, Grayslake, Ill. Golf club. 2,026,749; Jan. 7.

Peters, Arthur H., Phillipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Bearing for steel retainers. 2,026,703; Jan. 7.

Petree, Gregory A., Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Valve. 2,026,704; Jan. 7.

Pettersson, Hilde K., geb., Berting-Treptow, Germany. Apparatus for delivering and affixing labels, postage stamps, and the like. 2,027,287; Jan. 7.

Pfeiffer, William C., assignor to The Hery Register Company, Dayton, Ohio. Typewriter attachment. 2,026,845; Jan. 7.

Pfister, Arthur, Ridgewood Plateau, N. Y., assignor to Radio Corporation of America. Electrical control system. 2,027,196; Jan. 7.

Pharis Tire and Rubber Company. (See Reed, Ralph M., assignor.)

Phelps, Paul. (See Voyt, C. W., and Phelps.)

Philippe, Louis, Inc. (See Lawry, Hafis, assignor.)

Phoenix, Ernest T., Amsterdam, N. Y., assignor to Bigelow-Sanford Carpet Co. Inc., Thompsonville, Conn. Setting frame. 2,027,319; Jan. 7.

Pielsticker, Gustav, assignor to Maschinenfabrik Augsburg-Nuernberg A. G., Augsburg, Germany. Locomotive. 2,026,845; Jan. 7.

Pierson, Charles A., assignor to The Standard Electric Stove Company, Toledo, Ohio. Inclosed heating element for electric stoves. 2,026,797; Jan. 7.

Pines Winterfront Company. (See Raleigh, James F., assignor.)

Piper, William E., assignor to Gammeld Sign Corporation, Memphis, Tenn. Illuminated sign. 2,027,320; Jan. 7.

Platzman, Louis. (See Corigliano, P., and Platzman.)

Plauson, Hermann, Darmstadt, Germany, assignor, by mesne assignments, to T. R. C. Corporation, Wilmington, Del. Road paving. 2,026,968; Jan. 7.

Plauson, Hermann, Freiburg, Germany, assignor, by mesne assignments, to T. R. C. Corporation, Wilmington, Del. Building roads. 2,026,969; Jan. 7.

Pogue, Charles N., Norwood, Winnipeg, Manitoba, Canada. Carburetor. 2,026,796; Jan. 7.

Poste, Maurice, assignor to Compagnie Generale de Telegraphie Sans Fil, Paris, France. High frequency transmitter. 2,026,652; Jan. 7.

Powell, Albert C., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Trunk circuit. 2,027,197; Jan. 7.

Powell, Alan R., and E. C. Davies, assignors to Johnson Matthey & Company Limited, London, England. Electrodeposition of metals of the platinum group. 2,027,355; Jan. 7.

Pratt, Theodore, Glen Cove, N. Y. Combustion engine. 2,026,705; Jan. 7.

Priellipp, Walter, Dortmund, assignor to Vereinigte Stahlwerke Aktiengesellschaft, Duesseldorf, Germany. Sheet piling. 2,027,288; Jan. 7.

Procofieff-Seversky, Alexander, New York, N. Y., assignor to Seversky Aero Corporation. Variable speed drive for calculator mechanism. 2,026,912; Jan. 7.

Procofieff-Seversky, Alexander, New York, N. Y., assignor to Seversky Aero Corporation. Sighting control for aircraft. 2,027,246; Jan. 7.

Procofieff-Seversky, Alexander, New York, N. Y., assignor to Seversky Aero Corporation. Range finding and sight directing apparatus for use in aircraft. 2,027,245; Jan. 7.

Procofieff-Seversky, Alexander, New York, N. Y., assignor to Seversky Aero Corporation. Apparatus for use in directing the flight of aircraft. 2,027,250; Jan. 7.

Procter & Schwartz, Incorporated. (See Hogarty, Herman E., assignor.)

Program Clock, Inc. (See Sanford, H. W., and Thomas, assignors.)

Program Clock, Inc. (See Thomas, Fritz H., assignor.)

Prosser, Herman L., Long Beach, Calif. System of illumination. 2,027,116; Jan. 7.

Purdy, George H. (See Robertson, E., and Purdy.)

Pure Carbonic Company of America. (See Rapenne, Eugene L., assignor.)

Pureza, Julius, Brooklyn, N. Y. Pressing iron. 2,027,062; Jan. 7.

Quinlan Pretzel Co. Inc. (See Gips, Harrison S., assignor.)

Quinn, Robert G. (See Campbell, J., and Quinn.)

Radio Corporation of America. (See Beatt, George P., assignor.)

Radio Corporation of America. (See Carter, Philip S., assignor.)

Radio Corporation of America. (See Gamble, James W., assignor.)

Radio Corporation of America. (See Dellinger, J. H., and Tuve, assignors.)

Radio Corporation of America. (See Dowden, William L., assignor.)

Radio Corporation of America. (See Hansell, Clarence W., assignor.)

Radio Corporation of America. (See Hills, Sidney C., assignor.)

Radio Corporation of America. (See Knight, John R., Jr., assignor.)

Radio Corporation of America. (See Parkin, T. D., and Webb, assignors.)

Radio Corporation of America. (See Pfister, Arthur, assignor.)

Radio Corporation of America. (See Trevor, Bertram, assignor.)

Radio Corporation of America. (See Turner, Alfred H., assignor.)

Radovich, Harry, Detroit, Mich. Molding pipes. 2,026,908; Jan. 7.

Ragonnet, Eugene L., assignor to Pure Carbonic Company of America, New York, N. Y. Converter. 2,026,709; Jan. 7.

Raleigh, James F., River Forest, assignor to Pines Winterfront Company, Chicago, Ill. Radiator shutter. 2,026,653; Jan. 7.

Ramey, Inc. (See Smithwick, H., and Ramey, assignors.)

Randolph, George B., San Antonio, Tex. Lawn trimmer. 2,027,289; Jan. 7.

Rappold, George W., Maspeth, N. Y. Slide measuring cabinet. 2,027,196; Jan. 7.

Ratelle, Charles J., Chicago, assignor of fifty-one percent to Nils G. Olson, Aurora, Ill. Metallic shingle. 2,027,321; Jan. 7.

Rath, Rudolf, Munich, Germany. Relief work for artificial tooth backing. 2,026,706; Jan. 7.

Raybestos-Manhattan, Inc. (See Lang, George E., assignor.)

Raymond Rag Company, The. (See Sharkey, William E., assignor.)

Reach, Milton S., Springfield, Mass. Water bottle. 2,027,240; Jan. 7.

Reichsamt, Rudolf, assignor to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany. Receiver circuit arrangement. 2,026,980; Jan. 7.

Reck, Peter C., assignor to Sylvania Electric Company, Adrian, Mich. Vibratory diaphragm horn mounting. 2,026,654; Jan. 7.

Reed, John C. 3d, and C. C. Schott, Louisville, Ky., assignors to Standard Sanitary Manufacturing Company. Sink ware. 2,026,962; Jan. 7.

Reed, Ralph M., assignor to The Pharis Tire and Rubber Company, Newark, Ohio. Pneumatic film casing. 2,027,243; Jan. 7.

Reichert, William M. (See Tyler, H. H., and Reichert.)

Reifel, John W., Huntington Park, Calif. Machine for trenchless boring. 2,027,063; Jan. 7.

Reiter, Daniel L., New York, N. Y., and J. H. Arthur, Providence, R. I.; said Arthur assignor to said Reiter. Buckle. 2,026,710; Jan. 7.

Remington Arms Company. (See Woodford, Watson H., assignor.)

Renner, Walter, and F. Kerpmann, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Condensation product. 2,027,159; Jan. 7.

Revol, Marc. (See Chatterton, J. S., Revol, and Dahlstrom.)

Revere Copper and Brass Incorporated. (See Willson, Richard A., assignor.)

Reynolds, Marvin C. (See Harris, E. E., and Reynolds.)

Rice, Charles Dale, West Hartford, Conn. Universal joint. 2,026,907; Jan. 7.

Rice, Harold D., Barrington, R. I., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Printer's blanket. 2,027,322; Jan. 7.

Rice, Herbert C., assignor to General Motors Corporation, Detroit, Mich. Car heater. 2,026,655; Jan. 7.

Richards, Samuel G. Des Moines, Iowa. Station indicator. 2,026,847; Jan. 7.

Richter, Herman W., Bridgewater, Mass. Flooring material and molding mixture. 2,026,864; Jan. 7.

Riebel, Frederick, Jr., assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio. Suction cleaner. 2,027,240; Jan. 7.

Riebel, Frederick, Jr., assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio. Suction cleaner floor tool. 2,027,260; Jan. 7.

Riess, Kolman, Irvington, N. J. Toy or display device. 2,026,913; Jan. 7.

Ritter, Claude A., Cincinnati, Ohio. Expanding mandrel holder. 2,027,119; Jan. 7.

Robbins, George A., Hilliar Township, Knox County, Ohio. Window. 2,026,781; Jan. 7.

Roberts, Montague H., Englewood, N. J., assignor to Franklin Railway Supply Company, New York, N. Y. Locomotive. 2,026,707; Jan. 7.

Robertson, James, and G. H. Purdy, San Francisco, Calif. Connecting tubes in series. 2,027,200; Jan. 7.

Robertson, Robert B., assignor to The Transiodo Joint Company, Chicago, Ill. Blind joint former and lead distributor. 2,027,261; Jan. 7.

Robinson, Gordon D., Annapolis, Md. Electric circuits for employing capacitative currents. 2,027,291; Jan. 7.

Robinson, Robert. (See Hatfield, H. R., Lodge, and Robinson.)

Rocheleau, Antonin, Cap-de-la-Madeleine, Quebec, Canada. Storage battery connector. 2,027,120; Jan. 7.

Robb, Charles F., Jr. (See Wright, William D., assignor.)

Rock, Frank, Los Angeles, Calif. Motor vehicle signal. 2,026,762; Jan. 7.

Rockwell, Byrd C., Sheffield, Ala., assignor of one-half to Bradley Lumber Company of Arkansas, Warren, Ark. Block flooring. 2,027,297; Jan. 7.

Rogers, Clifford H., assignor of twenty-four per cent to J. Kaufman, and twenty-four per cent to J. K. Carr, Portland, Oreg. Vehicle brake. 2,026,585; Jan. 7.

Rohm & Haas Company. (See Bruson, H. A., and Covert, assignors.)

Rosenthal, Dunbar A. (See Winter, C. F., and Rosenthal.)

Rosenthal, Leon W., and J. S. Meyer, New York, N. Y. Display device. 2,026,783; Jan. 7.

Ross, Hazen C., Junction City, Kans. Humidity and temperature control for incubation. 2,026,801; Jan. 7.

Ross, Howard S., Harrisburg, Pa. Toilet comb. 2,027,151; Jan. 7.

Ross, John D., Bangor, Maine. Automatic controlling device. 2,026,866; Jan. 7.

Rotary Lift Company. (See Hauver, Charles W., assignor.)

Rotermund, Maynard A. (See Kennedy, H. B., Rotermund, and Jones.)

Rozunek, Ernst, Berlin-Lichterfelde, Germany. Electromagnetically operated vacuum switch. 2,027,004; Jan. 7.

Rubber Service Laboratories Co., The. (See Scott, W., and Byers, assignors.)

Ruber, Ernest W., San Francisco, Calif. Cooling means for internal combustion engines. 2,026,848; Jan. 7.

Rubin & Denivelle. (See Rubin, Joseph, assignor.)

Rubin, Joseph, Brooklyn, assignor to Rubin & Denivelle, New York, N. Y. Wall ornament. 2,026,708; Jan. 7.

Runyan, Frank C., Overland, Mo. Self-adjusting brake. 2,027,302; Jan. 7.

Rutherford, John T. (See Thompson, H. W., and Rutherford.)

Sadgebury, Herman F., assignor to The National Cash Register Company, Dayton, Ohio. Cash register. 2,026,849; Jan. 7.

Sadtler, Chester R., assignor to Barber-Colman Company, Rockford, Ill. Method and apparatus for heat treating high speed steel. 2,027,065; Jan. 7.

Sandt, Julius, Pirmasens, Germany. Heel nailing machine with nail feed. 2,027,132; Jan. 7.

Sanford, Hugh W., Knoxville, and F. H. Thomas, Greeneville, assignors to Program Clocks, Inc., Knoxville, Tenn. Program clock. 2,026,996; Jan. 7.

Schacht, Elmer C., Troy, N. Y., assignor, by mesne assignments, to Basic-Aluminite Corporation, Manufacture of abrasive articles. 2,027,060; Jan. 7.

Schacht, Elmer C., assignor to Basic-Aluminite Corporation, Troy, N. Y. Abrasive material. 2,027,059; Jan. 7.

Schacht, Elmer C., Troy, N. Y., assignor, by mesne assignments, to Basic-Aluminite Corporation, Method of coating and apparatus therefor and product. 2,027,057; Jan. 7.

Schaum, Paul F., Cincinnati, Ohio. Control device for power laundry machines. 2,026,850; Jan. 7.

Schatelig, Paul, Lausanne, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Sulphur dyestuffs and making same. 2,027,333; Jan. 7.

Schneider, Albert H., Carter Lake, Iowa, assignor to Baker Ice Machine Co. Inc., Omaha, Nebr. Apparatus for freezing ice cream and similar mixes. 2,027,302; Jan. 7.

Schittenhelm, Karl, Offenbach-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Roast mineral acid dispersions salts and preparing them. 2,027,052; Jan. 7.

Schoew, Karl F., Huntington, W. Va. Reporter. 2,026,914; Jan. 7.

Schoen, Karl, Wurzburg, assignor to the firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Sluice weir. 2,026,854; Jan. 7.

Schofield, John H. (See Coffey, S., and Schofield.)

Schott, Clarence C. (See Reed, J. C., 3d, and Schott.)

Schott, Peter, Jr., assignor to American Fixture & Showcase Manufacturing Company, St. Louis, Mo. Article display-counter. 2,026,952; Jan. 7.

Schrader's Son, Incorporated. (See Williams, Selden T., assignor.)

Schrauth, Walther, Berlin-Dahlem, assignor to Deutsche Hydrierwerke Aktiengesellschaft, Berlin-Charlottenburg, Germany. Procedure for the manufacture of condensation products. 2,027,361; Jan. 7.

Schroter, Rudolph. (See Lommel, W., and Schroter.)

Schroter, Karl. (See Becker, K., Schroter, and Wolf.)

Schubert, Georg, assignor to Forsach Aktien-Gesellschaft, Zehlendorf, near Berlin, Germany. Television system. 2,026,915; Jan. 7.

Schubert, Kurt, Berlin, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filter circuit. 2,027,067; Jan. 7.

Schumaker, Alan G. (See Schumaker, John S. and A. G.)

Schumaker, John S. and A. G., Asheville, N. C. Driving mechanism. 2,026,909; Jan. 7.

Schupbach, Rene M. (See Lauber, J. A., and Schupbach.)

Schwarze Electric Company. (See Rock, Peter C., assignor.)

Scott, Norman D., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del. Reacting alkali metals with aromatic hydrocarbons. 2,027,060; Jan. 7.

Scott & Williams, Incorporated. (See Grother, Ivan W., assignor.)

Scott, Winfield, Akron, Ohio, and H. G. Byers, Washington, D. C., assignors to The Rubber Service Laboratories Co., Akron, Ohio. Preservation of rubber. 2,027,061; Jan. 7.

Scribner, William L., assignor to The Timken Roller Bearing Company, Canton, Ohio. Bearing cage. 2,026,802; Jan. 7.

Seamless Rubber Company, The. (See DeLaney, Wallace W., assignor.)

Searing, Hudson S., New York, N. Y., assignor to General Electric Company. Control and protection of electric circuits. 2,027,206; Jan. 7.

Searles, Wayne S., assignor to Universal Optical Corporation, Providence, R. I. Sport ophthalmic mounting. 2,027,122; Jan. 7.

Seiferth, Hugo, Duesseldorf-Oberkassel, Germany. Rolling method. 2,027,283; Jan. 7.

Servel, Inc. (See Dowell, Alvis Y., assignor.)

Servel, Inc. (See Knight, Donald B., assignor.)

Servel, Inc. (See Munters, Carl G., assignor.)

Seversky Aero Corporation. (See Procofieff-Seversky, Alexander, assignor.)

Seversky Aero Corporation. (See Procofieff-Seversky, Alexander, assignor.)

Sharkey, William E., assignor to The Raymond Rag Company, Middlebury, Ohio. Method and apparatus for making bags. 2,027,206; Jan. 7.

Sheldon, Weldo, South Norwalk, Conn. Power system for well drilling. 2,026,709; Jan. 7.

Shellmar Products Company. (See Gilfillan, Paul M., assignor.)

Sherman, Donald W., Shorewood, assignor to A. O. Smith Corporation, Milwaukee, Wis. Automobile frame. 2,026,658; Jan. 7.

Sherman, John C., Gorham, Maine. Fountain pen. 2,026,807; Jan. 7.

Shockey, H. H. (See Lack, Arnold, assignor.)

Short, Bladen M., assignor to Lyon Cover Company, Detroit, Mich. Tire cover. 2,026,597; Jan. 7.

Siddall, William M., Jr., East Orange, N. J. Fire alarm system. 2,027,068; Jan. 7.

Siebenthaler, Thomas L., Kansas City, Mo. Routing machine. 2,026,659; Jan. 7.

Siemens & Halske, Aktiengesellschaft. (See Schubert, Kurt, assignor.)

Silberkweit, Hans, Vienna, Austria. Lighter. 2,027,294; Jan. 7.

Skelton, J. G., Company. (See Skelton, John G., assignor.)

Skelton, John G., assignor to J. G. Skelton Company, Inc., Richmond, Va. Yarn supporting device. 2,027,325; Jan. 7.

Skelton, William E. (See McCarty, B. Y., and Skelton.)

Slate, McLaughlin C., Albany, assignor to Slate Mfg. Co., Portland, Oreg. Fuel oil emulsifying device for combustion engines. 2,026,851; Jan. 7.

Slate Mfg. Co. (See Slate, McLaughlin C., assignor.)

Smith, A. O., Corporation. (See Sherman, Donald W., assignor.)

Smith, David B., Los Angeles, Calif. Valve. 2,026,916; Jan. 7.

Smith, Earl H., Flushing, N. Y. Propelling device. 2,026,917; Jan. 7.

Smith, Edward W., assignor to The Electric Storage Battery Company, Philadelphia, Pa. Secondary or storage battery. 2,027,310; Jan. 7.

Smith, Francis H., Woodstown, N. J., and C. K. Black, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Azo dye and its preparation. 2,027,206; Jan. 7.

Smith, Harold C., Indianapolis, Ind. Signal light for motor vehicles. 2,026,710; Jan. 7.

Smith, James N., Westfield, N. J., assignor, by mesne assignments, to The Enterprise Aluminum Company. Spout attachment for vessels. 2,026,852; Jan. 7.

Smith, L. Roy, et al. (See Dann, Carl D., assignor.)

Smith, Minta A., et al. (See Dann, Carl A., assignor.)

Smith, Ralph R., assignor to The Galion Metallic Vault Company, Galion, Ohio. Lifting mechanism. 2,026,563; Jan. 7.

Smithwick, Harold, Scarsdale, N. Y., and P. Haibo, Cranford, N. J., assignors, by mesne assignments, to Ramco, Inc. Method of and apparatus for making window bags. 2,026,711; Jan. 7.

Smythe, Edwin H. (See Loveridge, F. H., and Smythe.)

Smythe, Edwin H., Evanston, Ill., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Sound picture apparatus. 2,027,207; Jan. 7.

Snap-on Tools, Inc. (See Gagne, Gideon E., assignor.)

"Society of Chemical Industry in Basle." (See Schatelle, Paul, assignor.)

Sorenson, Wendell L., Brooklyn, N. Y. Artificial bait. 2,027,099; Jan. 7.

Somson, Charles R., Ardrossan, Scotland, assignor to Imperial Chemical Industries Limited. Ignition composition. 2,027,308; Jan. 7.

Spang, Joseph P., Quincy, Mass. Cooking appliance. 2,027,002; Jan. 7.

Spencer Manufacturing Co., The. (See Johnson, Forrest F., assignor.)

Stacy, Thomas F., assignor to The French Oil Mill Machinery Co., Piqua, Ohio. Steeping press. 2,027,252; Jan. 7.

Stafford, Charles E., Spondon, near Derby, England, assignor to Celanese Corporation of America. Manipulation of sheet material. 2,026,754; Jan. 7.

Stahl, Frank E., and R. W. Waterstrat, assignors to Columbus McKinnon Chain Corporation, Tonawanda, N. Y. Strap fastener for tire chains. 2,027,003; Jan. 7.

Staley, A. E., Manufacturing Company. (See Gill, Lowell O., assignor.)

Standard Electric Stove Company, The. (See Pierson, Charles A., assignor.)

Standard Oil Company. (See Anderson, Louis E., assignor.)

Standard Oil Company. (See Payne, Donald E., assignor.)

Standard Oil Company of California. (See Edwards, Samuel H., assignor.)

Standard Oil Company of California. (See Thompson, H. W., and Rutherford, assignors.)

Standard Oil Development Company. (See Edson, Frank H., assignor.)

Standard Oil Development Company. (See Vernet, Jules, assignor.)

Standard Sanitary Manufacturing Company. (See Reed, J. C., 2d, and Ebbott, assignors.)

Stapleton, Victor, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Treatment of hydrocarbon oil. 2,026,803; Jan. 7.

Starr, Frank M., Schenectady, N. Y., assignor to General Electric Company. Control and protection of electric circuits. 2,027,209; Jan. 7.

Steel Heddle Manufacturing Company. (See Kaufmann, John J., assignor.)

Stem, Edgar S., assignor of one-half to A. A. Stull, Allerson, Pa. Electrical connection. 2,026,755; Jan. 7.

Sterling, Percy H., Mount Lebanon, Pa. Sink. 2,026,804; Jan. 7.

Stewart, Donald H., assignor to Eastman Kodak Company, Rochester, N. Y. Camera latch. 2,027,004; Jan. 7.

Stockstrom, Arthur, and A. H. Brodbeck, assignors to American Stove Company, St. Louis, Mo. Broiler for gas ranges. 2,027,124; Jan. 7.

Stoddard, Wallace W., Savannah, Ga. Veneer machine. 2,027,295; Jan. 7.

Stoddard, William B., Jr. (See Weisberg, L., and Stoddard, Jr.)

Stoll, Albert, Koblenz, Switzerland. Reclining chair. 2,027,125; Jan. 7.

Stone, John S., San Diego, Calif., assignor to American Telephone and Telegraph Company. Composite oscillator for electromagnetic waves. 2,026,712; Jan. 7.

Stover, Oscar H., and E. H. Brigham, assignors to The Oleothesia Company, Inc., Buffalo, N. Y. Anaesthetic. 2,027,128; Jan. 7.

Stowe, Loyd R., Shaker Heights, Ohio. Stoker. 2,026,805; Jan. 7.

Strathman, Elmer G., assignor to The Cincinnati Time Recorder Company, Cincinnati, Ohio. Guarded juice extracting machine. 2,026,918; Jan. 7.

Stright, James L., Summerside, Prince Edward Island, Canada. Compass. 2,026,919; Jan. 7.

Stuart, Kimberley, Neenah, Wis., and G. B. Linderman, Jr., Beverly, N. J. Baking utensil. 2,027,296; Jan. 7.

Stull, Albert A. (See Stem, Edgar S., assignor.)

Sturtevant, B. F., Company. (See Hansen, Milton R., assignor.)

Sturtevant, B. F., Company, Inc. (See Houston, Milton R., assignor.)

Sturtevant, B. F., Company. (See Higgins, Darragh L., assignor.)

Sucrat, Robert, Detroit, Mich. Automatic choke controlling mechanism. 2,027,070; Jan. 7.

Sundback, Gideon, assignor to Hookless Fastener Company, Meadville, Pa. Slider for slide fasteners. 2,027,526; Jan. 7.

Superheater Company, The. (See Cotterman, Rudolf M., assignor.)

Surface, Morris H., assignor to The Chain Companies, Incorporated, Wilcoxbury, Conn. Lighting fixture. 2,026,756; Jan. 7.

Sutherland Paper Company. (See Freeland, George O., assignor.)

Swanson, Edwin C. (See Abramson, J. H., and Swanson.)

Swanstrom, Arthur C., Irvington, N. J., assignor to Magnetic Stop Nut Corporation. Nut structure. 2,026,751; Jan. 7.

Sweet, Sterling S. (See McNally, J. G., and Sweet.)

Swift, Claude E. (See Bray, U. R., and Swift.)

T. R. C. Corporation. (See Plauson, Hermann, assignor.)

Talbott, Nelson S. (See Hochwalt, C. A., and Carmody, assignors.)

Talbott, Nelson S. (See Hochwalt, C. A., and Thomas, assignors.)

Talbott, Nelson S. (See Thomas, C. A., and Hochwalt, assignors.)

Tarrie, Frederick J., Silvertown, London, England, assignor to The India Rubber, Gutta Percha and Telegraph Works Company Limited, Aldwych, London, England. Aircraft wheel brake. 2,027,210; Jan. 7.

Tastenhoye, Hubert, Vilvorde, Belgium. Cone wheeled trailer for automobiles and similar vehicles. 2,027,117; Jan. 7.

Tatroe, Raymond F., Coffeyville, Kans. Boot spur. 2,027,035; Jan. 7.

Taube, Carl, Leverkusen-I. G.-Werk, and J. Hilger, Leverkusen-Wiesdorf, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Azodyestuffs. 2,026,920; Jan. 7.

Taylor, Herbert J. (See Alfreds, Tooris H., assignor.)

Taylor, William E., East Orange, N. J., assignor to American Can Company, New York, N. Y. Method and apparatus for purifying oil in the coating machine. 2,026,598; Jan. 7.

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Hofer, E., and Kummerer, assignors.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Muth, Herbert, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Rechnitzer, Rudolf, assignor.)

Tennessee Valley Authority. (See Curtis, Harry A., assignor.)

Ter Horst, William P. (See Bills, C., and ter Horst.)

Terwilliger, Ivan M., Altadena, Calif. Displaying pictures. 2,026,718; Jan. 7.

Tessmer, Edwin W., Tomahawk, Wis. Dirigible toboggan. 2,027,128; Jan. 7.

Teves, Marten C. (See DeBoer, J. H., and Teves.)

Texas Company, The. (See Clarke, Louis A., assignor.)

Texas Company, The. (See Behimer, Otto, assignor.)

Texas Company, The. (See de Florez, Luis, assignor.)

Texas Company, The. (See McCarty, R. T., and Shelton, assignors.)

Texas Company, The. (See Stapleton, Victor, assignor.)

Thomas, Charles A. (See Hochwalt, C. A., and Thomas.)

Thomas, Charles A., and C. A. Hochwalt, assignors, by mesne assignments, to Nelson S. Talbott, Dayton, Ohio. Artificially aging whisky. 2,027,129; Jan. 7.

Thomas, Fritz H. (See Sanford, H. W., and Thomas.)

Thomas, Fritz H., Greeneville, assignor to Program Clock, Inc., Knoxville, Tenn. Program clock. 2,027,086; Jan. 7.

Thomas, Henry L., East Douglas, and J. L. Trusler, Jr., signors to Whitin Machine Works, Whitinsville, Mass. Long draft spinning cradle. 2,027,211; Jan. 7.

Thompson, Albert E., San Jose, assignor to Pacific Macaroni Company, San Francisco, Calif. Fruit pitter. 2,026,806; Jan. 7.

Thompson, Harry W., and J. T. Rutherford, Berkeley, assignors to Standard Oil Company of California, San Francisco, Calif. Apparatus for hydrolizing acid sludge. 2,026,714; Jan. 7.

Tibbitts, Gordon C. (See Olsen, F., Tibbitts, and Kerone.)

Timken, Henry H., assignor to The Timken Roller Bearing Company, Canton, Ohio. Roller bearing axle. 2,026,807; Jan. 7.

Timken Roller Bearing Company. (See Berliner, William L., assignor.)

Timken Roller Bearing Company, The. (See Timken, Henry H., assignor.)

Tondreau, Albert W., Hollywood, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y. Film advancing mechanism for motion picture apparatus. 2,026,821; Jan. 7.

Towne, Thomas M., Parma, Ohio. Inspection lens. 2,027,189; Jan. 7.

Tsu, Wesley H. Long Beach, assignor of one-half to Clarence W. Hoefer, Santa Ana, Calif. Thermostatic electric circuit control apparatus. 2,027,070; Jan. 7.

Trabon Engineering Corporation. (See Hills, David R., assignor.)

Trampoesch, Frank, Huntington Station, N. Y. Paint mixer. 2,027,297; Jan. 7.

Trane Company, The. (See Miner, Robert G., assignor.)

Translode Joint Company, The. (See Robertson, Robert E., assignor.)

Tratsch, Walter A., and B. Grunig, Chicago, Ill. Coin chute. 2,026,921; Jan. 7.

Travatex Products Corporation. (See Cleghorn, Albert E., assignor.)

Trevor, Bertram, Riverhead, N. Y., assignor to Radio Corporation of America. Tuning means. 2,026,661; Jan. 7.

Truslow, James L. (See Thomas, H. L., and Truslow.)

Truslow, James L., assignor to Whitin Machine Works, Whitinsville, Mass. Spinning frame. 2,027,212; Jan. 7.

Turnbull, John R., et al. (See Gillespie, Charles P., assignor.)

Turner, Alfred H., Collingswood, N. J., assignor to Radio Corporation of America. Secret signaling. 2,026,758; Jan. 7.

Turner, Alfred H., Collingswood, N. J., assignor to Radio Corporation of America. Superheterodyne receiver. 2,026,759; Jan. 7.

Turner, Louis E., Chicago, Ill. Sound reproducing or recording needle. 2,026,760; Jan. 7.

Tweedie, Charles, Jefferson City, Mo. Sock lining for shoes. 2,027,072; Jan. 7.

Tweedie, Charles, assignor to Tweedie Footwear Corporation, Jefferson City, Mo. Insole. 2,027,323; Jan. 7.

Tweedie Footwear Corporation. (See Tweedie, Charles, assignor.)

Tyler, Ralph S., Cleveland Heights, and W. M. Reichart, Cleveland, assignors to The Chandler & Price Company, Cleveland, Ohio. External contracting brake. 2,026,715; Jan. 7.

Union Carbide and Carbon Research Laboratories, Inc. (See Kennedy, H. E., Rotermund, and Jones, assignors.)

Union Oil Company of California. (See Bray, U. R., and Swift, assignors.)

Union Switch & Signal Company, The. (See Baughman, George W., assignor.)

Union Switch & Signal Company, The. (See Nicholson, Frank H., assignor.)

Union Switch & Signal Company, The. (See Vanhorn, James J., assignor.)

Union Switch & Signal Company, The. (See Young, Henry S., assignor.)

United Aircraft Corporation. (See Caldwell, F. W., and Martin, assignors.)

United Gas Improvement Company, The. (See Evans, Owen B., assignor.)

United Shoe Machinery Corporation. (See Finn, Sidney J., assignor.)

United Shoe Machinery Corporation. (See Hadaway, John B., assignor.)

United Shoe Machinery Corporation. (See Haselton, George, assignor.)

United Shoe Machinery Corporation. (See Jorgensen, Bernhard, assignor.)

United Shoe Machinery Corporation. (See MacDonald, Lester S., assignor.)

United States Envelope Company. (See Kennedy, George H., Jr., assignor.)

United States Paper Mills, Inc. (See Winter, C. P. and Rosenthal, assignors.)

United States Rubber Company. (See Rice, Harold D., assignor.)

Universal Optical Corporation. (See Beariet, Wayne S., assignor.)

Universal Products Company, The. (See Warner, Archibald A., assignor.)

Upton, Charles B., Piqua, Ohio. Cooker. 2,027,131; Jan. 7.

Urschel, William E., Valparaiso, Ind. Corn picker. 2,026,761; Jan. 7.

Van Dusen, Charles A., Baltimore, Md. Pipe fitting. 2,026,964; Jan. 7.

Van Horn, James J., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Signaling apparatus. 2,027,251; Jan. 7.

Vanity Fair Silk Mills. (See Burns, Charles R., assignor.)

Van Ranst, Cornelius W., assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,027,329; Jan. 7.

Vereinigte Stahlwerke Aktiengesellschaft. (See Priellpp, Walter, assignor.)

Verner, Jules, Linden, N. J., assignor to Standard Oil Development Company. Insulated self buoyant floating roof for tanks. 2,026,762; Jan. 7.

Victor, Benjamin J., Oak Park, assignor to Victor Manufacturing & Gasket Company, Chicago, Ill. Gasket with integral molded flange. 2,026,854; Jan. 7.

Victor Manufacturing & Gasket Company. (See Victor, Benjamin J., assignor.)

Viebahn, William W., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Flasher circuits. 2,027,253; Jan. 7.

Vierling, Oskar, Berlin, Germany, assignor to Messner Inventions, Inc. Electricity-controlled musical instrument. 2,027,078; Jan. 7.

Villem, Raymond. (See Chretz, H., and Villem.)

Vincent, Daniel B., Jacksonville, Fla. Drier. 2,026,923; Jan. 7.

Vogt, Clarence W., Louisville, Ky., and P. Phelps, Pleasantville, N. Y., assignors, by mesne assignments, to Vogt Processes, Incorporated, Louisville, Ky. Apparatus and method for continuous solidification and subdivision of ice cream and analogous products. 2,027,255; Jan. 7.

Vogt, Clarence, Wenonah, N. J. Scooter. 2,027,254; Jan. 7.

Vogt, Clarence W., assignor to Vogt Processes, Incorporated, Louisville, Ky. Refrigerating apparatus. 2,027,256; Jan. 7.

Vogt, Clarence W., assignor to Vogt Processes, Incorporated, Louisville, Ky. Cutter for bars of ice cream or the like. 2,027,257; Jan. 7.

Vogt Processes, Incorporated. (See Vogt, C. W., and Phelps, assignors.)

Vogt Processes, Incorporated. (See Vogt, Clarence W., assignor.)

Vollman, Joseph, San Francisco, Calif. Air compressing device. 2,027,076; Jan. 7.

Von Pein, Edward J., Dayton, Ohio, assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y. Scale. 2,027,077; Jan. 7.

Voorhees, William, Flushing, N. Y. Safety razor. 2,027,213; Jan. 7.

Wall & Ocs. (See Geiger, Frederick, assignor.)

Wallace, Walter E., and D. Bell, Wayne County, Ind. Metal casket. 2,026,716; Jan. 7.

Wallace, William H., Detroit, Mich. Leaf spring. 2,026,599; Jan. 7.

Ward, Robert J. (See Kinsella, E., and Ward.)

Warner, Archibald A., Royal Oak, Mich., assignor to The Universal Products Company, Inc. Universal joint. 2,027,078; Jan. 7.

Warner, Arthur W., Media, Pa., assignor to Isbell Porter Company, Newark, N. J. Operating retorts to produce coke, gas and oil. 2,026,922; Jan. 7.

Warner Bros. Pictures, Inc. (See Tondreau, Albert W., assignor.)

Waterstrat, Raymond W. (See Stahl, F. E., and Waterstrat.)

Watkins, George E., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Laminated glass. 2,026,717; Jan. 7.

Watson, James B., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Lubricating system. 2,026,662; Jan. 7.

Webb, Christopher F., Kenton, assignor to Bell Punch Company, Limited, London, England. Ticket printing and issuing machine. 2,026,763; Jan. 7.

Webb, Keith E. (See Parkin, T. D., and Webb.)

Webster, Duane E., assignor to Norton Company, Worcester, Mass. Grinding wheel. 2,027,122; Jan. 7.

Weigele, Albert E., East Orange, N. J., assignor to National Pneumatic Company, New York, N. Y. Antirattler door guide. 2,026,955; Jan. 7.

Weingartner, Frank A., Philadelphia, Pa. Transmission gearing. 2,026,924; Jan. 7.

Weinstein, Abraham S., Brighton, Mass. Flashing. 2,027,133; Jan. 7.

Weinstein, Abraham, Allston, Mass. Flashing. 2,027,134; Jan. 7.

Weisberg & Greenwald, Inc. (See Weisberg, L., and Stoddard, Jr., assignors.)

Weisberg, Louis, and W. B. Stoddard, Jr., assignors to Weisberg & Greenwald, Inc., New York, N. Y. Electrodeposition of metals. 2,026,718; Jan. 7.

Weisel, Edward A., Newark, N. J. Handling and displaying food products. 2,026,764; Jan. 7.

Weiss, Arthur J., St. Albans, N. Y., assignor to Robert Gair Company, Inc., New York, N. Y. Knockdown dual display container. 2,027,079; Jan. 7.

Weiss and Downs, Inc. (See Downs, Charles R., assignor.)

Weldon, Chichester P., Bristol, Conn., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Brake. 2,027,135; Jan. 7.

Wesberg, Peter, assignor of forty-nine one hundredths to H. A. Michel, Chicago, Ill. Constructing certain display and toy articles. 2,027,252; Jan. 7.

Wessel, Ludwig H. (See Hermann, W. H., and Wessel.)

Western Block Company, The. (See Lee, William J., assignor.)

Western Cartridge Company. (See Olsen, F., Tibbitts, and Kerone, assignors.)

Western Union Telegraph Company, The. (See Dirkes, R. F., and Wheeler, assignors.)

Westinghouse Electric & Manufacturing Company. (See Bostwick, Myron A., assignor.)

Westinghouse Electric & Manufacturing Company. (See Austin, Walter M., assignor.)

Westinghouse Electric & Manufacturing Company. (See Goldsborough, Shirley L., assignor.)

Westinghouse Electric & Manufacturing Company. (See Hayford, Benjamin L., assignor.)

Westinghouse Electric & Manufacturing Company. (See Kimball, Richard L., assignor.)

Westinghouse Electric & Manufacturing Company. (See Klemperer, Hans, assignor.)

Westinghouse Electric & Manufacturing Company. (See Lindstrom, True, assignor.)

Westinghouse Electric & Manufacturing Company. (See LaVeccomte, Lester B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Lenz, Thomas H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Lowry, Erwin F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Parks, Fred M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Vieh&hn, William W., assignor.)
Westinghouse Lamp Company. (See Henry, Donald R., assignor.)
Westinghouse X-Ray Company. (See Nelson, Albert C., assignor.)
Westinghouse X-Ray Company. (See Morrison, Montford, assignor.)
Westrope, Fred J., Detroit, Mich., assignor to The Murray Corporation of America. Window support and regulating device. 2,026,719; Jan. 7.
Weitel, Theodore A., Wauwatosa, assignor to Automatic Products Company, Milwaukee, Wis. Control system for heaters. 2,026,750; Jan. 7.
Wheat, Grant, assignor to Keebler Manufacturing Company, Marlboro, Mass. Portable electric lamp. 2,027,283; Jan. 7.
Wheeler, Evan R. (See Dirkes, R. F., and Wheeler.)
White, Marian E., Bogalusa, La. Washboard. 2,026,721; Jan. 7.
White, Harry B., Canton, Ohio, and R. C. Becker, York, Pa., assignors to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,026,800; Jan. 7.
Whitehall Patents Corporation. (See Morin, L. H., and Mariusky, assignors.)
Wiggin Machine Works. (See Thomas, H. L., and Truslow, assignors.)
Wiggin Machine Works. (See Truslow, James L., assignor.)
Whitney, Leslie D., San Francisco, Calif. Powder dispenser. 2,026,922; Jan. 7.
Wichmitt, William S., Baltimore, Md. Air distributing means for passenger cars. 1,027,250; Jan. 7.
Whyte, Henry T., San Francisco, Calif. Apparatus for precooling refrigerator cars. 2,026,855; Jan. 7.
Wickersham, Harry P. (See Burns, R., and Wickersham.)
Wikkerink, Rolf, Berlin-Karlshorst, Germany, assignor to General Electric Company. Electroresponsive apparatus. 2,027,214; Jan. 7.
Wilcox, Duncan M., Sunbilla, Bolton, England, assignor of one-half to The British Steel Piling Company, Limited, London, England. Percussive tools such as hammers and pile drivers. 2,027,500; Jan. 7.
Wilkins, Richard A., assignor to Revere Copper And Brass Incorporated, Rome, N. Y. Welding rod alloys. 2,027,209; Jan. 7.
Wilkinson, Nathan, Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Well drilling system. 2,026,600; Jan. 7.
Williams, John J. (See Gray, D. M., and Williams, assignors.)
Williams, Leo L., Cleveland Heights, Ohio. Making moldings. 2,027,215; Jan. 7.
Williams, Selden T., Bellerose, assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y. Tire valve tool. 2,026,926; Jan. 7.
Wilmot Engineering Company. (See Blatch, Francis H., assignor.)
Wingfoot Corporation. (See Clifford, Albert M., assignor.)
Winn, Sperry H., Seattle, Wash. Electric water heater. 2,026,800; Jan. 7.
Wintenberger, Paul, Sable-Sur-Sarthe, Sarthe, France. Corking machine. 2,026,927; Jan. 7.
Winter, Courtney P., and D. A. Rosenthal, assignors to United States Paper Mills, Inc., Chambersburg, Pa. Paper towel. 2,027,266; Jan. 7.
Wittel, Otto, assignor to Eastman Kodak Company, Rochester, N. Y. Footage indicator for motion picture apparatus. 2,027,007; Jan. 7.
Wolf, Hans. (See Becker, K., Bahnsen, and Wolf.)
Wollensak, Andrew, assignor to Wollensak Optical Company, Rochester, N. Y. Microscope. 2,026,725; Jan. 7.
Wollensak, Andrew, assignor to Wollensak Optical Company, Rochester, N. Y. Binocular zoom glass construction. 2,026,726; Jan. 7.
Wollensak, Andrew, assignor to Wollensak Optical Company, Rochester, N. Y. Lens element. 2,026,724; Jan. 7.
Wollensak Optical Company. (See Wollensak, Andrew, assignor.)
Wood, Alexander P., Schenectady, N. Y., assignor to General Electric Company. Dynamo-electric machine. 2,027,196; Jan. 7.
Wood, Walter A., Detroit, and J. O. Aimon, Royal Oak, assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich. Muffler. 2,027,320; Jan. 7.
Woodford, Watson H., Bridgeport, Conn., assignor to Remington Arms Company, Inc. Molding process and molded article. 2,026,705; Jan. 7.
Woodworth, James E., Manteno, Calif. Hydrant. 2,027,003; Jan. 7.
Worthington Pump and Machinery Corporation. (See Gilman, George H., assignor.)
Wright, Lee A., Jr., Baxley, Idaho. Foot-operated transmission. 2,027,340; Jan. 7.
Wright, William D., Brockport, assignor to C. F. Robb, Jr., Webster, N. Y. Bag filling machine. 2,027,261; Jan. 7.
Wunthal, Morris, New York, N. Y. Lady's hand bag. 2,026,953; Jan. 7.
Wurlitzer Grand Piano Company. (See Holcomb, Gustav E., assignor.)
Wyscaver, Floyd Y., assignor of one-third to Henry C. Parker, Washington, D. C. Tool for opening automobile doors. 2,027,060; Jan. 7.
Yale & Towne Mfg. Co., The. (See Bennett, H. B., and Archer, assignors.)
Yale & Towne Manufacturing Company, The. (See Love, Charles B., assignor.)
Yeomans, Lucien L., Chicago, Ill. Container. 2,027,191; Jan. 7.
Young, Henry S., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway track switch controlling apparatus. 2,026,810; Jan. 7.
Young, Henry S., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway traffic controlling apparatus. 2,027,216; Jan. 7.
Young, John M., Brooklyn, N. Y., assignor to American Car Company, New York, N. Y. Canning. 2,026,601; Jan. 7.
Young, John M., Brooklyn, assignor to American Car Company, New York, N. Y. Apparatus for canning. 2,026,602; Jan. 7.
Yourgalski, Francis S., Brooklyn, N. Y., assignor, by mesne assignments, to The Laboratory Corporation. Timing and safety device for bottle conveyers. 2,026,866; Jan. 7.
Youngstown Steel Door Company, The. (See Madland, Gabriel, assignor.)
Zacha, William. (See Arvesane, Mayer L., assignor.)
Zarse, Robert A., West Allis, Wis. Etching process. 2,026,903; Jan. 7.
Zeigler, Maxwell T., assignor, by mesne assignments, to Zeigler Packaged Ice Machinery Corporation, Huntington Park, Calif. Ice wrapping machine. 2,027,010; Jan. 7.
Zeigler Packaged Ice Machinery Corporation. (See Zeigler, Maxwell T., assignor.)
Zerk, Oscar U., Cleveland, Ohio. Universal joint. 2,027,128; Jan. 7.
Zerkle, Paul F., Cleveland, Ohio. Indicator. 2,027,217; Jan. 7.
Zimmerman, Arthur H., Hammond, Ind. Combination plumbing fixture. 2,026,887; Jan. 7.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Balancing machine. A. F. Mayer and F. T. McDonough. 19,812; Jan. 7.
Car, Interchangeable container freight. G. C. Woodruff. 19,815; Jan. 7.
Cock, Gas. E. E. Meany. 19,810; Jan. 7.
Electromagnetic vibrating apparatus. H. E. Wurzbach and C. H. Kenold. 19,816–17; Jan. 7.
Elevator. C. E. Ellis, Jr. 19,805; Jan. 7.
Elevator system, Electric. G. H. Grosvenor. 19,808; Jan. 7.
Footwear. H. Malin. 19,809; Jan. 7.
Fuel Treatment of motor. W. L. Benedict. 19,804; Jan. 7.
Hydrocarbons, Treating. L. Kirschbraun. 19,818; Jan. 7.
Interlocking system for railroads. S. N. Wight. 19,814; Jan. 7.
Mixing device. G. D. Moore and J. F. Beaumont. 19,811; Jan. 7.
Plate, Cake. E. O. Stendel. 19,813; Jan. 7.
Regulator compensator. F. H. Gulliksen. 19,807; Jan. 7.
Vibration instrument for bone audition. F. W. Krana. 19,806; Jan. 7.

LIST OF DESIGN INVENTIONS

Applique emblem or similar article for wearing apparel. C. Ermey. 98,058; Jan. 7.
Applique emblem or similar article for wearing apparel. C. Ermey. 98,110–111; Jan. 7.
Automobile. P. M. Lewis. 98,060; Jan. 7.
Automobile body or similar article. E. M. Ferguson. 98,060; Jan. 7.
Bag frame. W. C. Hiering. 98,122; Jan. 7.
Bathtub. J. A. Callahan. 98,061; Jan. 7.
Beverage cooler. G. V. Steffens. 98,096; Jan. 7.
Bottle. G. H. Laird. 98,077–8; Jan. 7.
Bottle and dropper, Combination. H. P. Stockler. 98,119; Jan. 7.
Bowl or similar article, Cereal. G. L. Jenks. 98,079; Jan. 7.
Box or similar article, Powder. J. S. Sherman. 98,092; Jan. 7.
Brassière. W. Rosenthal. 98,080; Jan. 7.
Brush and needle, Combined. G. E. Lofgren. 98,062; Jan. 7.
Brush, Floor. H. Cave. 98,120; Jan. 7.
Buckle. L. Alterson. 98,045; Jan. 7.
Buckle. J. J. Walsh. 98,090; Jan. 7.
Buckle. H. F. Wright. 98,101; Jan. 7.
Cabinet. S. J. Block. 98,048; Jan. 7.
Cabinet for a domestic ironing machine. G. B. Kell. 98,072; Jan. 7.
Cabinet, Wall. E. W. Swanson. 98,097; Jan. 7.
Case for calculating machines. W. W. Landmeier. 98,123; Jan. 7.
Casing for flexible measuring rules. F. A. Volz. 98,098; Jan. 7.
Casing, stand, and capping device for a bottling machine, Combined. M. Harrison. 98,066; Jan. 7.
Clock. A. S. Bittenbery. 98,069; Jan. 7.
Doll baby novelty. A. L. Gabe. 98,062; Jan. 7.
Dress. E. Hubert. 98,114; Jan. 7.
Dress display case. A. M. Knopf. 98,075; Jan. 7.
Dress, Ensemble. E. Schwartz. 98,111–13; Jan. 7.
Ear drum protector. N. P. Steckler. 98,095; Jan. 7.
Electric heater. E. Bruga. 98,050; Jan. 7.
Embroidered fabric. L. A. Silk. 98,053–4; Jan. 7.
Game board. E. H. Osbrink. 98,064; Jan. 7.
Glider. W. G. Hardy. 98,068; Jan. 7.
Jar. B. F. Conner. 98,055; Jan. 7.
Jug. A. L. Lorenson. 98,081; Jan. 7.
Lace. G. D. Bryson. 98,106; Jan. 7.
Lace. H. Giebel. 98,121; Jan. 7.
Lace. J. D. Wiener. 98,127–32; Jan. 7.
Lamp base or similar article. B. Weisman. 98,100; Jan. 7.
Lamp casing. A. L. Arenberg. 98,105; Jan. 7.
Lighting unit. J. W. Gosling. 98,112; Jan. 7.
Locomotive. E. J. W. Ragsdale. 98,126; Jan. 7.
Mass card holder. W. F. Linka. 98,116; Jan. 7.
Necktie holder. F. B. Culver. 98,057; Jan. 7.
Ornament, Automobile radiator. F. Q. Hershey. 98,098; Jan. 7.
Paper weight, clock, calendar, and support therefor, Combined. G. W. Blow. 98,046; Jan. 7.
Pedestal lamp. L. Levenson. 98,079; Jan. 7.
Piano case. G. C. Kavanagh. 98,115; Jan. 7.
Piano, Upright. W. Zaiser. 98,102–4; Jan. 7.
Plate. J. B. Clark. 98,052; Jan. 7.
Plate or similar article. J. R. Goodwin. 98,064; Jan. 7.
Pocket receptacle, Flexible. W. R. Buxton. 98,107–8; Jan. 7.
Rotary valve. V. E. Flodin. 98,061; Jan. 7.
Sash rail, Metal. H. H. Hendrickson. 98,067; Jan. 7.
Shoe. D. S. Cohen. 98,053; Jan. 7.
Shoe. P. Calella. 98,054; Jan. 7.
Shoe. S. Epstein. 98,059; Jan. 7.
Shoe. H. Goldberg. 98,063; Jan. 7.
Shoe. S. D. Schwartz. 98,091; Jan. 1.
Showcase. F. L. Pollard. 98,086; Jan. 7.
Spoon or other article of flatware. E. J. Conroy. 98,096; Jan. 7.
Spotlight. M. B. Beck. 98,047; Jan. 7.
Stand for the display of hors d'oeuvres, Service. A. Karsh. 98,071; Jan. 7.
Stick, Walking. L. G. McCorkle. 98,083; Jan. 7.
Storage battery case. O. O. Hieser. 98,087–8; Jan. 7.
Stove, Brooder. L. G. Knapp. 98,074; Jan. 7.
Stove, Solid fuel cook. G. E. Pickup. 98,085; Jan. 7.
Tank vehicle. F. G. Thwaits. 98,125; Jan. 7.
Textile fabric. O. J. Cahn. 98,109; Jan. 7.
Tobacco pipe. M. H. Barling. 98,046; Jan. 7.
Toilet seat. W. C. Groesinger. 98,118; Jan. 7.
Tray or similar article. J. H. Horsley. 98,069; Jan. 7.
Vehicle, Rail. E. J. W. Ragsdale. 98,133; Jan. 7.
Velocipede. H. L. Krafft. 98,070; Jan. 7.
Waffle iron and tray, Combined. A. S. Knapp. 98,073; Jan. 7.
Washing machine casing and wringer, Combined. A. H. Peters. 98,124; Jan. 7.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive articles, Manufacture of. E. C. Schacht. 2,027,306; Jan. 7.
Abrasive material. E. C. Schacht. 2,027,309; Jan. 7.
Abrasive sheet and making the same. O. S. Buckner. 2,027,067; Jan. 7.
Absorption refrigerating apparatus. D. B. Knight. 2,027,106; Jan. 7.
Acid anhydrides, Manufacture of aliphatic. C. J. Malm and W. E. Fisher. 2,026,985; Jan. 7.
Acid, Apparatus for making phosphoric. H. A. Curtis. 2,026,519; Jan. 7.
Acid calcium citrate, Manufacture of. A. H. Bennett. 2,027,204; Jan. 7.
Acid esters of fatty acid monoglycerides, Phosphoric. B. R. Harris. 2,026,765; Jan. 7.
Acid, Manufacture of acrylic. B. Hill. 2,026,894; Jan. 7.
Acid sludge, Hydrolosing. H. W. Thompson and J. T. Rutherford. 2,026,714; Jan. 7.
Adhesives, Apparatus for treating. C. A. Ball. 2,026,726; Jan. 7.
Air compressing device. J. Volliman. 2,027,076; Jan. 7.
Air conditioning apparatus. J. O. Guffey. 2,026,974; Jan. 7.
Air conditioning, Method and apparatus for. C. R. Neeson. 2,027,058; Jan. 7.
Air conditioning system. M. R. Hanson. 2,027,097; Jan. 7.
Air, Method and apparatus for conditioning. C. R. Downs. 2,026,935–6; Jan. 7.
Air, Method and apparatus for dehumidifying. C. R. Downs. 2,027,004; Jan. 7.
Aircraft. R. H. Goddard. 2,026,585; Jan. 7.
Aircraft, Apparatus for use in directing the flight of. A. Procofieff-Seversky. 2,027,350; Jan. 7.
Aircraft wheel brake. F. J. Tarris. 2,027,210; Jan. 7.
Air distributing means for passenger cars. W. B. Whittitt. 2,027,259; Jan. 7.
Airfoil construction. G. R. Barnhart. 2,026,727; Jan. 7.
Airfoil construction for airplanes. G. R. Barnhart. 2,026,728; Jan. 7.
Alarm device, Automatic. S. C. Hills. 2,026,635; Jan. 7.
Alarm system, Fire. W. M. Siddall, Jr. 2,027,066; Jan. 7.
Alcohol, Hydroaromatic. H. A. Bruson and L. W. Covert. 2,026,668; Jan. 7.
Alcohols and esters, Hydrogenation of aliphatic. W. A. Lazier. 2,027,152; Jan. 7.
Alloy. R. E. Paine. 2,026,589–92; Jan. 7.
Alloy, Free cutting. W. A. Dean and C. C. Jancure. 2,026,549–50; Jan. 7.
Alloy, Free cutting. W. A. Dean and C. C. Jancure. 2,026,577–9; Jan. 7.
Alloy, Sintered hard metallic. K. Becker, K. Schröter, and H. Wolff. 2,026,959; Jan. 7.
Alloys, Free cutting. W. L. Fink. 2,026,551; Jan. 7.
Alloys, Free cutting. H. L. Hopkins. 2,026,582; Jan. 7.
Alloys, Free cutting. L. W. Kempf and W. A. Dean. 2,026,540–48; Jan. 7.
Alloys, Free cutting. L. W. Kempf and W. A. Dean. 2,026,553–76; Jan. 7.
Alloys, Welding rod. R. A. Wilkins. 2,027,320; Jan. 7.
Altimeter. V. E. Carbonara. 2,027,068; Jan. 7.
Amplifier, Magnetic. A. S. Fitz Gerald. 2,027,311; Jan. 7.
Amplifier system. B. F. Miessner. 2,027,054; Jan. 7.
Anesthetic. O. H. Stover and E. H. Brigham. 2,027,126; Jan. 7.
Antenna, Directional. P. S. Carter. 2,027,020; Jan. 7.
Antioxidant. A. M. Clifford. 2,026,517; Jan. 7.
Arch support and bunion protector. A. Mirenta. 2,027,055; Jan. 7.
Arcing of the contacts of electrical regulating instruments, Preventing. M. Eaton. 2,026,617; Jan. 7.
Armature for magnetic movements. C. Mossick. 2,026,994; Jan. 7.
Ar-N-(Nitro-phenyl)-tetrahydro-naphthylamines and preparing same. H. C. Olpin. 2,026,748; Jan. 7.
Astigmometer. T. A. Bennett. 2,026,607; Jan. 7.
Automobile accessory. S. Faith and S. Klasstorner. 2,026,779; Jan. 7.
Automobile body. P. Aliano. 2,027,141; Jan. 7.
Automobile brake, Semiautomatic nonbacking. O. B. Hunt. 2,026,896; Jan. 7.
Automobile frame. D. W. Sherman. 2,026,658; Jan. 7.
Axle journal lubricator, Railway. G. W. D. Leslie. 2,027,110; Jan. 7.
Axle unit. A. P. Armington. 2,027,218; Jan. 7.
Azodyestuff. C. Taube and J. Hilger. 2,026,920; Jan. 7.
Azodyestuffs, Waterinsoluble. F. Muth. 2,026,908; Jan. 7.
Bag; *See*—
Lady's hand bag.
Bag filling machine. W. D. Wright. 2,027,261; Jan. 7.
Bag forming machine. H. Irmscher. 2,027,172; Jan. 7.
Bags, Method and apparatus for making. W. H. Sharkey. 2,027,295; Jan. 7.
Bags, Method of and apparatus for making valve. S. Smilowitch and P. Halko. 2,026,711; Jan. 7.
Bait, Artificial. W. L. Sorenson. 2,027,060; Jan. 7.
Balancing machine. A. Lobert. 2,026,668; Jan. 7.
Ball rolling game. A. S. Moorman. 2,027,344; Jan. 7.
Bar; *See*—
Claw bar.
Baseball game. J. C. Mayer. 2,026,791; Jan. 7.
Basket, Fruit. W. S. Lockett. 2,027,052; Jan. 7.
Basket web assembling machine. O. S. Hall. 2,026,752; Jan. 7.
Battery; *See*—
Secondary or storage battery. Storage battery.
Battery connector, Storage. A. Rocheleau. 2,027,129; Jan. 7.
Beans, Treatment of soy. L. O. Gill. 2,026,676; Jan. 7.
Bearing axle, Roller. H. H. Timken. 2,026,560; Jan. 7.
Bearing cage. W. L. Scribner. 2,026,502; Jan. 7.
Bearing for steel retainers. A. M. Peters. 2,026,768; Jan. 7.
Bearing, Making a pivot. J. H. Davis and J. C. Lemming. 2,026,774; Jan. 7.
Belt for X-ray apparatus, Immobilizer. A. C. Nelson. 2,027,318; Jan. 7.
Binocular zoom glass construction. A. Wollensak. 2,026,723; Jan. 7.
Blank for container closures and making the same. L. S. La Bombard. 2,027,248; Jan. 7.
Blanket, Printer's. H. D. Rice. 2,027,323; Jan. 7.
Block; *See*—
Snatch block.
Blower. W. H. Leinweber. 2,026,689; Jan. 7.
Boat propelling device. A. Granger. 2,026,826; Jan. 7.
Boiler; *See*—
Steam or hot water boiler.
Bolt. A. A. Kirley. 2,026,666; Jan. 7.
Bolt making machine. W. L. Clouse. 2,026,823; Jan. 7.
Book holder and marker. P. C. Payne. 2,026,796; Jan. 7.
Bottle carrier. C. Korts. 2,026,525; Jan. 7.
Bottle, Water. M. S. Roach. 2,027,290; Jan. 7.
Box; *See*—
Cake box. Lunch box.
Box. O. L. Hots. 2,026,976; Jan. 7.
Box and making it. G. E. Nelson. 2,026,696; Jan. 7.
Bracket; *See*—
Venetian blind bracket.
Brake; *See*—
Aircraft wheel brake. Self-adjusting brake.
Automobile brake.

Brake. C. P. Weldon. 2,027,185; Jan. 7.
Brake drums, Making. W. H. Carr. 2,026,578; Jan. 7.
Broiler for gas ranges. A. Stockstrom and A. H. Denbeck. 2,027,124; Jan. 7.
Brush, Dispensing fountain. W. D. Heatherson. 2,026,586; Jan. 7.
Brush holder. R. C. Monteith. 2,026,644; Jan. 7.
Buckle. D. I. Reiter and J. H. Arthur. 2,026,750; Jan. 7.
Building construction. J. E. Hoover. 2,027,296; Jan. 7.
Building construction fabricating device. J. A. Irwin. 2,026,835; Jan. 7.
Building unit. W. L. Goelts and M. Bredsky. 2,026,838; Jan. 7.
Burner; *See*—
Oil burner.
Burner construction, Gas. A. W. Fulton. 2,027,157; Jan. 17.
Cabinet, chest, and the like. H. Derman. 2,027,154; Jan. 7.
Cabinet for collapsible tubes. E. Cairns. 2,026,304; Jan. 7.
Cable clamp. E. W. Cooper. 2,026,824; Jan. 7.
Cable, Electric. G. W. Baughman. 2,027,223; Jan. 7.
Cake box, Slice measuring. O. W. Happold. 2,027,196; Jan. 7.
Calcium chloride, Deodorized. C. R. Downs. 2,027,003; Jan. 7.
Calculator, Noon interval. H. M. Jensen. 2,026,536; Jan. 7.
Calendar. O. W. Pendergast. 2,027,286; Jan. 7.
Calendar, Automatic. A. K. H. Gerstenberg. 2,026,802; Jan. 7.
Camera and projector, Motion picture. L. B. T. Branch. 2,026,980; Jan. 7.
Camera construction. C. W. Crumrine. 2,027,338; Jan. 7.
Camera, Folding. L. Goldhammer. 2,026,877; Jan. 7.

Camera latch. D. E. Sargent. 2,027,004; Jan. 7.
Can feeding mechanism. N. P. Bach. 2,026,811; Jan. 7.
Canning, Apparatus for. J. M. Young. 2,026,602; Jan. 7.
Canning method. J. M. Young. 2,026,601; Jan. 7.
Cap for collapsible tubes and the like. J. E. Hall, Sr. 2,026,553; Jan. 7.
Car heater. H. C. Rice. 2,026,553; Jan. 7.
Car and H. MacIlvain. 2,026,646; Jan. 7.
Carbon bisulphide, Production of. M. J. Leahy. 2,026,849; Jan. 7.
Carburetor. J. D. Basher. 2,027,236; Jan. 7.
Carburetor. C. H. Kirby. 2,026,733; Jan. 7.
Carburetor. C. N. Pogue. 2,026,788; Jan. 7.
Card analyzing machine. R. A. Ford. 2,027,062; Jan. 7.
Card Index and the like. F. H. Loveridge and E. H. Smythe. 2,026,583; Jan. 7.
Carrier; *See*—
Bottle carrier.
Case; *See*—
Shipping case.
Cash register. H. F. Sedgwick. 2,026,849; Jan. 7.
Casing; *See*—
Tire casing.
Casket, Metal. W. E. Walker and D. Bell. 2,026,716; Jan. 7.
Catalyst. R. S. Johnson. 2,027,316; Jan. 7.
Catalyst for the reduction of sulphur dioxide, Preparing a. M. C. Boswell. 2,026,839; Jan. 7.
Catch, Hood. T. T. Logie. 2,026,640; Jan. 7.
Cellulose product, Producing a. J. Campbell and R. G. Quinn. 2,026,865; Jan. 7.
Cereals, Apparatus for puffing. J. L. Ferguson. 2,026,734; Jan. 7.
Chair; *See*—
Reclining chair.
Change-speed gear, Continuously variable. A. Rask and J. Krautschneider. 2,026,928; Jan. 7.
Channel cleaning and lubricating system for lubricated valves, Selective. J. C. Hahn. 2,026,891; Jan. 7.
Chart display apparatus. F. Geiger. 2,026,881; Jan. 7.
Chuck, Work. W. S. Kiby and D. Gurney. 2,026,629; Jan. 7.
Chute, Coin. W. A. Tratsch and E. Granig. 2,026,921; Jan. 7.
Circuit arrangement, Rectifier. H. Rechnitzer. 2,026,800; Jan. 7.
Circuit breaker. W. M. Austin. 2,027,219; Jan. 7.
Circuit breaker. T. Lindstrom. 2,027,238; Jan. 7.
Circuit breaker apparatus. B. L. Hayford. 2,027,228; Jan. 7.
Circuit, Keying. W. W. Eitel and J. McCullough. 2,026,874; Jan. 7.
Circuit, Trunk. A. Pagel. 2,027,197; Jan. 7.
Circuits, Flasher. W. W. Behnke. 2,027,253; Jan. 7.
Circuits for employing capacitative currents, Electric. G. D. Robinson. 2,027,284; Jan. 7.
Clamp; *See*—
Cable clamp. Releasing clamp.
Clamping device. G. O. Bolton. 2,027,220; Jan. 7.
Claw bar. J. T. Lane. 2,026,581; Jan. 7.
Clay homogenizing, Method and apparatus. M. F. H. Gouverneur. 2,026,744; Jan. 7.
Cleaner; *See*—

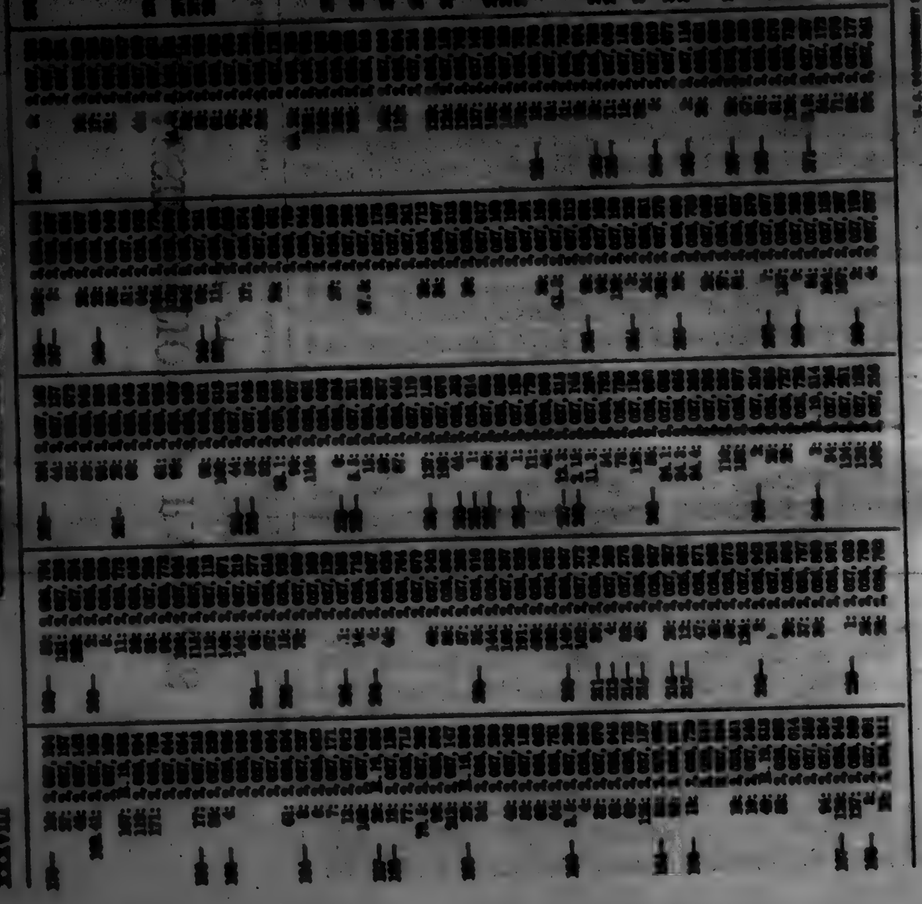
Glass forming machine. A. J. McNab. [illegible]; Jan. 7.
Glass, Laminated. J. G. Gallaly and R. S. Burst. 2,026,907; Jan. 7.
Glass, Laminated. G. R. Watkins. 2,026,717; Jan. 7.
Golf club. R. Foster. [illegible]; Jan. 7.
Governor. B. Krauss. [illegible]; Jan. 7.
Grain in storage, Preserving. T. E. Davis. 2,027,208; Jan. 7.
Grate, Stove. M. J. McLaine. [illegible]; Jan. 7.
Grid construction of electric discharge devices. G. E. Kellenbeck. [illegible]; Jan. 7.
Grid-glow tube position indicating construction. P. H. Long. 2,027,229; Jan. 7.
Grille, Overhead-acting. M. L. Cornell. 2,027,190; Jan. 7.
Grinding wheel. D. E. Wadsley. 2,027,123; Jan. 7.
Grinder, Food. L. J. Lantz. [illegible]; Jan. 7.
Grip mechanism for cableways. C. Sauder. [illegible]; Jan. 7.
Guide, Window glass. D. A. Greene. [illegible]; Jan. 7.
Guiding arrangement for a dependent superelevating machine. C. J. Hughey. 2,026,976; Jan. 7.
Guns, Packed joint for. S. G. Hoyer. [illegible]; Jan. 7.
Hair crier. J. B. Kelley. [illegible]; Jan. 7.
Hair crier. R. A. Olsen. [illegible]; Jan. 7.
Hairpin, Needlepoint. J. E. Johnson. [illegible]; Jan. 7.
Handle for pails. J. M. Hochwarth. [illegible]; Jan. 7.
Hanger for playground swings. J. B. Martin. [illegible]; Jan. 7.
Heat exchange apparatus. D. L. Higgins. 2,027,215; Jan. 7.
Heater: *See*—
Car heater. Water heater.
Heater and ventilator for motor vehicles. J. C. Bell. 2,026,689; Jan. 7.
Heating element for electric stoves, Inclosed. C. A. Fiveson. 2,026,797; Jan. 7.
Heel nailing machine with nail feed. J. Sandt. 2,027,133; Jan. 7.
High frequency generator. E. M. Hobson. [illegible]; Jan. 7.
Hoist for semitrailers. H. W. Holmes. [illegible]; Jan. 7.
Holder: *See*—
Brush holder. Separating nozzle holder.
Card holder. Stocking holder.
Hood latch. H. A. Mears. [illegible]; Jan. 7.
Hook: *See*—
Safety scotch hook.
Hopper for telephone toll collecting apparatus, Coin. G. A. Long. [illegible]; Jan. 7.

Houses with displaced quarters, Row of. H. Berthing. 2,026,664; Jan. 7.
Humidity and temperature control for incubation. H. C. Ross. 2,026,801; Jan. 7.
Hydraulic device for oil well pumping. M. Kahr and J. S. Kahr. 2,027,104; Jan. 7.
Hydraulic transmission. J. E. Douglas. 2,026,776; Jan. 7.
Hydrocarbons from paraffins, Production of unsaturated. H. Dreyfus. [illegible]; Jan. 7.
Ice cream and [illegible] products, Apparatus and method for continuous [illegible] and pulverization of. C. W. Vogt and [illegible]. 2,027,365; Jan. 7.
Ice cream [illegible] mixes, Apparatus for freezing. A. H. Schneider. [illegible]; Jan. 7.
Ice wrap [illegible]. M. T. Seigler. 2,027,010; Jan. 7.
Ignition [illegible]. C. H. Somers. 2,027,306; Jan. 7.
Illumina[illegible]. F. Piper. 2,027,[illegible]; Jan. 7.
Illumina[illegible] of. W. I. Prosser. [illegible]; Jan. 7.
Impedan[illegible]. L. Goldschmidt. 2,027,226; Jan. 7.
Indicator: *See*—
Station [illegible].
Incander[illegible]. Portable. C. S. McGill. 2,026,782; Jan. 7.
Inclinom[illegible]. Hudlow. 2,026,806; Jan. 7.
Incubato[illegible]. 2,026,590; Jan. 7.
Indanthr[illegible] of halogenated. J. Ogilvie. 2,026,6[illegible]; Jan. 7.
Indicating [illegible] for arc welding. R. W. David. 2,027,234; Jan. 7.
Indicator. F. F. Rankin. 2,027,217; Jan. 7.
Ink well and holder, Combined. C. G. Gregory. 2,026,539; Jan. 7.
Insole. C. [illegible]. 2,027,228; Jan. 7.
Internal [illegible] engine. J. E. Davis. 2,026,570; Jan. 7.
Iron, Pressing. L. Parets. 2,027,063; Jan. 7.
Ironing device. R. B. Foster. 2,027,274; Jan. 7.
Joint: *See*—
Universal joint.
Joint and [illegible] construction, Wood. E. F. Conrad. 2,026,[illegible]; Jan. 7.
Joint for electric cables. F. C. Meyer and G. R. Moffitt. 2,026,537; Jan. 7.
Juice extracting [illegible] machine, Guarded. E. G. Streckfuss. 2,026,[illegible]; Jan. 7.
Keying. C. [illegible]. 2,027,035; Jan. 7.
Kitchen [illegible] device. A. C. Gilbert and S. P. Merne. 2,027,[illegible]; Jan. 7.
Knitting machine. S. W. Lippitt. 2,026,744; Jan. 7.
Knitting machine. S. J. Matrod. 2,026,745; Jan. 7.
Labels, [illegible] stamps, and the like, Apparatus for delivering [illegible]. H. E. von Pettenpaus. 2,027,267; Jan. 7.
Ladder mount. T. Hooker. 2,026,535; Jan. 7.
Lady's hand bag. M. Wuntzal. 2,026,963; Jan. 7.
Lamp: *See*—
Incandescent lamp. Portable electric lamp.
Light and test lamp.
Lamp shade or similar article and making the same. Dipped-[illegible]. E. Greeman. 2,026,939; Jan. 7.
Landing apparatus for airplanes. J. Goldman. 2,027,162; Jan. 7.
Last manufacture. S. J. Finn. 2,026,650; Jan. 7.
Lasting machine. P. Jorgensen. 2,026,589; Jan. 7.
Latch: *See*—
Camera latch.
Hood latch.
Leaf spring. W. H. Wallace. 2,026,680; Jan. 7.
Leer. L. J. Reese, Sr. 2,026,757; Jan. 7.
Leer, Vertical glass annealing. P. L. Geer. 2,026,781; Jan. 7.
Lens, Inspecting. [illegible] M. Tyree. 2,027,120; Jan. 7.
Lens mount. A. Wellenzak. 2,026,724; Jan. 7.
Lenses, Making ophthalmic. W. Bennett. 2,026,909; Jan. 7.
Leuco compounds, Formation of. L. S. Bake. 2,027,144; Jan. 7.
Lift. C. W. Hinger. 2,026,953; Jan. 7.
Lifting [illegible]. W. E. Smith. 2,026,958; Jan. 7.
Light and [illegible] Utility. A. J. Hammer. 2,027,094; Jan. 7.
Light for motor vehicle signal. H. O. Smith. 2,026,710; Jan. 7.
Lighter. H. [illegible]. 2,027,296; Jan. 7.
Lighting [illegible]. H. E. Barbee. 2,026,756; Jan. 7.
Lip stick, [illegible]. R. S. Cornell, Jr. 2,026,968; Jan. 7.
Liquid dispensing apparatus. K. H. Bradley. 2,026,909; Jan. 7.
Liquid dispensing device. W. H. Beaney. 2,026,518; Jan. 7.
Loading machine. F. Cartlidge. 2,027,061; Jan. 7.
Lock: *See*—
Combination lock.
Lock. C. [illegible]. 2,027,186; Jan. 7.
Locking, [illegible] and lightning device, Adjustable. A. Millinger. [illegible]; Jan. 7.
Locomotive. [illegible]. 2,026,646; Jan. 7.
Locomotive. [illegible] Curtis. 2,026,707; Jan. 7.
Locomotive [illegible] burner, dust passing, flue cleaning structure. F. H. Shumacher, Jr. 2,027,209; Jan. 7.
Loom harness. J. J. Kaufmann. 2,026,787; Jan. 7.
Lubricator: *See*—
Axle journal lubricator. Shelf-type lubricator.
Lubricating system. J. B. Watson. 2,026,663; Jan. 7.
Lubricator. C. L. Daun. 2,027,024; Jan. 7.
Lunch box. I. H. Devine. 2,026,967; Jan. 7.
Machine for coating strips of lumber. E. P. Dittmar. 2,026,821; Jan. 7.
Machine for operating upon shoe parts. G. Hamilton. 2,026,884; Jan. 7.
Machine for preparing pastes. M. and G. Brabenti. 2,026,697; Jan. 7.
Machine for refining paper stock and pulp. W. E. Hermes and L. H. Wetzel. 2,027,041; Jan. 7.
Machine for rounding and channeling soles. J. E. Hadaway. 2,026,638; Jan. 7.
Machine for testing accuracy of gears. G. L. Harness. 2,026,764; Jan. 7.
Machine for trenchless boring. J. W. Beitel. 2,027,063; Jan. 7.
Magnetic amplifying and control system. A. S. Fitzgerald. 2,027,312; Jan. 7.
Massaging and bathing apparatus. E. Kabat. 2,026,981; Jan. 7.
Materials by fluid streams, Apparatus for separating. M. E. Haworth. 2,026,633; Jan. 7.
Matter in manufactured material, Dispersing. W. W. Carter. 2,027,060; Jan. 7.
Measuring device. F. A. Janssens. 2,026,681; Jan. 7.
Mechanical operations on moving work, Method of and apparatus for performing. G. O. Frostad. 2,026,780; Jan. 7.
Mechanical movement. E. E. Foster. 2,027,275; Jan. 7.
Mechanism for separating the books of an interconnected book-end. O. Kleinschmidt and O. Muller. 2,027,105; Jan. 7.
Mercaptobenzothiazyl-arylidenylphides, M. Bögemann. 2,026,553; Jan. 7.
Metal lacing. E. E. Butterfield. 2,026,671; Jan. 7.
Metals contained in ferruginous sulphide ores or roasts, Sulphating the non-ferrous. C. P. Dolnick. 2,026,715; Jan. 7.
Metals, Electrodeposition of. L. Weinberg and W. B. Stoddard, Jr. 2,026,718; Jan. 7.
Metals of the platinum group, Electrodeposition of. A. R. Powell and E. C. Davies. 2,027,258; Jan. 7.
Metals with aromatic hydrocarbons, Reacting alkali. N. D. Scott. 2,027,060; Jan. 7.
Metals, Working and treating. F. L. Antisell. 2,026,605; Jan. 7.
Mica products, Producing. F. C. Atwood. 2,027,082; Jan. 7.
Microscope. A. Wellenzak. 2,026,722; Jan. 7.
Minerals, Flotation of. F. G. Moses, R. W. Hess, and R. L. Perkins. 2,027,257; Jan. 7.
Mitten, Three fingered. B. T. Baskin. 2,027,034; Jan. 7.
Mixing machine. E. O. Loomis. 2,027,185; Jan. 7.
Modelling means. R. Hofer and W. Kunnecke. 2,027,044; Jan. 7.
Molding process and molded article. W. H. Woodford. 2,026,705; Jan. 7.
Moldings, Making. L. L. Williams. 2,027,215; Jan. 7.
Mixer: *See*—
Paint mixer.
Motor: *See*—
Electric motor. Trigger motor.
Motor control system. F. M. Parks. 2,027,247; Jan. 7.
Mounting for dynamo-electric machines, Field. J. Mamaix. 2,026,642; Jan. 7.
Mounting for reproducing and engraving machines, Stylus. F. M. Hembus. 2,026,893; Jan. 7.
Mounting, Globe. R. R. Dupler. 2,027,186; Jan. 7.
Mounting, Hub cap. H. J. Horn. 2,026,786; Jan. 7.
Mounting, Sport ophthalmic. W. S. Beattes. 2,027,123; Jan. 7.
Mounting unit, Resilient. H. D. Geyer. 2,026,625; Jan. 7.
Mounting, Vibratory diaphragm horn. P. C. Rock. 2,026,654; Jan. 7.
Mulker. W. A. Wood and J. O. Almen. 2,027,209; Jan. 7.
Music, Apparatus for the production of. R. F. Miessner. 2,027,074; Jan. 7.
Music, Method and apparatus for the production of. C. T. Jacobs. 2,027,075; Jan. 7.
Musical instrument, Electricity-controlled. O. Vierling. 2,027,072; Jan. 7.
Nail file. J. W. Garow. 2,026,970; Jan. 7.
Name plate and holder, Reversible. A. C. Brookey. 2,027,086; Jan. 7.
Navigational instrument. H. M. Jensen. 2,026,537; Jan. 7.
Needle, Self-lubricating inlaying. W. W. De Laney. 2,026,933; Jan. 7.
Needle, Sound reproducing or recording. L. R. Turner. 2,026,790; Jan. 7.
Negative holder. H. C. Jones. 2,026,836; Jan. 7.
Negatives with photographic images thereon of enhanced quality, Production of. A. B. Field. 2,027,271; Jan. 7.
Neon tube support. A. B. McMahan. 2,026,949; Jan. 7.
Nozzle, Spray. C. J. Kurtz. 2,026,745; Jan. 7.
N-p-amino-aryl-carbamic acids, Producing. E. E. Etselmiller. 2,026,619; Jan. 7.
Net and making same, Sheet metal. H. C. Raynes. [illegible]; Jan. 7.

Nut roasting machine. R. W. Sly and H. H. Lotzy. 2,027,146; Jan. 7.
Nut structure. A. C. Swanstrom. 2,026,757; Jan. 7.
Nuts, Salting edible. J. B. Bissell and C. K. Bissell. 2,026,813; Jan. 7.
Oil burner. J. W. Canaan. 2,026,609; Jan. 7.
Oil burner. L. W. Holmes. 2,027,101; Jan. 7.
Oil purifying device for combustion engines, Fuel. McL. C. Slate. 2,026,851; Jan. 7.
Oil in tin coating machines, Method and apparatus for purifying. W. B. Taylor. 2,026,598; Jan. 7.
Oil, Production of lubricating. U. B. Bray and C. E. Swift. 2,026,720; Jan. 7.
Oil treatment, Hydrocarbon. H. R. Birkhimer. 2,026,812; Jan. 7.
Oil, Treatment of hydrocarbon. V. Stapleton. 2,026,803; Jan. 7.
Oiling means for planetary transmission. W. B. Barnes. 2,027,012; Jan. 7.
Oils, Treatment of hydrocarbon. L. De Florez. 2,027,334; Jan. 7.
Ores, Device for milling and separating. J. H. Degner. 2,026,825; Jan. 7.
Ores, Roasting sulphide. R. P. Fleming. 2,026,621-2; Jan. 7.
Ores, Treating ferriferous. F. Johanssen. 2,026,683; Jan. 7.
Ornament. R. De Ross. 2,026,934; Jan. 7.
Ornament, Wall. J. Rubin. 2,026,706; Jan. 7.
Oscillator for electromagnetic waves, Composite. J. S. Stone. 2,026,712; Jan. 7.
Oxasoline compound. M. Engelmann. 2,027,031; Jan. 7.
Oxidation, Prevention of. S. Musher. 2,026,697; Jan. 7.
Package, Laundry. L. E. Morse. 2,026,645; Jan. 7.
Packaging machine. R. J. and G. A. Hutt. 2,027,232; Jan. 7.
Packing, Apparatus for. F. G. Fees. 2,026,523; Jan. 7.
Pad and cover. M. K. Brodt. 2,026,961; Jan. 7.
Paint mixer. P. Tramposch. 2,027,297; Jan. 7.
Pan, Pie. F. Hilinger. 2,026,820; Jan. 7.
Paper cap ammunition for toy pistols. E. S. Peake. 2,027,117; Jan. 7.
Paper guide device. L. P. Crossman. 2,026,869; Jan. 7.
Paper or other material, Apparatus for cutting. A. H. Haupt. 2,026,633; Jan. 7.
Paper stacker. R. Hornbeck and R. Hornbeck. 2,027,241; Jan. 7.
Paste and producing the same, Vat dyestuff. M. H. Fleysher and J. Ogilvie. 2,026,623; Jan. 7.
Pavement marking machine. R. L. Hefner. 2,026,678; Jan. 7.
Paving composition and producing same. J. H. Conselman. 2,026,614; Jan. 7.
Pen, Fountain. J. C. Sherman. 2,026,657; Jan. 7.
Pencil. F. R. Barker. 2,026,815; Jan. 7.
Picture apparatus, Sound. E. H. Smythe. 2,027,207; Jan. 7.
Pictures, Apparatus for making composite talking motion. W. L. Douden. 2,027,028; Jan. 7.
Phonograph, Automatic. R. B. Bryant. 2,026,820; Jan. 7.
Photo-electric device. J. H. de Boer and M. C. Teves. 2,027,025; Jan. 7.
Photographic exposures, Method and apparatus for controlling. W. A. Edwards. 2,026,675; Jan. 7.
Pictures, Displaying. I. M. Terwilliger. 2,026,718; Jan. 7.
Pigments of the indanthrone series, Producing. F. W. Johnson. 2,026,637; Jan. 7.
Pile lowering device for printing presses. A. and E. Kluge. 2,027,177; Jan. 7.
Pilot-wire protection for transmission lines. L. B. Le Vesconte. 2,027,287; Jan. 7.
Pin bearing construction, Wrist. H. A. Gehres. 2,027,035; Jan. 7.
Pipe coupling parts, Making. J. F. King. 2,027,176; Jan. 7.
Pipe fitting. C. A. VanDusen. 2,026,954; Jan. 7.
Pipes, Molding. H. Rafovich. 2,026,996; Jan. 7.
Piston. A. Lach. 2,027,179; Jan. 7.
Piston, Composite. T. P. Chase. 2,026,611; Jan. 7.
Piston for internal combustion motors. E. C. Long. 2,026,789; Jan. 7.
Pistons, Manufacture of composite. T. P. Chase. 2,026,612; Jan. 7.
Pitter, Fruit. A. R. Thompson. 2,026,906; Jan. 7.
Plastic and making same, Sulphur-containing. C. Mills and W. P. ter Horst. 2,026,876; Jan. 7.
Plug: *See*—
Drain plug. Spark plug.
Plumbing fixture, Combination. A. H. Zimmerman. 2,026,867; Jan. 7.
Portable electric lamp. G. Wheat. 2,027,286; Jan. 7.
Powder dispenser. L. D. Whitney. 2,026,925; Jan. 7.
Powder plants, System for the remote operation of. E. Pearson. 2,026,893; Jan. 7.
Powder, Propellent. G. C. Hale and D. B. Cameron. 2,026,631; Jan. 7.
Powder system for well drilling. W. Sheldon. 2,026,706; Jan. 7.
Powders, Manufacture of smokeless. P. Olsen, G. C. Tibbitts, and E. B. W. Kerone. 2,027,114; Jan. 7.
Precision resistance. P. H. Dike. 2,026,616; Jan. 7.
Press: *See*—
Stooping press.
Pressing apparatus. W. C. McDaniel. 2,026,692; Jan. 7.
Pressure controlling device for gasoline pumps. D. McCormick. 2,026,690; Jan. 7.
Pressure regulator. G. W. McKee. 2,026,758; Jan. 7.
Pretzel forming machine. H. S. Gige. 2,026,[illegible]; Jan. 7.
Printing device for lumber. H. H. Peyton. 2,027,347; Jan. 7.
Projector and sound-reproducing assembly, Combination. W. J. Morrissey. 2,027,191; Jan. 7.
Propeller control mechanism. F. W. Caldwell and R. Martin. 2,026,814; Jan. 7.
Propeller, Fluid operating. W. H. Lukenbeal. 2,027,090; Jan. 7.
Propelling device. R. H. Smith. 2,026,917; Jan. 7.
Protocatechuic aldehyde, Preparation of. M. A. Carpenter and R. C. Kunz. 2,027,148; Jan. 7.
Pulley attachment. H. DeLand. 2,026,673; Jan. 7.
Pulp from straw of graminaceous plants, Manufacture of refined. K. Kodama. 2,026,900; Jan. 7.
Pump. W. M. Bell. 2,027,015; Jan. 7.
Pump. J. P. Johnson. 2,026,789; Jan. 7.
Rack: *See*—
Supporting rack.
Rack. G. S. Moore. 2,026,746; Jan. 7.
Radiator shutter. J. F. Raleigh. 2,026,868; Jan. 7.
Radiographic plate changer. M. Morrison. 2,026,907; Jan. 7.
Rail wheel. O. Hacker. 2,027,302; Jan. 7.
Range finding and sight directing apparatus, Optical, as in aircraft. A. Procofieff-Seversky. 2,027,349; Jan. 7.
Razor, Safety. W. Vanamburgh. 2,027,214; Jan. 7.
Receptacle: *See*—
Fuse and switch receptacle.
Receptacle for refrigerators, Combination. A. E. Dowst. 2,027,092; Jan. 7.
Reclining chair. A. Stoll. 2,027,128; Jan. 7.
Recorder. K. F. Schoow. 2,026,914; Jan. 7.
Reel: *See*—
Fishing reel.
Reel. C. B. Beasley. 2,026,695; Jan. 7.
Reel seat for fishing rods. H. W. Mann. 2,027,349; Jan. 7.
Reel structure. H. P. Maynes. 2,027,[illegible]; Jan. 7.
Reeling device for tag forming machines. [illegible]. 2,026,897; Jan. 7.
Refractory articles, Shaping. D. B. Hendryx. 2,026,849; Jan. 7.
Refrigerating apparatus. R. R. Candee. 2,027,[illegible]; Jan. 7.
Refrigerating apparatus. J. J. Nance. 2,027,[illegible]; Jan. 7.
Refrigerating apparatus. C. W. Vogt. 2,027,[illegible]; Jan. 7.
Refrigerating means and method. E. [illegible] Koeppe. 2,026,838; Jan. 7.
Refrigerating system. G. Muffy. 2,027,[illegible]; Jan. 7.
Refrigeration. C. G. Masters. 2,027,091; Jan. 7.
Refrigeration apparatus. M. H. Hudson. 2,027,206; Jan. 7.
Refrigerator. D. H. Gaston. 2,027,318; Jan. 7.
Refrigerator. C. E. L. Lipman. 2,027,189; Jan. 7.
Refrigerator cars, Apparatus for precooling. H. M. Whyte. 2,026,886; Jan. 7.
Regulator: *See*—
Draft regulator. Pressure regulator.
Releasable jarring tool. H. Burns and H. W. Hickerson. 2,026,961; Jan. 7.
Releasing clamp. J. M. Jester. 2,026,976; Jan. 7.
Resins, Manufacture of. A. Hock. 2,027,549; Jan. 7.
Retorts to produce coke, gas and oil, Operating. A. W. Warner. 2,026,928; Jan. 7.
Ring: *See*—
Finger ring.
Ring holding apparatus. W. A. Cutchins. 2,027,136; Jan. 7.
Road joint former and load distributor. E. M. Robertson. 2,027,201; Jan. 7.
Road paving. H. Plauson. 2,026,888; Jan. 7.
Roads, Building. H. Plauson. 2,026,889; Jan. 7.
Roll adjuster mechanism, Hydraulic. G. A. McFaddin. 2,027,283; Jan. 7.
Rolling method. H. Seiferth. 2,027,[illegible]; Jan. 7.
Roof construction. S. S. Calahill. 2,026,[illegible]; Jan. 7.
Roof construction. O. F. Gruebner. 2,027,163; Jan. 7.
Roof for tanks, Laminated self-buoyant floating. J. Venino. 2,026,762; Jan. 7.
Rotor for hammer mills. E. J. Mahaffey. 2,026,[illegible]; Jan. 7.
Routing machine. T. L. Siebenthaler. 2,026,[illegible]; Jan. 7.
Rosin sizing and making the same. W. H. Harding and A. W. Montgomery. 2,027,106; Jan. 7.
Rubber, Preservation of. W. Scott, and H. G. Byers. 2,027,091; Jan. 7.
Rulers, Attachment for. M. L. Aronson. 2,026,[illegible]; Jan. 7.
Running gear. O. Hacker. 2,027,306; Jan. 7.
Ruscus, Softening bleached and dyed. L. M. Jones. 2,026,873; Jan. 7.
Safe. M. D. Bennett and H. M. Archer. 2,027,[illegible]; Jan. 7.
Safe. W. H. Jaeger. 2,026,917; Jan. 7.
Safety scotch hook. J. M. Kinison. 2,026,[illegible]; Jan. 7.
Safety switch. G. D. Breyer and O. W. Myers. 2,026,[illegible]; Jan. 7.
Salts and preparing them, Solid mixed [illegible] and ammonium K. Schmitzendahl. 2,027,066; Jan. 7.
Sash and window frame. O. H. Johnson. 2,026,[illegible]; Jan. 7.



Scale. J. W. Bryce. 2,027,010; Jan. 7.
Scale. E. J. Von Pein. 2,027,017; Jan. 7.
Scooter. C. Vogt. 2,027,254; Jan. 7.
Scouring implement. E. R. Kingman. 2,026,858; Jan. 7.
Screen: *See*—
Window screen.
Screw-cap or screw with brush. A. Gross. 2,026,890; Jan. 7.
Seat: *See*—
Furniture spring seat.
Seal, Barrel. L. E. Anderson. 2,027,143; Jan. 7.
Sealing-in machine. J. P. Leick. 2,027,181; Jan. 7.
Secondary or storage battery. E. W. Smith. 2,027,210; Jan. 7.
Secrecy system. H. Chireix and R. Villon. 2,026,813; Jan. 7.
Securing device. T. C. McVeagh. 2,026,586; Jan. 7.
Self-adjusting brake. F. C. Bonyun. 2,027,102; Jan. 7.
Separating and washing apparatus. W. C. Mennies and F. H. Blatch. 2,026,903; Jan. 7.
Separating apparatus. L. F. Holly. 2,026,894; Jan. 7.
Separating device for roughage mills. J. Holland-Lacy. 2,026,853; Jan. 7.
Separator for seeds or the like. W. Olson. 2,026,910; Jan. 7.
Setting frame. M. T. Phoenix. 2,027,319; Jan. 7.
Sewage, Treatment of. R. D. Pirnie. 2,026,949; Jan. 7.
Shade, Roller. H. H. Koller and W. G. Dery. 2,027,107; Jan. 7.
Shade, Window. R. C. Buck. 2,026,660; Jan. 7.
Shaker or the like, Salt. J. W. Jennings. 2,026,722; Jan. 7.
Shaped bodies, Manufacturing thin-walled. E. Hotalen. 2,027,314; Jan. 7.
Shearing device. A. B. Harris. 2,026,620; Jan. 7.
Sheet material, Manipulation of. C. E. Stafford. 2,026,754; Jan. 7.
Sheet piling. W. Prielipp. 2,027,285; Jan. 7.
Shelf structure, Loading and unloading. C. W. La Marsh. 2,027,278; Jan. 7.
Shelf-type lubricator. W. M. Gray. 2,027,227; Jan. 7.
Shield. E. E. Klintz. 2,026,741; Jan. 7.
Shield, Fused grading. H. A. Frey. 2,027,301; Jan. 7.
Shingle, Metallic. C. J. Hatzke. 2,027,321; Jan. 7.
Shipping case. J. M. Leake and G. G. Fulchild. 2,026,901; Jan. 7.
Shoe, Third point support. R. G. Busse and H. W. Ekholm. 2,027,147; Jan. 7.
Shoes, Method of and machine for use in the manufacture of. L. S. Macdonald. 2,026,641; Jan. 7.
Siding, Self-spacing. C. E. Eckert. 2,027,029; Jan. 7.
Sight attachment for car or other tanks. J. Beebe. 2,027,145; Jan. 7.
Sighting control for aircraft. A. Procofieff-Seversky. 2,027,348; Jan. 7.
Sign: *See*—
Edge-illuminated sign. Illuminated sign.
Sign letter, Illuminated. R. A. Luna. 2,027,187; Jan. 7.
Signal: *See*—
Vehicle signal.
Signal. G. W. Bergman. 2,026,770; Jan. 7.
Signal. C. W. Curran and W. E. Funk. 2,026,935; Jan. 7.
Signaling apparatus. J. J. VanHorn. 2,027,261; Jan. 7.
Signaling, Secret. A. H. Turner. 2,026,758; Jan. 7.
Signaling system. D. Mitchell. 2,026,696; Jan. 7.
Signaling system, Highway crossing. D. J. McCarthy. 2,027,188; Jan. 7.
Signals, Receiving and amplifying electric. J. B. Knight, Jr. 2,026,944; Jan. 7.
Silencer. S. Oldberg. 2,026,795; Jan. 7.
Silk, Process and apparatus for the manufacture of artificial. F. Lappe. 2,027,047; Jan. 7.
Sink. P. H. Sterling. 2,026,804; Jan. 7.
Sink ware. J. C. Reed, 3d, and C. C. Schott. 2,026,962; Jan. 7.
Slicer, shredder and dicer, Combined. M. W. McArdle and I. Jeppeson. 2,026,661; Jan. 7.
Slider for slide fasteners. D. H. Gilmore. 2,027,227; Jan. 7.
Slider for slide fasteners. G. Sundbeck. 2,027,326; Jan. 7.
Snatch block. W. J. Lee. 2,027,270; Jan. 7.
Soap preparation. H. Bertsch. 2,026,816; Jan. 6.
Sock lining for shoes. G. Tweedie. 2,027,072; Jan. 7.
Solid articles into tubular structures, Method and apparatus for converting. G. A. Cooper. 2,027,152; Jan. 7.
Solubility of mixed esters of cellulose and the product resulting therefrom, Changing the. C. J. Malm and C. L. Fletcher. 2,026,683; Jan. 7.
Solvent reclaiming with nitro-alcohols. L. A. Clarke. 2,027,354; Jan. 7.
Spark plug. I. B. Close. 2,026,822; Jan. 7.
Spectacles or eyeglasses, Ventilated. B. Gottlieb. 2,027,037; Jan. 7.
Speed transmission, Automatic variable. W. H. Dumble. 2,026,777; Jan. 7.
Spindle boring machine, Multiple. J. Coulter. 2,027,023; Jan. 7.
Spinning frame. J. L. Trenlow. 2,027,212; Jan. 7.
Spout attachment for vessels. J. N. Smith. 2,026,862; Jan. 7.
Spray, Root. H. F. Tatroe. 2,027,605; Jan. 7.
Spraying device. G. E. Johnson and G. Lowenberg. 2,027,103; Jan. 7.
Spreader for placing an adhesive on the back of carpets and rugs, Hand. E. K. Bauer. 2,027,331; Jan. 7.
Spring: *See*—
Leaf spring.
Springing arrangement for vehicles. F. Nallinger. 2,026,969; Jan. 7.
Station indicator. S. G. Richards. 2,026,847; Jan. 7.
Steam or hot water boiler. J. W. Lockett. 2,027,345; Jan. 7.
Steel, Apparatus for making open-hearth. M. J. Conway. 2,027,151; Jan. 7.
Steel, Method and apparatus for heat treating high speed. C. B. Sadtler. 2,027,065; Jan. 7.
Steel, Treating molten. A. A. Classen. 2,027,269; Jan. 7.
Steeping press. T. F. Stacy. 2,027,252; Jan. 7.
Stencilling, Method of and apparatus for. H. M. Hommel and R. E. Hicks. 2,027,102; Jan. 7.
Still heater, Pressure. S. H. Edwards. 2,026,674; Jan. 7.
Stock quotation projecting device. A. D. Hitson. 2,026,822; Jan. 7.
Stoker. L. B. Stowe. 2,026,805; Jan. 7.
Storage battery. E. W. Allen. 2,027,262; Jan. 7.
Store front construction. P. E. Attick and J. J. Bosshard. 2,027,081; Jan. 7.
Strain release for wringers. E. H. Erdman. 2,027,225; Jan. 7.
Submarine drill. H. J. Ferguson. 2,026,879; Jan. 7.
Suction cleaner. F. Riebel, Jr. 2,027,249; Jan. 7.
Suction cleaner. H. B. White and D. C. Becker. 2,026,809; Jan. 7.
Suction cleaner floor tool. F. Riebel, Jr. 2,027,250; Jan. 7.
Superheterodyne receiver. A. H. Turner. 2,026,789; Jan. 7.
Support: *See*—
Neon tube support.
Supporting rack. G. J. Barrett. 2,026,858; Jan. 7.
Suspension attachment for bottle-necked vessels. E. J. Miller. 2,026,980; Jan. 7.
Swing. M. L. Carraway. 2,027,089; Jan. 7.
Switch: *See*—
Electrical switch. Vacuum switch.
Safety switch.
Switch controlling apparatus, Railway track. H. S. Young. 2,026,810; Jan. 7.
Switch mechanism, Electric. H. B. Joy. 2,026,980; Jan. 7.
Table. D. D. Myers. 2,026,995; Jan. 7.
Tank vehicle, Frameless. H. J. Dillon. 2,026,826; Jan. 7.
Tap, Insect. E. Atkinson. 2,027,011; Jan. 7.

CLASSIFICATION OF PATENTS

ISSUED JANUARY 7, 1936

Note.—First number—class, second number—subclass, third number—patent number

Patents Nos. 2,027,360 to 2,028,127

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 462—No. 2 TUESDAY, JANUARY 14, 1936 Price—$10 per year

The OFFICIAL GAZETTE is issued under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $10.00 per annum, including annual index, ($10.75); single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Designs	75—Nos.	93,194 to No.	93,268, inclusive.
Total	1,084		

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,880,444, A. P. Arrington, Tread link, decided November 27, 1935, claims 1 and 2.

Pat. 1,985,621, J. A. Gibbs, Automatic sales book register, decided December 26, 1935, claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, and 12.

Pat. 1,982,572, A. S. Richardson, Method and apparatus for cooling water and air, decided December 26, 1935, claims 1, 2, 3, 4, 5, 6, 7, and 8.

Pat. 1,986,808, John Oakley, Sprocket, decided December 24, 1935, claims 1 and 2.

Notice Regarding Payment of Fees

All fees must be paid in advance. Payment of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks must be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. (See Rule 124.)

Certified checks, bank drafts, express and foreign money orders must be immediately negotiable and for the full amount of the fee required by the Patent Office. No allowance can be made by this Office for any charge for their collection or exchange. Postage stamps will not be accepted. Failure to comply with the above instructions will cause delay.

NOTICE

Board of Appeals—Decisions—Time for Response

U. S. PATENT OFFICE, *Washington, January 13, 1936.*

There appears to be some confusion among attorneys and applicants as to the time within which action must be taken in applications following a decision of the Board of Appeals.

The decision of the Board of Appeals is "an action" in the application, and, in order to save the application from abandonment, amendment must be filed within six months from the date of that decision unless an appeal has been taken to the Court of Customs and Patent Appeals or review of the decision sought by a bill in equity under section 4915.

The Examiner will not notify the applicant of the decision of the Board of Appeals.

CONWAY P. COE,
Commissioner.

Drawings

PRECAUTIONS TO BE OBSERVED IN FORWARDING DRAWINGS TO THE UNITED STATES PATENT OFFICE

Where drawings are to be filed in connection with an application for Letters Patent in the United States Patent Office, each sheet, before it can be accepted by the Office as a part of the application, must be signed in the name of the inventor at the lower right-hand corner, either by him or by an attorney whose written authorization from the applicant is filed in connection with the application. The signatures should never be written on a line parallel with the longer edges of the sheet, one of the shorter edges being always regarded, for the purpose of locating the signatures, as the lower edge of the sheet. The signatures must all be within the margin of the sheet and below the lines of the drawing. The title of the invention should be written with pencil on the back of each sheet of drawings.

When there are filed on the same day two or more applications by the same inventor, each of the documents and drawings belonging to the same application, should have placed thereon the same letter or number, which should be different from the letter or number placed upon those of any other of the applications.

It is desirable that all parts of the complete application, including the drawings, be deposited in the Office at the same time. Should, however, the other parts of the application be filed before the drawings are sent, the latter when forwarded should be accompanied by a letter stating the number of sheets inclosed, and that the drawings are to be filed with the other parts of the application, giving the date at which such other parts were filed in the Office, the name of the inventor, and title of the invention should also be given, and it should be indorsed with pencil on the back of each sheet of drawings. The letter should also state, if such be the case, that the new drawings are to be substituted for those previously filed.

Reissue Drawings

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Secretary of Commerce, Rule 53 of the Rules of Practice in the United States Patent Office is canceled and the following is substituted therefor:

"53. In reissue applications the drawings upon which the original patent was issued may be used upon the filing of suitable permanent photographic copies thereof, if no changes are to be made in the drawings."

Condition of Applications Under Examination at Close of Business December 31, 1931

U. S. Court of Customs and Patent Appeals

In re McKee

No. 3,184. Decided November 21, 1932

1. DOUBLE PATENTING—METHOD AND APPARATUS.

Where appellant has been granted a patent for a device for performing a method which may be also performed by other apparatus or by hand, it cannot be said that claims for the method recite the mere function of a machine, so that their allowance would be double patenting.

2. SAME—SAME.

Claims for a method of marking edible carcasses *held* patentably distinct from the claim of appellant's patent for a device used in such marking.

APPEAL from the Patent Office. Reversed.

Mr. Roy W. Johns for McKee.

Mr. E. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

BLAND *J.:*

The invention involved in this appeal which is from the decision of the Board of Appeals of the United States Patent Office, affirming the Primary Examiner's rejection of certain claims, relates to a method of ink marking, underneath the covering or fell, of carcasses, particularly sheep carcasses.

Appellant has been granted two apparatus claims in Patent No. 1,886,170, issued November 21, 1933. Separate application was filed in which claims for a method of marking carcasses were presented.

The Examiner rejected all the claims upon references, and rejected claims 2 and 3, which are involved in this appeal, upon the additional ground that they called for only the function of a particular device.

Upon appeal to the Board, the Examiner was reversed as to claim 1 in the application here involved and the claim was allowed. The Board held that claims 2 and 3 were not anticipated by the prior art, but affirmed the action of the Examiner in rejecting the claims and used the following language:

> Claims 2 and 3 are additionally rejected as being drawn to the function of a particular device. We are not prepared to hold that claims of this nature should be rejected for that reason but we can find no patentable distinction between the subject matter of these claims and that of claim 1 of appellant's patent 1,886,170. It is our opinion, therefore, that to allow claims 2 and 3 would result in double patenting. [Italics ours.]

Claim 1 of appellant's said patent reads as follows:

> 1. A branding instrument comprising a plurality of needles arranged according to a chosen design of brand mark and a support therefor, said needles being each provided with a groove, and said having deeply recessed apertures adjacent their points terminating in said grooves, whereby to carry ink through a layer of fell.

The two claims rejected by the Board, involved in this appeal, are as follows:

> 2. In the packing industry, the method of marking edible carcasses or parts thereof, having a surface covering such as fell or the like, which consists in perforating the surface covering or fell by means of an inked implement having penetrating portions with ink pockets formed in the sides thereof and depositing ink from said ink pockets in the tissue beneath the fell.
>
> 3. In the packing industry, the method of marking edible carcasses or parts thereof, having a surface covering such as fell or the like, which consists in perforating the surface covering of fell by means of an inked implement having penetrating portions with longitudinally disposed ink pockets formed in the sides thereof and depositing ink from said ink pockets in the tissue beneath the fell.

While appellant in oral argument stated that division was required by the Patent Office between the article claims and the method claims, it is conceded that the record before us does not show this fact and that for the purposes of considering this case we may not regard division as having been required by the Patent Office so as to bring before us a consideration of the applicability of our holdings in *In re Cady*, 22 C. C. P. A. (Patents) 1190, 77 F.(2d) 108, 460 O. G. 7, and *In re Carlton*, 22 C. C. P. A. (Patents) 1222, 77 F.(2d) 388, 460 O. G. 501.

It is conceded on both sides that the sole question for decision here is whether or not the Board erred in rejecting the claims upon the ground that their allowance would result in double patenting because of the finding of the Board that there was no patentable distinction between the subject matter of the two claims at bar and claim 1 of appellant's said patent.

It frequently happens that an inventor invents a method of doing a thing and a machine or device for performing the steps of the method. Both may be inventive and he may properly be allowed claims covering both the apparatus and the method. For reasons which need not be discussed here, he should not have a method claim if the method is stated in terms which merely recite the performance of the machine, and the rule has been fairly well settled as to when a method claim, which method may be performed by a patented machine, may be allowable. This question was gone into thoroughly by this court in *In re Ernst et al.*, 21 C. C. P. A. (Patents) 1235, 71 F.(2d) 169, 449 O. G. 507. Numerous authorities were there cited and considered, including *In re Weston*, 17 App. D. C. 431, 94 O. G. 1786. We, in the *Ernst* case, quoted with approval the following definite rule which was laid down in the *Weston* case:

> It seems to us from all these authorities the deductions to be drawn are these: First, that processes involving a chemical or other elemental action, if new and useful, are patentable; second, that a process, which amounts to no more than the mere function of a machine, is not patentable; third, that a process or method of a mechanical nature, not absolutely dependent upon a machine, although perhaps best illustrated by mechanism, may, if new and useful, be the proper subject of a patent, even though it involves no chemical or other elemental action.

We then said:

> * * * It appears that appellants' process is absolutely dependent upon a machine, or machines, for which appellants have been allowed apparatus claims, and each of the method claims here involved states a function, and nothing more than a function, of the apparatus described in the allowed claims. * * *

In *In re McCurdy*, 22 C. C. P. A. (Patents) 1140, 76 F.(2d) 400, 459 O. G. 923, the issue was much the same as the one at bar. We there cited several

cases and followed our holding in *In re Ernst et al.* *supra*. We said:

We think it is well settled that the inventor of an apparatus may be allowed method claims if the method performed by the apparatus may be performed by other apparatus or by hand. The mere fact that he has invented a machine for carrying out his process does not make him any the less an inventor of the process, provided the machine and process both are new and useful and otherwise meet the requirements of the statute. Bell, the inventor of the telephone, discovered that by gradually changing the intensity of a continuous electrical current so as to make it correspond exactly to the changes in the density of the air, caused by the sound of the voice, speech could be reproduced and understood, and he devised an instrument for doing it. He was the discoverer of the underlying principle which his machine or device made serviceable to humanity. He was the inventor of a method and also of a mechanism for performing the method. (See *The Telephone Cases*, 126 U. S. 1, at pages 532, 533).

[1] From the various authorities considered we think the rule is well settled that under circumstances like those at bar, if the method of the claims can be performed by any other apparatus or by hand, it cannot be said that the claims recite the mere function of a machine, so that their allowance would be double patenting. See *Expanded Metal Co. v. Bradford*, 214 U. S. 366, 143 O. G. 933; *In re Tallmadge*, 57 App. D. C. 390, 194 O. G. 1219.

The important inquiry in determining the issue presented, therefore, is whether or not the method claims call for steps which can be performed only by the apparatus for which appellant was allowed said claim 1 of the patent.

In appellant's application, concerning the method claims he states:

It may be noted that in the practice of this invention the method used for applying the brand by whatever means is mainly to form a dot or preferably an agreupement or series of dots by injecting and depositing appropriate charges of ink beneath the surface of the meat or under the fell thereon, according to the chosen design. * * *

The Board in the decision appealed from did not agree with the examiner's finding that the method claims call for nothing more than the function of a particular device, nor is there any suggestion in the Board's opinion that the claims describe the function of the device. The Board merely stated that it saw no patentable distinction between the subject matter of the claims and that of claim 1 of appellant's patent.

We see no reason why the steps of the method claims at bar could not be performed by hand or by apparatus other than that covered by the said patent claim. The steps involved in claim 2 of the instant application are (1) perforating the surface covering or fell by means of an inked implement having penetrating portions with ink pockets formed in the sides thereof and (2) depositing ink from said ink pockets in the tissue beneath the fell. It would be tenuous to urge that when the courts have spoken of performing by hand what may be performed by a machine they meant by hand alone, that is to say, without the use of some ordinary tool in common use. In the instant case, can it be contended that before appellant can perform by hand the act of perforating the surface covering and depositing ink, he must literally perforate the fell covering with his fingers or hands. In carrying out the method of claims 2 and 3, he may take by hand "an inked implement having penetrating portions" which may not be an "instrument comprising a plurality of needles arranged, according to a chosen design of brand mark and a support therefor" as is provided for in claim 1 of the patent.

It is true that both claims 2 and 3 qualify the inked implement used by specifying that the implement has ink pockets of a certain character. It is not difficult to conceive of a hand implement which might be used to brand carcasses by hand which had penetrating portions with ink pockets of the character described in the method claims and did not comprise the particular features called for in the patent claim.

[2] We are not in accord with the views of the Board that there was no patentable distinction between the subject matter of the claims at bar and said claim of appellant's patent. Patentable new and useful results may flow from the performance of the method of the claims which are distinguishable from the subject matter of claim 1 of appellant's patent. Certainly there is such doubt involved that under the well-settled rule, the applicant should have the advantage thereof.

The decision of the Board of Appeals appealed from as to said claims 2 and 3 is reversed.

REVERSED.

1,489,944, M. Kasser, Machine for processing eggs, D. C., N. D. Calif. (San Francisco), Dec. E 2806, *Kasser Egg Process Co. v. McMary Stores, Ltd.* Dismissed for want of prosecution Nov. 4, 1935.

1,508,757, F. L. Alexander, Device for torpedoing wells, D. C., S. D. Calif. (Los Angeles), Dec. J-66-S, *The Ford Alexander Corp. v. Hercules Well Shooting & Contracting Co. et al.* Dismissed without prejudice Nov. 22, 1935.

1,526,982, R. W. Hill, Stencil sheet, filed Oct. 28, 1935, D. C. Mo. (Kansas City), Doc. 2778, *A. B. Dick Co. v. W. R. Starkey et al.* Injunction granted Nov. 15, 1935. Same, D. C., N. D. Ill., E. Div., Doc. 9242, *A. B. Dick Co. v. Illinois Paper Co. et al.* Patent held valid and infringed. Injunction granted Apr. 16, 1935.

1,527,121, Gottfriedsen & Cottingo, Metallic chloride and method of making same, D. C. Del., Dec. E 1037, *The Dow Chemical Co. v. Tuscco Salt Products Co.* Consent decree dismissing bill without prejudice Nov. 7, 1935.

1,538,980, A. L. Gester, Continuous vacuum filter, filed Oct. 24, 1935, D. C., Utah (Salt Lake City), Doc. E 12906, *Oliver United Filters, Inc., v. The Elmco Corp. et al.*

1,542,177, J. T. Allen, Rubber molding apparatus, filed Sept. 18, 1936, D. C. Del., Doc. E 1128, *Continental Rubber Works v. Firestone Tire & Rubber Co. of Calif. et al.*

1,551,011, M. Conti, Smoking device, filed Nov. 22, 1935, D. C., S. D. N. Y., Doc. E 7320, *A. Herz v. Continental Briar Pipe Co., Inc., et al.*

1,553,788, A. Rosowsky, Candy package, filed Nov. 18, 1935, D. C., S. D. N. Y., Doc. E 7318, *C. W. Jables v. P. L. Andrews Corp.*

1,611,767, E. D. Misner, Drive mechanism for washing machines, D. C., E. D. Mich. (Detroit), Doc. 7056, *Universal Devices, Inc., v. Borg Warner Corp. et al.* Dismissed (notice Nov. 19, 1935).

1,641,871, S. Solomon, Brief case, filed Nov. 14, 1935, D. C., S. D. N. Y., Doc. E 81/357, *Standard Brief Case Co., Inc., v. S. Rothbarger et al.* (*Hercules Leather Goods Co.*).

1,655,391, K. R. Feller, Method of and apparatus for feeding molten glass, filed Nov. 12, 1935, D. C., W. D. Pa., Doc. E 3146, *Hartford-Empire Co. v. Tygart Valley Glass Co.*

1,657,873, E. F. Dreger, Apparatus for conditioning paper, filed Nov. 12, 1935, D. C., N. D. Calif. (San Francisco), Doc. E 2805-E, *E. F. Dreger v. Sunset Lithograph Co. et al.*

1,665,262, W. H. Sturgis, Hood fruit, filed Nov. 11, 1935, D. C. R. I., Doc. 338, *Equipment Specialties Co. v. E. D. Norman.*

1,669,016, E. H. O'Neil, Deodorant and method of making same, D. C., S. D. N. Y., Doc. E 76/367, *E. H. O'Neil et al. v. Feminine Products, Inc.* Dismissed Nov. 22, 1935.

1,705,241, L. D. Scobier, Glass blowing machine, D. C., N. D. Ohio, W. Div., Doc. E 1022, *Owens-Illinois Glass Co. v. The O'Neill Machine Co. et al.* Dismissed without prejudice Nov. 22, 1935.

1,707,545, E. C. Wente, Acoustic device, appeal filed Nov. 21, 1935, C. C. A., 8th Cir. (St. Louis), Doc. 10347, *Western Electric Co., Inc., et al. v. Cinema Supplies, Inc.* Dismissed Nov. 21, 1935.

1,724,624, H. C. Harrison, Piston diaphragm having tangential corrugations, C. C. A., 8th Cir. (St. Louis), Doc. 10346, *Western Electric Co., Inc., v. Cinema Supplies, Inc.* Dismissed Nov. 21, 1935.

1,750,109, C. H. Kirby, Throttle pump carbureter, filed Nov. 16, 1935, D. C., W. D. Mich., S. Div., Doc. 2740, *Marvel Carburetor Co. et al. v. W. Bewerdink et al.* (*Electric Service Station*).

1,754,069, J. H. Cohen, Heater, filed Nov. 22, 1935, D. C., E. D. Mich. (Detroit), Doc. 7330, *Casco Products Corp. v. Standard Hardware & Auto Supply, Inc.* Same, D. C. R. I., Doc. 327, *Casco Products Corp. v. Kaufman & Chernick, Inc., et al.*

1,756,000, J. M. Miller, Piezo-electric oscillation generator, filed Nov. 25, 1935, D. C., S. D. N. Y., Doc. E 81/370, *J. M. Miller v. Western Electric Co., Inc.*

1,759,826, R. F. Goss, Primer valve, D. C. Oreg. (Portland), Doc. E 9455, *Goss Primer, Inc., v. D. S. Williams et al.* Dismissed Oct. 28, 1935.

1,760,665, D. E. Spatholf, Shoe, filed Nov. 13, 1935, D. C., E. D. Mo. (St. Louis), Doc. 11007, *Hamilton, Brown Shoe Co. v. Stix, Baer & Fuller Co.*

1,762,961, C. H. Kirby, Carbureter, filed Nov. 15, 1935, D. C., W. D. Mich. (Grand Rapids), Doc. 2739, *Marvel Carburetor Co. et al. v. W. Bewerdink et al.* (*Electric Service Station*).

1,777,433, C. F. Hogelund, Full vision frost shield, C. C. A., 8th Cir. (St. Louis), Doc. 10269, *Durkee-Atwood Co. v. Fifth Second Co.* Decree affirmed Nov. 2, 1935. Doc. 10271, *Durkee-Atwood Co. v. W. P. Hilger.* Decree as above.

1,787,098, N. Wolf, Union suit, filed Nov. 15, 1935, D. C., S. D. N. Y., Doc. E 81/340, *N. Wolf et al. v. Marshall-Field & Co., Inc.* Doc. E 81/341, *N. Wolf et al. v. McLellan Stores Co.* Doc. E 81/191, *N. Wolf et al. v. Schlein et al.* Consent decree for plaintiff (notice Nov. 16, 1935).

1,792,672, E. V. Camp, Resilient traffic guard, appeal filed Nov. 9, 1935, C. C. A., 4th Cir., Doc. 3977, *J. M. Oates* (*Highway Safety Appliance Co.*) *v. E. V. Camp.*

1,796,867, G. Candas, Brooch and the like, filed Nov. 23, 1935, D. C., S. D. N. Y., Doc. E 81/367, *G. Candas et al. v. O. J. Agnini et al.*

1,822,402, W. F. Hoelthe, Safety gas cock, C. C. A., 4th Cir., Doc. 3815, *W. F. Hoelthe v. The C. M. Kemp Mfg. Co.* Decree of Circuit Court of Appeals of June 18, 1935 set aside and rehearing granted Oct. 10, 1935.

1,829,915, J. J. Wasser, Display device, filed Nov. 15, 1935, D. C., N. D. Calif. (San Francisco), Doc. E 2956-L, *Peerly Dairy Co. v. M. S. Manhard.*

1,834,070, J. J. Parkinson, Heating device, filed Nov. 13, 1935, D. C., S. D. N. Y., Doc. E 81/326, *Parkinson Heater Corp. et al. v. W. E. Warden* (*Warden Water Heaters*). Doc. E 81/329, *Parkinson Heater Corp. et al. v. W. Bobleck* (*Roby Distributing Co.*).

1,854,892. (See Re. 19,710.)

1,866,995, A. L. Wurster, Cravat holder, filed Nov. 21, 1935, D. C., S. D. N. Y., Doc. E 81/362, *Wrest Cravat Holder Co., Inc., et al. v. Imperial Merchandise Co., Inc.*

Same, D. C., E. D. N. Y., Doc. E 7751, *Wrest Gravel Holder Co., Inc.*, et al. v. *E. Lewis* et al. Consent decree for plaintiff Nov. 29, 1935.

1,987,230, M. Schwartzman, Attaching device, filed Nov. 25, 1935, D. C., S. D. N. Y., Doc. E 81/376, *H. Schwartzman* v. *A. Gompel* (*A. Gompel Millinery Supply Co.*).

1,982,563, W. D. Bartlett, Coin controlled vending machine, filed Oct. 19, 1935, D. C., N. D. Miss. (Delta), Doc. E 297, *W. D. Bartlett* v. *B. W. Hottle* et al. (*Hott Bros.*).

1,919,018, L. Goebbel, Ornamented lining fabric, D. C., S. D. N. Y., Doc. E 76/382, *L. Goebbel* v. *Art Silk Corp.* Consent decree for plaintiff (notice Nov. 16, 1935).

1,921,437, L. K. Stupell, Ornament, filed Nov. 18, 1935, D. C., S. D. N. Y., Doc. E 81/348, *L. K. Stupell* et al. v. *Brier Mfg. Co., Inc.*, et al.

1,922,133, H. S. Hougium, Windshield heater for motor vehicles, filed Nov. 8, 1935, D. C. Nebr. (Omaha), Doc. E 1491, *H. Peterson* (*Liberty Mfg. Co.*) et al. v. *Safety Equipment Mfg. Co.* Same, filed Nov. 12, 1935, D. C., S. D. Iowa (Council Bluffs), Doc. E 4217, *H. Peterson* (*Liberty Mfg. Co.*) et al. v. *Morris Register Co.*

1,981,621, C. M. Peterson, Fixture switch, filed Nov. 20, 1935, D. C., E. D. N. Y., Doc. E 7622, *Circle F Mfg. Co.* v. *Loudon Mfg. Co.*

1,943,800, P. Bischof, Take-up device for stranded cables, D. C., S. D. N. Y., Doc. E 79/184, *P. Bischof* v. *Superi Products Corp.* Consent and order of discontinuance (notice Nov. 21, 1935).

1,984,134, Himmel & Himmel, Structural member, filed Nov. 14, 1935, D. C. Conn. (New Haven), Doc. E 2496, *The Himmel Bros. Co.* v. *M. H. Berthiaume.*

1,967,954, P. Halpern, Garment, filed Nov. 6, 1935, D. C. Calif. (San Francisco), Doc. E 3964-L, *P. Halpern* v. *M. Goldstein, Inc.*, et al.

1,984,269, B. Greenbaum, Brassiere, D. C., N. D. Ohio, E. Div., Doc. 5181, *Kenold, Inc.*, et al. v. *W. Taylor Sons & Co.* Dismissed without prejudice Oct. 18, 1935.

2,009,990, Levenson & Berger, Undergarment, filed Nov. 14, 1935, D. C., E. D. N. Y., Doc. E 7220, *Boston Knitting Mills, Inc.*, v. *Sears, Roebuck & Co., Inc.* Same, D. C., S. D. N. Y., Doc. E 81/333, *Boston Knitting Mills, Inc.*, v. *E. P. Haight* et al. (*A. E. Haight & Co.*).

2,014,998, Schechter & Hoderman, Flexible tube and coupling, filed Nov. 15, 1935, D. C., S. D. N. Y., Doc. E 71/330, *American Cooler Co., Inc.*, v. *Jess Equipment & Service Co., Inc.*

2,017,962, C. E. Fuesser, Display receptacle, filed Nov. 15, 1935, D. C., N. D. Ohio, E. Div., Doc. 5347, *C. E. Fuesser* v. *The Laurel Biscuit Co.*

Re. 17,337, F. Milliken, Lubricated valve, D. C., S. D. N. Y., Doc. E 76/180, *Milliken Valve Corp.* v. *American Car & Foundry Co.* Consent and order of discontinuance (notice Nov. 21, 1935).

Re. 17,920, D. J. Cremen, Cap, D. C., E. D. Pa., Doc. 6027, *D. J. Cremen* v. *Keystone Adjustable Cap Corp.* Dismissed without prejudice (notice Nov. 8, 1935).

Re. 19,710 (of 1,854,600), Pollak & Osterreicher, Condensation product and method of making same, C. C. A., 2d Cir., Doc. 14320, *Catalin Corp. of America* v. *Catalosuit Mfg. Co., Inc.*, et al. Decree affirmed (notice Nov. 18, 1935).

Des. 87,087, J. J. Klecka, Finger ring, filed Nov. 19, 1935, D. C., S. D. N. Y., Doc. E 81/351, *J. R. Wood & Sons, Inc.*, v. *B. & E. J. Gross Co., Inc.*

Des. 96,963, A. Greenspan, Dress, filed Nov. 8, 1935, D. C., S. D. N. Y., Doc. E 81/314, *Century Frocks, Inc.*, v. *L. Weis.*

Des. 97,305, J. Rubin, Dressing table box, D. C., S. D. N. Y., Doc. E 81/302, *J. Rubin* v. *I. Perlmutter* et al. Consent decree for plaintiff (notice Nov. 21, 1935).

Des. 97,288, I. Geist, Blouse, filed Nov. 20, 1935, D. C., S. D. N. Y., Doc. E 81/332, *Mitchell & Weber, Inc.*, v. *Wm. Hamelbridge Mills, Inc.*

Disclaimers

Re. 18,317.—*John O. Black*, Los Angeles, Calif. PROCESS FOR HEATING OILS. Patent dated July 12, 1932. Disclaimer filed December 19, 1935, by the assignee, *Gasoline Products Company, Inc.*

Hereby enters this disclaimer to claims 1 and 2 of the aforesaid Letters Patent which are in the following words, to wit:

"1. A process of heating petroleum oils in tubular coils situated in a furnace which comprises first passing the oil through a section of coil located in the hottest zone of the furnace comprising a plurality of rows of tubes in which the flow of oil through the tubes of each row is substantially transverse to that of the flow of furnace gases and in which the passage of oil from row to row is in substantially the same direction as that of the flow of furnace gases and then passing the oil through a section of coil located in a less highly heated zone of the furnace comprising a plurality of rows of tubes in which the flow of oil through the tubes of each row is substantially transverse of the flow of furnace gases and in which the passage of oil from row to row is substantially counter-current to that of the furnace gases.

"2. A process of heating petroleum oils in tubular coils situated in a furnace which comprises first passing the oil through a section of coil located in the hottest zone of the furnace and arranged to absorb radiant heat comprising a plurality of rows of tubes in which the flow of oil from row to row is in substantially the same direction as that of the flow of furnace gases, and then passing the oil through a section of coil located in a less highly heated zone of the furnace comprising a plurality of rows of tubes in which the flow of oil through the tubes of each row is substantially transverse of the flow of furnace gases and in which the passage of oil from row to row is substantially counter-current to that of the furnace gases."

1,485,186.—*Harold D. Arnold*, East Orange, N. J. SYSTEM OF DISTRIBUTION. Patent dated February 26, 1924. Disclaimer filed December 20, 1935, by the assignee, *Western Electric Company, Incorporated.*

Hereby enters this disclaimer to the following claims, being claims 1 to 19 inclusive, 15 and 18 of said patent, in the following words, to wit:

"1. An oscillation generator comprising a resonant circuit for determining the frequency supplied by said generator, a load circuit adapted to be energized by said generator and a three electrode electric discharge repeater for transferring alternating current energy from said generator to said load circuit and preventing said load circuit from reacting on said generator.

"2. An oscillation generator susceptible to reactive effects, an alternating current load circuit and a three electrode asymmetrically conducting repeater for transferring alternating current of the generator frequency to said load circuit.

"3. An oscillation generator susceptible to reactive effects, an alternating current load circuit and an audion repeater for transferring current of the generator frequency to said load circuit.

"4. An oscillation generator of the feed-back type, a reactive load circuit, an asymmetrically conducting repeater device having three electrodes, means for coupling said generator to two of said electrodes and means for coupling said load circuit to one of said first-mentioned electrodes and to the third electrode.

"5. An oscillation generator of the audion type, an alternating current load circuit and an audion repeater between said generator and said load circuit whereby the frequency of the current supplied by said generator is independent of the character of said load circuit.

"6. An oscillation generator comprising a discharge device having an input circuit and an output circuit reacting upon said input circuit, a load circuit for coupling said generator to a load, and an asymmetrically conducting repeater in circuit between said generator and said load for preventing said load from reacting on said generator.

"7. In a system of distribution, an oscillation generator comprising a discharge device having an anode, a cathode and an impedance controlling electrode and input and output circuits, means for transferring energy from said output circuit to said input circuit, a load circuit energized from said output circuit, and a discharge device constituting a repeater having an anode, a cathode and an impedance controlling electrode connected between said output circuit and said load circuit whereby the load is prevented from reacting on said generator.

"8. An electron discharge device having an input circuit and an output circuit reacting upon said input circuit, a load circuit energized from said output circuit, and an asymmetrically conducting repeater element between said output circuit and said load circuit.

"9. In a system of distribution, a circuit for absorbing energy, a discharge device in said circuit for controlling said energy, an output circuit for said discharge device, means for transferring energy from said output circuit back to said first circuit, a load circuit energized from said output circuit, and an asymmetrically conducting repeater device between said output circuit and said load circuit.

"10. In a system of distribution, a discharge device having an anode, a cathode and an impedance controlling electrode and input and output circuits, means for transferring energy from said output circuit to said input circuit, a load circuit energized from said output circuit, and a discharge device constituting a repeater having an anode, a cathode and an impedance controlling electrode connected between said output circuit and said load circuit whereby the load is prevented from reacting on said generator.

"15. A generator of characteristically varying waves comprising reactance elements for determining the frequency of the waves generated, the frequency of said generator being affected by the reaction of other reactance elements on said frequency determining reactance elements, a reactive load circuit connected to said generator to be supplied with sinusoidal waves of the frequency of the waves generated by said generator, in combination with means for preventing said load circuit from affecting the frequency of the waves supplied comprising a space discharge repeater capable of repeating from said generator to said load circuit but not capable of repeating from said load circuit to said repeater.

"18. An oscillation generator comprising an electric discharge device having input and output circuits which are coupled in feed-back relation and which comprise reactances that substantially determine the frequency of the oscillations produced, a reactive load circuit to which oscillations are to be supplied, and an alternating current repeater having an input circuit associated with said generator to receive alternating current therefrom, and an output circuit associated with said load circuit to impress repeated alternating current of the frequency produced by said generator thereupon, said repeater input and output circuits being asymmetrically connected whereby the impedance of the input circuit is substantially negligibly influenced by the impedance conditions of said output circuit and said load circuit is prevented from reacting upon said generator to change the characteristics of the generated oscillations."

1,708,921.—*Carl Georg Munthe*, Stockholm, Sweden. REPRODUCTION. Patent dated March 31, 1931. Disclaimer filed December 17, 1935, by the assignee, *Servel, Inc.*

Hereby enters this disclaimer to claims 3, 4, 5, and 6 thereof, to wit:

"3. A refrigerator having a compartment to be cooled, said compartment containing an evaporator, a cooling fin in said compartment, a conduit in said compartment attached to said evaporator and to said fin, and a volatile fluid partly filling said conduit.

"4. A refrigerator having a compartment to be cooled, said compartment containing an evaporator and an element to be cooled by said evaporator, a conduit in heat exchange relation with said element and with said evaporator, and a volatile fluid partly filling said conduit.

"5. A refrigerator having a compartment to be cooled, an evaporator in said compartment, an element in said compartment to be cooled by said evaporator, a conduit in heat exchange relation with said element and with said evaporator and a volatile fluid partly filling said conduit.

"6. A refrigerator having a cooling compartment and a heat transfer device in said cooling compartment containing a volatile liquid for producing an interchange of heat between different parts of the compartment."

1,819,508.—*Clarence W. Hansell*, Rocky Point, N. Y. COMMUNICATION BY FREQUENCY VARIATION. Patent dated August 18, 1931. Disclaimer filed December 11, 1935, by the assignee, *Radio Corporation of America.*

Hereby enters this disclaimer with respect to claims 12 and 24 of the said patent, to wit:

"12. The method of eliminating the effect of partial fading of frequency modulated signals which includes discriminating between amplitude and frequency variation by limiting the received signal to the low signal level, and thereafter changing frequency modulation to amplitude modulation for detection."

"24. In a frequency modulation receiver arranged to eliminate the effect of partial fading of frequency modulated signals, the combination of means to limit the signal energy to the low signal level, and means to thereafter change the frequency modulation of the limited signal energy to amplitude modulation for detection."

1,831,676.—*Ulmrin A. Blodgett*, South Brewer, and *Hugo H. Hanson*, Bangor, Maine. METHOD FOR THE PREPARATION OF STRONG BLEACHED SULPHATE PULP. Patent dated November 10, 1931. Disclaimer filed December 10, 1935, by the assignee, *Eastern Manufacturing Company.*

Hereby enter this disclaimer to that part of claims 3 and 4 in said patent which is in the following words, to wit:

"reactive compound of sulphur",—insofar as this term includes sodium sulphide.

1,881,481.—*Philip F. Scofield*, Palo Alto, Calif. INDUCTANCE COIL. Patent dated December 20, 1932. Disclaimer filed December 7, 1935, by the patentee.

Hereby enters this disclaimer to claims 1, 5, and 6 of said Letters Patent which are in the following words, to wit:

"1. An inductor comprising a conductor disposed in a coil of at least one turn, said conductor having a core of material having a low coefficient of thermal expansion fixed to a shell of conducting material having a high electrical conductivity and a relatively high coefficient of expansion."

"5. An inductor comprising a conductor disposed in a coil of at least one turn, said conductor having a core of relatively low coefficient of expansion and high rigidity, and a conducting shell fixed to said core and constrained thereby against expansion in the direction of the length of the core.

"6. An inductor comprising a conductor disposed in a coil of at least one turn, said conductor having a core of nonconducting material having a low coefficient of thermal expansion fixed to a shell of conducting material having a high electrical conductivity and a relatively high coefficient of thermal expansion."

1,884,800.—*Norman Tschebotar*, Komotau, Czechoslovakia. METHOD AND APPARATUS FOR MACHINING ROLLS SUCH AS PILGER ROLLS AND THE LIKE. Patent dated January 17, 1932. Disclaimer filed November 30, 1935, by the patentee.

Hereby enters this disclaimer to claims 1, 2, and 19 of the aforesaid Letters Patent, which are in the following words:—

"1. In a machine tool for machining rolls of the kind described, the combination of a rotatable table provided with bearings for supporting a pair of rolls to be machined with their axes parallel to one another and to said table, a tool holder carried on the frame of the machine and extending between the pair of rolls so mounted, means for rotating said table, mechanism for rotating each roll about its axis to feed the same to a tool in said holder and mechanism for automatically moving the tool holder in directions transverse to the axis of rotation of the table as the same rotates and for the purpose specified.

"2. In a machine tool for machining rolls of the kind described, the combination of a rotatable table provided with bearings for supporting a pair of rolls to be machined with their axes parallel to one another and to said table, a tool holder movably mounted on the machine frame and extending between the pair of rolls so mounted, means for moving said tool holder radially with respect to said table, means for rotating said table, mechanism for rotating each roll about its axis to feed the same to a tool in said holder and mechanism for moving the tool holder in directions transverse to the axis of rotation of the table as the same rotates, and for the purpose specified."

"19. A method of machining rolls, for example, Pilger rolls, which consists in (a) rotating a pair of rolls having their axes disposed parallel to one another about an axis which extends between the rolls in a direction at right angles to the axes thereof (b) subjecting the rolls as they rotate to cuts across the peripheral faces thereof from a tool located between the rolls, and (c) periodically moving the tool radially with respect to the said axis of rotation of the pair of rolls in such a manner that the cuts are made in accordance with the desired contour of the rolls."

1,902,526.—*Kurt Schmidt*, Wuppertal-Elberfeld-Grenze, Germany. FILAMENT TREATMENT. Patent dated March 21, 1933. Disclaimer filed December 6, 1935, by the assignee, *North American Rayon Corporation.*

Hereby enters this disclaimer to those claims numbered 3, 4, 5, 6, and 8, in the said Letters Patent, said claims being in the following words, to wit:

"3. In a process of the class set forth, the steps of drying spool-spun filaments, rewinding and twisting them onto a second support, removing the filament body so

formed, as a unit, and treating this body to aftertreatment and drying while in an unsupported state.

"4. In a process of the class set forth, the steps of drying spool-spun filaments, rewinding them onto a second support to form a filament body comprising a tightly wound cake, removing the filament body so formed, as a unit, and treating this body to aftertreatment and drying while in an unsupported state.

"5. In a process of the type described, the steps of spinning and drying filaments, rewinding the yarn into a tight cake onto second supporting means from which the cake may be removed bodily, removing the cake bodily and then wet treating and drying it while it is in an unsupported condition.

"6. In the production of even shrinkage yarn, the steps of spooling spun filaments, respooling onto secondary supports, in the form of a tight cake-like filament body, removing the filaments bodily from said secondary supports, and wet treating and drying them unsupported."

1,929,284.—*Julius Vons*, Wiesbaden-Biebrich, Germany. PRINTED REGENERATED CELLULOSE AND A METHOD OF PRODUCING IT. Patent dated October 3, 1933. Disclaimer filed December 23, 1935, by the assignee, *The Visking Corporation*.

Hereby disclaims claim 3 of said patent and the subject matter of said claim 3.

1,945,807.—*Frederick G. Folberth* and *William M. Folberth*, Cleveland, Ohio. CLUTCH AND BRAKE CONTROL MECHANISM. Patent dated February 6, 1934. Disclaimer filed December 9, 1935, by the patentees.

Hereby enter this disclaimer to claims 11 and 14 which are in the following words, to-wit:

"11. In apparatus of the class described, the combination of a manually operable clutch actuating pedal, fluid pressure actuated means connected to said clutch pedal and adapted to exert a force tending to move said pedal in clutch disengaging direction, a valve for controlling said fluid pressure actuated means and mechanical connections between said valve and said clutch pedal whereby the initial movement of said pedal in either clutch engaging or clutch disengaging direction operates said valve.

"14. In apparatus of the class described, the combination of manually operable clutch operating mechanism, fluid pressure actuated means connected to said clutch operating mechanism and adapted to exert a force tending to move said clutch operating mechanism in clutch disengaging direction, a valve for controlling said fluid pressure actuated means and mechanical connections between said valve and said clutch operating mechanism whereby the initial movement of said clutch operating mechanism in either clutch engaging or clutch disengaging direction operates said valve."

1,983,914.—*Byers W. Kadel*, Baltimore, Md., and *Donald H. Sawyer*, Rochester, N. Y. RAILWAY TRUCK. Patent dated June 19, 1934. Disclaimer filed December 21, 1935, by the assignee, *The Symington Company*.

Hereby enters this disclaimer to that part of the claims in said specification which is in the following words, to wit:

"5. In a car truck, a bolster, a pair of side frames, each having a shelf portion and a tension portion therebelow, said bolster having means projecting from opposite ends thereof and integral therewith and extending through openings in the respective side frames sheives for tying said side frames together, spring means above each shelf supporting said bolster, leaf spring means in said tension portion and extending longitudinally thereof, said leaf spring means cooperating with the associated bolster projecting means for supporting said bolster, means supporting said leaf spring means in spaced relation to the bottom of said tension portion, and means on said leaf spring means cooperating with said bolster projecting means for limiting movement of said leaf spring means with respect to said bolster."

"10. In a railway vehicle, spaced side frames having bolster openings therein and a transverse bolster having its ends guided in said openings, each of said side frames having a central spring supporting portion, tension members extending from said spring supporting portion, and bolster guiding spring plate supporting columns with bolster guiding surfaces rising upwardly from said spring supporting portion and tension members, said tension members and bolster columns each having spaced side walls integral with the spring, semi-elliptic springs extending longitudinally of said side frames beyond said guiding surfaces, housed between walls of said tension members, and having their ends supported at a distance from said spring supporting portion by means interposed between the semi-elliptic springs and tension members, said semi-elliptic springs being in load supporting engagement with said bolster, and coil springs supporting said bolster."

"20. In a railway vehicle, in combination, a side frame having tension and compression members and spaced struts integrally connecting said tension and compression members and forming a window therewith, the tension member between said struts having a seat portion, a bearing provided on said tension member below said seat portion, and having a lower web spaced from said seat portion, a load carrying member extending into said window, coil springs interposed between said seat portion and said load carrying member, a spring seat in said bearing having a spring engaging portion spaced from said lower web, a longitudinally extending leaf spring, longer than the distance between said struts, engaging said spring engaging portion, and means interposed between said leaf spring and load carrying member, whereby said load carrying member is resiliently supported on said side frame by said coil and leaf springs."

"24. In a railway vehicle, in combination, a side frame having tension and compression members and spaced struts integrally connecting said tension and compression members and forming a window therewith, the tension member between said struts having a seat portion, coil springs supported thereon, a bearing provided on said tension member below said seat portion and having a lower web spaced from said seat portion, a seat carrying member extending into said window and supported by said coil springs, seats spaced a greater distance apart than the width of said window and supported in said bearing above said lower web, a semi-elliptic leaf spring having its ends supported on said spaced seats, and means interposed between said leaf spring and load carrying member, whereby said load carrying member is resiliently supported on said side frame by said coil and leaf springs."

2,008,208.—*Charles O. Clark*, St. Bernard, Ohio. HYDROUS SULPHONATED FATTY ACID ESTERS AND THEIR PRODUCTION. Patent dated June 25, 1935. Disclaimer filed December 18, 1935, by the assignee, *The Procter & Gamble Co.*

Hereby enters this disclaimer to the process of claim 6 in so far as such process comprises causing 1:2 dihydroxy propane 3-sulfonic acid to react with a compound selected from the group consisting of fatty acids containing at least six carbon atoms per molecule and their alkali metal salts, and in so far as such process comprises causing the soluble salts of 1:2 dihydroxy propane 3 sulphonic acid to react with a compound selected from the alkali metal salts of the group consisting of fatty acids containing at least six carbon atoms per molecule.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 14, 1936

[VOL. 462. No 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 2

Receptacles

Ser. No. 371,937. R. G. SQUIRE & SONS, New York, N. Y. Filed Nov. 23, 1935.

PRESSULES

For Collapsible Metallic Containers.
Claims use since Nov. 15, 1932.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 365,964. THE M. WERK COMPANY, St. Bernard, Ohio. Filed Sept. 4, 1935.

1832
FLOATING LAUNDRY SOAP
THE M. WERK CO.
ESTABLISHED 1832

The representation of the top of a cake of soap and all wording except "1832" are disclaimed apart from the mark.
For Soap.
Claims use since Nov. 11, 1932.

Ser. No. 371,057. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio. Filed Nov. 1, 1935.

KLOR-LENE

For Liquid Spotting Solution for Use in Dry Cleaning.
Claims use since July 15, 1935.

Ser. No. 371,483. THE GERBO COMPANY, INC., Philadelphia, Pa. Filed Nov. 13, 1935.

Drionizing

For Cleaner for Household and Industrial Uses, More Particularly for Cleaning Railway Rolling Stock.
Claims use since Oct. 26, 1936.

Ser. No. 371,495. HARRY I. HULL, Queens Village, Long Island, N. Y. Filed Nov. 13, 1935.

For Hand Cleansers, Soaps, and the Like.
Claims use since July 18, 1934.

Ser. No. 371,620. THE BARRABOL COMPANY, Indianapolis, Ind. Filed Nov. 18, 1935.

The drawing is lined for blue and red, the unlined portions indicating white. The representation of a carton per se is disclaimed.
For Paste-Like Preparation for Shaving.
Claims use since September, 1910.

Ser. No. 371,856. E. DALTROFF & CIE., doing business as Parfumerie Caron, Paris, France. Filed Nov. 22, 1935.

MADEMOISELLE PEAU FRAÎCHE

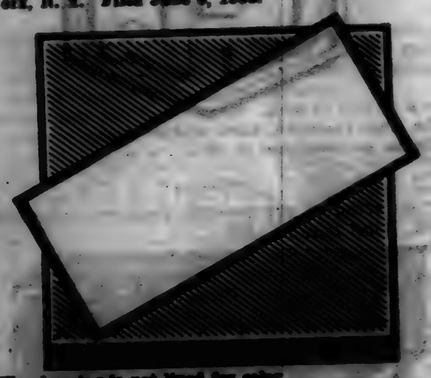
For Soaps.
Claims use since June 18, 1935.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

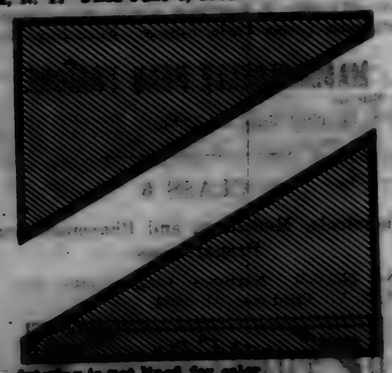
Ser. No. 355,682. NATIONAL LABORATORIES, INC., New York, N. Y. Filed Aug. 31, 1934.

TONICOLOR



No claim is made to "Tonicolor" apart from the mark.
For Finger Wave Lotion Including a Washable Color.
Claims use since Mar 1, 1934.

Ser. No. 362,886. New England Alcohol Company, Everett, Mass. Filed Apr. 17, 1935.



For Denatured Alcohol to Be Used for Anti-Freeze Compositions.
Claims use since Sept. 18, 1934.

Ser. No. 363,257. Standard Brands Incorporated, New York, N. Y. Filed June 6, 1935.

The drawing is not lined for color.
For Phosphate and Lactate Mixture Suitable for Use with Sodium Bicarbonate for the Same Purpose as Baking Powder.
Claims use since July, 1934.

Ser. No. 363,258. Standard Brands Incorporated, New York, N. Y. Filed June 6, 1935.

The drawing is not lined for color.
For Phosphate and Lactate Mixture Suitable for Use with Sodium Bicarbonate for the Same Purpose as Baking Powder.
Claims use since July, 1934.

Ser. No. 366,886. Stephens Laboratories, Inc., New York, N. Y. Filed Aug. 16, 1935.

Jane Addams

The name "Jane Addams" is the name of a deceased celebrity.
For Perfumes, Face Powder, Toilet Waters, Lipsticks, Rouges, and Cosmetical Compounds.
Claims use since Aug. 1, 1935.

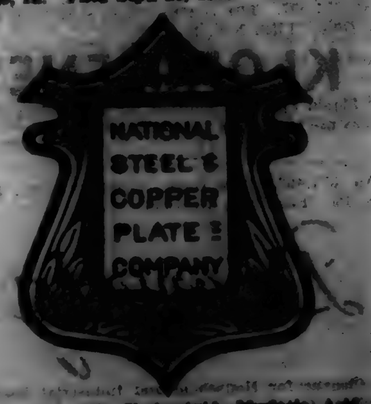
Ser. No. 368,188. Chemische Fabriken Dr. Joachim Wiemik & Co. Aktiengesellschaft, Berlin-Waidmannslust, Germany. Filed Sept. 10, 1935.

"Apondon"

For Preparation for the Treatment of Obesity.
Claims use since Oct. 12, 1934.

Ser. No. 368,868. Jacinto Soca, doing business as The Mustavix Chemical Company, Brooklyn, N. Y. Filed Sept. 20, 1935.

MUSTAVIX



For Salves and Ointments for External Use for the Relief of Congestion and Colds.
Claims use since Sept. 1, 1933.

Ser. No. 369,686. Aktiengesellschaft Johannes Jaenecke, Berlin-Charlottenburg, Germany. Filed Sept. 25, 1935.

COPALIT

For Condensing Products of Phenols or of Aldehyds, Resins, and Artificial Resins.
Claims use since May 1, 1935.

Ser. No. 369,940. National Steel & Copper Plate Co., Chicago, Ill. Filed Sept. 26, 1935.

For Acetic Acid, Citric Acid, Malonic Acid, Nitric Acid, Oxalic Acid, Albumen, Denatured Alcohol, Alum,

Ammonia-Water, Benzol, Charcoal, Gum-Arabic, Iron Sulfate, Magnesium Carbonate, Potassium Ferricyanid, Potassium Permanganate, Stirling-Powder, Subsemester, Sodium [illegible] Claims use since Apr. 1, 1935.

Ser. No. 369,942. National Steel & Copper Plate Co., Chicago, Ill. Filed Sept. 26, 1935.

NALCO

For [illegible] Re-Sublimed.
Claims use [illegible]

Ser. No. 370,[illegible] doing business as Thomas Treatment Company, Tulsa, N. C. Filed Oct. 18, 1935.

T.R.C.

For Medicine for Coughs and Colds.
Claims use since September, 1935.

Ser. No. 370,940. Vincenzo Bocchini, doing business as Vita Company, Philadelphia, Pa. Filed Oct. 19, 1935.

TERPICINE

For Medicinal Preparation for Coughs Due to Colds or Bronchitis.
Claims use since Mar. 1, 1932.

Ser. No. 370,527. Ellis-Foster Company, Montclair, N. J. Filed Oct. 26, 1935.

POLYM

For Synthetic Resins of the Phenol Aldehyde Type.
Claims use since July 31, 1935.

Ser. No. 370,884. Mayo Bros. Laboratories, Los Angeles, Calif. Filed Oct. 28, 1935.

The drawing is not lined for color.
For Tooth Paste and Tooth Powder.
Claims use since Oct. 21, 1935.

Ser. No. 371,264. Max Sonnabend, doing business as Walcodan Co., New York, N. Y. Filed Nov. 6, 1935.

WALCODAN

For Dandruff Remover and Scalp Antiseptic Preparation, Skin Cream, Skin Lotion, Massage Cream, Perfumery, Face Powder, Deodorant, Nail Polish, and Hair Tonic.
Claims use since June 14, 1935.

Ser. No. 371,290. Carbide and Carbon Chemicals Corporation, New York, N. Y. Filed Nov. 7, 1935.

TERGITOL

For Wetting Out Agents, Emulsifying Agents, Compositions for Accelerating the Penetration of Liquids Into Solid Materials, and Agents for Increasing the Miscibility of Liquids, Other Than for Laundries and Dry Cleaning Concerns, and Not Intended for Sale or Distribution to Supply Houses Dealing with Those Industries.
Claims use since Dec. 18, 1934.

Ser. No. 371,306. I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Nov. 7, 1935.

Latekoll

For Latex-Thickening Agents.
Claims use since Sept. 10, 1935.

Ser. No. 371,326. S. R. Squibb & Sons, New York, N. Y. Filed Nov. 7, 1935.

SENODIN

For Preparations for the Treatment of Affections of the Respiratory Tract.
Claims use since Oct. 21, 1935.

Ser. No. 371,338. W. H. & L. D. Betz, Philadelphia, Pa. Filed Nov. 8, 1935.

THQ

For Tetrahydroxyquinone Indicator.
Claims use since April, 1934.

Ser. No. 371,367. Chemische Fabrik Grunau, Landshoff & Meyer A.-G., Berlin-Grunau, Germany. Filed Nov. 8, 1935.

Neospiran

For Medicinal and Pharmaceutical Preparation for the Stimulation of the Respiratory System and Circulation.
Claims use since July 20, 1935.

Ser. No. 371,372. R. T. Vanderbilt Company, Inc., New York, N. Y. Filed Nov. 8, 1935.

KALVAN

For Precipitated Calcium Carbonate.
Claims use since Oct. 26, 1935.

Ser. No. 371,401. SURFACE COMBUSTION CORPORATION, Toledo, Ohio. Filed Nov. 9, 1935.

KATHENE

For Air Conditioning Fluids.
Claims use since Oct. 29, 1935.

Ser. No. 371,412. HARRY R. ATWOOD, doing business as H. R. Atwood and Co., San Diego, Calif. Filed Nov. 11, 1935.

For Salve for Cuts, Burns, Sores, and Skin Irritations.
Claims use since Apr. 5, 1931.

Ser. No. 371,477. PAUL FRANK SOCOLOVSKY, New York, N. Y. Filed Nov. 12, 1935.

24-HR

For Tooth Powder Preparation.
Claims use since July 10, 1934.

Ser. No. 371,504. BONWIT TELLER, INC., New York, N. Y. Filed Nov. 15, 1935.

721

For Bath and Talcum Powder, Bath Oil, Perfumes, and Toilet Water.
Claims use since July, 1935.

Ser. No. 371,671. HAMILTON C. BATES, doing business as C. J. Bates & Son, Chester, Conn. Filed Nov. 18, 1935.

Barbara Bates

Trade-mark is a facsimile signature of a person of that name.
For Nail Polish and Bleach, Powders, Lotions, Creams, and Softeners for the Hands, Feet, and Face, Cuticle Creams.
Claims use since Nov. 8, 1935.

Ser. No. 371,834. MEYER TOBIN, doing business as Alkine Laboratories, New Brunswick, N. J. Filed Nov. 21, 1935.

FLEMOLYN

The drawing is lined for brown.
For Preparation for the Relief of Coughs Due to Colds, Throat Irritations, and for Soothing the Bronchial Tract.
Claims use since Jan. 1, 1932.

Ser. No. 371,837. B. DARTHEY & CIE., doing business as Parfumerie Caron, Paris, France. Filed Nov. 22, 1935.

MADEMOISELLE PEAU FRAÎCHE

For Perfumes, Toilet Waters, Face and Toilet Powders, Powder and Rouge Compacts, Rouges, Lipsticks, Bath Salts, Lotions for the Skin and Hair, and Sachets.
Claims use since June 15, 1926.

Ser. No. 371,895. CHESEBROUGH MANUFACTURING COMPANY, CONSOLIDATED, New York, N. Y. Filed Nov. 22, 1935.

Excepting the word "Vaseline" and the name of applicant, all wording is disclaimed apart from the mark. No claim is made to the representation of a container or a container label. As actual use the mark is printed in blue and yellow upon a white background.
For Camphor Ice.
Claims use since Oct. 30, 1935.

Ser. No. 371,914. ELECTRIC ENERGY CO., Oakland, Calif. Filed Nov. 23, 1935.

ELECTRIC ENERGY

For Chemical in Crystal Form for Use in Storage Battery Electrolyte to Prevent Freezing, Overheating, Corrosion, Overcharging, and Sulphation.
Claims use since July 1, 1935.

Ser. No. 371,920. DOROTHY GRAY, Bloomfield, N. J. Filed Nov. 23, 1935.

SALON

For Face Powder.
Claims use since Aug. 21, 1933.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 372,316. WILLIAM J. H. ROEHLER, Fort Worth, Tex. Filed Dec. 6, 1935.

LITTLE RED DEVIL

For Fireworks.
Claims use since Nov. 1, 1932.

CLASS 12

Construction Materials

Ser. No. 362,662. BRADEN MANUFACTURING COMPANY, Terre Haute, Ind. Filed Mar. 18, 1935.

COPPER-MIX

The expression "Copper-Mix" is disclaimed apart from the mark.
For Metal Roofing.
Claims use since Feb. 25, 1935.

Ser. No. 369,823. JOHNS-MANVILLE CORPORATION, New York, N. Y. Filed Oct. 2, 1935.

WEATHERLOK

For Composition Shingles and Composition Roofings.
Claims use since Aug. 2, 1935.

Ser. No. 371,907. UNITED STATES PLYWOOD CO. INC., New York, N. Y. Filed Oct. 30, 1935.

The word "Plywood" and the representation of the goods are disclaimed except as shown.
For Plywood.
Claims use since September, 1932.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 371,873. CARL E. LEHMAN, doing business as Faucetqueen Company, Chicago, Ill. Filed Nov. 22, 1935.

FAUCET-QUEEN

For Faucet Strainer Attachment.
Claims use since Oct. 16, 1935.

Ser. No. 372,006. A. L. HANSEN MFG. CO., Chicago, Ill. Filed Nov. 29, 1935.

HANSCO

For Machine Staples.
Claims use since Nov. 6, 1935.

CLASS 15

Oils and Greases

Ser. No. 370,389. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed Oct. 15, 1935.

Flying Horse

For Lubricating Oil.
Claims use since June 28, 1935.

Ser. No. 370,752. THE ATLANTIC REFINING COMPANY, Philadelphia, Pa. Filed Oct. 24, 1935.

ODNOL

For Petroleum Products, Particularly Petroleum Oils for Various Uses in Industrial Arts.
Claims use since Oct. 1, 1935.

Ser. No. 370,753. THE ATLANTIC REFINING COMPANY, Philadelphia, Pa. Filed Oct. 24, 1935.

ATREOL

For Petroleum Products, Particularly Petroleum Oils for Various Uses in Industrial Arts.
Claims use since Aug. 21, 1935.

Ser. No. 371,008. INDIAN REFINING COMPANY, Lawrenceville, Ill. Filed Oct. 31, 1935.

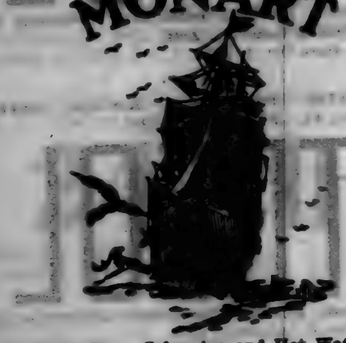
The drawing is lined for red and blue.
For Lubricating Oils.
Claims use since Jan. 16, 1934.

Ser. No. 371,006. PETROLEUM FUELS CORPORATION, Port Chester, N. Y. Filed Nov. 15, 1935.

The drawing is lined for red.
For Gasoline, Fuel Oils, and Lubricating Oils.
Claims use since Oct. 1, 1934.

CLASS 16

Paints and Painters' Materials



Ser. No. 371,079. ROY ELWOOD ROTH, doing business as Roth & White, Lancaster, Pa. Filed Nov. 1, 1935.

NUFIN

For Finish or Polish for Furniture, Floors, Woodwork, Automobiles, Etc.
Claims use since Sept. 30, 1935.

Ser. No. 371,120. ATLANTIC CALCOMINE CO., INC., Brooklyn, N. Y. Filed Nov. 4, 1935.

MONART

For Cold Water Calcomine and Hot Water Calcomine.
Claims use since Oct. 18, 1933.

Ser. No. 371,826. REPUBLIC CORPORATION, New York, N. Y. Filed Nov. 21, 1935.

LIQUID METALLATION

The word "Liquid" is disclaimed apart from the mark.
For Aluminum Paint.
Claims use since Mar. 1, 1935.

Ser. No. 372,200. THE MURALO COMPANY, INC., New Brighton, N. Y. Filed Dec. 5, 1935.

MUROCAL

For Dry Powder to Be Mixed with Water and Used as a Calcimine or Decorative Wall Coating.
Claims use since May 1, 1935.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 371,628. GENERAL ELECTRIC COMPANY, Schenectady, N. Y. Filed Oct. 21, 1935.

GENERAL ELECTRIC

For Air Brakes and Parts Thereof.
Claims use since October, 1934.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 371,166. JAMES B. BRADLEY CORPORATION, St. Louis, Mo. Filed Nov. 4, 1935.

COP-OR-ALL CON-NEC-TITE

The word "Con-nec-tite" is disclaimed apart from the mark.
For Electrical Connectors.
Claims use since Oct. 14, 1935.

Ser. No. 371,674. CONTINENTAL MOTORS CORPORATION, Detroit and Muskegon, Mich. Filed Nov. 12, 1935.

PERM-o-FLUX

For Sound Reproducers and Parts Thereof, Particularly Speakers or Sound Reproducers for Radio Receiving Sets.
Claims use since Nov. 6, 1935.

Ser. No. 371,675. CONTINENTAL MOTORS CORPORATION, Detroit and Muskegon, Mich. Filed Nov. 12, 1935.

The drawing is lined for red. The words "Motors" and "America's Standard" are disclaimed apart from the mark.
For Sound Reproducers and Parts Thereof, Particularly Speakers or Sound Reproducers for Radio Receiving Sets.
Claims use since Nov. 9, 1935.

Ser. No. 371,676. CONTINENTAL MOTORS CORPORATION, Detroit and Muskegon, Mich. Filed Nov. 12, 1935.

The drawing is lined for red and gold. The words "Dynamic", "Speaker", "Motor", and "America's Standard" are disclaimed apart from the mark.
For Sound Producers and Parts Thereof, Particularly Speakers or Sound Reproducers for Radio Receiving Sets.
Claims use since Nov. 9, 1935.

Ser. No. 371,802. CASTLE (Estate) INCORPORATED, doing business as Roybloc Distributors, Minneapolis, Minn. Filed Nov. 23, 1935.

Roybloc

For B-Batteries, Flashlight Batteries, and Dry Cells.
Claims use since Sept. 1, 1927.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 370,462. BEATRICE L. DOWSING, Hollywood, Calif. Filed Oct. 17, 1935.

For Astrological Games.
Claims use since Sept. 30, 1935.

Ser. No. 371,901. GAM SALES COMPANY, Peoria, Ill. Filed Nov. 25, 1935.

BARREL of FUN

For Number Game Played with Counters.
Claims use since Oct. 1, 1934.

Ser. No. 371,931. CHARLES BURRELL OLDS, JR., Cleveland, Ohio. Filed Nov. 25, 1935.

JUG-A-LO

For Ball and Cup Game.
Claims use since Oct. 22, 1935.

Ser. No. 372,002. DOMENICO FRISOLI, doing business as Scientific Model Airplane Co., Newark, N. J. Filed Nov. 29, 1935.

SCIENTIFIC MODEL AIRPLANE CO.

No claim is made to the wording or to the representation of the goods. The drawing is lined for green.
For Toys—Namely, Model Aeroplanes, Motorboats, and Automobiles.
Claims use since 1932.

Ser. No. 372,242. ROBERT W. SWAN, JR., Rockaway Beach, New York, N. Y. Filed Dec. 6, 1935.

PICK-A-WORD

For Word Puzzles.
Claims use since Jan. 26, 1934.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

Ser. No. 370,855. BUSSEY-BLAKE HARDWARE COMPANY, Texarkana, Ark. Filed Aug. 1, 1935.

BLACKBIRD

The drawing is lined for red.
For Axes.
Claims use since April, 1935.

Ser. No. 371,090. CROWN REFRIGERATOR CO. INC., Newark, N. J. Filed Nov. 2, 1935.

CROWN

For Beer Dispensing Apparatus Comprising Pumps, Compressors, Motors, Switches, Grid Condensers, Fans, Air Purifier, Gauges, Air Regulator, Check Valves, Tanks, Faucets and Condenser Traps.
Claims use since May 1, 1934.

Ser. No. 371,197. H. DORNE & CO., INC., New York, N. Y. Filed Nov. 5, 1935.

U-TIL-I-TEE

For Articles of Household Cutlery—Namely, Table Knives, Paring Knives, Butter Knives, Forks, Tablespoons, Fruit-Spoons, Teaspoons, Spreaders, Shears, Made of Base Metal.
Claims use since Aug. 1, 1935.

Ser. No. 371,383. CHEW LEVICK COMPANY, Philadelphia, Pa. Filed Nov. 8, 1935.

RIDE PROVER

For Machines to Be Used for Dispensing Grease to Any Type of Automotive Vehicle Including Passenger Cars, Trucks, Busses, and the Like.
Claims use since Oct. 9, 1935.

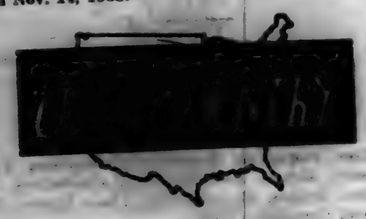
Ser. No. 371,698. HARRY K. DEPUE, Somerton, Pa. Filed Nov. 9, 1935.

DEPUE SUPERBILT

For Hand Operated Garden Rakes.
Claims use since Oct. 24, 1935.

Ser. No. 371,422. THE STARR APPLIANCE COMPANY, Detroit, Mich. Filed Nov. 11, 1935.

THERMERON



For Devices for Adapting Internal Combustion Engines to Burn Fuel Oil.
Claims use since Oct. 2, 1935.

Ser. No. 371,471. PHILIP J. KROLL, doing business as P. J. Kroll Engineering Associates, New York, N. Y. Filed Nov. 12, 1935.

"Dynamic Lubrication"

The word "Lubrication" is disclaimed apart from the mark.
For Machines for Jacking and Rocking Vehicles.
Claims use since June 6, 1935.

Ser. No. 371,558. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Nov. 14, 1935.

For Automobile Oil Filters.
Claims use since July, 1934.

Ser. No. 371,559. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Nov. 14, 1935.

Reliance

For Automobile Oil Filters.
Claims use since July, 1934.

Ser. No. 371,969. AMERICAN SAFETY RAZOR CORPORATION, Brooklyn, N. Y. Filed Nov. 26, 1935.

CORRUX

For Razor Blades and Razors.
Claims use since Oct. 30, 1935.

Ser. No. 372,019. OTTO E. KRAUS, Chicago, Ill. Filed Nov. 26, 1935.

friendly

For Razor Blades.
Claims use since Nov. 7, 1935.

CLASS 26

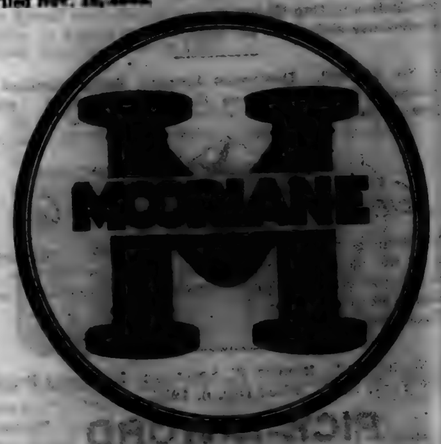
Measuring and Scientific Appliances

Ser. No. 362,576. JERNKONTORET, Stockholm, Sweden. Filed Mar. 15, 1935.

For Apparatus and Scientific Appliances for Testing Metals, Especially Iron and Steel for Hardness, Tensile Strength, Melting Point, and Other Physical and Metallographic Properties.
Claims use since May, 1934.

Ser. No. 368,678. APPLIANCE ENTERPRISES, INC., Denver, Colo. Filed Aug. 22, 1935.

BANK NIGHT



For Films for Theatrical Use.
Claims use since Nov. 21, 1932.

Ser. No. 369,607. SKIPPY INCORPORATED, McLean, Va. Filed Sept. 24, 1935.

"SKIPPY"

For Spectacles, Eyeglasses, and Parts Thereof, Ophthalmic Mountings and Parts Thereof.
Claims use since Aug. 2, 1935.

Ser. No. 371,782. MOORMAN COMPANY, Toledo, Ohio. Filed Nov. 18, 1935.

For Fit Gauges and Pressure Gauges.
Claims use since Oct. 30, 1935.

CLASS 31

Filters and Refrigerators

Ser. No. 371,393. FEDDERS MANUFACTURING COMPANY, INC., Buffalo, N. Y. Filed Nov. 5, 1935.

FED-R-FIN

No claim is made to the word "Fin" apart from the mark.
For Heat Exchange Coils for Refrigerating Systems.
Claims use since Feb. 25, 1935.

Ser. No. 372,445. TENNESSEE FURNITURE CORPORATION, Chattanooga, Tenn. Filed Dec. 4, 1935.

The words "Air Conditioned" are claimed only as shown.
For Refrigerators.
Claims use since Nov. 1, 1935.

CLASS 32

Furniture and Upholstery

Ser. No. 371,956. J. MICHAELS, INC., Brooklyn, N. Y. Filed Nov. 8, 1935.

J. MICHAELS, Inc.
"FRIEND OF THE PEOPLE"

For Household Articles—Namely, Bedsteads, Bureaus, Dressers, Chairs, Sofas, Lounges, Sideboards, and Framed Mirrors.
Claims use since 1905.

CLASS 34

Heating, Lighting, and Ventilating Apparatus

Ser. No. 364,703. BELL & GOSSETT COMPANY, Chicago, Ill. Filed May 9, 1935.

TRIPLE DUTY SYSTEM

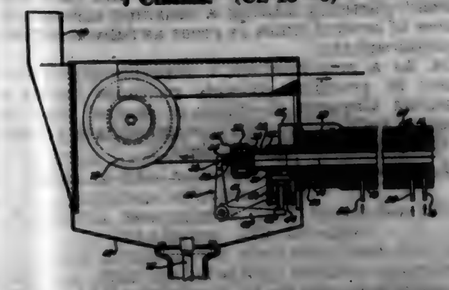
REISSUES

JANUARY 14, 1936

19,818
MOLDED CONTAINER



Pearley Lee Barber, Turner, Oreg.
Original No. 1,991,649, dated February 19, 1935, Serial No. 613,512, May 24, 1932. Application for reissue August 12, 1935, Serial No. 35,982.
5 Claims. (Cl. 197—13)

1. A mold for molding a hollow article having two or more separable sections: comprising a pair of longitudinally separable mold blocks, each of which is provided on its meeting face with a recess formed to the shape of a side of one section of said article and having a tapered semi-annular annulus through one end of each block, said blocks being arranged to have their meeting faces engaged during the process of molding; a pair of longitudinally separable mold blocks, each of which is provided on its meeting face with a recess formed to the shape of a side of the other section of said article and having a semi-annular opening through one end of each block; the last mentioned semi-annular opening cooperable to define an annulus when the last mentioned blocks have their meeting faces engaged, said annulus being of larger diameter but conforming to the flare of the tapered annulus formed by the tapering semi-annuli when the meeting faces of the first mentioned mold blocks are engaged.

19,820
APPARATUS FOR HANDLING TREATED ARTICLES

George Lafayette Cherry, Western Springs, Ill., and Leslie Fawcett Lamplough, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Original No. 1,885,660, dated October 25, 1932, Serial No. 362,108, May 10, 1929. Application for reissue September 17, 1934, Serial No. 744,432.
7 Claims. (Cl. 18—6)

5. In combination, a fluid pressure container having an opening in the wall thereof and a fluid seal comprising a resilient member, means to secure said member in position to close said opening, said member being apertured to permit passage of a strand therethrough, a movable retaining member associated with the resilient member and being supported to move in one direction to exert pressure on said resilient member, a piston, means operably connecting the piston and retaining member to move said retaining member in said direction and means for supplying fluid pressure independent of the fluid pressure in said container to the piston.

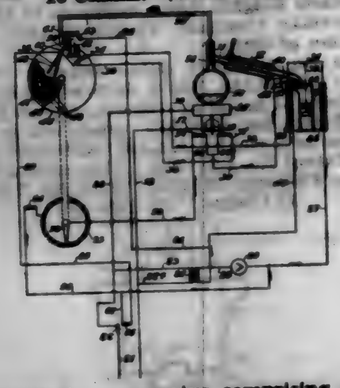
MULTIPLE-PLY PAPER

Ezra B. Fish, Kansas City, Mo., assignor, by mesne assignments, to The Interstate Folding Box Company, Middletown, Ohio, a corporation of Ohio
Original application November 1, 1921, Serial No. 513,143. Divided and application May 2, 1925, Serial No. 626,198, Patent No. 1,583,236, dated September 1, 1925. This application for reissue September 12, 1925, Serial No. 49,249
4 Claims. (Cl. 92—40)

1. A paper sheet comprising a photographically opaque ply and a facing ply united permanently therewith by interlocking of the fibres of the plies.

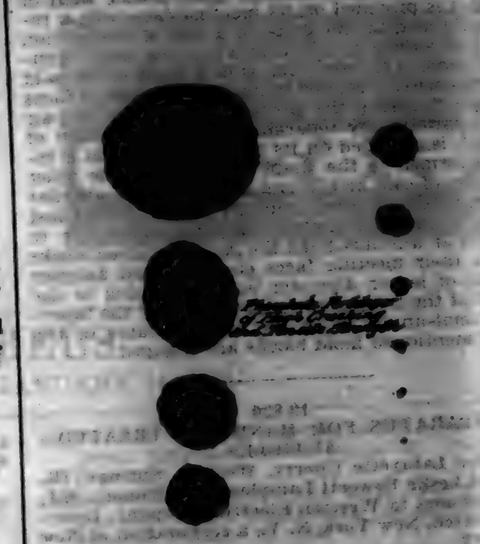
19,822
METALLIC WALL STRUCTURE

Karl F. Hasserman, Cleveland Heights, Leroy D. Mowery, Cleveland, and John A. Bohnsack, Cleveland Heights, Ohio, assignors to The E. F. Hasserman Company, Cleveland, Ohio, a corporation of Ohio
Original No. 1,842,984, dated January 19, 1932, Serial No. 360,234, May 3, 1929, which is in turn a division of Serial No. 290,634, August 20, 1928, now Patent No. 1,856,995, which was in turn a division of Serial No. 134,110, September 7, 1926, now Patent No. 1,681,805. This application for reissue February 18, 1935, Serial No. 7,159
13 Claims. (Cl. 189—34)



1. In partition construction, a sheet metal cornice of generally channel shape having upstanding flange portions rebent inwardly to define a longitudinal opening and having a recess in its web portion, a hollow support member abutting the web portion of said cornice and having a removable face member providing access to the under surface of the cornice, and a panel member abutting said support and engaged in the aforementioned recess.

19,823
ANTENNA COUPLING SYSTEM
Louis A. Hazeltine, Hoboken, N. J., assignor to Hazeltine Corporation, a corporation of Delaware
Original No. 1,552,710, dated April 5, 1932, Serial No. 492,270, November 4, 1930. Application for reissue November 16, 1935, Serial No. 50,235
6 Claims. (Cl. 250—20)

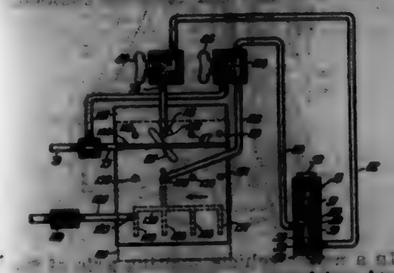


1. A high-frequency coupling circuit tunable throughout a frequency range and adapted primarily for coupling a capacity type antenna to the input of a thermionic tube, comprising, a tunable secondary circuit having coupled thereto a primary circuit including inductance sufficient to resonate with a certain antenna capacity at a frequency fixed at about the lowest frequency of said tunable range, and shunt resistance associated with said primary circuit sufficiently high in maximum magnitude to have an inappreciable effect upon the operation of said coupling circuit when connected to an antenna having said certain capacity, said magnitude being sufficiently low to prevent serious detuning for a given frequency adjustment of said tunable secondary circuit when said primary circuit is connected to an antenna of less than said certain capacity.

19,824
AUTOMATIC ENGLER DISTILLATION APPARATUS
John E. Moore and George W. Chenicek, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Original No. 1,863,246, dated June 14, 1932, Serial No. 527,710, April 4, 1931. Application for reissue September 8, 1933, Serial No. 688,994
16 Claims. (Cl. 22—253)

1. Distillation apparatus comprising a distillation flask, a condenser connected with said flask, a receiver for the condensate formed in said condenser, heating means for said flask, a chart, an electrical circuit including two contact points, a pivoted lever adapted to alternately contact said points, means on said lever for intercepting a drop of condensate whereby the lever is caused to move from one contact point to the other, means for recording distillation temperatures on said chart and means actuated by said electrical circuit for indicating on said chart the interception of said first drop of condensate, whereby the distillation temperature at the time said first drop of condensate is received can be determined from said chart.

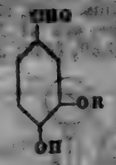
19,825
FERTILIZER
Beverly Ober and Edward H. Wight, Baltimore, Md., assignors to The Ohio-Apex Company, Baltimore, Md., a corporation of Maryland
Original No. 1,947,122, dated February 13, 1934, Serial No. 512,551, February 27, 1931. Application for reissue November 18, 1934, Serial No. 753,243
18 Claims. (Cl. 71—7)



1. As a new product, a phosphate fertilizer in porous discrete nodular encrusted and indurated globoid particles, having a crushing strength in excess of several times as great as fully cured den superphosphate.

14. As a new product, a superphosphate fertilizer in granular discrete particles having a crushing strength in excess of several times as great as fully cured den superphosphate, formed by crushing the product of claim 1.

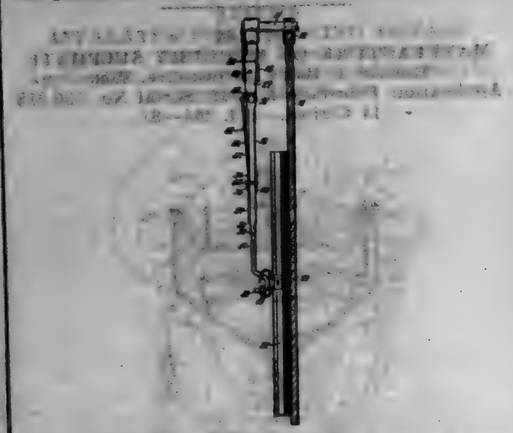
PATENTS
GRANTED JANUARY 14, 1936



2,027,360
FUEL INJECTION SYSTEM
Carrell R. Abbot, Detroit, Mich., assignor to Ex-Cell-O Aircraft & Tool Corporation, Detroit, Mich., a corporation of Michigan
Application March 19, 1934, Serial No. 437,856
21 Claims. (Cl. 123—32)

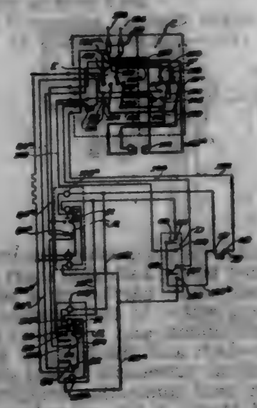
2. A fuel injection system, comprising, in combination, a source of liquid fuel under pressure, an injection nozzle having a fluid pressure responsive valve member, and a rotary distributor for effecting the simultaneous supply of fuel from said source at equal pressures to opposed pressure areas on said member and for discharging the pressure on one of said areas after a predetermined interval while substantially maintaining the pressure on the other of said areas to cause movement of said member from one position to another.

2,027,361
FOOD FLAVORING COMPOSITION
Arthur Alt, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application October 16, 1933, Serial No. 693,882
9 Claims. (Cl. 99—11)



3. A flavoring composition for foodstuffs embodying a material having the following structural formula:

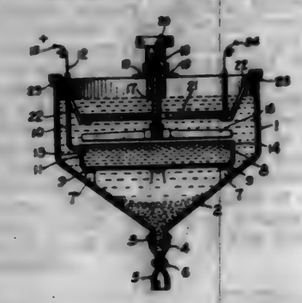
where R is an aralkyl group, vanillin and a solvent therefor.



2,027,362
WINDSHIELD WIPER
John W. Anderson, Gary, Ind., and Theodore J. Smulski, Lake Zurich, Ill.; said Smulski assignor to The Anderson Company, Gary, Ind., a corporation of Indiana
Application December 8, 1931, Serial No. 579,874
13 Claims. (Cl. 15—250)

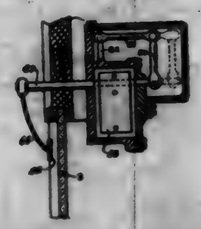
3. In a device of the class described, the combination with an actuating member operatively related to a windshield, of an arm comprising an inner section rigidly connected to said member, an intermediate section pivotally mounted on said inner section for movement in a plane substantially perpendicular to the windshield, and an outer section slidably mounted on said intermediate section, a flat spring mounted on and secured to one side of the intermediate section and extending from its securing means into engagement with the others of said sections for yieldingly maintaining the respective sections in various positions of relative adjustment with respect

to each other, said intermediate section having a plurality of seats formed therethrough adjacent said spring to prevent accumulation of matter between said intermediate section and said spring, and means slidably mounted on one of said sections and engageable with said spring for varying the tension thereof.



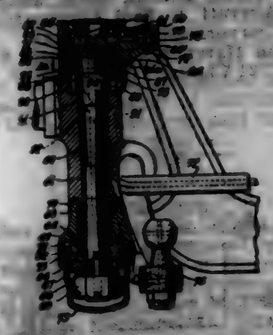
2,027,363
VALVE OPERATING MECHANISM
Walter B. Atchinson, Indian Orchard, Mass., assignor to The Chapman Valve Manufacturing Company, Indian Orchard, Mass., a corporation of Massachusetts
Application October 24, 1928, Serial No. 670,463
9 Claims. (Cl. 177—311)

1. In a device of the character described, in combination a mechanism arranged to operate a



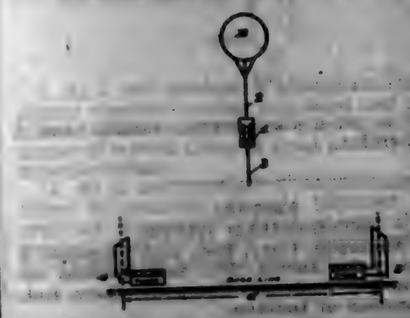
valve and including an element to be driven, a motor for driving said element, and a clutch for detachably connecting said motor and element to permit manual operation of the valve, locking means for said clutch, remote control means for said motor including a master switch structure situated distant from said valve, line switches controlled thereby and serving to energize the motor, and a local switch in series with said master switch structure and actuated to closed position by said locking means irrespective of said line switches when said motor and element to be moved are operatively connected through said clutch.

2,027,264
MANUFACTURE OF MERCURY SULPHATE
Ronald J. Baird, Milwaukee, Wis.
Application February 4, 1932, Serial No. 590,918
14 Claims. (Cl. 204—9)



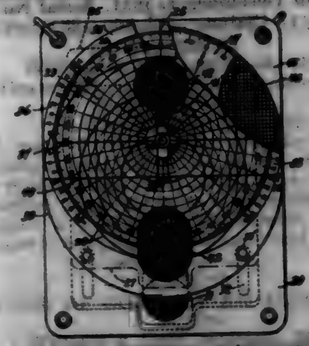
1. A method of making a crystalline mercurous sulphate catalyst which comprises contacting a solution containing about 2% sulphuric acid and about 10% sodium nitrate with mercury; passing a direct current of electricity through the solution while making the mercury the anode; and maintaining a current density at the anode of about 0.5 to 1 ampere per square decimeter.

2,027,265
WINDSHIELD CLEANING DEVICE
George A. Barker, Rochester, N. Y.
Application February 14, 1934, Serial No. 711,211
6 Claims. (Cl. 15—255)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



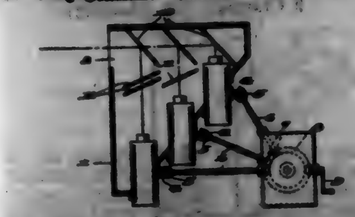
1. In a cleaner for a windshield having a curved surface, a wiper blade, a slidable shaft supporting said blade, said shaft carried by a housing and connected to a motor in the housing to receive oscillatory movement, and a pivoted connection between said shaft and the housing for imparting a longitudinal movement to said shaft during its oscillation, said connection comprising a rod fixed to said shaft, a lug extending from the housing and a link universally connecting said rod and said lug.

2,027,266
CENTRAL LUBRICATION
Joseph Bijur, deceased, late of New York, N. Y., by George Bijur, executor, New York, N. Y., assignor to Auto Research Corporation, a corporation of Delaware
Application June 7, 1928, Serial No. 615,797
23 Claims. (Cl. 184—7)



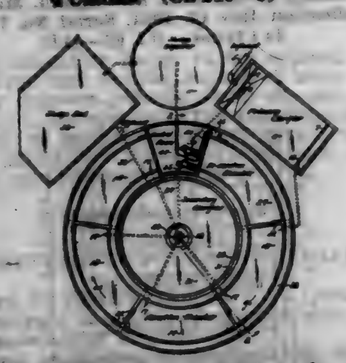
3. In a motor vehicle steering axle of the type including an axle beam having a clevis, a knuckle straddled by said clevis, a king pin rigidly fitted in said knuckle and bearing in the jaws of said clevis, and a thrust bearing encircling the lower end of the king pin and sustaining the axle beam upon the knuckle; the combination therewith of a bushing for the upper end of the king pin adjustably fitted in the upper clevis jaw and including a skirt encircling the upper end of the knuckle to render the connection dust-proof thereat, a lubricant inlet carried by the upper clevis jaw and leading into said upper bushing, said bushing having a passageway longitudinally thereof communicating with a bore in the upper face of the knuckle and enclosed within the dust-proof skirt, and piping draining said bore, carried by said knuckle and leading to a bearing thereof.

2,027,267
SYSTEM OF DETERMINING METEOROLOGICAL CONDITIONS BY RADIO
William R. Blair, Fort Monmouth, Oceanport, N. J.
Application February 15, 1933, Serial No. 656,115
11 Claims. (Cl. 250—3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



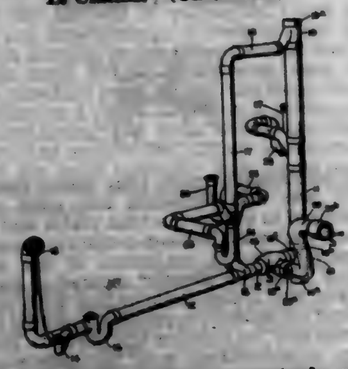
1. In a system of the character described, employing an aerial moving body freely subject to atmospheric influences and adapted to carry a radio transmitter in radio communication with an observation station; the method of determining meteorological conditions, which consists in generating radio frequency oscillations from said transmitter; modulating said oscillations quantitatively in accordance with characteristics of the atmosphere; and detecting the modulated energy at the observation station.

2,027,268
NAVIGATIONAL INSTRUMENT
Robert W. Bockius, United States Navy
Application April 22, 1935, Serial No. 17,629
6 Claims. (Cl. 33—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



6. A navigational instrument, comprising a direction indicating member settable to indicate a wind direction, a member bearing ground-speed circles operatively associated therewith, a member bearing air-speed circles and at their center a wind velocity indicium settable to indicate a wind velocity on said ground-speed circles, a member settable to define a line that includes said indicium and a chosen point on said first mentioned member, the intersection of said line with a chosen air-speed circle indicating a ground speed that is a function of said chosen air-speed, of the wind vector, and of the direction of said line, and means to read on said first member a direction that is determined by the directional position of said line, of said wind vector and of the compass variation.

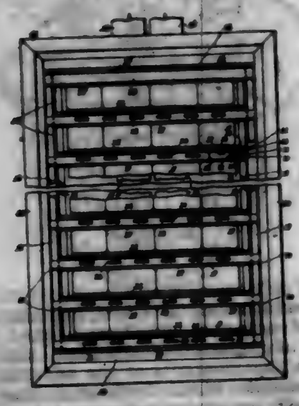
2,027,269
PHOTOGRAPHIC APPARATUS
Fernand A. Bourges, New York, N. Y.
Application March 2, 1933, Serial No. 659,556
6 Claims. (Cl. 88—16.4)



1. In photographic apparatus, the combination with a plurality of cameras having separate lenses arranged approximately at equal light distances from an object, of a transparent reflector plate arranged in front of one of said cameras in the direct path of light but at an angle to said path of light from the object in position to reflect light from the object directly to said camera and to transmit light to a second camera, said first-mentioned camera being so arranged that the direct path of light to its lens from the transparent reflector plate is approximately at right-angles to the path of light from the object to said transparent reflector plate, and a compensator plate equal in light interference to the reflector plate and arranged between the reflector plate and the first-mentioned camera in the path of the light passing to said camera and approximately at the same angle thereto as the transparent reflector plate to the light passing therethrough in position to compensate for any distortion caused by the image passing through the transparent reflector plate and equalizing any distortion between the object and the second camera.

2,027,270
APPARATUS FOR TREATING SEWAGE
Frank S. Currie, San Bernardino, Calif.
Application January 24, 1934, Serial No. 708,131
4 Claims. (Cl. 210—8)

1. In combination; a clarifying chamber; a plurality of seration chambers around the periphery of the clarifying chamber; and means for causing fluid contents of the seration chambers to circulate about horizontal lines intermediate their inner and outer peripheral walls; said seration chambers being adapted for interconnection, and for discharging ultimately into said clarifying chamber.



2,027,271
FACTORY FABRICATED ROUGH PLUMBING UNIT
Robert L. Davison, New York, N. Y., assignor to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application November 19, 1932, Serial No. 643,124
12 Claims. (Cl. 4—211)

1. In combination with a receptacle provided with a trapway having a lateral discharge, of a

substantially horizontal extending member, trap means connected to said horizontally extending member, a vertically extending combined air-vent and water-pipe member, a V-fitting connecting said vertical member with said horizontally extending member, a vertically extending combined air-vent and waste-pipe member connected at a lower portion to said horizontally extending member remote from the connection of the latter with said first-named combined air-vent and waste-pipe member and connected at an upper portion to said first-named combined air-vent and waste-pipe member, and a half-syphon-leg connector member communicating with said substantially horizontally extending member.

2,027,272
APPARATUS FOR FREEZING MATERIALS
Sidney M. Davison, Annisquam, Mass.
Application July 12, 1934, Serial No. 734,727
24 Claims. (Cl. 62—114)

1. A freezing apparatus comprising a support and spaced apart on said support a plurality of pairs of separated refrigerated plates of which one is movable relatively to the other, said plates of each pair having a flexible water tight connection between the edges thereof.

2,027,273
DENTAL APPLIANCE
Edward H. Eden, St. Louis, Mo.
Application January 10, 1934, Serial No. 706,128
5 Claims. (Cl. 32—19)

1. In combination with trial plates fitted to a person's jaws and including bite rims, an element secured to one of the trial plates and adapted to have recorded thereon a marking indicating the centric different occlusions of the person's lower jaw, a second element secured to the other trial plate, and means cooperating with said elements and adjustable to various positions relative to the marking for guiding the person's jaws into positions in accordance with the determined occlusions of the jaws for the forming of record check bites between said bite rims.

2,027,274
MOUTH TREATING COMPOSITION
Otto S. Fowler, Beverly, Calif.
No Drawing. Application May 8, 1933, Serial No. 669,454
6 Claims. (Cl. 167—93)

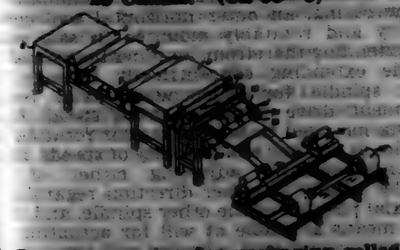
1. A composition of matter comprising a mouth preparation containing live non-pathogenic *Bacillus aloaligenes*.

2,027,275
SCREEN SEPARATOR
George Holt Fraser, Brooklyn, N. Y.
Application December 1, 1931, Serial No. 578,251
8 Claims. (Cl. 209—237)

1. A rotary screen, comprising in combination, a screen clothing, a frame for supporting said clothing, mounted for vertical movement to impart vertical movement to said clothing, a substantially horizontal shaft for supporting and rotating said screen, and up-pressor means for pressing said screen upwardly; the combination therewith of self depression rotary cam means movable downwardly with, and rotatable with said screen, and adapted to move itself and said screen downwardly in opposition to said up-pressor means, and a downward cam face opposite and above and co-operable with said rotary cam means, adapted during rotation thereof to cause the latter to depress itself and said screen collectively in opposition to said up-pressor means.

2,027,276
SAFETY HOOK
Herbert E. Gross, Los Angeles, Calif., assignor to Byron Jackson Co., Los Angeles, Calif., a corporation of Delaware
Application August 18, 1934, Serial No. 740,255
9 Claims. (Cl. 24—232)

1. A safety hook comprising a hook-shaped body having an upwardly projecting bill, said body having an outwardly projecting abutment above the opening into the hook, a locking bar pivotally attached to the bill, extending upwardly across the opening of the hook and engaging the upper face of the abutment so that the said locking bar supports a portion of the load on the hook, said locking bar capable of swinging down on its pivot to leave the opening into the hook unobstructed, and a latch pivotally mounted on the body of the hook and having means for engaging the upper end of the locking bar to hold the same in engagement with the abutment.

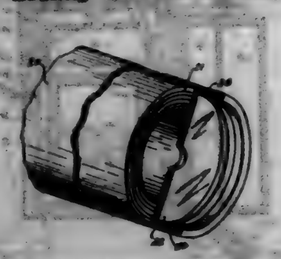


2,027,277
METHOD OF CONVERTING ALDEHYDES TO ACIDS
William J. Hale, Midland, Mich.
No Drawing. Application October 26, 1931, Serial No. 571,251
12 Claims. (Cl. 260—116)

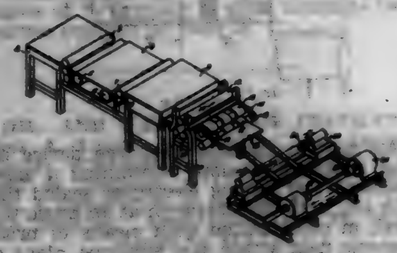
1. A method of preparing organic acids which comprises contacting an aldehyde and water, in vapor phase, with a dehydrogenative catalyst and a directive catalytic base which catalytic base comprises a partially hydrolyzable salt of an amphoteric base and an organic acid.

2,027,278
METHOD OF CONVERTING ALCOHOLS TO ACIDS
William J. Hale, Midland, Mich.
No Drawing. Application November 9, 1931, Serial No. 574,923
27 Claims. (Cl. 260—116)

1. A process of preparing organic acids which comprises contacting alcohol and water, in vapor phase, with a dehydrogenative catalyst and a catalytic mass comprising essentially a partially hydrolyzable salt of an amphoteric base and an organic acid.



2,027,279
APPARATUS FOR PACKAGING RUGS
Clifford F. Hawker, Benjamin F. Herr, and Fred G. Rettinger, Lancaster, Pa., assignors to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Application March 16, 1933, Serial No. 660,216
Renewed June 19, 1933
26 Claims. (Cl. 93—5)

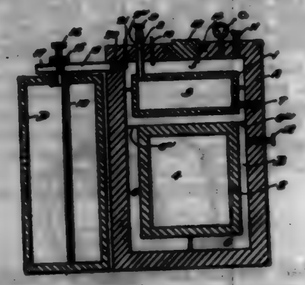


1. In an apparatus for packaging rolled articles, yielding means to center a rolled article in a tube and yielding means to crimp the ends of the tube into inturned beads, each of said means having arms adapted to position the tube for its operation thereon.

2,027,280
ROLL PACKAGE
Clifford F. Hawker, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Application March 16, 1933, Serial No. 660,217
7 Claims. (Cl. 206—58)

7. The combination with a plurality of relatively rigid tube sections of built-up paper construction, detachably secured together, forming a tubular housing for a cylindrical body substantially incompressible along a direction parallel to its axis and of undetermined axial length, of closures for each end of the housing, at least one of said closures including an end member within the housing and an inwardly turned, axially extending flange on the exposed end of one of the tube sections, capable of being formed at any operable position along the axis of the housing to accommodate the axial length of the body to be housed, said rolled article substantially filling the space between said closures within said housing.

2,027,281
METHOD OF PACKAGING ROLLED ARTICLES
Clifford F. Hawker, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Original application March 16, 1933, Serial No. 660,217. Divided and this application July 24, 1934, Serial No. 736,633
10 Claims. (Cl. 93—5)



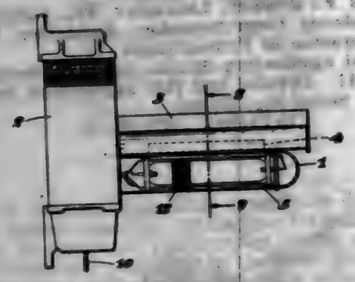
1. In the method of packaging rolled articles which are substantially incompressible along a direction parallel to the axis of rolling and which have an axial length which may vary slightly from a standard axial length, the steps consisting in positioning a rolled article in a relatively rigid tube, positioning end disks within the tube and adjacent the ends of the article, and turning the ends of the tube inwardly into beads until the disks engage the ends of the article, regardless of its axial length.

2,027,282
PORTABLE DRY ICE REFRIGERATION
Clarence L. Jacklin, Salt Lake City, Utah
Application September 25, 1933, Serial No. 690,572
10 Claims. (Cl. 62—91.5)

1. In a refrigerator of the class described, the combination of a large compartment having separate food chambers therein, means to introduce

carbon dioxide liquid into said compartment to form semi-solid carbon dioxide; means to control the flow of liquid therein; and means to provide

separate degrees of temperature in each of the food chambers by making the insulation of the walls of different cold resisting insulation.



2,027,283

ELECTRIC DISCHARGE DEVICE

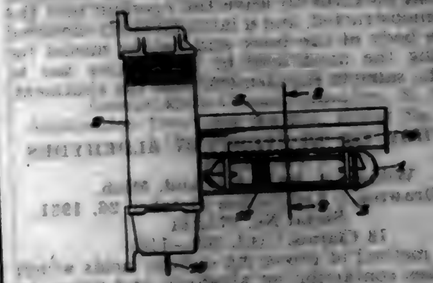
Carl E. Kenty, Chatham, N. J., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a corporation of New Jersey

Application October 3, 1934, Serial No. 746,726

9 Claims. (Cl. 176—122)

1. An electric gaseous discharge device comprising a sealed envelope containing a gaseous atmosphere and having electrodes sealed therein with the path therebetween at an angle to the vertical, in combination with means to produce a magnetic field within said envelope, along substantially the entire path between said electrodes, the gradient in said field being such that the magnetic reaction thereof with the normal arc current is sufficient to maintain the arc stream substantially at the axis of said device while that with the starting current is insufficient to force said arc stream into contact with the lower wall of said device.

2,027,284



APPARATUS FOR CONTROLLED ELECTRIC DISCHARGE DEVICES

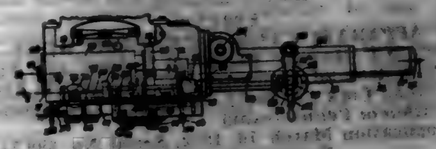
Carl E. Kenty, Chatham, N. J., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a corporation of New Jersey

Application January 15, 1935, Serial No. 1,970

8 Claims. (Cl. 176—124)

2. In combination, an electric gaseous discharge device comprising a sealed envelope containing a gaseous atmosphere and having electrodes sealed therein, and means to produce a magnetic field within said device to control the position of an arc between said electrodes, said means comprising a magnet coil connected in series with said device, a core of magnetizable material extending through said coil and then converging to form an air gap which extends

along said device beyond each of said electrodes parallel to the desired arc path, and a second core which extends about one side of said coil and overlaps the first mentioned core on either side of said coil, said second core being limited to the central portion of said arc path.



2,027,285

HEADSTOCK FOR MACHINE TOOLS

Hans B. Kraut and Keith F. Gallimore, Fond du Lac, Wis., assignors to Gidding & Lewis Machine Tool Co., Fond du Lac, Wis., a corporation of Wisconsin

Application June 26, 1934, Serial No. 732,792

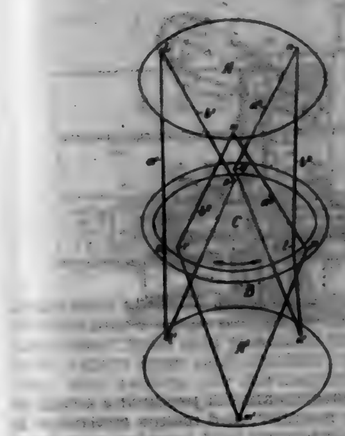
21 Claims. (Cl. 29—36)

1. A headstock comprising, in combination, a hollow casing, an outer horizontal tool spindle slidably and rotatably mounted in said casing and extending therefrom, an inner horizontal tool spindle extending concentrically through said outer spindle for independent axial feeding movement, drive means including speed change gearing mounted in said casing for rotating said spindles at any one of a plurality of speeds, means for independently adjusting either of said spindles axially in either direction regardless of the axial position of the other spindle, and power drive means available at will for actuating said last mentioned means, whereby said outer spindle may be projected horizontally from said casing to provide a rigid extended support for said inner spindle when the latter is projected horizontally a substantial distance from said casing.

2,027,286

SYSTEM FOR MOVING BODIES TOWARDS AND AWAY FROM EACH OTHER

Adolf Krämmer, Berlin, Germany



Application December 1, 1933, Serial No. 699,631

In Germany December 2, 1932

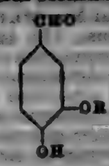
14 Claims. (Cl. 74—89)

1. Means for moving two bodies towards and away from each other, and for supporting them

in any intermediate position, comprising two disc-like bodies disposed in substantially parallel planes, a third body substantially parallel to the said first bodies, a plurality of pairs of links, the links of each pair being angularly disposed with respect to each other and being connected at their apices to one of said disc-like bodies, the other ends of the links of each pair being con-

nected one to each of the other of said disc-like bodies and to said third body, said third body being rotatable with respect to said first bodies, and the rotation thereof causing shifting of the apices of the angles between the links of each pair, and variation in the spacing of the two bodies.

2,027,287



FLAVORING OF FOODSTUFFS

Lucas P. Kyrides, Webster Groves, and Henry H. Retailliau, St. Louis, Mo., assignors, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware

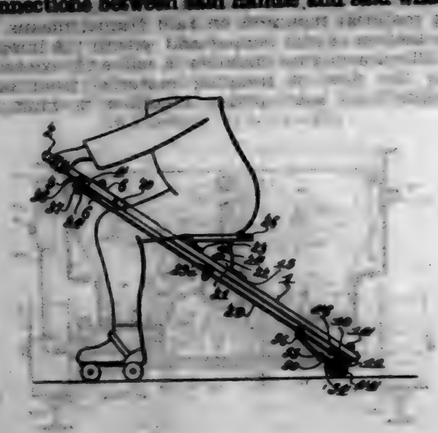
No Drawing. Application May 20, 1932, Serial No. 613,632

5 Claims. (Cl. 99—11)

8. A flavoring for foodstuffs consisting of an alcoholic solution of coumarin and a material having the structural formula:

where R is a propyl, butyl, amyl, hexyl, heptyl or octyl group.

2,027,288



SCOOTER

William R. Larkin, Flushing, N. Y.

Application September 15, 1933, Serial No. 689,113

14 Claims. (Cl. 280—182)

1. In a scooter, the combination of a chassis, a pair of wheels supporting the rear end of the chassis, a handle at the front end of the chassis mounted to be turned to the right and left, and connections between said handle and said wheels

by which the wheels may be turned for the purpose of steering.

2,027,289

PACKING FLUID SEALS

Wilbur Arthur Lazier, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 18, 1931, Serial No. 545,487

10 Claims. (Cl. 91—68)

3. A fluid-sealing material comprising a fibrous base impregnated with a mixture comprising a hydrogenated castor oil, and a solid lubricant, said castor oil having been hydrogenated to such a degree as to produce a waxy material having a melting point of at least 70° C.

2,027,290

OIL- AND WATER-PROOF PRODUCT

Wilbur A. Lazier, Marshallton, and James H. Werntz, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

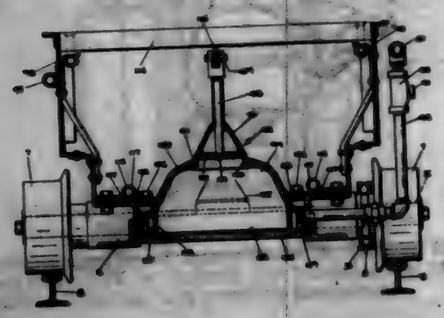
No Drawing. Application June 28, 1932, Serial No. 619,734

6 Claims. (Cl. 91—68)

1. A container for and resistant to lubricating type oils, which comprises fibrous organic sheet material coated with a composition comprising a substantially hydrogen saturated ester of a hydroxyl containing fatty acid, said ester having a melting point of at least 50° C., and being of the class consisting of substantially hydrogen saturated castor oil, substantially hydrogenated blown drying oils, and waxy esters of hydroxy stearic acids with high molecular weight alcohols.

2,027,291

TAMPING APPARATUS



Nils D. Levin and Ernst F. Muller, Columbus, Ohio, assignors to The Jeffrey Manufacturing Company, a corporation of Ohio

Application June 29, 1932, Serial No. 618,606

10 Claims. (Cl. 86—21)

1. Apparatus for tamping drill holes in a mine face comprising the combination with a port-

able supporting frame, of a source of compressed air mounted thereon, a hopper for tamping material mounted on said frame, means at the bottom of said hopper and within the hopper to afford a mixing chamber, a valve for controlling the flow of tamping material from said hopper into said mixing chamber, a multiple

nozzle at the bottom of said hopper and surrounding said valve for aerating the tamping material to facilitate its flow into said mixing chamber, means for controlling such aeration, and means for directing the flow of a mixture of air and tamping material from said mixing chamber into a hole to be tamped.

2,027,292

FACE MASK

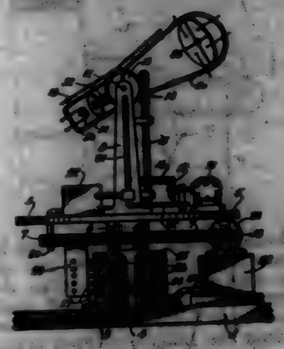
Frank G. Manson, Dayton, Ohio

Application June 2, 1932, Serial No. 614,985

7 Claims. (Cl. 128—141)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a face mask a face portion comprising a plurality of sections cut to snugly conform to and intimately contact the wearer's face when in assembled relation, said face portion including a nose opening shaped to snugly receive the nose and a separate mouth opening the surrounding materials of which intimately contact the lips of the wearer, a nose piece secured at its peripheral edges to said face portion and spaced from and inclosing said openings to form a breathing chamber for the nose separate and apart from the interior of said face portion, means in said nose portion for supplying gases to said breathing chamber, means adjacent said first mentioned means forming a communicating passageway between said mouth opening and the atmosphere to permit exhalation of said gases, and baffle means cooperating with said gas supply means for deflecting the entering gases away from the face and into said breathing chamber.



2,027,293

CATHODE-RAY DEVICE

Harold J. McCreary, Chicago, Ill., assignor of one-fourth to Rodney G. Rietzschel, one-fourth to Henry Hugo Engelhardt, and one-fourth to Forrest B. Brunner, all of Chicago, Ill.

Application January 18, 1935, Serial No. 2,027,293

12 Claims. (Cl. 33—204)

1. In a compass, means for producing a cathode ray, a movable member, and means controlled by the ray for maintaining said member parallel to the lines of force of the earth's field, said last means including mechanism for moving said member to correct for angular displacement in both vertical and horizontal planes.

10. An instrument comprising means for generating a cathode ray, a horizontal member, a member movable about a horizontal axis, means for supporting said axis adjacent said horizontal member with the second member at a variable angle thereto depending on its position on said axis, and means responsive to deflection of said ray by the earth's magnetic field for moving said second member on said axis to indicate the inclination of the earth's field with respect to said horizontal member.

2,027,294

TREATMENT OF HYDROCARBONS

Edward W. Moldenhauer, Philadelphia, Pa., assignor, by mesne assignments, to Gasoline Antioxidant Company, Wilmington, Del., a corporation of Delaware

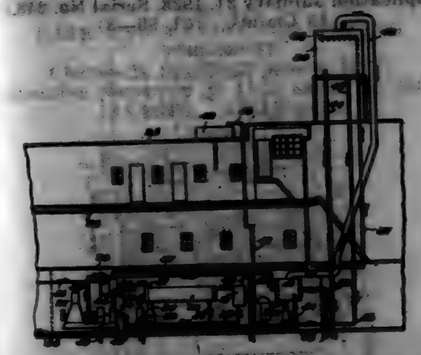
No Drawing. Application December 28, 1933, Serial No. 703,479

5 Claims. (Cl. 44—9)

1. A motor fuel comprising cracked gasoline normally tending to deteriorate upon storage by gum formation, and stabilized against such gum formation by having incorporated therein a small amount of a substance selected from the group consisting of ano benzene, azoxy benzene and hydrazo benzene, said amount being sufficient substantially to retard said gum formation.

2,027,295

WATER RECLAIMER



Vincent P. McVoy, Mobile, Ala.

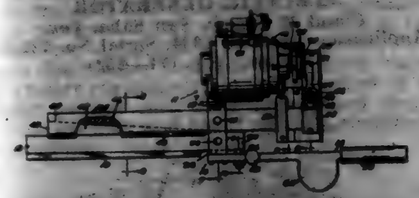
Application November 28, 1934, Serial No. 755,286

2 Claims. (Cl. 202—43)

1. That process of recovering pure water at approximately 200 gallons per hour by use of the heat of waste condenser cooling water under low

absolute pressure, which consists in spraying under pressure a large volume of said waste water at approximately 110° F. over a large area in a vacuum chamber disposed at least the vacuum seal height above the surface water level, maintaining said chamber under about 2 pound per

square inch absolute pressure, continuously force recirculating a large portion of the unvaporized waste water from said chamber, withdrawing the water vapors from said chamber, condensing the same, and wasting the unvaporized waste water in excess of that required to prime the circulation of the waste water.



2,027,296

CARCASS CLEAVING MACHINE

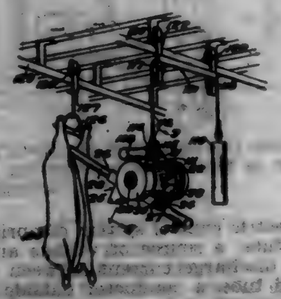
Henry A. Mayer, Cincinnati, Ohio, assignor of one-half to Weil Machine Company, Cincinnati, Ohio, a corporation of Ohio

Application December 22, 1930, Serial No. 504,903

17 Claims. (Cl. 17—33)

3. In a carcass cleaving machine, the combination of a frame, a cleaving blade and a complemental actuator blade pivoted in superposed arrangement on said frame, operating means for said actuator blade, and means normally causing separation between said cleaving blade and said actuator blade, and arranged for permitting approach between said actuator blade and said cleaving blade by pressure of said cleaving blade on the carcass.

11. In a carcass cleaving machine, the combination of a portable frame, a cleaving blade having a cleaving portion, said cleaving portion extending beyond said frame in the direction of length of said cleaving blade, so as to dispose said cleaving portion and said frame in end to end relation, pivot mounting means on said portable frame for said cleaving blade for pivotal swinging movements of said cleaving portion of said cleaving blade in the plane of said blade, an actuating part for said cleaving blade, and operating means for said actuating part for imparting said swinging movements, said pivot mounting means and said operating means being located solely at the frame end of said cleaving blade.



2,027,297

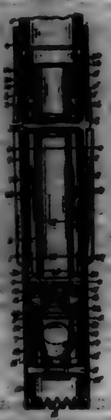
CARCASS CLEAVING MACHINE

Henry A. Mayer, Cincinnati, Ohio, assignor of one-half to The Weil Machine Company, Cincinnati, Ohio, a corporation of Ohio

Application May 21, 1935, Serial No. 22,586

20 Claims. (Cl. 17—35)

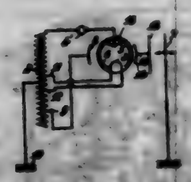
4. In a carcass cleaving machine arranged for descent lengthwise of a suspended carcass during the cleaving operation, the combination of a cleaving blade in the carcass position, means for pivoting said cleaving blade and means for operating said pivoted cleaving blade outside the carcass position, said cleaving blade being the sole part of said carcass cleaving machine located within the carcass during the cleaving operation.



2,027,298

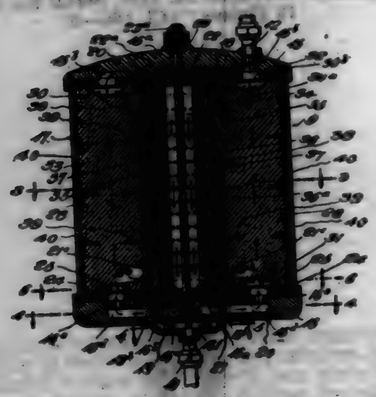
WELL-POINT

Thomas F. Moore, Morris Plains, N. J.



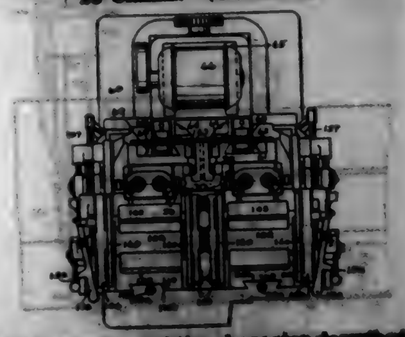
Application November 20, 1933, Serial No. 698,799

19 Claims. (Cl. 166—5)



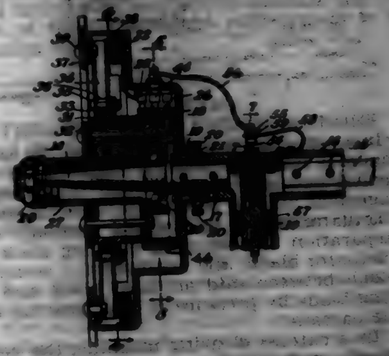
1. A well-point adapted to be sunk into water-containing soil for withdrawing the water therefrom comprising an inner pipe, a tubular screen surrounding the pipe in radially spaced relation thereto, and a cage unit surrounding the screen in radially spaced relation thereto and having its lower end provided with a tubular head extended below the inner pipe in spaced relation thereto to form a port to allow the ground-water to pass therethrough and through the screen into the lower end of the cage unit, and a ring-valve controlling said port.

2,027,390
ELECTRIC CONTROL APPARATUS
Johannes Osterrieder, Moring, and Johann Michel, Augsburg, Germany
Application December 10, 1931, Serial No. 580,346
In Germany January 26, 1931
7 Claims. (Cl. 250—27)



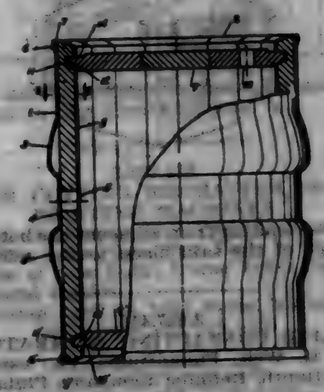
1. An electric control system comprising a gas discharge tube, a source of voltage arranged to produce a discharge current between electrodes within said tube, a conductor outside said tube and forming with at least one internal electrode thereof a loose capacity coupling with a large stray field, a source of voltage arranged to maintain the field of said capacity coupling and by means of said internal electrode controlling the discharge current in the tube, and means for indicating discharge current variations due to disturbance of the field.

2,027,400
OIL FILTER
Robert H. Pennebaker, New Orleans, La.
Application July 14, 1933, Serial No. 680,497
14 Claims. (Cl. 210—135)



1. An oil filter comprising a cylindrical casing, removable heads at opposite ends of said casing, an oil inlet connection extending through one of said heads, an oil discharge connection extending through the other of said heads, a multiplicity of filter screens, an annular shaped cylindrical filter container concentrically insertable in said casing between said heads, said container enclosing a mass of filter clay and having symmetrical perforate end portions, means for passing oil through the screens and thereafter longitudinally through the filter clay in a series path, and baffle means disposed throughout said filter clay for effecting maximum passage of the oil through said filter clay.

2,027,401
BROACHING MACHINE
Julian L. Perkins and Hiram D. Croft, Springfield, Mass., assignors to Perkins Machine & Gear Company, Springfield, Mass., a corporation of Massachusetts
Application January 21, 1932, Serial No. 588,325
25 Claims. (Cl. 90—5)

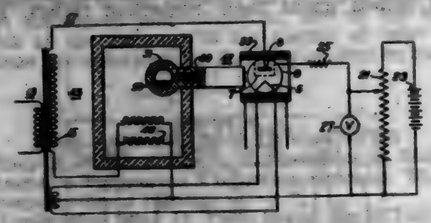


1. In a machine of the character described, the combination of a reciprocating slide carrying pairs of oscillatable broaching tools, means for effecting the oscillating movement of the tools at predetermined positions of the slide, a work-carrying fixture, means for mounting the fixture to present a plurality of pieces of work carried thereby in precision relation to the reciprocating path of said tools, and means connecting said pairs of broaching tools for maintaining said pairs of broaching tools in parallelism during the cutting action thereof upon said plurality of pieces of work carried by the fixture.

2,027,402
ELECTRIC GENERATOR
Claud M. Roach, San Saba, Tex.
Application April 24, 1934, Serial No. 722,160
1 Claim. (Cl. 171—252)

A generator of the kind indicated comprising a step cylindrical housing, means for stationarily mounting the same, a stud shaft fixed with respect to the housing, a rotor in surrounding relation to said shaft and formed with a shell encircling the shaft, anti-friction bearings interposed between the shell and the shaft, a series of bobbins disposed in the housing within the larger step of the latter and angularly spaced therearound with their axes parallel with the axis of said shaft, a series of permanent horse-shoe magnets carried by the rotor with their legs arranged radially thereof, so that they pass the bobbins at the side faces of their legs adjacent the free ends when the rotor rotates, a rectifier carried by the rotor within the smaller step of the housing, and brushes having holders mounted in but insulated from the housing at the smaller step, the brushes bearing radially on the rectifier.

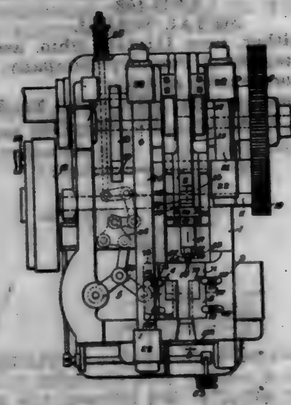
2,027,441
CASK AND METHOD OF MAKING THE SAME
Charles B. Shepherd, Bronx, N. Y.
Application November 20, 1933, Serial No. 698,221
13 Claims. (Cl. 217—72)



1. A cask comprising a metal cylinder, a container enclosed and compressed and maintained under compression by said cylinder, said container being composed of straight wooden staves having their outer surfaces transversely curved at a greater curvature than the curvature of the cylinder so that each stave has limited contact with the cylinder and heads suitably mounted in the container.

2,027,454
BITUMINOUS EMULSION
James B. Small, East Cleveland, Ohio, assignor to The Glidden Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application May 26, 1933, Serial No. 673,112
6 Claims. (Cl. 134—1)

1. A bituminous emulsion, in which the emulsifying agent is a soap of rosin heat-treated at 500–600° F.

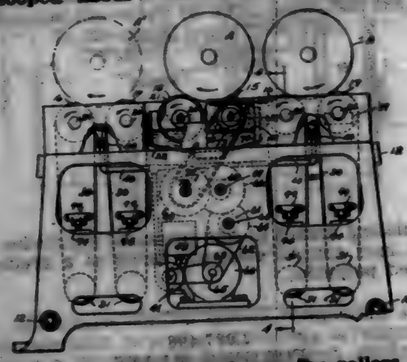


2,027,461
TEMPERATURE CONTROL APPARATUS
Lloyd Smeaton, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 30, 1933, Serial No. 695,626
9 Claims. (Cl. 219—20)

3. Temperature responsive apparatus comprising an evacuated container designed to be located within the influence of the region to be controlled, a plurality of principal electrodes in said container, a control electrode to cooperate with said principal electrodes, a vaporizable substance disposed in said container, a circuit incorporating said principal electrodes, temperature

regulating means in said principal electrodes circuit, said control electrode being at a predetermined potential.

2,027,466
FORGING MEANS
George Spatta, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application February 21, 1930, Serial No. 430,206
Renewed March 1, 1935
6 Claims. (Cl. 78—63)



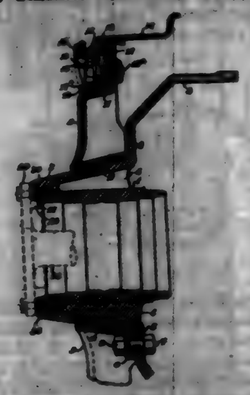
6. In a machine for upsetting flanges at the ends of the tubular arms of axle housings having central transverse openings, a stationary die means, a second die means movable against said first die means to clamp one end of said arms therebetween, a die member having punch means adapted to be moved into register with said die means to form a radial flange at the gripped end of said arm, and means spaced from the die means and engaging the defining wall of said opening to limit the position of said arm within said die means to gauge the distance from the center of the opening at which the radial flange will be formed, whereby each flange will be formed at a predetermined distance from the center of said opening.

2,027,497
APPARATUS FOR CLEANING ROLLS
Guido von Woborn, Dayton, Ohio, assignor to Oxford Varnish Corporation, Detroit, Mich., a corporation of Michigan
Application February 8, 1934, Serial No. 710,518
2 Claims. (Cl. 15—4)

1. A printing roll cleaning mechanism, comprising a frame, a pair of spaced rollers mounted

in said frame and arranged to simultaneously support a roll to be cleaned, each of said rollers being provided with a fabric belt, said belts being looped about their respective rollers, the

portion of the belts looped over the rollers supporting the roll to be cleaned, means to maintain said belts taut, means to rotate said rollers at different peripheral speeds, and means to apply a solvent to one of said belts.



2,027,408

METAL WHEEL

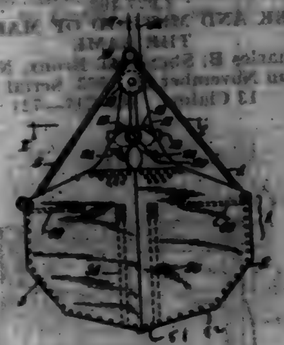
George Walther, near Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a corporation of Ohio

Application April 22, 1931, Serial No. 532,166

8 Claims. (Cl. 301—13)

1. A metal wheel comprising a hub and spokes, axially tapered seat portions on said spokes, said spokes having radially straight ends, an overhanging tire rim having a tapered edge, aiming wedge clamps between the tapered edge of the tire rim and the tapered seats on the spokes to support the rim, and means on said clamps for engagement with the straight sides of the spoke ends to guide the applying movements of the clamps to a true position in the plane of the wheel to support the rim in a plane at right angles to the axis of the wheel.

2,027,409



CLAM SHELL BUCKET

Francis H. Weeks and Richard B. Weeks, New York, N. Y.

Application May 23, 1932, Serial No. 614,164

4 Claims. (Cl. 37—144)

1. A clam shell bucket, comprising two opposed blades, each of said blades including a back portion, sides and a bottom, said sides and bottom terminating in digging edges, adapted to register with the digging edges of the opposed blade, and each of said blades including a diagonal bracing

member extending from adjacent the bottom digging edge of the said blade to the side of said blade.

2,027,410

FLUID CONTACTING APPARATUS

Horace M. Weir, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania

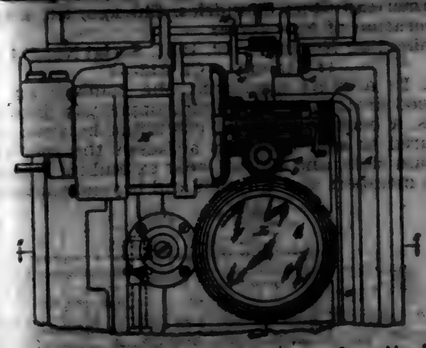
Application May 24, 1933, Serial No. 672,345

3 Claims. (Cl. 210—124)

1. In apparatus for processing a fluid in which contacting of the fluid with a bed of solid particles is effected, means for supporting said bed of solid particles which comprise a layer of steel wool in contact with the lower surface of said bed, and supporting means for the layer aforesaid.

2,027,411

LENS MOUNT



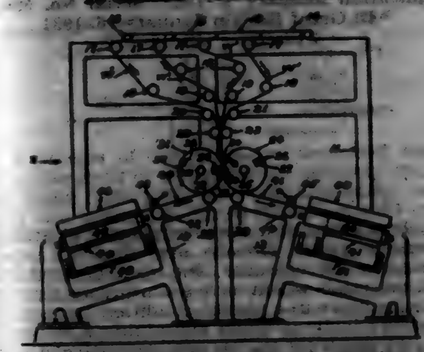
Lloyd E. Whittaker, Los Angeles, Calif., assignor to Technicolor Motion Picture Corporation, Hollywood, Calif., a corporation of Maine

Application July 18, 1934, Serial No. 735,690

14 Claims. (Cl. 88—45)

1. A device of the character described, comprising, an apparatus structure, with a lens

master mount support fixed thereto, a master mount adjustable within said support and substantially coaxial thereto, an optical system fitting said master mount, and means for attaching said system to said master mount.



2,027,412

WEB CUTTING MECHANISM FOR PRINTING MACHINES

Adolph M. Zachermann, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York; Irving Trust Company, permanent trustee

Application April 29, 1933, Serial No. 668,327

16 Claims. (Cl. 270—21)

1. In a mechanism for cutting a running web, means for severing it, in transit, into sheets of unequal lengths and full width of the web engaged by the said severing means, and means for forwarding the cut sheets of each length directly from the severing means to a different destination.

2,027,413

METHOD OF MAKING ELECTRICAL RESISTANCE ELEMENTS

Paul G. Ambrose, Indianapolis, Ind., assignor to P. R. Mallory & Co., Incorporated, Indianapolis, Ind., a corporation of Indiana

Application January 11, 1933, Serial No. 651,425

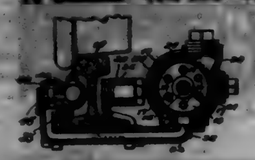
3 Claims. (Cl. 201—76)

1. A method of altering the resistance of an elongated resistance element including a metallic

462 O. G.—20

conductive oxide, which consists of placing adjacent the element a metallic member of high thermal and electrical conductivity shaped to cover a part of the element and to leave another part uncovered and subjecting one of the two parts of the element to the action of heat to reduce the resistance of the part subject to heat.

2,027,414



RAIL AND FLANGE LUBRICATOR

Sidney E. Haines, Chicago, Ill., assignor to Maintenance Equipment Company, Chicago, Ill., a corporation of Illinois

Application May 14, 1926, Serial No. 277,524

Renewed April 27, 1934

16 Claims. (Cl. 184—5)

1. A rail lubricating device comprising a container, means movable longitudinally within said container from opposite ends toward the center for ejecting grease therefrom, means actuated by a car wheel moving along the rail for actuating the last mentioned means, and an orifice in said container intermediate its ends.

2,027,415

UNITARY WIRE CONNECTER

Jasper Blackburn, Webster Groves, Mo.

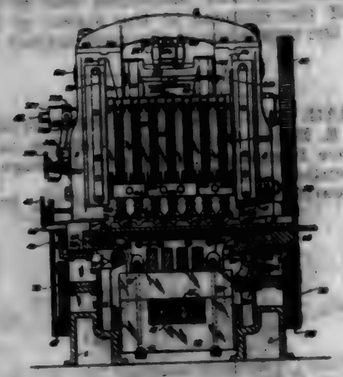
Application May 30, 1925, Serial No. 32,499

7 Claims. (Cl. 173—263)

1. A unitary wire connecter, comprising in combination a bifurcate bolt having a medial wire receiving slot opening out thru one end, a hook within the slot of the bolt at the inner face of the extremity of one of the legs thereof, a nut threadable upon the legs of the bolt over the slot, a bearing lug rotatably anchored within the orifice of the nut and formed to slide within the slot of the bolt as the nut is turned thereon, and a loop on one face of the lug arranged to engage the hook of the bolt as the nut is unturned therefrom, whereby the nut and lug assembly may be withdrawn at the end of the bolt and swung aside for the admission or removal of wires.

2,027,416

ELECTRIC HEATING APPARATUS



John R. Richeson, Willoughby, Ohio, assignor to The Ajax Manufacturing Company, Euclid, Ohio, a corporation of Ohio

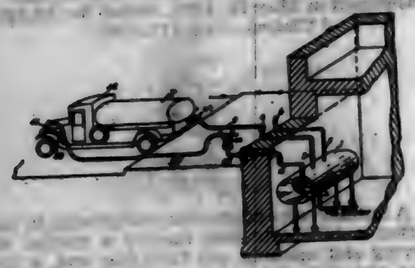
Application May 19, 1932, Serial No. 612,379

12 Claims. (Cl. 219—11)

1. In an apparatus for electrically heating metal blanks, the combination of a plurality of pairs of electrodes, and means for presenting work blanks thereto in predetermined order and for causing the engagement of the electrodes with the work pieces, means for causing the supply of heating current to the electrodes during said

period of engagement, power means for actuating said engaging means and a safety mechanism for rendering the power means inactive com-

sequent upon irregular conditions occurring at the points of engagement between the work blanks and contactors.



2,027,417

METHOD AND MEANS FOR INDICATING THE FLUID CONTENT OF A CONTAINER

Will N. Cherman, Philadelphia, Pa.

Application March 30, 1933, Serial No. 663,534

15 Claims. (Cl. 116—118)

1. Means for indicating to an operator engaged in replenishing the supply of fluid in a reservoir that the fluid in the said reservoir has reached a certain predetermined point which consists of the combination of a tubular element inserted into the said reservoir so that its free end is at the said predetermined point, a substantially air tight indicating chamber having its floor member attached to the other end of the said tubular means and positioned so as to be visible to the said operator, a valve positioned in the roof member of the said chamber, the said valve in its open position permitting communication of the said chamber with the atmosphere and preventing such communication in its closed position, a second valve positioned in the said roof member, tubular means having one of its ends connected to the said second valve and the other of its ends connected to the intake manifold of a gasoline motor, the said second valve being formed for permitting, in one of its positions communication between the said tubular means connecting the said second valve to the said intake manifold and the said indicating chamber, and for preventing such communication in its closed position.

2,027,436

DRAFT GEAR

Alfred E. Cushore, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey

Application November 12, 1931, Serial No. 574,470

11 Claims. (Cl. 213—7)

1. In a draft appliance, the combination of spaced draft members having oppositely disposed slots, a backstop casting extending between and secured to said members adjacent the rear end of said slots, and a draft gear extending between said members and through and beyond said slots

and abutting said backstop casting, said backstop casting and draft gear having cooperating means preventing lateral displacement of said draft gear in said slots.

2,027,419

PRODUCTION OF ARTIFICIAL THREADS, FILAMENTS, RIBBONS, AND THE LIKE

Henry Dreyfus, London, England

Application January 7, 1932, Serial No. 585,379

In Great Britain January 16, 1931

7 Claims. (Cl. 18—54)

1. In a process for the manufacture of artificial filaments, yarns, ribbons and films of organic derivatives of cellulose, the step of stretching such materials which have a continuous structure and which are in a plastic condition by means of a moving body of liquid containing a solvent or swelling agent for the organic derivative of cellulose.

2,027,[illegible]

PROCESS FOR REMOVING WATER FROM VAPOROUS MIXTURES CONTAINING ALIPHATIC ANHYDRIDES

Henry Dreyfus, London, England

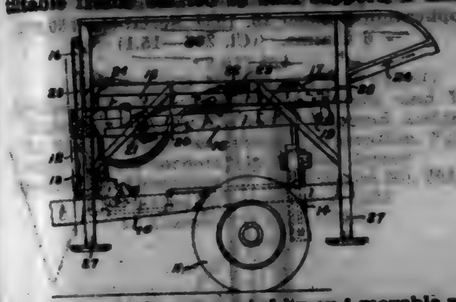
No Drawing. Application July 1, 1932, Serial No. 620,544. In Great Britain July 27, 1931

10 Claims. (Cl. 260—129)

1. Process for removing water from vaporous mixtures containing water and lower aliphatic anhydrides which comprises reacting under the action of heat said water in the vapor phase with a gaseous hydrocarbon.

2,027,421

VEHICLE BODY AND HOIST STRUCTURE



Charles G. Eisenberg, Jr., Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin

Application June 11, 1934, Serial No. 730,624

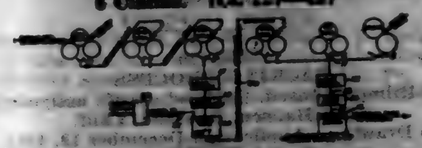
11 Claims. (Cl. 214—65)

1. In combination, a vehicle, a vertically movable support carried by said vehicle, a set of

hoists spaced apart longitudinally of the vehicle for elevating said support, the front hoist of said set being disposed higher than the rear hoist, a tiltable frame carried by said support, a tilting

hoist for said frame carried by and movable with said support, a carrier body detachably mountable upon said frame, and common power means for actuating all of said hoists.

2,027,423



METHOD OF CLARIFYING SUGAR CANE JUICES

Francis Rivers Portier, Jeanerette, La., assignor of one-fifth to Frank G. Campbell, Arlington County, Va.

Application September 7, 1934, Serial No. 743,140

In Cuba September 4, 1934

6 Claims. (Cl. 127—42)

1. A process of the character described comprising the steps of collecting the primary juices from sugar cane mills into one apparatus, collecting the secondary juices from said mill into a secondary apparatus, subjecting said secondary juices to a treatment to effect quick precipitation, which treatment involves heating to a relatively high temperature and without decantation, quickly reducing the temperature of said secondary juices and delivering them with their precipitated and consolidated impurities back by and upon the bagasse mat and collecting said secondary juices for further clarification after they have been strained by passage through said mat, all in a continuous operation.

2,027,424

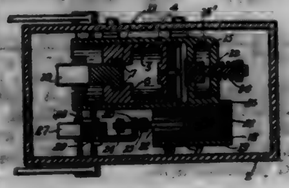
DOORCHECK

George W. Gardiner, Los Angeles, Calif.

Application June 29, 1934, Serial No. 733,916

7 Claims. (Cl. 16—84)

1. A door check including a body having two fluid chambers, a member adapted to be connected with a door to be moved with movement of the door, parts on the member movable in the chambers from initial positions adjacent the ends of the chambers, means for by-passing the fluid in the chambers through the said parts during the initial and intermediate portions of the movement of the member, means for bypassing the fluid past the said parts during the intermediate portion of movement of the member, and means for by-passing fluid from one chamber to the other during the final portion of the movement of the member.



2,027,434

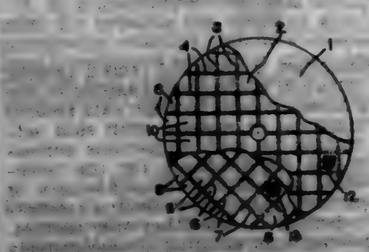
BRAKE RELEASE CONTROL MECHANISM FOR VEHICLES

Lester S. Gunderman, Pittsburgh, Pa., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware

Application April 14, 1931, Serial No. 530,010

8 Claims. (Cl. 192—13)

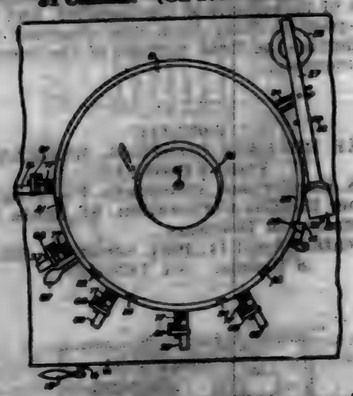
1. In an apparatus of the class described, a cylinder having a piston therein, a fluid containing reservoir in which the cylinder is housed, a check valve which opens into the cylinder by means of which fluid may flow from the reservoir into the cylinder, means operably connecting the piston with the brake mechanism of a vehicle, means operatively connected with the clutch mechanism of a vehicle for controlling the escape of fluid from the cylinder back to the reservoir, said last-named means comprising a sleeve within the reservoir open at each end and having a port intermediate the ends thereof opening into the cylinder, and a reciprocating valve in the sleeve adapted to move back and forth across the port.



2,027,435

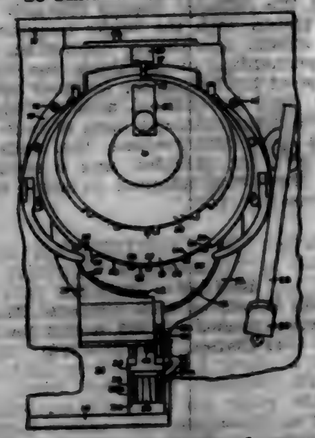
BUFFING WHEEL

Elisha Winthrop Hall, Scituate, Mass.



Application August 9, 1935, Serial No. 35,490

13 Claims. (Cl. 51—193)



1. A buffing wheel comprising a plurality of contacting layers of fibrous buffing material firmly united at predetermined spaced intervals by a tenacious adhesive.

2,027,426
PHONOGRAPH CONTROL BY SOUND RECORD
John Hays Hammond, Jr., and Albert B. Tresser, Gloucester, Mass., assignors, by mesne assignments, to said John Hays Hammond, Jr.
Application June 20, 1933, Serial No. 619,118
21 Claims. (Cl. 179—100.4)

1. In a phonograph or the like, a sound record tablet of substantially circular form provided with notches on the periphery thereof and means cooperating with said notches for setting the controls of said phonograph.

2,027,427
REPEATING PHONOGRAPH
John Hays Hammond, Jr., Gloucester, Mass.
Application August 19, 1933, Serial No. 685,906
16 Claims. (Cl. 274—16)

12. In combination, a stack of record tablets, each having marginal projections adapted to engage a setting means, means to align said records with said projections in register with said setting means, certain of said projections corresponding to setting requirements for the selection on one side of said record and others of said projections corresponding to setting requirements of the selection on the other side thereof, a repeating phonograph adapted to successively play records from said stack, means to adjust the sound reproducing characteristics of said phonograph, and setting means adapted to be actuated by said projections for setting said adjusting means in accordance with the requirements of each record.

2,027,428
STERILIZING TOOTHBRUSH RECEPTACLE
Milton T. Hanke, Chicago, Ill., assignor to Margaret C. Hanke, Chicago, Ill.
Application October 20, 1934, Serial No. 749,473
6 Claims. (Cl. 206—15.1)

1. A sterilizing receptacle for articles to be dried and sterilized comprising a container having porous walls of unglazed ceramic material permitting the passage of moisture therethrough and an antiseptic material in communication with the interior of said container.

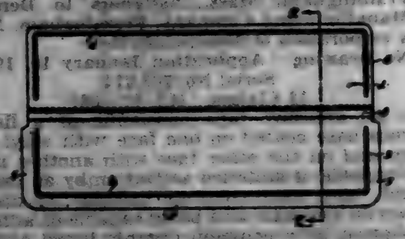
2,027,429
PACKING PROCESS
Carl Hilmer Hansen, Oakland, Calif., assignor to John Hansen, Oakland, Calif.
No Drawing. Application December 19, 1931, Serial No. 583,186
6 Claims. (Cl. 99—8)

8. The method of charging an evacuated container for dry packed commodities with a preserving gas which comprises depositing a predetermined amount of solidified carbon dioxide within the container with the commodity, subjecting the container to rapid evacuation, and immediately sealing the container in its evacuated condition before the solidified carbon dioxide has completely sublimed, the amount of solid carbon dioxide used and the duration of the evacuating operation being so proportioned and timed that sufficient unsublimed carbon dioxide will be left in the container after evacuation and sealing to produce a carbon dioxide gas under a greater than atmospheric pressure within the container.

2,027,430
CONTAINER
Carl Hilmer Hansen, Oakland, Calif.
Application October 17, 1932, Serial No. 638,324
4 Claims. (Cl. 220—66)

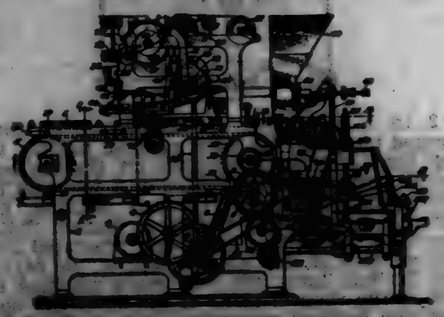
1. A container for foodstuffs packed by a vacuum and pressure process having a combined vacuum and pressure indicating flexible portion formed in a wall thereof, said indicating flexible portion being adapted to move freely into either one of two positions in response to pressure applied to one side thereof and having said inherent characteristics as to cause it to remain in either one of said two positions to which it is last moved until a predominating external pressure is applied to the other side thereof.

2,027,431
HEEL AND HEEL-SEAT FITTING
George Hamilton, Cyril Henry James, and William Isaac Bacon, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 23, 1932, Serial No. 648,730
In Great Britain July 1, 1932
12 Claims. (Cl. 36—34.5)



1. A heel having in its breast a groove which extends transversely of the heel and is positioned adjacent to the forward edge of the attaching face of the heel, said groove tapering in width and being constructed to receive the rear end of a short pole of a shoe to which the heel is to be attached.

2,027,432
VENDING DEVICE
Edwin Parker Hirst, Merchantville, N. J., assignor to Gus Marks and Simon Aron, trading as Novelty Sales Company, Philadelphia, Pa.
Application September 26, 1930, Serial No. 484,574
5 Claims. (Cl. 312—35)



1. As an article of manufacture a dispensing device of the punch board type consisting of a body portion having a plurality of apertures formed therein; two spaced apart dividing strips of frangible material extending through the said body portion and dividing the said body portion into an upper portion having guiding apertures formed therein, a lower portion having guiding apertures formed therein, and a plurality of article receiving walls formed by the walls of the said apertures extending between the said dividing members and the surfaces of the said dividing members; a plurality of slanted channel dividing strips lacing out said portions formed therein bounding and enclosing the free edges of the said body member to form a single unitary structure; a plurality of pin apertures formed in the body member and registering with the cut out portions formed in the said strips; and a plurality of pin members, each of said pin members extending through one of the said cut out portions in the said binding strips and the said pin apertures in the said body member, the said pin members serving to bind the entire structure together.

2,027,433
GLARE SHIELD
Rex C. Jacobs, Detroit, Mich.
Application July 27, 1934, Serial No. 737,174
6 Claims. (Cl. 296—97)

1. A glare shield composed of a single piece of sheet metal folded upon itself, said sheet metal forming a tubular portion at its fold, the interior surface of said portion constituting a bearing surface the edges of one fold being reversely bent upon the edges of the other fold, and a soft material between said folds.

2,027,434
BAG MAKING AND FILLING MACHINE
Emil G. Jurgens and Hasan K. Becker, Chicago, Ill., assignors to Fetzer Machinery Co., Chicago, Ill., a corporation of Illinois
Application March 24, 1933, Serial No. 662,506
5 Claims. (Cl. 93—5)

1. In a machine of the class described, mechanism for twisting the necks of filled paper bags comprising cooating sets of V-shaped laminated jaws interleaved with each other, and means for causing said jaws to embrace the neck of a bag, move toward each other and to rotate.

2,027,435
ART OF STICKING BODIES
Ernest L. Kollender and Gardner R. Alden, Framingham, Mass., assignors to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts
No Drawing. Application November 15, 1932, Serial No. 643,169
12 Claims. (Cl. 91—68)

1. In the art of sticking a body carrying a substantially dry coating comprising polymerized

vinyl ester resin and requiring the use of a moistening liquid to acquire tackiness, the step of controlling the tackiness which consists in applying to the coating a volatile moistening liquid containing a true solvent for the resin and an aliphatic hydrocarbon serving to restrain the true solvent action of said solvent on said resin.

2,027,430

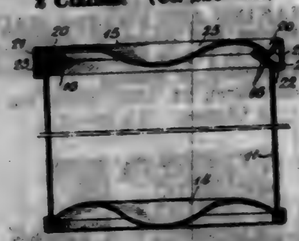
ADHESIVE TAPE

Ernest L. Kallander and Gardner R. Alden, Framingham, Mass., assignors to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts

No Drawing. Application January 10, 1934, Serial No. 706,074

13 Claims. (Cl. 91—68)

1. An adhesive tape consisting of a flexible fibrous base coated on one face with vinyl ester resin and on the other face with another material capable of adhesive activation by an organic liquid, both said coatings existing as distinct layers on said base and being capable of adhesive activation by a common organic liquid and capable of adhering firmly to each other when thus activated but said coatings being substantially without tackiness prior to such activation.



2,027,431

PRESERVING CAN

Heinrich Karl, Jersey City, N. J.

Application July 12, 1933, Serial No. 624,219

2 Claims. (Cl. 220—66)

2. In a preserving can consisting of three formed pieces of the same material namely, the can body, the bottom and the lid, the can body united with the lid by means of a fold and the latter made hermetic through packing and through compression, the lid so shaped that a free space is obtained but locally separated from the contents of the can, one wall of the part of the lid that limits said free space reaching inside of the vertical plane of the outer can body wall and inclined upwardly and inwardly, forming thereby the lower wall of said free space, and said free space being annular and free from obstructing objects and of such depth and position as to permit a cutting tool to penetrate deep enough for severing the lid along said free space and thus preventing the falling of metal particles into the contents of the can or the mixing of the latter with said metal particles at the removal of the lid and a guide channel on top of the can for guiding the cutting tool along said free space.

2,027,432

SANITARY PRESERVING CAN

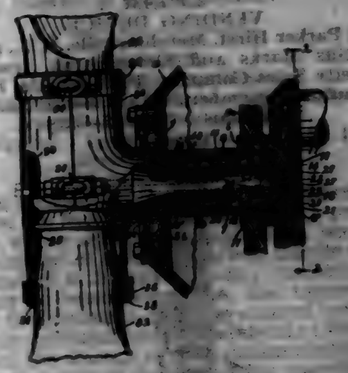
Heinrich Karl, Jersey City, N. J.

Application September 12, 1933, Serial No. 689,423

8 Claims. (Cl. 220—57)

1. In a preserving can, a body having an open end, a closure for said end, and a flexible contractile inner cover for said end having its peripheral portion resting upon the edge of the body surrounding said end and interposed between said edge and said closure, said cover having concentric depressions forming means for gripping

and contracting the same and also constituting recesses for receiving cuttings from said closure when the latter is being cut open along a line whose vertical plane lies inside said open end.



2,027,439

PROPELLER MOUNTING MECHANISM

Frank A. King, Los Angeles, Calif.

Application March 9, 1934, Serial No. 714,816

25 Claims. (Cl. 170—173)

1. In a propeller mounting the combination of: a crank shaft having a splined socket, a blade supporting member provided with a corresponding splined shank engaging said socket, screw means securing said shank in said socket, the screw means being provided with a second socket, and a screw locking means arranged to be actuated through the medium of said second socket.

2,027,440

PROCESS FOR THE MANUFACTURE OF ZINC SULPHIDE

Samuel Kryger, New York, N. Y.

No Drawing. Application May 18, 1931, Serial No. 538,945

10 Claims. (Cl. 23—125)

1. The process for the manufacture of zinc sulphide comprising heating an intimate mixture of a zinc ore, amalgam with sulphur until the reaction is completed, distilling off the mercury, and heating the residue until all the mercury sulphide, if formed, is driven off from the zinc sulphide.

2,027,441

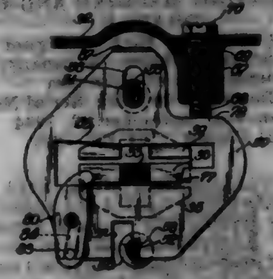
ORNAMENTATION FOR BAGS

Aaron Landis, New York, N. Y.

Application November 22, 1933, Serial No. 699,242

17 Claims. (Cl. 41—24)

1. An ornament and a device for removably securing the ornament to bags made of leather or similar bag material, said device including a plate, means for securing the plate in position on an outer surface of the bag, the plate having an extension turned back over the plate and forming a resilient prong, and said ornament having a portion providing a passage of a width to receive the prong therewithin and the portion then being snugly clamped between the prong and the plate, the prong, plate and portion cooperating to retain the ornament seated upon the bag in a predetermined relation.



2,027,442

TRANSMISSION

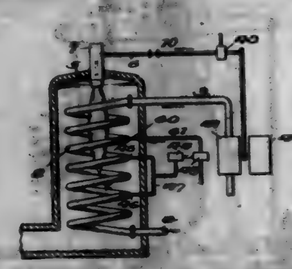
Robert Lapsley, Berrien Springs, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan

Application May 29, 1933, Serial No. 673,377

18 Claims. (Cl. 74—475)

1. In a selective transmission, a shiftable member optionally movable to a plurality of positions normally providing progressively varying driving ratios, means limiting the selection to any one of a group consisting of a limited number of less than all of said positions, and means actuated by the selection of certain of said limited number of positions for shifting said first means to provide for the selection of positions outside said group.

2,027,443



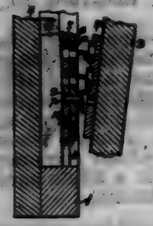
STEAM GENERATOR OF THE WATER TUBE TYPE

Arthur Lieberherr, Winterthur, Switzerland, assignor to Sulzer Freres Societé Anonyme, Winterthur, Switzerland

Original application December 22, 1930, Serial No. 504,281. Divided and this application August 29, 1935, Serial No. 38,456

4 Claims. (Cl. 122—448)

1. A steam generator, comprising at least one tube for the working medium, means for heating said tube, a pump for supplying fuel to said heating means, a pump for supplying working medium to said tube, the two pumps being driven by the same means, and a pump for supplying auxiliary working medium to said tube on occasion, and a single instrumentality for controlling, independently of vaporisation zones, the speed of said auxiliary pump by the temperature, only, at that point in the tube system where under normal conditions the working medium first begins to change from saturated to superheated steam.



2,027,444

SCORING AND PUNCHING DEVICE FOR LOOSE LEAF COVERS

Sidney D. Light, Royal Oak, Mich.

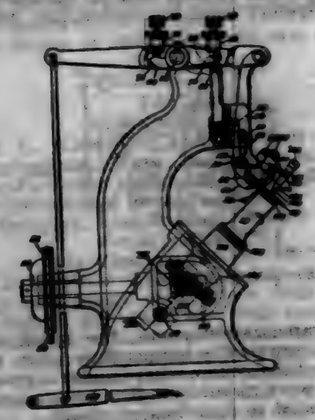
Application May 29, 1934, Serial No. 728,141

5 Claims. (Cl. 164—98)

1. An arrangement of the character described comprising a press having two relatively movable platens, a plate secured upon each platen so that said plates are opposed to one another, the plates having a plurality of parallel and opposed projections and grooves formed upon their coacting faces in registering pairs to form score marks in a cover to act as guides in folding the latter, in combination with means carried by said plates for simultaneously forming through the cover pairs of openings in transverse alignment so that each pair is in registry when the cover is folded along the score marks, said openings being adapted to receive pins by which leaves are retained between portions of the cover when folded along the score marks.

2,027,445

MACHINE FOR OPERATING UPON SHEET MATERIAL



Lester E. Macdonald, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application December 15, 1932, Serial No. 647,423

42 Claims. (Cl. 12—33)

1. That method of assembling the tongue and the vamp of an upper which consists in applying

adhesive to the surfaces to be united, arranging certain points in said surfaces in correct relation to each other and then progressively applying

even, uniform and uninterrupted rolling pressure to the parts to effect a bond therebetween.

2,027,445

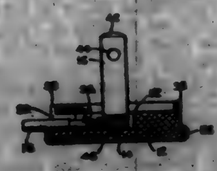
PROCESS FOR PREPARING GONAD STIMULATING HORMONE

Arthur E. Meyer, Rockford, Ill., assignor to Chappel Bros. Inc., Rockford, Ill., a corporation of Delaware

No Drawing. Application January 29, 1934, Serial No. 708,233

9 Claims. (Cl. 167—74)

1. In the process for obtaining the alcohol and acetone insoluble pituitary gonad stimulating hormones from animal tissue containing the same, the step which comprises extracting the said material with a dilute aqueous solution of a lower aliphatic alcohol.



2,027,447

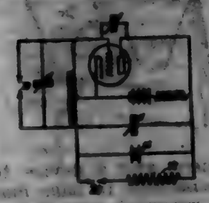
ELECTRIC PLUG

Paul Percy, New Rochelle, N. Y.

Application June 7, 1933, Serial No. 674,662

4 Claims. (Cl. 173—361)

1. A prong for an electrical contact plug, said prong comprising a generally L-shaped strip of metal the long arm of which acts as a contact pin and the short arm of which acts as a base, said prong being provided at the base with a pair of opposed notches for receiving a flexible conductor wrapped thereabout, and a locking finger formed integrally with and bent upwardly from the base of the prong at one side thereof and adapted to be forced downwardly upon said flexible conductor in order to lock the same in the notches.



2,027,448

CRYSTAL CONTROLLED OSCILLATOR

Harold O. Peterson, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

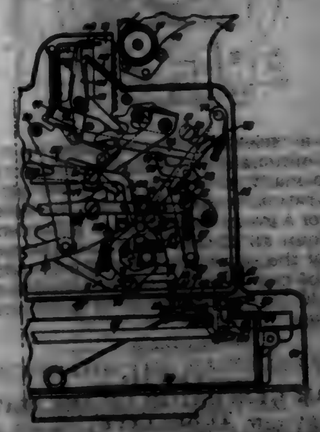
Application March 21, 1927, Serial No. 176,577

9 Claims. (Cl. 250—36)

1. The combination of a vacuum tube oscillation generator having a filament, grid and plate, a first means to augment the inherent capacity between said plate and said grid, auxiliary means to neutralize said augmented capacity, and piezoelectric means connected in parallel with a portion of said last mentioned means.

5. An oscillation generator comprising the combination of an electron discharge device having an anode, a cathode and a grid, high frequency circuits interconnecting said anode, grid and cathode electrodes, a two electrode piezoelectric crystal connected to a pair of said electrodes for frequency stabilizing the frequency of oscillations generated by said device and, a two electrode spark gap connected across said piezoelectric crystal.

2,027,449



CALCULATING MACHINE AND CASH DRAWER

Ernest Race, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a corporation of Michigan

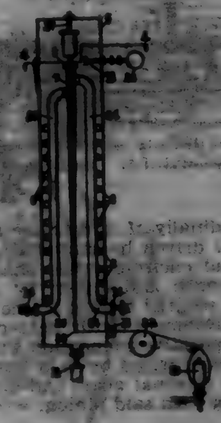
Application December 20, 1930, Serial No. 503,630

Renewed November 23, 1934

21 Claims. (Cl. 235—63)

1. In combination, a calculating machine having a register and means for taking a total therefrom, a cash drawer movably front closed to open position and vice versa, and means acting to automatically open said cash drawer when a total is taken on said machine, said means having provisions for preventing the opening of the cash drawer when a total is taken with the register clear.

2,027,450



PRODUCTION OF ARTIFICIAL SILK AND SIMILAR PRODUCTS

Robert Pierce Roberts and Edgar Davis Johnson, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware

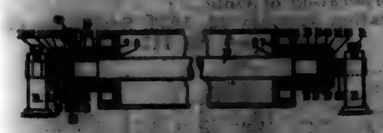
Application March 5, 1932, Serial No. 597,599

In Great Britain April 4, 1932

15 Claims. (Cl. 18—8)

10. Apparatus for the production of artificial filaments, threads and the like by dry spinning processes, comprising a spinning cell or chamber, a jet in said chamber, means for passing through the cell or chamber evaporative medium in countercurrent to the direction of extrusion, and means for producing a convection current of evaporative medium drawn from a source external to the spinning machine and introducing it into the vicinity of the spinning jet.

2,027,451



MEANS FOR CONVEYING MATERIALS IN THE FORM OF LONG WEBS OR SHEETS

James Henry Rooney and Robert John Ward, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware

Application April 6, 1934, Serial No. 719,430

In Great Britain April 26, 1933

6 Claims. (Cl. 308—20)

1. In apparatus for conveying material in the form of long webs or sheets, a freely rotatable roller adapted to forward the material, a rotatable driving member arranged co-axially with said roller, and a plurality of rolling members interposed between said driving member and said roller, and adapted on rotation of said driving member to roll and thereby to provide for the transmission of a non-positive drive to said roller so as to permit the peripheral speed of the roller to adjust itself automatically to the rate at which the material is delivered to the roller.

2,027,452

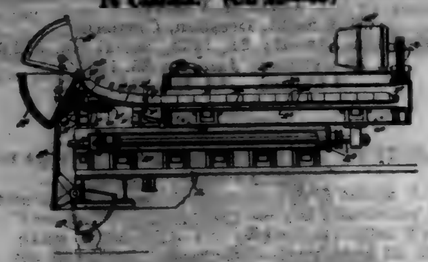
GOLF CLUB

Gunner Rosing, Chicago, Ill.

Application May 16, 1934, Serial No. 726,351

2 Claims. (Cl. 273—79)

1. A golf club having a shaft, a head mounted thereon adjustable relative to said shaft, and means providing said adjustability comprising a pair of spacing rings of wedge shaped formation interposed between said head and the adjacent end of said shaft.



2,027,453

CENTRIFUGAL PIPE CASTING APPARATUS

Norman F. S. Russell and Frederick C. Langenberg, Edgewater Park, N. J., assignors to United States Pipe and Foundry Company, Burlington, N. J., a corporation of New Jersey

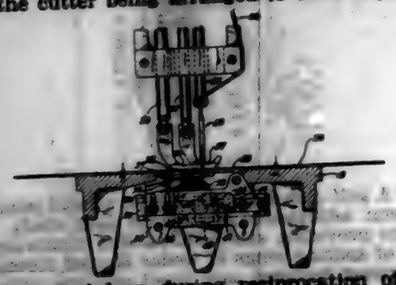
Application November 3, 1934, Serial No. 751,318

16 Claims. (Cl. 22—45)

1. In centrifugal pipe casting apparatus comprising a rotatable mold, a conduit for the delivery of molten metal extending into the mold, a ladle adapted to contain and deliver molten metal located in front of and at a higher level than the mold, the combination therewith of an inclined chute adapted to receive the metal from the ladle and deliver it to the conduit entering the mold, which chute is formed with a bottom contour which, at approximately the point where the metal from the ladle first contacts with the chute, is inclined to the vertical at an angle not exceeding 30° and which is continued as a geometric curve of progressively decreasing curvature having at its upper end a tangent coinciding in angular inclination with the angular inclination of the chute at the point of impact of the metal and having at the lower end of the curve an approximately horizontal tangent.

2,027,454

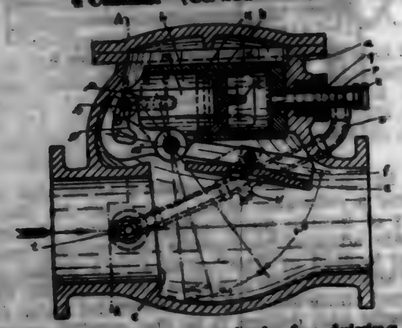
TUFTING ATTACHMENT FOR SEWING MACHINES



William F. Schmidtsdorf, Oshkosh, Wis., assignor to Deltex Rug Company, Oshkosh, Wis., a corporation of Wisconsin

Application May 5, 1934, Serial No. 724,194

9 Claims. (Cl. 112—79)



1. A tufting attachment mechanism for sewing machines having a reciprocating needle for pene-

trating a fabric and carrying a strand which is passed through the fabric by the needle, comprising a transversely reciprocal frame positioned below the fabric and carrying a looper arm and a cutter adjacent an edge portion of the looper arm, the looper arm being arranged to engage the strand to form loops below the fabric, means for reciprocating the needle and the frame member, the cutter being arranged to sever a previ-

ously formed loop during reciprocation of the frame while another loop is being formed and engaged on the looper arm, and rectilinearly reciprocating means independent of the looper for engaging a portion of the yarn of a loop during reciprocations of the frame member and the needle and for releasing it during other reciprocations of the frame member and needle.

2,027,455
CHECK VALVE
Max Seibt, Dresden, Germany
Application January 21, 1933, Serial No. 652,877
In Germany January 25, 1932
4 Claims. (Cl. 251—124)

1. A check valve, particularly for driving centrifugal pumps, comprising a casing having an inlet and an outlet, a cylinder connected with said casing, a movable piston within said cylinder, an oscillatable flap adapted to close said inlet, means operatively connecting said flap with said piston, a pipe having one end connected to said casing adjacent to said inlet and another end leading into the interior of said cylinder, and a mandrel carried by said piston and adapted to close the second-mentioned end of said pipe.

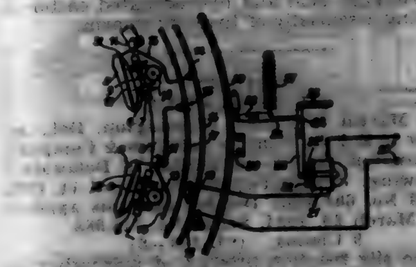
2,027,456
MINING MACHINE
William W. Sleane, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application March 2, 1933, Serial No. 659,532
Renewed April 25, 1925
21 Claims. (Cl. 262—23)

1. In a mining machine, a support, cutting mechanism carried thereby including a motor, a frame member disposed forwardly of said motor, a cutter frame carried by said frame member for rotatable movement with respect thereto about an axis disposed longitudinally of said frame member and having a cutter bar projecting therefrom carrying a cutter chain for movement thereabout, means driven by said motor for driving said cutter chain about said cutter bar comprising a shaft extending longitudinally of said frame member, and means driven by said motor for rotating said cutter frame about an axis dis-

posed longitudinally of said frame member comprising a gear driven by said shaft, a sleeve coaxial with and encircling said shaft for a portion of its length and driven by said gear, an internal gear secured to said frame member and held from movement with respect thereto, a cage having operative connection with said cutter frame, a pinion carried by said cage and meshing with said internal gear, and a gear on said sleeve meshing with said pinion.

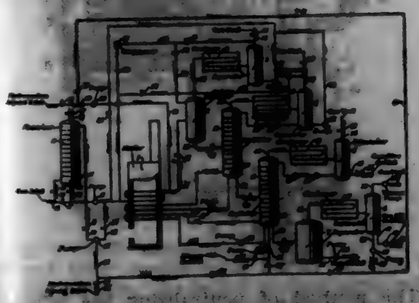
2,027,457
CORN COB PIPE AND METHOD OF MAKING SAME
Reg M. Strutz and Edwin J. Steffenson, Beaverville, Ills.
Application December 2, 1924, Serial No. 753,452
3 Claims. (Cl. 12—59)

3. A pipe comprising a solidified plastic exterior portion, and a cob bowl compressed in said exterior portion.



2,027,458
THERMOSTATIC VALVE
Edmund J. Te Pas, Rocky River, Ohio, assignor to The Patrol Valve Company, Cleveland, Ohio, a corporation of Ohio
Application January 12, 1933, Serial No. 651,907
7 Claims. (Cl. 137—161)

1. A valve device to control the flow of one fluid by temperature conditions of a second fluid,



including a first passageway for conducting said first fluid, two valve elements in said passageway normally open and adapted to close the same, one of said valves when moved to closed position adapted to move the other to open position, means responsive to temperature changes for controlling the closing of one of the valves when the other valve is in open position, and a second passageway for conducting the second fluid adjacent said responsive means.

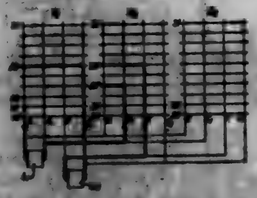
2,027,459
CIRCULAR LOOM
Robert Fenden, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application August 8, 1934, Serial No. 738,892
In Great Britain August 21, 1933
10 Claims. (Cl. 139—13)

1. In a circular loom, latch mechanism adapted on release to stop weaving by bringing to an end relative circular motion between the weft inserting means and the warp threads, an electric circuit, electrical latch releasing means included in and actuated by said circuit, means adapted to detect jamming of the warp threads, and contacts in said circuit adapted to be operated on actuation of said detecting means so as to actuate the latch releasing means through said circuit.

2,027,460
NATURAL GAS CONVERSION PROCESS
Malcolm P. Yonker, Bartlesville, Okla., assignor to Phillips Petroleum Company, Bartlesville, Okla., a corporation of Delaware
Application September 11, 1930, Serial No. 481,318
22 Claims. (Cl. 196—9)

19. A process for the conversion of normally gaseous hydrocarbons to normally liquid hydrocarbons which comprises flowing a stream of said gaseous hydrocarbons through a tube under high pressure, heating said stream during passage through said tube to a temperature in excess of 750° F. whereby some of said gaseous hydrocarbons will be converted to liquid hydrocarbons, and adding hydrocarbon oil to said stream of gaseous hydrocarbons after said stream has been heated and prior to substantial reduction of said pressure under which said stream is held subsequent to said addition of oil.

2,027,461
WIPER FOR ADHESIVE-APPLYING IMPLEMENTS
Donald R. Andersen, Wausau, Wis.
Application March 13, 1934, Serial No. 715,248
1 Claim. (Cl. 91—58)



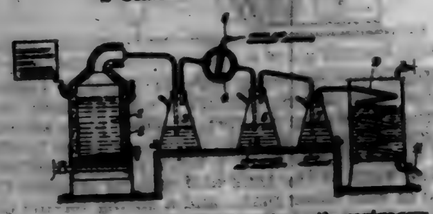
Means for removing surplus adhesive from a coated tape passing through a coating tank, said means comprising an upright wiper plate secured rigidly in the tank, a second wiper plate having one edge rolled to form a bead, a pintle rod held by the walls of the tank and passing through the bead of said wiper plate, and a spring having one end engaged with the wall of the tank and its opposite end bearing upon the last-mentioned wiper plate whereby said plate will be yieldably held toward the stationary wiper plate, the coated tape passing between adjacent opposed edges of the two wiper plates.

2,027,462
STABILIZING GUM FORMING PETROLEUM PRODUCT
Eugene Ayres, Swarthmore, and Mark L. Hill, Yeadon, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a corporation of Texas
No Drawing. Application December 13, 1932, Serial No. 647,979
7 Claims. (Cl. 44—9)

1. A cracked gasoline containing a small proportion of a crude condensation product formed by reaction of di-alpha naphthylamine with cresol.

2,027,463
TELEPHONE SYSTEM
Henry Melvin Bascom, Brooklyn, and Otto Albert Friend, New York, N. Y., assignors to American Telephone and Telegraph Company, a corporation of New York
Application October 7, 1933, Serial No. 692,676
14 Claims. (Cl. 179—22)

1. In a telephone system, a cross-bar switch, lines appearing in groups in separate sections of said switch, links having a calling branch and a called branch appearing in each section of said



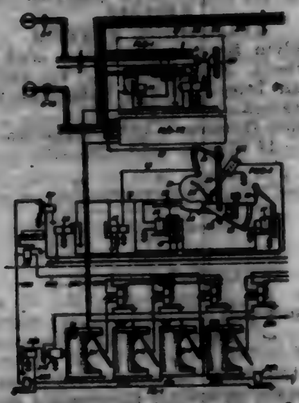
switch, means for connecting a calling line to a called line through an idle link with the calling line connected directly to a calling branch of said link and the called line connected directly to a called branch of said link at two connecting points only of said switch, and means for originating one call through said switch before another is completed, and means for preventing interference in said switch between calls in progress at the same time.

2,027,464

PROCESS OF CRACKING TAR AND BITUMINOUS SCHIST OILS WITH RECOVERY OF BY-PRODUCTS

Louis Boulanger, Brussels, and Ferdinand Rassam, Leuzmel, Belgium

Application January 10, 1934, Serial No. 706,113
In Great Britain August 4, 1932
2 Claims. (Cl. 196—61)



1. In a process of cracking tar oils, primary oils of low temperature distillation of coal, or bituminous schist oils, which consists in oxidizing the oils by diluted ozone, washing said oils in lime-water and treating same in a dehydrator, vaporizing said oils in a retort and superheating the resulting vapors at a temperature above 800° C., condensing the major portion of the phenols from the vapors, mixing the vapors thoroughly with ozone and nitrogen monoxide, leading said vapors into lime-water and magnesia, thence through a solution of potassium hydroxide to retain the remaining phenols, and collecting the benzol by condensation.

2,027,465

TELEPHONE SYSTEM

Roy M. Brasellon, Chicago, Ill., assignor to American Telephone and Telegraph Company, a corporation of New York

Application February 7, 1933, Serial No. 655,670
20 Claims. (Cl. 179—18)

1. In combination, a plurality of automatic switches, a distributer switch comprising a stepping magnet and a plurality of banks of terminals, normally open circuits one for each of the operating magnets of said automatic switches, each of said circuits including a different one of said terminals, and means comprising a relay individual to each of said banks for operatively completing said circuits one at a time.

2,027,466

COMPOSITION CONTAINING CASTOR OIL DERIVATIVE

Merlin Martin Brubaker, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application April 11, 1933, Serial No. 665,695
3 Claims. (Cl. 134—36)

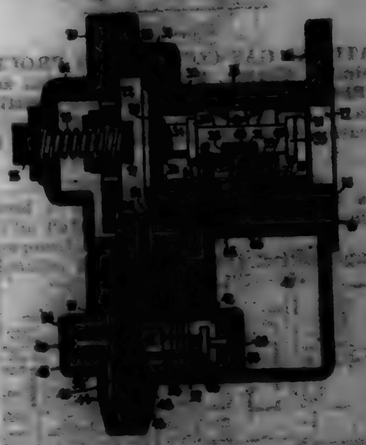
1. A composition of matter comprising a cellulose derivative and the oily reaction product of polycarboxylic acid and hydrogenated castor oil consisting essentially of hydroxy stearin.

2,027,467

OIL DERIVATIVE

Merlin Martin Brubaker, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Original application April 11, 1933, Serial No. 665,695. Divided and this application March 23, 1934, Serial No. 716,942
9 Claims. (Cl. 260—6)



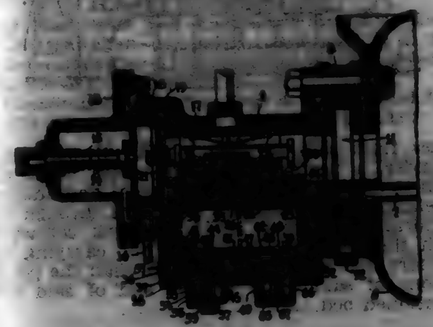
1. The oily reaction product of polycarboxylic acid and hydrogenated castor oil consisting essentially of hydroxy stearin.

2,027,468

AIR BRAKE

Charles A. Campbell, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey

Application June 9, 1933, Serial No. 675,523
31 Claims. (Cl. 303—85)



1. The method of neutralizing the effect of pressure differentials between the charged pressures of the auxiliary reservoirs of automatic air brake units connected in a train by a brake pipe, such differentials being occasioned by leakage under running conditions; which consists in initiating a service application by establishing throughout the brake pipe a substantially uniform lowered pressure and temporarily restricting the flow of auxiliary reservoir air to the brake cylinders to less than the normal service rate for timed periods approximately proportional directly to the differentials between each initial auxiliary reservoir pressure and such lowered pressure.

2,027,469

AIR BRAKE

Charles A. Campbell, Watertown, N. Y., and Parker Dodge, Chevy Chase, Md., assignors to The New York Air Brake Company, a corporation of New Jersey

Application February 27, 1933, Serial No. 658,552
15 Claims. (Cl. 303—36)

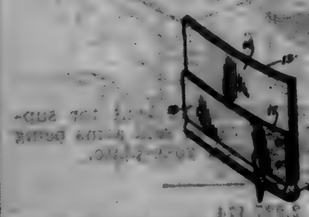
1. The method of controlling the development of pressure in a brake cylinder, which consists in controlling the rate of flow of air to the brake cylinder in response to the rise and subsequent fall of pressure in a chamber which is first gradually charged and then gradually discharged, and controlling the change from such charge to such discharge in response to the development of pressure in the brake cylinder.

2,027,470

DENTIST'S TOOTH EXTRACTING IMPLEMENT

Sanit T. Carnes, Ardmore, Pa.

Application January 4, 1934, Serial No. 705,873
10 Claims. (Cl. 32—61)



1. In a tooth extracting instrument, an instrument body including a barrel portion and a handle portion, the barrel portion terminating in lateral guides, a slide operative in the guides, extracting gripping jaws operatively carried by the slide, means for adjusting the jaws toward and from each other for gripping and releasing a tooth, and means associated with the handle and the barrel and operatively connected to the slide for moving the latter for urging an extracting seated on the jaws, said barrel having a swiveled end section, the terminal of which carries the guides for the slide, the swiveled end section adapted to be adjusted swivelly for positioning the gripping jaws downwardly or upwardly for extracting lower or upper teeth, and means for holding the swivel end section in its adjusted positions.

2,027,471

NONPERVIOUS SWEAT BAND CONSTRUCTION FOR HATS

Arthur C. Cason, Norfolk, Va.

Application April 27, 1934, Serial No. 723,796
4 Claims. (Cl. 2—181)

1. Non-pervious sweat band construction for hats comprising in combination, a molded strip of sweat-proof material having inner and outer flaps lying side by side and an integral bead, solid in cross section, from which said flaps emanate, the inner flap being wider than the outer flap, and a sweat leather cemented to the inner side of said inner flap, the outer flap being securable to a hat.

2,027,472

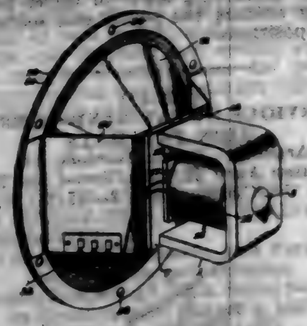
SEWING MACHINE MATERIAL GUIDE

Arthur Colbert, Santa Monica, Calif.

Application November 6, 1933, Serial No. 696,529
3 Claims. (Cl. 112—9)

1. In a device of the class described, a pair of guide members about which material is adapted to be looped, and between which said material is adapted to be stitched, a loop connecting said members on one end of said device, and a pair of inturned normally spaced apart ends on said members at the other end of said device.

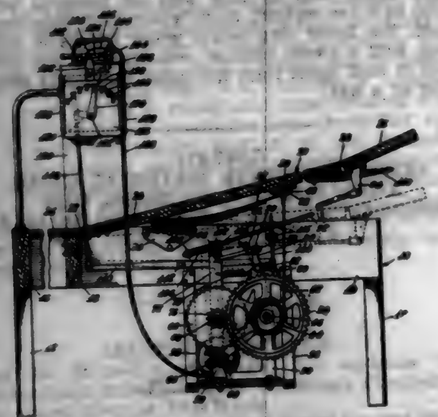
2,027,473



LOUD SPEAKER

Frederick L. Creager, Marshallville, and M. Lee McElhinney, Camden, N. J., assignors to Radio Corporation of America, a corporation of Delaware

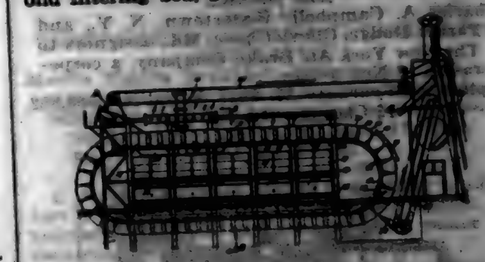
Application January 30, 1932, Serial No. 589,824
4 Claims. (Cl. 179—115.5)



1. In a sound translating device of the dynamic type, a yoke of magnetic material comprising a central pole piece and an outer pole structure on either side of said central pole piece, and a yoke plate comprising a single flat piece of metal having a central opening adapted to

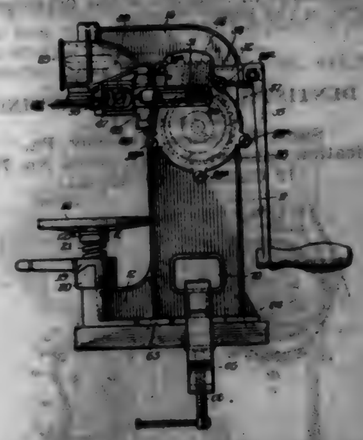
form with said central pole piece an annular air gap, said plate being united with said outer pole structure by fusion of magnetic material and

having integral arms outwardly bent for supporting an acoustic diaphragm, said arms being substantially as wide as said yoke-plate.



2,027,474
DIVING APPARATUS
Elmer C. Dean, Frankfort, Ind.
Application June 26, 1934, Serial No. 732,533
9 Claims. (Cl. 272—56)

1. A diver's apparatus comprising a runway movably connected with a fixed support, spring means yieldingly resisting movement of the runway in one direction, means for moving adn holding the runway in various shifted positions against the tension of said spring means, and a mechanism operatively connected with said means and actuated by the weight of a diver stepping thereon for releasing said means and freeing the runway, to throw the diver.



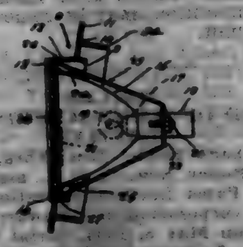
2,027,475
APPARATUS FOR THE PURIFICATION OF WATER
Pierre René Girard, Paris, France, assignor to Société d'Etudes pour l'Epuration des Eaux "Procédés G. et R.", Paris, France, a company of France
Application August 25, 1934, Serial No. 741,500
In France September 2, 1933
4 Claims. (Cl. 210—196)

1. An apparatus for clarifying water which comprises, in combination, at least two filtering beds disposed above one another so that water is caused to flow successively therethrough, means for continuously moving the upper bed with a translatory motion with respect to the second bed, an inclined perforated hollow cylinder adapted to rotate in a continuous manner, means for feeding the matter of the upper filtering bed into said cylinder after its passage over the second filtering bed, a furnace, means for causing

gases from said furnace to flow through said cylinder, a perforated sorting drum connected with the outlet end of said cylinder and adapted to eliminate the matters that pass through the perforations thereof, and a conveyor connected with the outlet of said drum for carrying the matters that have not passed through the perforations of said drum to the end of said first mentioned bed.

2,027,476
CAN SEALING MACHINE
Samuel G. Gamlins, River Forest, Ill., assignor to James P. Dowell, McKinney, Tex.
Application January 7, 1933, Serial No. 650,225
10 Claims. (Cl. 113—23)

1. In a portable can sealing machine the combination of a base, a base plate mounted on said base, a frame member, a removable chuck member mounted above said base plate, said chuck member including a spindle, a pair of spaced bearings to receive said spindle, a gear mounted between said bearings and adapted to rotate said spindle, a sleeve member mounted in one of said bearings and extending into the center of said gear.



4. In a portable can sealing machine the combination of a base, a base plate mounted on said base, a frame extending upwardly from said base, a head member mounted on said frame, a removable chuck plate mounted on said head mem-

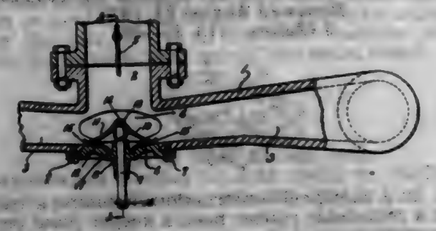
ber above said base plate, arm members pivotally mounted on said frame member and capable of horizontal movement but not vertical movement in relation thereto, seaming rollers mounted on said arm members, means for permitting vertical adjustment of said seaming rollers both upwardly and downwardly to compensate for inaccuracies in the manufacture of said arm members and their associated parts and means for driving said chuck plate and forcing said seaming rollers into engagement with a can flange.

2,027,477
PROCESS FOR THE MANUFACTURE OF ALKALI DICHROMATE
Ernst Hachbefer and Annemarie Berther, Krefeld-Uerdingen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application July 3, 1933, Serial No. 678,952. In Germany September 17, 1932
17 Claims. (Cl. 23—56)

1. Process for the manufacture of alkali dichromate which comprises reacting with carbonic acid under superatmospheric pressure on alkali monochromate solution at a temperature of at least 50° C., cooling down the solution during the reaction and separating the alkali bicarbonate from the alkali dichromate.

2,027,478
HUB LAMP
Beverly Shaw Hamer, Austin, Tex.
Application August 13, 1934, Serial No. 739,654
1 Claim. (Cl. 240—8.12)

A hub lamp comprising a hub cap, including a cover part, a tubular member extending through the cover part and having a portion located in the cap and another portion projecting from the cap, the distance of the outer end of the last mentioned portion from the outer face of the cover portion gradually increasing from the bottom of said last mentioned portion to the top thereof, a transparent member in the outer end of the tubular portion, a reflector and bulb assembly mounted behind the transparent member and supported from the tubular part, and the supporting means including a yoke having hook extremities and the tubular member having holes therein receiving said extremities, and spring members carried by the yoke and engaging the reflector.



2,027,479
ROOT HARVESTING MACHINE
Georg Rendel, Bedeau, Ontario, Canada
Application January 11, 1935, Serial No. 1,291
In Canada January 13, 1934
9 Claims. (Cl. 23—123)

1. A root harvester including main and auxiliary chutes in inclined co-operating relationship, the auxiliary chute having a receiving end operative in working relationship with the ground, an endless conveyor mounted for travel through the main chute, a plurality of root engaging elements at intervals on the conveyor, said conveyor being arranged to bring the root engaging elements into working relationship with the ground and the auxiliary chute, soil working

knives carried by the auxiliary chute and located in advance of the receiving end thereof, means for effecting adjustment of the conveyor and auxiliary chute relative to their working relationship with the ground, and means for driving the conveyor, said means being operative from the traction of the harvester as a source of power.

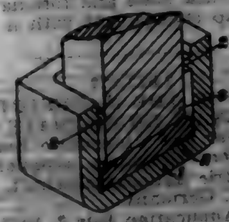
2,027,480
MANIFOLD
Frank B. Higley, Cleveland Heights, Ohio
Application April 12, 1934, Serial No. 720,162
19 Claims. (Cl. 128—141)

1. In a manifold for the purpose described and having a master passage and a plurality of distributing passages leading divergently from a base part thereof, means located at said base part for separating liquid particles from a generally gaseous mixture fed through said master passage, means for collecting some of said particles and rotary means for delivering the accumulated liquid to said distributing passages at the will of the operator.

2,027,481
PERCOLATOR
Samuel W. Ireland, Atlantic City, N. J.
Application April 19, 1935, Serial No. 16,679
1 Claim. (Cl. 53—3)

A percolator of the character described, comprising a lower vessel designed for heat exchange relationship to a source of heat, an upper vessel having a portion arranged to seat in an opening in the lower vessel, a gasket sealing the vessels, the bottom portion of said upper vessel having a centrally disposed aperture therein and

a depending collar surrounding said aperture, spaced bayonet lugs on said collar, a percolator tube having on its upper end portion an integral annular flange and an upstanding circular wall having inwardly extending flanges provided with L-shaped bayonet slots, said lugs being received in said bayonet slot for removably locking the percolator tube to the bottom por-

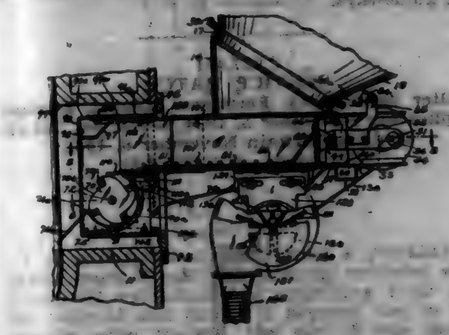


tion of the upper vessel, and the upper portion of said tube and the depending collar forming a chamber, a suction and fluid pressure operated valve in said chamber, normally closing the upper end of the percolator tube and adapted to close the aperture in the bottom of the upper vessel in communication with the percolator tube.

2,027,482
DETACHABLE HEEL
Charles E. Johnson, De Graff, Ohio
Application April 30, 1932, Serial No. 608,534
Renewed August 21, 1935
3 Claims. (Cl. 36—36)

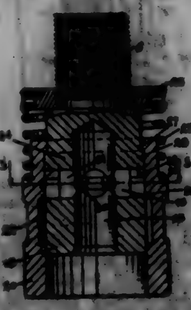
1. In a shoe heel construction including a base and a removable rubber heel, a keeper plate permanently secured to said base and having inturned edges providing a keeper groove, a carrier plate secured to the upper surface of the rubber heel, the rubber heel having a countersunk portion receiving said carrier plate and providing a marginal rim extending above and spaced laterally from the edges of said carrier plate whereby to provide a receiving groove, the edges of said carrier plate being designed to be inserted into the marginal keeper groove of said base-carried keeper plate and the margin of the latter being received in said receiving groove of the rubber heel, said marginal rim of the rubber heel being adapted to abut the surface of said base about said keeper plate whereby to conceal both plates and protect them from the weather, and outwardly struck tongues extending from said carrier plate and embedded in the rubber heel, the ends of said tongues being bent rearwardly toward the rounded portion of the rubber heel and the tongues adjacent the rounded rear end of the heel having their ends bent inwardly toward the carrier plate so as not to present catching edges when the rear end of the rubber heel wears down to expose the same.

2,027,483
METHOD OF MAKING COMPOSITE MOLDED PRODUCTS
Charles L. Keller, Cincinnati, Ohio, assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
Application June 7, 1932, Serial No. 615,730
1 Claim. (Cl. 18—55)



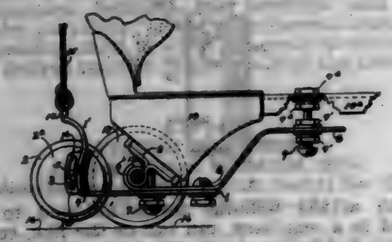
A process of making molded articles, which comprises introducing into a mold a quantity of thermoplastic composition in heat softened condition and molding said composition therein under pressure by a long draw molding operation so as to cause said composition to flow and fill the interstices of said mold and form an article of container shape, hardening said composition and introducing into the container formed thereof a second quantity of composition of thermoplastic character in heat softened condition, and of a type of bond with said first composition under conditions of heat and pressure, molding said second composition within said container as a matrix so as to form an integral article which, after hardening of said second composition, may be removed from said mold as a unit.

2,027,484
METHOD OF MANUFACTURING PAPER BOTTLES
Lydia Barbara Koch, New York, N. Y., and Andrew Reder, Newark, N. J., assignors to Reinforced Paper Bottle Corporation, New York, N. Y., a corporation of Delaware
Application May 5, 1934, Serial No. 724,033
7 Claims. (Cl. 93—39)



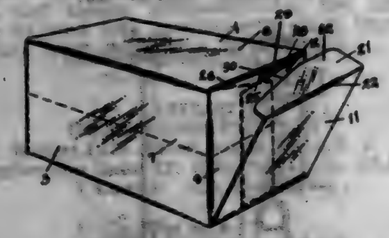
1. The method of producing a paper bottle consisting in first winding the bottle into body form, inturning the upper edge of the upper portion into a semi circularly thus inturning further to form a rim oval in cross section, then swedging further to complete the neat and simultaneously impress into the top of the body opposite the oval form an exterior circumferential reinforcement with longitudinal strengthening grooves and ribs extending up into the same.

2,027,485
METHOD OF STOKING FURNACES
Herman L. Kraeft, Cleveland, Ohio, assignor to Murray-Ohio Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application June 15, 1933, Serial No. 675,977
6 Claims. (Cl. 110—115)



2. The method of feeding fuel to a fire bed comprising intermittently revolving a mass of fuel about an axis while permitting part of the mass of fuel to gradually escape at the bottom of the mass, intermittently shifting that part of the fuel which has escaped from the revolving mass in a substantially horizontal direction toward the fire bed while the revolving mass is stationary, and finally imparting to the fuel particles a flipped movement to cause the fuel particles to be spread over the fire bed.

2,027,486
CLUTCH
Francis J. Lapointe, Ann Arbor, Mich.
Original application February 11, 1931, Serial No. 517,386, now Patent No. 1,957,121, dated November 28, 1933. Divided and this application November 25, 1933, Serial No. 699,737
1 Claim. (Cl. 279—74)



In a clutch for a tool having a neck, a shank and a head, the head having oppositely disposed angular beveled surfaces, a cylindrical clutch block having a socket for receiving the head of a tool, the head having beveled surfaces, a cylindrical clutch block having a socket for receiving the head and a part of the shank of the tool, the clutch block having openings radially slidable dogs located in the openings, a shell adapted for telescopic movements relative to the clutch block and having two cylindrical guiding surfaces at its ends fitting the exterior cylindrical surfaces of the clutch block and an inwardly extending flange, the edge of the flange fitting the cylindrical surface of the clutch block and forming an auxiliary guiding surface, the clutch block having a circular shoulder at its upper end and engaged by the said flange and fitting the interior surface of the shell, the lower end of the shell extending below the clutch block, the clutch block having a circular protruding part and the shell having a protruding shoulder, a helical spring located between the said part and the said protruding shoulder for yieldingly resisting movement of the shell relative to the clutch block, the shell having a circular recess for receiving the outer ends of the dogs to release the tool when the shell is moved counter the pressure of the spring.

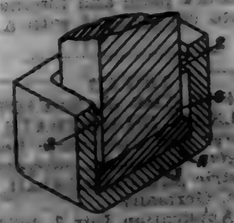
2,027,487
BRAKE
Walter H. Means, Atlanta, Ga.
Application November 23, 1933, Serial No. 699,419
11 Claims. (Cl. 280—173)

1. In a brake mechanism for roller skates, a yieldable longitudinally extensible brake support having a brake member carried by the rear portion of the support, means for rigidly securing the forward portion of the brake support to a skate frame, means for flexing the rear portion of the brake support to apply said brake member to a wheel, and means for angularly adjusting the rear portion of the brake member relative to the rotational axis of the skate wheel.

2,027,488
CARTON
Edward F. Ness, Toledo, Ohio
Application October 15, 1934, Serial No. 748,395
4 Claims. (Cl. 229—38)

1. A carton having a plurality of walls adjoining each other at their side edges, flaps extending from adjacent ends of certain of the adjoining side walls, one of said flaps having a side edge extending parallel to an end edge of a side wall adjoining the side wall from which said flap extends and along said end edge from one side edge of said adjoining side wall to a point on said end edge intermediate the side edges of said adjoining side wall, the last named flap having an end edge and an edge extending angularly to said end edge, another of said flaps

a depending collar surrounding said aperture, spaced bayonet lugs on said collar, a percolator tube having on its upper end portion an integral annular flange and an upstanding circular wall having inwardly extending flanges provided with L-shaped bayonet slots, said lugs being received in said bayonet slot for removably locking the percolator tube to the bottom por-

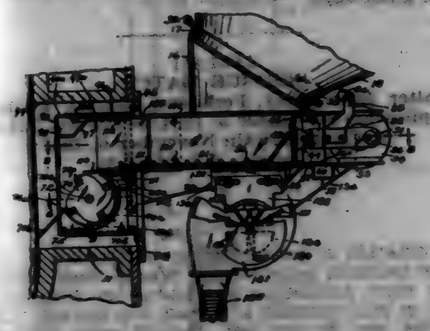


tion of the upper vessel, and the upper portion of said tube and the depending collar forming a chamber, a suction and fluid pressure operated valve in said chamber, normally closing the upper end of the percolator tube and adapted to close the aperture in the bottom of the upper vessel in communication with the percolator tube.

2,027,482
DETACHABLE HEEL
Charles E. Johnson, De Graff, Ohio
Application April 26, 1932, Serial No. 608,524
Renewed August 21, 1935
2 Claims. (Cl. 36—36)

1. In a shoe heel construction including a base and a removable rubber heel, a keeper plate permanently secured to said base and having inturned edges providing a keeper groove, a carrier plate secured to the upper surface of the rubber heel, the rubber heel having a countersunk portion receiving said carrier plate and providing a marginal rim extending above and spaced laterally from the edges of said carrier plate whereby to provide a receiving groove, the edges of said carrier plate being designed to be inserted into the marginal keeper groove of said base-carried keeper plate and the margin of the latter being received in said receiving groove of the rubber heel, said marginal rim of the rubber heel being adapted to abut the surface of said base about said keeper plate whereby to conceal both plates and protect them from the weather, and outwardly struck tongues extending from said carrier plate and embedded in the rubber heel, the ends of said tongues being bent rearwardly toward the rounded portion of the rubber heel and the tongues adjacent the rounded rear end of the heel having their ends bent inwardly toward the carrier plate so as not to present catching edges when the rear end of the rubber heel wears down to expose the same.

2,027,483
METHOD OF MAKING COMPOUNDED MOLDED PRODUCTS
Charles L. Keller, Cincinnati, Ohio, assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
Application June 7, 1926, Serial No. 203,720
1 Claim. (Cl. 18—59)

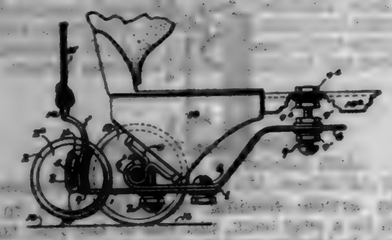


A process of making molded articles, which comprises introducing into a mold a quantity of thermoplastic composition in heat softened condition and molding said composition therein under pressure by a long draw molding operation so as to cause said composition to flow and fill the interstices of said mold and form an article of container shape, hardening said composition and introducing into the container formed thereof a second quantity of composition of thermoplastic character in heat softened condition, and of a type of bond with said first composition under conditions of heat and pressure, molding said second composition within said container as a matrix so as to form an integral article which, after hardening of said second composition, may be removed from said mold as a unit.

2,027,484
METHOD OF MANUFACTURING PAPER BOTTLES
Lydia Barbara Koch, New York, N. Y., and Andrew Bodor, Newark, N. J., assignors to Reinforced Paper Bottle Corporation, New York, N. Y., a corporation of Delaware
Application May 5, 1934, Serial No. 724,032
7 Claims. (Cl. 93—39)

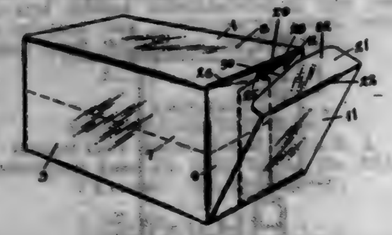
1. The method of producing a paper bottle consisting in first winding the bottle into body form, inturning the upper edge of the upper portion into a curl circularly thereabout, inturning further to form a rim curl in cross section, then swedging further to complete the curl and simultaneously bowing into the top of the body opposite the oval form an exterior circumferential reinforcement with longitudinal strengthening grooves and ribs extending up into the same.

2,027,485
METHOD OF STOKING FURNACES
Herman L. Kraft, Cleveland, Ohio, assignor to Murray-Ohio Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application June 13, 1933, Serial No. 675,977
6 Claims. (Cl. 110—115)



2. The method of feeding fuel to a fire bed comprising intermittently revolving a mass of fuel about an axis while permitting part of the mass of fuel to gradually escape at the bottom of the mass, intermittently shifting that part of the fuel which has escaped from the revolving mass in a substantially horizontal direction toward the fire bed while the revolving mass is stationary, and finally imparting to the fuel particles a flipped movement to cause the fuel particles to be spread over the fire bed.

2,027,486
CLUTCH
Francis J. Lapointe, Ann Arbor, Mich.
Original application February 21, 1931, Serial No. 517,286, now Patent No. 1,987,121, dated November 22, 1933. Divided and this application November 25, 1933, Serial No. 699,737
1 Claim. (Cl. 279—74)



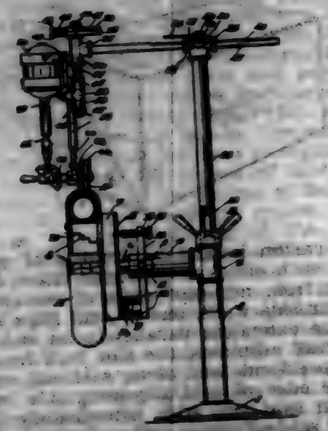
In a clutch for a tool having a neck, a shank and a head, the head having oppositely disposed angular beveled surfaces, a cylindrical clutch block having a socket for receiving the head of a tool, the head having beveled surfaces, a cylindrical clutch block having a socket for receiving the head and a part of the shank of the tool, the clutch block having openings, radially slidable dogs located in the openings, a shell adapted for telescopic movements relative to the clutch block and having two cylindrical guiding surfaces at its ends fitting the exterior cylindrical surfaces of the clutch block and an inwardly extending flange, the edge of the flange fitting the cylindrical surface of the clutch block and forming an auxiliary guiding surface, the clutch block having a circular shoulder at its upper end and engaged by the said flange and fitting the interior surface of the shell, the lower end of the shell extending below the clutch block, the clutch block having a circular protruding part and the shell having a protruding shoulder, a helical spring located between the said part and the said protruding shoulder for yieldingly resisting movement of the shell relative to the clutch block, the shell having a circular recess for receiving the outer ends of the dogs to release the tool when the shell is moved counter the pressure of the spring.

2,027,487
BRAKE
Walter H. Means, Atlanta, Ga.
Application November 22, 1933, Serial No. 699,419
11 Claims. (Cl. 280—173)

1. In a brake mechanism for roller skates, a yieldable longitudinally extensible brake support having a brake member carried by the rear portion of the support, means for rigidly securing the forward portion of the brake support to a skate frame, means for flexing the rear portion of the brake support to apply said brake member to a wheel, and means for angularly adjusting the rear portion of the brake member relative to the rotational axis of the skate wheel.

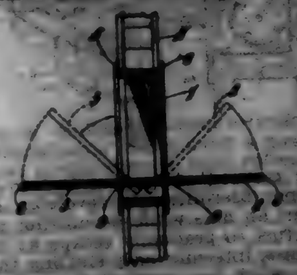
2,027,488
CARTON
Edward F. Nees, Toledo, Ohio
Application October 15, 1934, Serial No. 748,295
4 Claims. (Cl. 229—38)

1. A carton having a plurality of walls adjoining each other at their side edges, flaps extending from adjacent ends of certain of the adjoining side walls, one of said flaps having a side edge extending parallel to an end edge of a side wall adjoining the side wall from which said flap extends and along said end edge from one side edge of said adjoining side wall to a point on said end edge intermediate the side edges of said adjoining side wall, the last named flap having an end edge and an edge extending angularly to said end edge, another of said flaps



having a lip portion, the lip portion having a tip, one edge of the tip extending along a line convergent toward the base of the lip portion whereby when the tip is moved toward the body of the carton the said tip edge slidably engages the said angularly extending edge of the described one flap to progressively guide the lip portion to a position intermediate the said side edge of the described one flap and the said adjoining side wall whose end edge is proximate thereto.

2,027,423
HAT PEG OR THE LIKE
Arnold Noble, Halifax, and Thomas Phenix Walkland, Morecambe, England
Application March 29, 1935, Serial No. 13,746
In Great Britain April 3, 1934
3 Claims. (Cl. 211—23)



1. An article holding device adapted to be secured to a seat back, pin rail or the like, comprising a holder provided with an open back and a slotted aperture in its top, and a peg normally housed within said holder, provided with a spheroidal enlargement at its lower end, said peg being adapted when in active use to slide within said slot whereby the peg is capable of both a vertical and a lateral arcuate movement and when relieved of its load to automatically return to the holder.

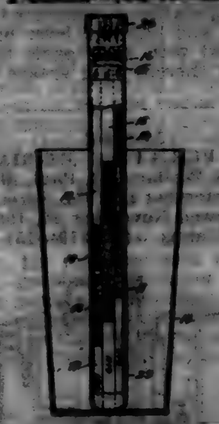
2,027,430
TIRE GROOVING MACHINE
Ralph N. Pendleton and Roland H. Hodge, Worcester, Mass., assignors, by mesne assignments, to Victor M. Cutek, New York, N. Y.
Application April 6, 1933, Serial No. 665,430
10 Claims. (Cl. 90—16)

1. In a device of the character described, a base, an index chuck on said base for supporting a tire, horizontal guideways, means for supporting said guideways on said base and providing for vertical and horizontal adjustment of said guideways relative to the chuck, a carriage movable on said guideways, a cutter, and means for supporting said cutter on said carriage for movement therewith as the latter is moved on the guideways.

2,027,431
SERVICE HATCH
Walter John Percy, Puradown, Dorset, England
Application November 5, 1934, Serial No. 751,645
In Great Britain November 6, 1933
1 Claim. (Cl. 20—5.5)

1. A service hatch having doors closing substantially flush with the wall surface pivoted on horizontal axes and adapted to be supported horizontally when open on the cantilever principle.

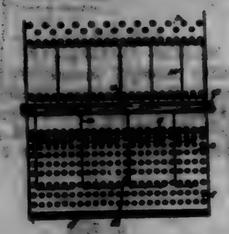
2,027,432
GAS MIXER
Harrison V. Snedegrar, Los Angeles, Calif.
Application August 21, 1933, Serial No. 686,049
1 Claim. (Cl. 48—190)



A gas mixer including a base having a fuel chamber therein and also having an annular flat top surface with an annular channel therein, an oil vapor nozzle integral with said base that is extended upward centrally above said annular surface with air inlets through said base adjacent the bottom of said nozzle, a valve housing detachably and adjustably secured to said base so its flat bottom end rests on the flat surface of said base and forms a cover for said channel to thereby convert it into an annular passage that is connected by another passage to the chamber in said base, said housing having a main passage arranged centrally over said nozzle and an offset by-pass that has its intake end opening into said annular fuel passage and its discharge end opening into said main passage, a throttle valve in said air passage that is interposed between said nozzle and discharge end of said by-pass, a shutter adjustably mounted on said base and arranged around said nozzle for regulating the flow of air into said main passage, and means for supplying oil vapor and regulating the flow to the chamber in said base.

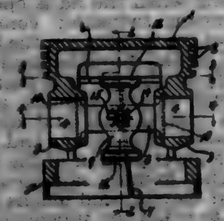
2,027,436
WALL STRUCTURE
William Joseph Thillerver, New Orleans, La.
Application July 5, 1935, Serial No. 30,377
1 Claim. (Cl. 256—19)

1. A wall structure comprising a plurality of pickets, each of said pickets being provided with a laterally extending pin projecting from one edge thereof and having a bayonet slot in the opposite edge thereof, the pin of one picket being adapted to engage into the bayonet slot of an adjacent picket so as to interlock said pickets together.



2,027,494
MIXING GAUGE
Frank W. Trabold, Detroit, Mich.
Application December 13, 1933, Serial No. 702,964
1 Claim. (Cl. 73—149)

In a device of the character described, a series of strips, each having indicia indicating the quantities of each of the several ingredients to be incorporated in a desired mixture, and an elongated transparent enclosure adapted to be inserted in a mixing receptacle, said enclosure having its lower end closed and its upper end open for permitting the insertion and removal of said strips whereby a selected strip may be placed at the end of the series to have its indicia visible through said transparent enclosure.

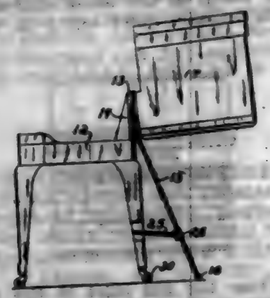


2,027,495
BOILER TUBE CLEANING CONSTRUCTION
Charles S. Turner, Detroit, Mich., assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich., a corporation of Michigan
Application April 8, 1935, Serial No. 15,275
7 Claims. (Cl. 122—390)

1. In combination, a boiler having a plurality of boiler tubes, a plurality of blower elements extending in rows across the width of the boiler, there being a plurality of said rows of blower elements between the gas inlet and the gas outlet of the boiler and each row being divided into sections with each section occupying a portion only of the width of the boiler and corresponding sections in said rows being in substantial

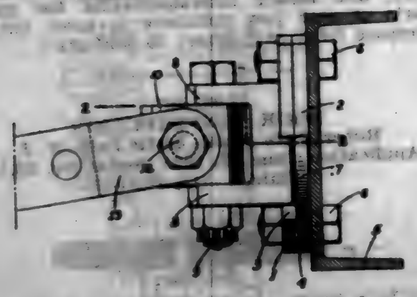
alignment from the gas inlet to the gas outlet of the boiler, a header, and means including connections between said sections and said header providing for the simultaneous supplying of cleaning fluid to all of the sections occupying any desired position of the width of the boiler.

2,027,496
PISTON EXPANDER
Leon A. Witter, Cleveland, Ohio
Application September 3, 1932, Serial No. 631,636
12 Claims. (Cl. 309—13)



1. Means for expanding a piston having a pair of wrist pin bosses and a split skirt, said means comprising a pair of bow members one seating at its ends upon the wrist pin bosses of the piston and extending laterally therefrom toward the split side of the piston, the other extending within said piston longitudinally thereof with its ends bridging the split of the piston skirt, and means interassociating the medial parts of said bow members to exert outward pressure from said bosses to said skirt.

2,027,497
BOOK CONSTRUCTION
Robert Earle Smith, Little Falls, N. J.
Application June 12, 1935, Serial No. 26,168
7 Claims. (Cl. 281—15)

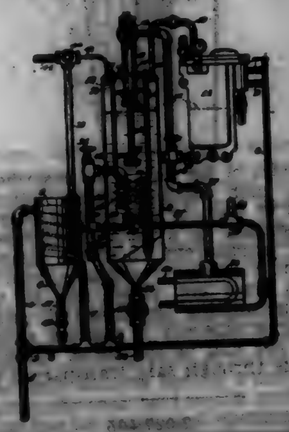


1. In a book: a packet comprising a binding strip, a backing leaf, and a bundle of leaves positioned between the binding strip and the backing leaf, the packet having an edge adjacent to which the binding strip, leaves and backing strip are bound together; and a cover of sheet material secured to said backing leaf, the cover extending around the bound edge of the packet and having an edge portion positioned beneath said binding strip.

2,027,436
CABINET
Herman A. Sperlich, Detroit, Mich.
Application January 30, 1935, Serial No. 4,963
5 Claims. (Cl. 62—9)

1. In combination with a container having an upstanding wall, hinging means supported by and spaced above the bottom of said wall, a lid carried by the hinging means, said lid having a hinged wall forming when the lid is closed a substantial continuation of said upstanding wall and being folded to a position beside said upstanding wall when the lid is open, at which time the lid as a whole projects laterally from the container, the lid also having a top wall at an angle to the hinged wall and spaced from the hinging means, means for bracing the container against tipping when the lid is open, comprising a bracing means swingably connected to the hinged wall of the lid between the hinging means and top wall lid and movable downward by opening movement of the lid to a position in which the upper end of said bracing means extends between the hinged wall and upstanding wall and lies against the latter, and check means articulating a lower portion of the bracing means to the container to move said means outward at the lower end thereof, said means being of sufficient length to reach the supporting surface and directly brace the container against tipping.

2,027,439
FLEXIBLE COUPLING
John S. Tully, Modesto, Calif.
Application October 15, 1934, Serial No. 748,332
1 Claim. (Cl. 286—32.44)



A flexible coupling for a motor vehicle having a frame and a trailer having a tongue and clevice comprising a disc adapted to rotatably engage with its forward face against a flat vertical portion of the vehicle frame, spaced ears formed integral with and projecting rearwardly from the other face of the disc, a block turnably mounted between the ears for rotation about an axis at right angles to the rotational axis of the disc, a bolt through the block rearwardly of the pivotal mounting thereof and at right angles thereto for turnable engagement with the trailer clevis and a mounting plate unit for the disc, said unit comprising a plate of slightly greater thickness than the disc and having a circular bore forming a bearing for the plate, a flange projecting from the plate over the outer edge of the rear face of the disc and means securing said mounting plate unit to the said vehicle frame.

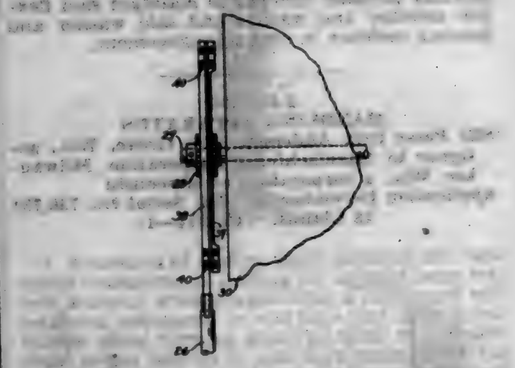
2,027,528
GREASE GUN
Louis C. Vanderlip, Elkhart, Ind.
Application February 28, 1935, Serial No. 8,623
7 Claims. (Cl. 221—47.3)

1. In a grease gun provided with a grease container, a discharge nozzle, and a reciprocable grease ejector for forcing grease from said nozzle, the combination of a toggle operatively carried by the grease gun, said toggle including a pair of pivotally connected links, one of said links being operatively connected with said grease ejector, and link and lever means operatively connected with said toggle for actuating the latter and thereby said grease ejector.

2,027,561
WATER PURIFYING MECHANISM
John S. Wallace, St. Paul, Minn.
Application September 22, 1931, Serial No. 564,519
Renewed November 26, 1934
4 Claims. (Cl. 210—15)

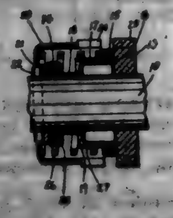
1. A water purifying mechanism, comprising a cylindrical casing, a spray head mounted therein, said spray head having openings substantially tangential to the periphery thereof, liquid supply means opening interiorly of said casing, liquid control means mounted to maintain a substantially constant liquid level in said casing above said spray head, liquid outlet means having an opening therein below the normal liquid level in said container through which opening water is withdrawn from the interior of said casing, said opening being spaced inwardly from the walls of said casing, said casing being open and unbaffled between said outlet opening and said spray head, and steam supply means connected to said spray head to discharge steam through the openings therein to heat water in said casing and to impart a swirling motion thereto.

2,027,502
SYLVICULTURAL MACHINE
Friedrich Weissmüller, Saarbrucken, Germany
Application March 2, 1934, Serial No. 714,420
In Germany March 2, 1933
5 Claims. (Cl. 111—1)



1. In a forest cultivating vehicle in combination a vehicle frame, a forest plough mounted near the front end of the frame for cutting and clearing the vegetation off the soil strip to be cultivated, a rearwardly bent guard hook, fixed on the front of said frame and extending to the plough tip for lifting the plough over immovable obstacles, a transverse axle rotatably mounted on said frame behind said plough, tearing grubbers fixed on said axle and burrowing grubbers rotatably mounted on said axle in alternating succession with said tearing grubbers, for simultaneously tearing up and comminuting the soil on the strip cleared by said plough, a two share strip heaping plough mounted behind said grubbers on said frame for heaping up the comminuted soil, means mounted behind said heaping plough for planting the cultivated strip, means for normally arresting the tearing grubbers and means, controlled by the pull exerted to draw the vehicle, for releasing said arresting means when said grubbers encounter an immovable obstacle, to permit said grubbers to rotate long enough to step over the obstacle and to thereby lift the rear portion of the vehicle to clear said heaping plough and planting means of the obstacle.

2,027,543
CLOSURE CAP
Richard H. Whitehead, New Haven, Conn.
Application December 11, 1934, Serial No. 756,910
9 Claims. (Cl. 215—74)



1. A closure-cap including: a body having an aperture extending therethrough; an operating-member rotatably mounted on said body and having an aperture therethrough in substantial alignment with the aperture through said body; and a closure-member between said body and said operating-member and adapted when said operating-member is rotated in one direction to close the opening formed by said aligned apertures, and when said operating-member is rotated in the opposite direction to open said opening and project a portion of said closure-member beyond the side-surface of said operating-member, said portion, when the closure-member is in closed position, serving to aid in preventing leakage from said opening.

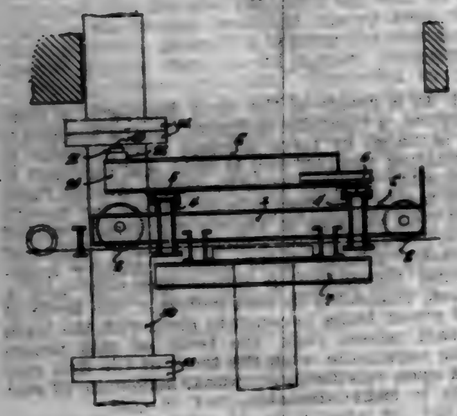
2,027,584
WEIGHING SCALE
Lawrence S. Williams, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application August 16, 1934, Serial No. 740,140
7 Claims. (Cl. 74—422)

1. In a device of the class described, in combination, a rotatable indicator, means adapted to be actuated by force to move said indicator to indicating position and to hold said indicator in indicating position after cessation of such force, said means including a rack, means for moving said rack endwise to various positions, a second rack, resilient means connecting said racks and yieldably holding them against relative longitudinal movement in either direction, and a pinion, connected to said indicator, the teeth of said pinion being in constant mesh with the teeth of said second rack, the teeth of said pinion being engageable with the teeth of the first said rack upon relative longitudinal movement of said racks in either direction.

2,027,585
BEARING SEAL FOR ROTARY SHAFTS
Carl J. Winkler, Indianapolis, Ind., assignor to Schwitzer-Cummins Company, Indianapolis, Ind., a corporation
Application October 29, 1934, Serial No. 750,286
3 Claims. (Cl. 286—11)

1. In a fluid seal, the combination with shaft and housing members rotatable relative to each other, of a sealing washer mounted about said shaft to bear against the ends of the housing member, a cup-shaped metal closure having one

end keyed to one of said rotatable members, a rubber sealing member mounted in said closure having oppositely-disposed ring portions, intermediate reduced and enlarged portions with a collapsible shoulder portion therebetween, said reduced portion bearing upon the periphery of the shaft in sealing engagement therewith, the ring of the enlarged portion bearing against the washer in sealing engagement and the collapsible shoulder portion being reversed upon itself when in operating position to permit longitudinal displacement while maintaining the reduced sealing portion in compressed engagement with the shaft, and a compressible spring surrounding said member interposed between the end of the closure and the enlarged sealing ring for exerting pressure thereon to maintain said flexible member and washer and said washer and housing member in sealing engagement.



2,027,506

HANDLING APPARATUS

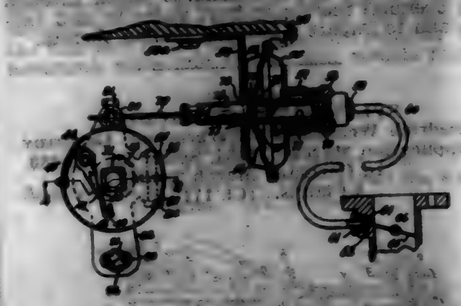
Nils Peter Erik Andersen, Elm Grove, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a corporation of Wisconsin

Application December 10, 1934, Serial No. 756,731

13 Claims. (Cl. 214—1)

1. A machine for handling heavy objects in crowded quarters and comprising a crane, and a grapple on the crane consisting of a pair of frame members having end portions projecting beyond the frame and adapted to straddle the object to be handled, jacks on said end portions for engaging said object, a parallel link motion interconnecting the frame members and means for shifting the frame members relative to the crane.

2,027,507



IGNITION APPARATUS

James L. Arthur, Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application December 20, 1931, Serial No. 583,009

4 Claims. (Cl. 123—117)

1. Ignition control apparatus for internal combustion engines having a fuel pipe through which a fuel charge is drawn to the engine cylinders comprising, in combination, a circuit breaker, a cam for operating the breaker, and means for effecting a relative angular adjustment between the cam and circuit breaker in a direction to retard the spark timing while the engine is idling and in response to engine produced suction in the engine fuel pipe, said means including a suction chamber, a displacement

member in said chamber, and a pipe connecting said chamber with the fuel pipe of the engine only at a point adjacent the edge of the engine throttle valve when closed and on the engine side of said valve.

2,027,508

TYPEWRITING MACHINE

Henry Allen Avery, Groton, N. Y., assignor to L. C. Smith & Corona Typewriters Inc., New York, N. Y., a corporation of New York

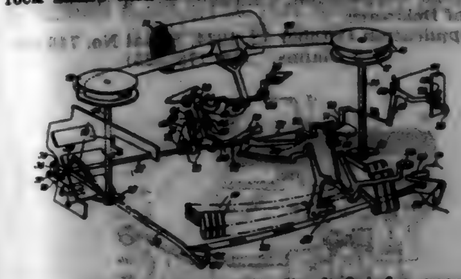
Application January 15, 1932, Serial No. 586,724

6 Claims. (Cl. 197—165)

1. In a typewriting machine having an inking ribbon actuating mechanism of the kind in which a drive shaft is endwisely shifted to connect it alternately with two ribbon spool-carrying shafts to feed the ribbon in either of two directions, the combination with the endwisely shiftable drive shaft of a ratchet wheel fixed to said shaft to turn said shaft therewith, a pawl carrier mounted on said shaft to rock thereon and to shift the shaft endwise, a pawl carried by said pawl carrier and engaged with the ratchet wheel to turn the drive shaft in one direction when the pawl carrier is rocked on the shaft, and means for shifting the pawl carrier axially in opposite directions to move the shaft endwise and thereby control the direction of feed of the ribbon.

2,027,509

TYPEWRITING MACHINE



Henry Allen Avery, Groton, N. Y., assignor to L. C. Smith & Corona Typewriters Inc., Syracuse, N. Y., a corporation of New York

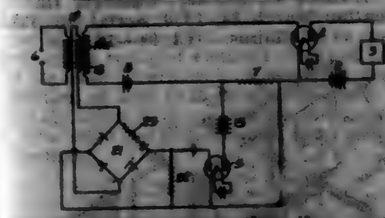
Original application January 15, 1932, Serial No. 586,724. Divided and this application February 24, 1933, Serial No. 657,345

6 Claims. (Cl. 197—159)

1. In a visible writing typewriting machine in which the type print at a point on the front por-

tion of the platen, the combination of a ribbon guide movable up and down to carry an inking ribbon over and retract it from the printing point, a bell-crank lever having a forwardly extending arm to which the guide is pivoted and a pendent arm having two projections located different distances from the lever axis and extending toward opposite sides of the machine, said lever being pivotally supported to swing about a horizontal axis extending transversely of the machine, a horizontal rock shaft extending transversely of the machine below said lever axis and projections, key-operated means for rocking said shaft, a yoke having two upstanding arms loosely pivoted at their lower ends on said rock shaft and slidable along said shaft, each

yoke arm having a longitudinal slot for receiving one of said projections on the bell-crank lever and one of said yoke arms having an aperture therein, a rock arm on said rock shaft having a projection extending longitudinally of said shaft, and manually operable means connected with said yoke for shifting said yoke longitudinally of the shaft from one to the other of two limits of axial sliding movement of the yoke on the shaft in both of which the projection on said rock shaft is engaged in said yoke arm aperture to rock the yoke with the shaft and in each of which a different one of said lever projections is engaged in the slot of a different one of the yoke arms to thereby vary the up and down throw of the ribbon guide.



2,027,510

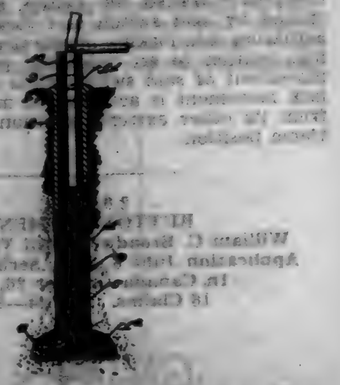
ELECTRON TUBE APPARATUS

Richard F. Ballen, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application February 26, 1932, Serial No. 595,319

12 Claims. (Cl. 178—171)

1. The method of distorting the wave form of the voltage applied to the grid of a vacuum tube which comprises rectifying a voltage varying with that to be distorted, exciting a compensating tube with the instantaneous rectified voltage and utilizing variations in the current delivered by the compensating tube to vary the voltage applied to the grid of the first mentioned tube, the rectified voltage being impressed as a positive voltage to the compensating tube and the compensating tube being so biased as to yield substantially no current when the instantaneous excitation voltage is zero.



2,027,511

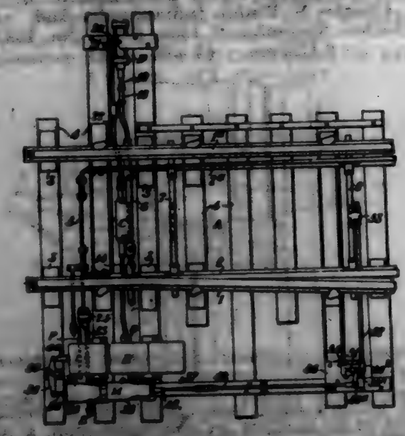
METHOD OF CASTING BELL-BOTTOM PLACE-PILING IN SOFT SANDY MATERIAL

Benjamin E. Bertran, Los Angeles, Calif., assignor of one-half to Jesse A. Bertran, Los Angeles, Calif.

Application July 25, 1932, Serial No. 624,363

6 Claims. (Cl. 61—57)

1. A method of casting place piling in soft material consisting of drilling an unlined bore into soft material while maintaining a semiliquid wall retaining substance in said bore and then introducing piling forming material while in a plastic state at the bottom of said bore underneath the mass of said semiliquid wall retaining substance in direct contact with said semiliquid wall retaining substance so as to entirely displace said semiliquid wall retaining substance and then removing everything from said bore except said piling forming material and the metallic reinforcing.



2,027,512

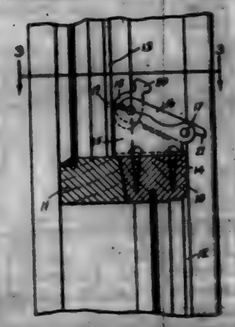
RAILWAY SWITCH OPERATING APPARATUS

Herbert L. Bone, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application July 15, 1933, Serial No. 680,568

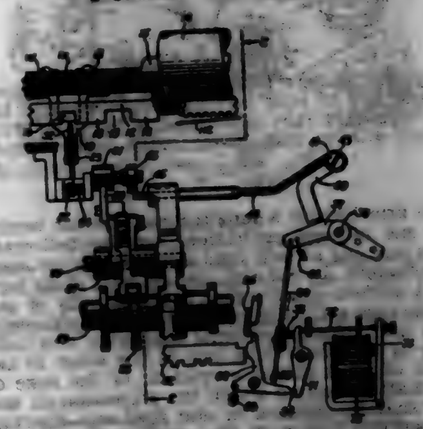
9 Claims. (Cl. 246—270)

1. In combination with a spring switch, a switch and lock movement operatively connected with said switch, means controlled by said switch and lock movement for locking said switch in one



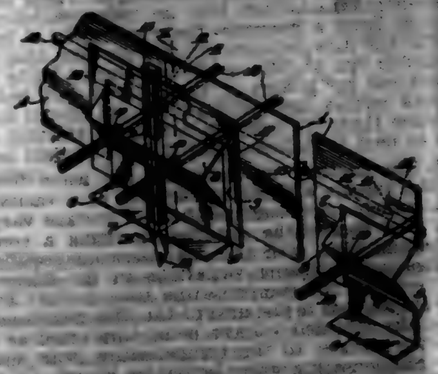
extreme position only, locking mechanism independent of said means biased to a locking position and effective when in its locking position for locking said switch in its other extreme position, means operated by a train approaching said switch in a trailing direction when said switch occupies its other extreme position for actuating said locking mechanism from its locking position to an unlocking position until after the train has completely trailed the switch, and means controlled by said switch and lock movement for actuating said locking mechanism from its locking position to an unlocking position prior to movement of said switch when said switch and lock movement is actuated to move said switch from its other extreme position to its one extreme position.

2,027,513
BUTTON ELEMENT
William C. Broadwell, Mill Valley, Calif.
Application June 8, 1935, Serial No. 25,562
In Canada October 26, 1934
16 Claims. (Cl. 24—245)



1. A button element for use with a companion loop member comprising a non-stretchable fabric serving as a retaining strap, a button of relatively soft rubber having a bonded union with said strap and including a shank portion and having a head presenting relatively thin flange-like margins extending laterally beyond said shank and adapted to be flexed toward the leg portions of said loop member and into impinging engagement with a garment at points underlying such margins and overlying such leg portions as when the loop member and button element are cooperatively attached to a garment and such garment is subjected to tension in the vicinity contiguous to the underlying head of said button.

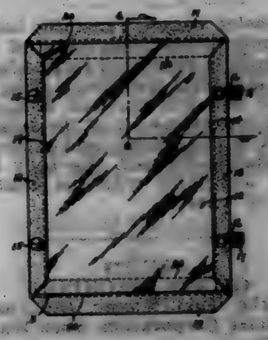
2,027,514
WINDOW SASH FASTENER
Charles V. Bumb, Indianapolis, Ind.
Application November 2, 1934, Serial No. 751,151
2 Claims. (Cl. 292—341)



1. A window sash lock comprising a support adapted to be secured on a window sash, a pair of walls extending upwardly therefrom, a pair of arms pivotally mounted on said support extending upwardly at an angle thereto between said walls, a yielding cushion member mounted between the free ends of said arms for frictional engagement with a locking surface, and tooth projections formed on the free ends of said arms and extending short of the point of normal engaging of the cushion and said locking surface, whereby said projections will be caused to bite into said surface for positively preventing the relative movement of said surface and sash in one direction upon sufficient force being exerted to compress the cushion member.

2,027,515
TWO-COLOR RIBBON MECHANISM
Charles W. Bereby, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application October 12, 1934, Serial No. 748,169
9 Claims. (Cl. 178—35)

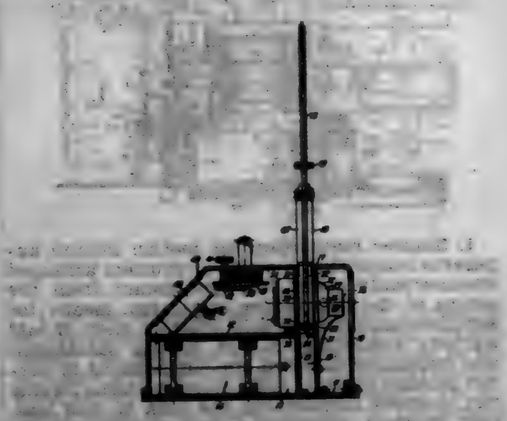
1. In a telegraphically controlled printing apparatus, a plurality of type elements, a platen, shift mechanism associated with said platen, a set of notched code bars variously positionable for accordingly controlling the performance of type elements, and a notched bar for controlling the performance of said shift mechanism.



2,027,516
CENTER STRIP AND SUPPORT
William C. Burrell, Kaukauna, Ill., assignor to Wallace C. Fischer, Chicago, Ill.
Application March 24, 1930, Serial No. 438,248
13 Claims. (Cl. 94—18)

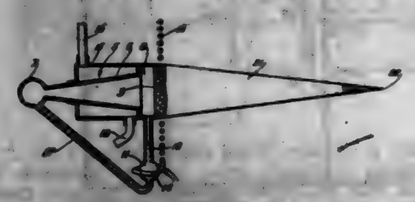
1. A concrete road center strip and support comprising a plurality of aligned, abutting

notched center strip boards, supports for holding said center strip boards mounted in position above a road sub-grade, stakes on one side of said center strip boards engaged with said supports for holding the same seated in position on a road sub-grade and also serving to hold the center strip boards in place, and reenforcing means supported by said supports for engaging and bracing the opposite sides of said center strip boards.



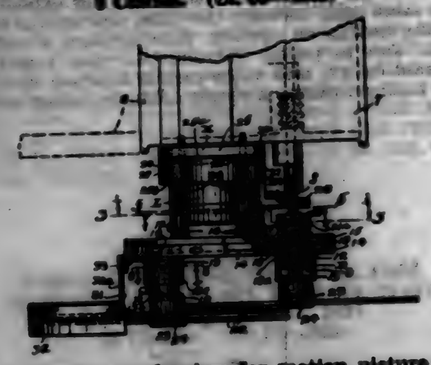
2,027,517
CERTIFICATE HOLDER
Anselem Orville Oehler, Des Moines, Iowa
Application November 26, 1934, Serial No. 754,748
3 Claims. (Cl. 40—16)

1. In a device of the class described, a single elongated rectangular sheet of flexible material having its four corners trimmed and its two side marginal edge portions folded over to form a side flap at each of its sides, a sheet of transparent flexible material over the main portion of said first-mentioned sheet and extending under each of said flap portions; said transparent sheet member having a length less than the length of said first-mentioned sheet member to provide end flaps on said first-mentioned sheet member capable of being folded over the end portions of said transparent sheet, a means for securing said first-mentioned sheet, said side flaps, and said sheet of transparent material together leaving said end flaps on said first-mentioned sheet free and unsecured, and a resilient element designed to have one of its ends operatively secured to one side edge portion of said first-mentioned sheet member and its other end operatively secured to the other side edge portion of said first-mentioned sheet member.



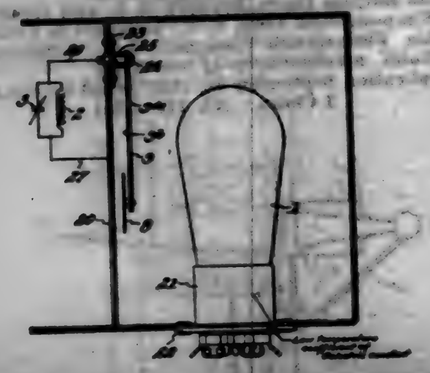
2,027,518
LUBRICATING OIL TESTING APPARATUS
Mead Cornell, San Francisco, and Charles C. Curtis, San Leandro, Calif., assignors to Charles C. Broadwater, Oakland, Calif.
Application December 27, 1932, Serial No. 648,242
6 Claims. (Cl. 88—14)

1. In apparatus for determining the lubricating quality of oil, a casing, a light sensitive cell mounted within the casing, indicating means connected to said cell, a source of light mounted within the casing and spaced with respect to the cell, a device for retaining a sample of oil, said device including a body provided with a pair of transparent walls spaced a predetermined distance apart whereby a relatively thin film of oil may be disposed between the same, and also including an inlet tube communicating with the space between the walls and suction means for drawing oil through the tube into the space between the transparent walls and for expelling the same back through the tube, one wall of the casing having an opening therethrough of sufficient size to permit introduction and removal of said device, and guide means disposed within the casing forming a recess communicating with



said opening, the recess being disposed between said cell and the lamp, said guide means serving to position said device with said transparent walls between said cell and said lamp when the device is inserted through said opening, said device when so positioned serving to exclude access of exterior light through said opening whereby only light from the lamp passing through the transparent walls is received by the cell.

2,027,519
COLD LIGHT SOURCE
John Burgess Davis, Keyport, N. J., and James L. Simpson, New York, N. Y., assignors to Columbia Phonograph Company, Inc., Bridgeport, Conn., a corporation of New York
Application September 24, 1933, Serial No. 634,643
1 Claim. (Cl. 176—124)

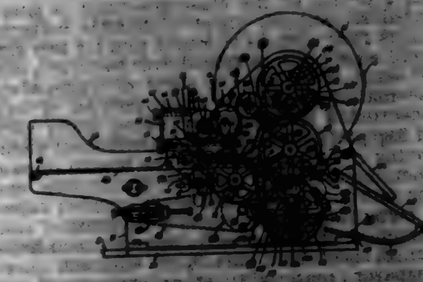


A mercury vapor induction lamp comprising an evacuated container, said container having a discharge region and mercury storage region, a quantity of mercury in said storage region, a water cooling jacket for said discharge region, and high frequency means disposed in proximity to said storage and discharge regions for providing a supply of mercury vapor and maintaining a discharge therethrough.

2,027,520
SHUTTER MECHANISM FOR MOTION PICTURE PROJECTORS
Israel Diebel, Minneapolis, Minn.
Substitute for abandoned application Serial No. 518,949, February 28, 1931. This application December 26, 1934, Serial No. 758,457
9 Claims. (Cl. 88—18.2)

1. Shutter mechanism for motion picture apparatus comprising a series of shutters arranged symmetrically about and equi-distant from the center of the lens of the apparatus, means for synchronously driving said shutters, each of said shutters comprising a disk having substantial and oppositely disposed cut-out portions to permit passage of light, said cut-out portions leaving rim portions surrounding the area of said lens, said shutters including a pair of diametrically disposed blades, said blades having their side edges diverging outwardly to a point which travels across the center of the lens, and then converging outwardly to the rim of the disk.

2,027,521
OSCILLATION GENERATOR
Frederick H. Drake, Beaston Township, Morris County, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application June 24, 1933, Serial No. 677,512
10 Claims. (Cl. 250—36)

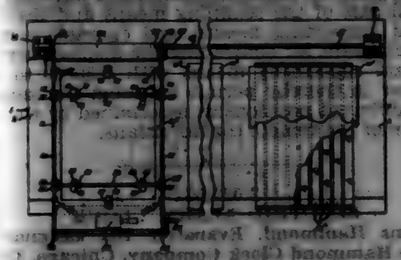


1. In an oscillation generator, the combination with a vacuum tube having a base of insulating material in which connections to the tube electrodes are mounted, of a tunable frequency-determining circuit including an inductance and tuning condenser, said inductance and condenser including means to prevent drift of the oscillation frequency with changes in temperature of said inductance and condenser, and means compensating for those changes in interelectrode capacities which result from changes in the temperature of said tube base.

2,027,522
COASTER WAGON
Joseph B. Sol, Shelbyville, Wis.
Application December 24, 1934, Serial No. 759,034
2 Claims. (Cl. 280—87.3)

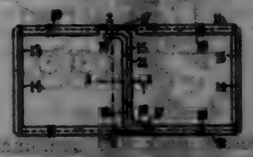
1. In a coaster wagon, a metallic body, bolster means depending therefrom, pairs of wheels on which said body is supported carried by said bolster means, said body including a deck and overhanging side and end portions and completely housing and concealing all of the bolster means and portions of the wheels, and a steering connection extending through the body externally thereof and associated with the bolster means for one pair of wheels.

2,027,523
CUTTING MACHINE
Ralph R. Erbe, Fort Wayne, Ind., assignor to The Capehart Corporation, Fort Wayne, Ind., a corporation
Application May 26, 1934, Serial No. 727,777
13 Claims. (Cl. 91—50)



1. In an apparatus of the class described, the combination of a gluing machine through which sheets are passed to deposit glue thereon, a rotating receiving table positioned to receive sheets discharged from said machine, and apparatus responsive to the presence of a sheet at a predetermined point on said table to stop the operation of said machine in proper timed relation to prevent discharge of a second sheet therefrom upon said first sheet.

2,027,524
METHOD AND APPARATUS FOR PREPARING STEREOTYPE MATRICES
Harland Funkhouser, Chicago, Ill., assignor to The Goes Printing Press Company, Chicago, Ill., a corporation of Illinois
Application December 4, 1931, Serial No. 578,588
In Great Britain September 26, 1930
21 Claims. (Cl. 18—194.5)

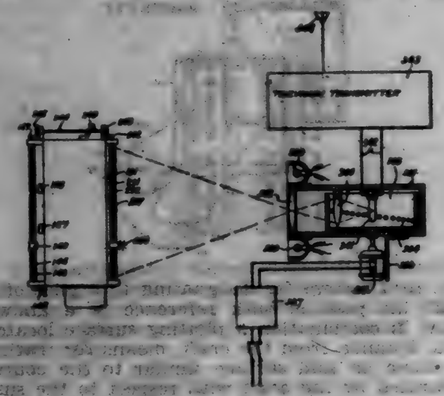


1. The method of forming a set of matrices for casting multicolor stereotype plates which

comprises applying imaging devices to the series of matrices and subsequently applying heat to a matrix or matrices to bring them to the same size

preparatory to casting the corresponding color plates therefrom.

2,027,525
CARDBOARD BOX
Reginald Harry Filmer, Clarkenwell, England, assignor to R. H. Filmer Limited, London, England
Application January 25, 1934, Serial No. 7,013
In Great Britain February 3, 1934
9 Claims. (Cl. 229—14)



1. An improved cardboard box having in combination a body, a partition, a flap at each vertical edge of the partition, one flap being fixed to one side of the body, and a piece of cardboard fastened at its upper end to the other side of the box behind which the other flap passes.

2,027,526
PIEZO-ELECTRIC CRYSTAL APPARATUS
Ralph K. Franklin, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application April 8, 1933, Serial No. 665,826
9 Claims. (Cl. 171—327)

9. A piezo-electric crystal housing comprising a circular insulating housing, a plurality of electrodes retained within said housing, insulating members between upper and lower electrodes forming an air gap, a piezo-electric crystal interposed between said upper and lower electrodes, a plurality of tapered retaining fingers to retain the frequency of oscillations constant by holding said crystal on the lower electrode within the air gap in one of several possible positions contiguous to said retaining fingers.

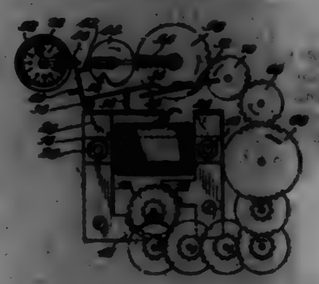
2,027,527
NAVIGATIONAL GUIDE SYSTEM
John Hays Hammond, Jr., Gloucester, Mass.
Application August 17, 1929, Serial No. 386,557
Renewed December 7, 1934
12 Claims. (Cl. 250—11)

1. In an aeronautical guide system, a plurality of direction finders, including pick-up devices, means for orienting said pick-up devices in accordance with the direction of the signals emitted from an aircraft, whereby said members will respond with predetermined effect to the signals impressed thereon, and means responsive to the orientation of said pick-up devices for transmitting the azimuthal angle of rotation of said pick-up devices to a plotting mechanism, whereby the location of the projection of the aircraft upon the earth can be determined, a transmission system comprising scanning means for scanning said plotting mechanism, and a receiving system in said aircraft for receiving and translating signals transmitted by said last mentioned transmission system.

2,027,528
NAVIGATIONAL GUIDE SYSTEM
John Hays Hammond, Jr., Gloucester, Mass.
Application October 22, 1930, Serial No. 489,285
13 Claims. (Cl. 250—11)

3. In a navigational guide system, a plurality of direction finding units dispersed adjacent a fixed location, means for orienting said units in accordance with the location of a craft, a map in the craft having registered thereon the characteristics of the scenery adjacent the fixed location, a plurality of designating units located in standard points with respect to said map, and means for translating the orientation of said direction finding units into orientations of said designating units on the craft, whereby said designating units are oriented an amount necessary for effecting the designation of the position of said craft with respect to the map.

2,027,329
NAVIGATIONAL GUIDE SYSTEM
John Hays Hammond, Jr., Gloucester, Mass.
Application October 29, 1929, Serial No. 403,206
Renewed September 26, 1935
7 Claims. (Cl. 250—3)



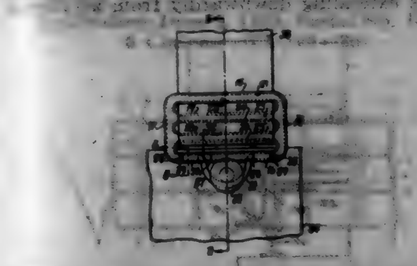
1. In a system for designating to a pilot of a craft his position with reference to a known point in combination a plotting surface located at a distance from the craft, means for tracing a course on said surface similar to the course generated by the craft with respect to the surrounding terrain comprising means adapted to resolve the motion of said first named means into rectilinear components, means for generating a plurality of carrier energy waves, means for modulating said carrier waves in accordance with the movement of said first named means and propagating the resultant energy, means in the craft for intercepting said propagated energy and deriving therefrom the modulations, a source of local oscillations and means for comparing the frequencies of the last named oscillations with the frequencies of the derived modulations, and means controlled thereby for varying the frequency of said local oscillations, and means including a plotting device responsive to said comparing means for graphically representing to the pilot of the craft his course with reference to the fixed location.

2,027,330
NAVIGATIONAL GUIDE SYSTEM
John Hays Hammond, Jr., Gloucester, Mass., assignor to Radio Corporation of America, a corporation of Delaware
Application November 15, 1932, Serial No. 642,713
13 Claims. (Cl. 250—11)

9. In a television, facsimile or the like transmission system, scanning means therefor, supporting means for the subject to be scanned, supporting means for the scanning means, means for translating the first named supporting means in its own plane and means for moving the first-named supporting means into a second plane which is parallel to the first named plane, means for varying the angular relationship between the optical axis of the scanning means and the first named supporting means, and operable remote control means for controlling the displacement of the said supporting means with respect to one another to thereby permit scanning the subject from different positions as determined by the operation of the remote control means.

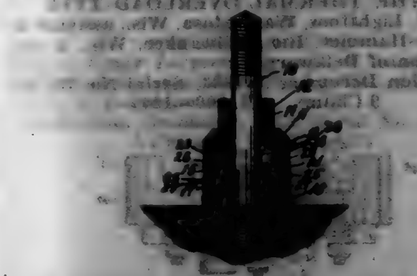
2,027,331
ELECTRIC ALARM CLOCK
Laurens Hammond, Evanston, Ill., assignor to The Hammond Clock Company, Chicago, Ill., a corporation of Delaware
Application February 15, 1931, Serial No. 515,598
2 Claims. (Cl. 58—23)

1. In an electric clock, the combination of a time gear train, a shaft driven thereby, a cam connected to said shaft so as normally to retain therewith, a manually engageable indicator secured to said cam and positioned at the back of the clock, a pointer on said shaft and cooperable with said indicator, said pointer being independent of the hands of the clock, and an alarm mechanism controlled by said cam.



2,027,332
POWDER METALLURGY
Charles Hardy, Pelham, N. Y., assignor to Hardy Metallurgical Company, New York, N. Y., a corporation of Delaware
No Drawing. Application April 4, 1934, Serial No. 719,935
2 Claims. (Cl. 75—1)

1. In a process for making a metallic object in which metal powders that have been plated with metal in an aqueous solution are employed, the improvement which comprises compressing the plated powders into a coherent mass while said plated powders are still wet with water and before the original soft amorphous character of the plating has been altered substantially by heating, thereby reducing the compressive force necessary to form a coherent mass of predetermined density.



2,027,333
LOOP-BUCKLE
Robert J. Hodge, West Haven, Conn., assignor to The American Buckle Company, West Haven, Conn., a corporation
Application July 12, 1935, Serial No. 31,344
3 Claims. (Cl. 24—73)

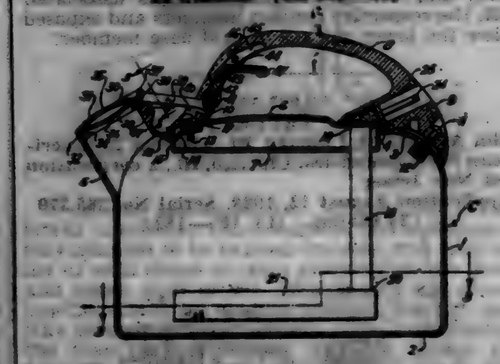
1. A loop-buckle comprising a frame having a continuous lower bar, and a wire loop pivotally

connected with the lower bar of the same, the distance between the lower edge of said bar and the lower end of the loop being less than the diameter of a button with which it is to be engaged, whereby the upper edge of the button, when entered into the loop, will project over the said lower bar.

2,027,334
STUD BOLT WRENCH
Charles B. Ingersoll, Cleveland, Ohio
Application August 5, 1933, Serial No. 683,513
1 Claim. (Cl. 81—53)

In a device of the character described, a head having a cavity, a plurality of cam faces on the wall of said cavity, a core mounted in said cavity for rotary movement in either direction, said core having an axially arranged bore adapted to receive a member of rounded cross section; circumferentially spaced slots in the wall of said core, rollers mounted in said slots with the axes thereof disposed in parallel relation to the axis of said core, said rollers projecting inwardly into said bore and outwardly beyond the circumferential surface of said core, a circumferentially extending channel around the intermediate portion of each roller, a coincident circumferentially extending groove around said core, a split spring ring fitted in said groove and entered in the outwardly presented portion of each channel in each roller, said spring yieldably holding said roller in an inward position, said rollers adapted to grip said rounded member when moved into engagement with said cam faces by a relative turning movement of the head and core.

2,027,335
CLEANING AND POLISHING COMPOSITION
Bernard H. Jacobson, Charleston, W. Va., assignor to Klipstein Chemical Processes, Inc., New York, N. Y., a corporation of New Jersey
No Drawing. Application February 26, 1935, Serial No. 8,941
4 Claims. (Cl. 252—93)



1. A dentrifice comprising a supporting paste vehicle and finely divided crystalline anthraquinone uniformly distributed therein.

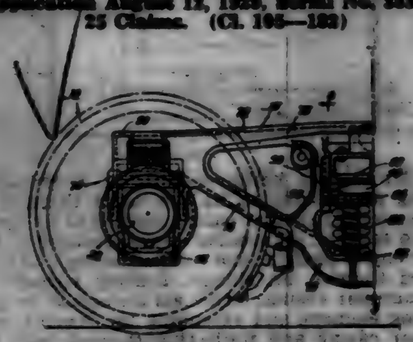
2,027,336
ARTICULATED DISPLAY
Alexander M. Jerabek, Newark, N. J., and Aubrey W. Vaughan, Cleveland, Ohio, assignors to National Carbon Company, Inc., a corporation of New York
Application October 4, 1933, Serial No. 692,164
12 Claims. (Cl. 40—124)

1. An articulated display comprising a plurality of containers in linear alignment and means comprising a rigid spacing member provided with a movable joint connecting each container to the next in line.

2,027,337
ELECTRIC TEAKETTLE
Ralph N. Kircher, West Bend, Wis., assignor to West Bend Aluminum Co., West Bend, Wis., a corporation of Wisconsin
Application January 21, 1935, Serial No. 2,694
12 Claims. (Cl. 219—44)

1. An electric kettle comprising a container having an opening in its top, a lid therefor, a single vertical tubular casing secured at its upper end to said lid, an annular casing secured to the lower end of said vertical tubular casing and supported thereby, an electric heating element in said annular casing, terminals connected to said heating element and extending up through said tubular casing and projecting through said lid, and an arched handle rigidly secured to the container and having an opening accommodating the portions of the terminals projecting through the lid, said portions of the terminals being accessible through said opening of the handle.

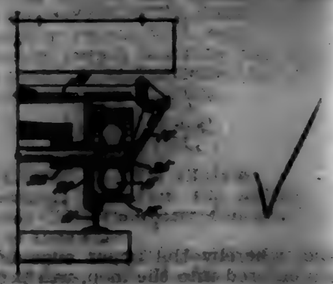
2,027,338
ELECTRIC SWITCH
Alvin W. Kolerus, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application May 14, 1934, Serial No. 725,482
11 Claims. (Cl. 200—53)



1. In an electric switch, in combination, an insulating [illegible] member, a plurality of contact

members rigidly secured to said base member and having edge portions spaced upwardly from the latter, a bridging contactor having a loose pivotal connection with one of said contact members, said contactor being in general of channel-form in transverse cross section, a portion of the bottom wall of the channel being sheared along parallel lines and deformed to provide an upwardly extending cam surface, a portion of said cam surface being located above the side walls of said contactor, an actuating lever pivotally supported in a predetermined spaced relationship to said base member, said lever having a recess in the lower end thereof, an insulating member

slidably engaging the walls of said recess, a coiled compression spring located within said recess and adapted to bias said insulating member outwardly therefrom, the outer end of said insulating member being engageable with said cam surface whereby said contactor and said lever are normally biased to given positions thereof respectively, said lever being movable at will to a given extreme position against said bias to temporarily retain said contactor in one of its extreme positions, and wiring terminal elements associated with the respective contact members and exposed below the lower surface of said base member.

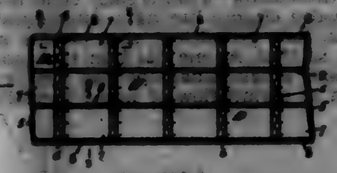


1,927,539
TRUCK
John A. Lamont, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application August 12, 1929, Serial No. 385,179
25 Claims. (Cl. 105—182)

1. In a truck for railway rolling stock, the combination of a truck frame, wheel and axle assemblies supporting said frame, said assemblies each including a non-rotatable axle having sliding cooperation with said truck frame, and snubber plates disposed as a cantilever between said non-rotatable axle and said frame.

1,927,540
PNEUMATIC RAILWAY WHEEL
Paul M. Lewis, Denver, Colo.
Application July 20, 1934, Serial No. 735,502
5 Claims. (Cl. 105—105)

1. A pneumatic wheel structure for a railway car comprising: a series of pairs of metallic truck wheels; a series of axles, each axle connecting a pair of said wheels; an outwardly extending cylindrical drum on each of said wheels; a main truck structure positioned above said wheels; brackets extending downwardly from said truck



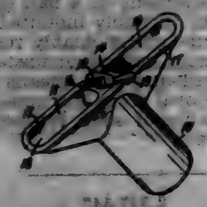
structure opposite said wheels; and pneumatic tires journalled on said brackets so as to ride within the cylindrical drums of said wheels; and a sub-truck structure connecting said axles.

1,927,541
ELECTRIC CIRCUIT CONTROLLING DEVICE OF THE THERMAL OVERLOAD TYPE
Edwin N. Lightfoot, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application December 8, 1932, Serial No. 701,581
9 Claims. (Cl. 200—134)

7. In a thermal overload device of the character described, in combination, a molded insulating base having a cup-shaped recess opening to the lower surface thereof, a thermally responsive unit comprising a substantially cylindrical member having a closed lower end, said member being non-rotatably supported by and depending from the upper end wall of said recess, an electric wire heating element located within said recess in spaced relationship to said cylindrical member, a toothed wheel exposed upon the upper surface of said base and having a shank extending downwardly into said cylindrical member, means comprising a fusible medium interposed between said shank and said member to normally restrain the former against rotation, a stationary contact and a movable contact, said movable contact being biased away from said stationary contact, a pawl associated with said movable contact and engageable with said toothed wheel to restrain said movable contact against movement under its bias pending a given degree of heating of said fusible medium, a body of insulating liquid within which said thermal overload device is submerged, a portion of said body of liquid being adapted to fill said recess, the walls of said recess acting to prevent substantial displacement of said portion of said body of liquid under the influence of convection currents generated therein to facilitate transmission of said heat to said fusible medium, and a pull-rod extending upwardly through said body of insulating liquid to provide for resetting of said overload device and consequent re-engagement of said movable contact with respective of the former.

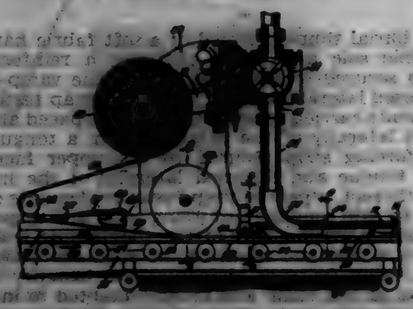
1,927,542
FILTER BELT FOR ROLLER PRESSES
Adolph W. Linscomb, Louisville, Ky., assignor to Louisville Drying Machinery Co. Inc., Louisville, Ky.
Application June 1, 1925, Serial No. 34,542
6 Claims. (Cl. 100—35)

1. In a filter belt of the class described, a plurality of hinged sections, each section comprising a perforated plate, a fine screen mesh secured at one edge to the advancing end of said plate, and means securing said screen between the advancing and following ends of the plates, so that the screen may freely expand longitudinally and laterally.



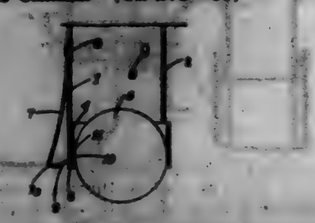
1,927,543
SUCTION NOZZLE
Gustaf Elmer Lofgren, Rye, N. Y., assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware
Application October 7, 1933, Serial No. 692,565
3 Claims. (Cl. 15—337)

1. A suction nozzle having a mouth surrounded with a surface contacting lip, said lip being provided with grooves forming communications between the mouth and the atmosphere when the nozzle is in operative position, said grooves being so arranged that a single vortex of air will be produced in said mouth during the normal operation of the nozzle, said lip providing a deflector for each air stream entering the nozzle thereby assisting the forming of said vortex.



1,927,544
SUCTION NOZZLE
Gustaf Elmer Lofgren, Rye, N. Y., assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware
Application May 29, 1934, Serial No. 728,439
12 Claims. (Cl. 15—353)

1. An upholstery nozzle for vacuum cleaners, said nozzle having lateral suction openings, a central opening intermediate and terminating in the same plane with said lateral openings and angularly disposed to a surface to be cleaned, and of such shape that a vortex is formed on tangential admission of air thereto, a groove communicating with the atmosphere and connecting



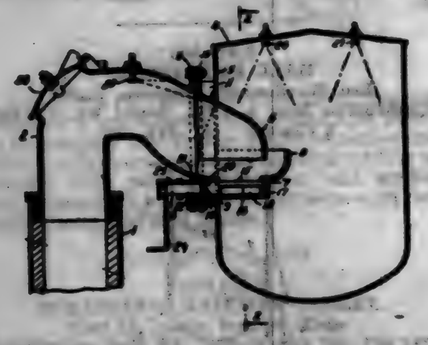
tangentially with said central opening and a common outlet communicating with said central and lateral openings.

1,927,545
APPARATUS FOR FORMING AND WRAPPING BRICKS OF ICE CREAM AND THE LIKE
Leslie A. Mapes, Fallsades, N. J., assignor to The Borden Company, New York, N. Y., a corporation of New Jersey
Application August 7, 1934, Serial No. 738,827
8 Claims. (Cl. 93—3)

1. In an apparatus for forming ice cream bricks, a conveyor, an elongated channel-shaped tray adapted to be carried thereon, said tray being of such shape in cross section that the lower and upper ends of the sides thereof are nearer together than the middle portions thereof, said tray being split longitudinally, means for holding the tray parts yieldingly together, means for forming a paper strip into channel shape and forcing it into the tray, means for cutting the sides of the channel-shaped paper strip to conform with the inner surfaces of the tray, and means for forcing ice cream into the paper-lined tray.

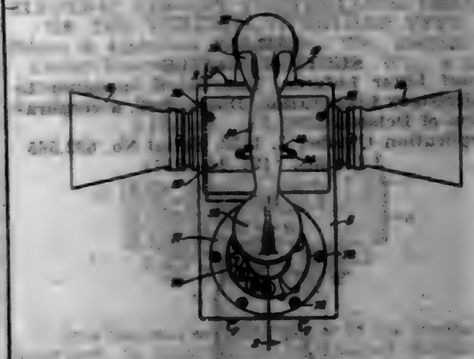
1,927,546
BALL RETRIEVER
Ian Macdonald, Modesto, Calif.
Application May 4, 1936, Serial No. 723,941
3 Claims. (Cl. 273—46)

1. A ball retrieving and retaining device comprising an open ended tube to receive a row of



balls in single file, yieldable means in the tube adjacent its lower end to permit a ball to be received into the tube from said end but preventing retractive movement of a ball once thus received, and a ball turnably mounted on the upper end of the tube and yieldably resisting turning movement; said ball when upstanding serving both as a ball and as a means to hold the balls against removal from the upper end of the tube but permitting of such removal when the ball is swung down.

2,027,547
BURIAL SLIPPER
James W. McCamish, Winchester, Ind.
Application November 2, 1934, Serial No. 751,988
1 Claim. (Cl. 36—54)

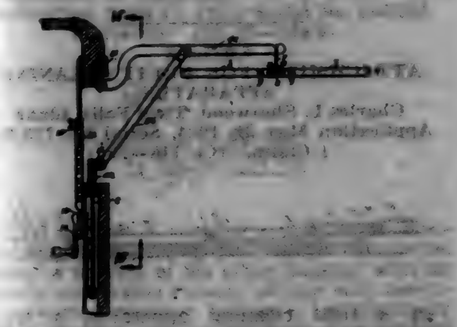


A burial slipper formed of a soft fabric having flexible sole and vamp portions, a reinforcing strip secured to the underside of the vamp and disposed laterally thereof, a pair of snap fastener elements carried by said strip and in spaced alinement laterally of the vamp portion, a tongue, a reinforcing strip secured to the upper face of said tongue and disposed laterally of the inner end thereof, a pair of snap fastener elements carried by said tongue reinforcing strip and disposed in alinement laterally of the tongue and spaced apart a distance equal to the distance between said vamp fastener elements; the fastener elements of the vamp and tongue adapted to interengage with each other to hold the tongue in proper longitudinal alinement on the shoe.

2,027,548
COLLECTOR MAIN VALVE ASSEMBLY
Charles Vernon McIntire, Short Hills, N. J., assignor to Semet-Solvay Engineering Corporation, New York, N. Y., a corporation of New York
Application August 11, 1932, Serial No. 628,243
18 Claims. (Cl. 202—256)

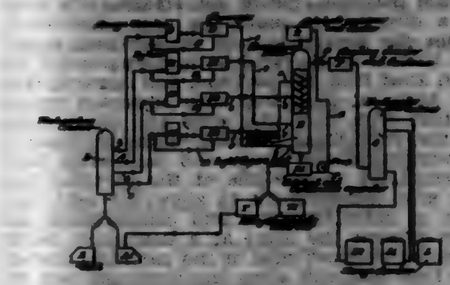
10. In a gas collecting system for a coal distillation plant, a collecting main, a gas conduit leading laterally through a side wall of said collecting main and provided with a hood extending into the main, a member within the main beneath said hood adapted to cooperate therewith to form a liquid seal for preventing flow of gas therethrough into the collecting main, a longitudinal opening providing communication between the space above said member and the space therebelow within said collecting main, and a valve closure having a substantial portion of its surface cylindrical, said closure being rotatable so that in one position it is adapted to block said longitudinal opening but in another position to permit flow of liquid therethrough.

2,027,549
TELEPHONE SET
Herbert F. Obergfell, River Forest, Ill., assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application July 18, 1933, Serial No. 680,049
3 Claims. (Cl. 179—160)



1. In a telephone set, a handset, means for supporting said handset on said telephone, an operating button operated by the removal and replacement of said handset on said telephone set, an evacuated vessel having a projecting stem extending therefrom, switchhook contacts completely sealed in said vessel, and operating mechanism connecting said stem on said vessel with said operating button for actuating said switchhook contacts, said mechanism including a cam face mounted to slide across said stem when the button is operated.

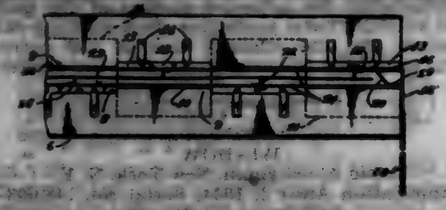
2,027,550
CHLOROBUTADIENE
Granville A. Perkins, South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application August 16, 1931, Serial No. 557,427
6 Claims. (Cl. 260—163)



1. A process for making 2-chlorobutadiene-1,3 which comprises reacting vinyl acetylene with aqueous hydrogen chloride in the presence of a catalyst consisting essentially of cuprous chloride, and in the presence of a water-immiscible inert solvent in which the product is dissolved.

2,027,551
AUTOMOBILE DRESSING ROOM TENT
Raymond V. Hideout, Highland Park, Mich.
Application April 24, 1935, Serial No. 17,547
3 Claims. (Cl. 135—3)

1. A dressing tent to be used with an automobile, comprising a window engaging frame, a tent support frame positioned at one side of said window engaging frame, rigidly connected thereto and supported thereby, said tent supporting frame being adapted to support a tent inclosure.



2,027,552
PROCESS FOR CONTROLLED PYROGENIC DECOMPOSITION OF HYDROCARBONS
Ovid R. Roberts, Jr., New Rochelle, N. Y.
Application September 23, 1933, Serial No. 690,758
15 Claims. (Cl. 196—52)

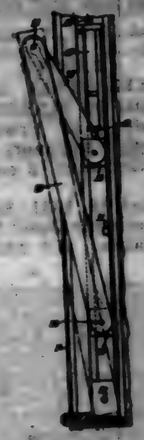
8. The method of effecting pyrogenic decomposition of hydrocarbons comprising decomposing a plurality of hydrocarbon fractions of different boiling points in the vapor phase by flowing them through a reaction zone while simultaneously contacting the same with a liquid metallic catalyst flowing counter-currently through the reaction zone, each fraction being separately introduced into said reaction zone to contact the liquid catalyst at points which afford the optimum conditions of pyrogenic decomposition and coupling necessary for proper stabilization.

2,027,553
ROAD JOINT EXCHANGER WITH VOID FORMING UNIT
Robert R. Robertson, Chicago, Ill., assignor to The Truscon Joint Company, Chicago, Ill., a corporation of Illinois
Application November 17, 1933, Serial No. 698,427
21 Claims. (Cl. 94—18)

1. A concrete construction joint former comprising a base section, a core unit removably supported thereby, and removable from the concrete construction to leave a void therein, and adjustable means carried by the base section for closing an end of the core unit and an end of the void when the core unit is removed.

2,027,554
CHROME NICKEL STEEL ALLOY PRODUCT AND METHOD OF MAKING THE SAME
Paul Schafmeister and Erwin Alfred Spenlé, Essen, Germany, assignors to Fried. Krupp A. G., Essen, Germany, a corporation of Germany
Application May 22, 1931, Serial No. 540,834
In Germany June 2, 1930
7 Claims. (Cl. 148—12)

3. The method of treating austenitic chrome nickel steel alloy products having a stable surface which comprises first heating within the carbide precipitation range, second, cold working, and third, reheating above the recrystallization temperature but below the temperature at which the carbides redissolve, to effect recrystallization of the cold-worked metal.



2,027,555
CORN PAD PACKAGE
William M. Scholl, Chicago, Ill., assignor to The Scholl Mfg. Co. Inc., Chicago, Ill., a corporation of New York
Application April 17, 1933, Serial No. 666,464
5 Claims. (Cl. 128—155)

1. A unit package comprising a folded carrier strip having a plurality of adjacent layers, corn

pads adhesively fixed to said layers except one, medicated plasters affixed to the excepted layer, the medication on said plasters being capable of deteriorating the adhesive coating of the pads, and an impervious protective strip covering said plasters and the opposite side of the carrier strip to include the area covered by the plasters.

2,027,556
WINDOW
David A. Saligman, New York, N. Y.
Application April 2, 1934, Serial No. 718,663
4 Claims. (Cl. 20—49)

1. A window structure including a sash of the type having a sliding and a hinging movement, said sash having lateral metal tracks adapted to slide therewith in an associated window frame and having a pivoted connection at the lower end thereof between the lower ends of said tracks, metal slide blocks at the lower ends of said tracks, links pivoted at their lower ends to said slide blocks and pivoted at their upper ends to the sides of said sash, said tracks having stops to limit the upward movement of said slide blocks for defining the outermost pivoted position of the sash.

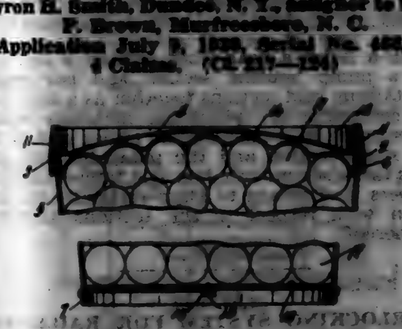
2,027,557
SHOE
Edward L. Shatin, Endicott, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a corporation of New York
Application June 8, 1934, Serial No. 729,718
5 Claims. (Cl. 36—14)

1. A shoe of the character specified; comprising an upper, an insole, means connecting the lower edge of the upper to the periphery of the insole, the lower edge of the upper lying approximately in the plane of the lower face of the insole; a beaded welt having a thickened flange on its upper edge secured to and around the upper above the insole, an outsole secured to the insole, and a fexing extending around the lower portion of the upper below the flange of the welt and around the outer edges of the outsole the lower edge of the fexing terminating in the plane of the lower face of the outsole.

2,027,558
ATTACHMENT FOR FRUIT CLEANING APPARATUS
Charles L. Sherwood, Twin Falls, Idaho
Application May 31, 1934, Serial No. 728,419
1 Claim. (Cl. 146—196)

In a fruit cleaning apparatus, a trough adapted to receive fruit and provided with a transverse partition defining independent compartments, one of which is adapted to receive an acid solution and the other fresh water, said partition having sloping faces curved downwardly in opposite directions and merged into the bottom of the trough, a drum rotatably mounted adjacent the partition and spaced therefrom above the acid solution compartment and provided with a plurality of spaced radial arms, each arm being straight throughout substantially its entire length and at its free end terminating in a hooked portion disposed in a direction to extend toward the bottom of the acid bath compartment when the free end of the arm is presented toward a sloping side face of the partition, means for rotating the drum in a direction to move the arms downwardly across the sloping face of the partition toward the bottom of the acid bath compartment and then away from the partition and upwardly with the hooks at their free ends presented upward to hold fruit upon the arms and effect lifting of the fruit from the acid bath, the path of movement of the drum and said arms being substantially to the side of the partition over the acid compartment to allow the acid solution to drain into the acid compartment and then present the arms at a downward incline toward the upper edge of the partition whereby the fruit may roll along the arms and over the partition into the water compartment.

2,027,559
BUSHING
Newton Skillman, Detroit, Mich., assignor to O. & S. Bearing Company, Detroit, Mich., a corporation of Michigan
Application February 5, 1931, Serial No. 513,491
4 Claims. (Cl. 308—238)



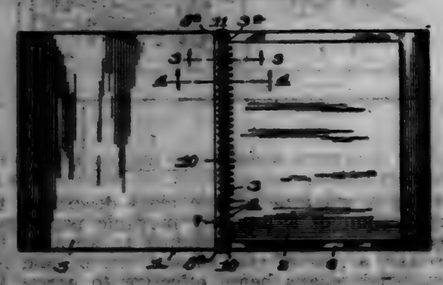
1. A bushing comprising an inner sheet of lubricant impregnated fibrous material integrally backed and held in place by a hardened combustic material, said material being of such consistency as to readily shear when forced into an undersize housing unit.

2,027,560
SELF-LUBRICATING SELF-ADJUSTING BEARING AND METHOD OF FORMING SAME
Newton Skillman, Detroit, Mich., assignor to O. & S. Bearing Company, Detroit, Mich., a corporation of Michigan
Application April 17, 1933, Serial No. 666,522
17 Claims. (Cl. 29—149.5)

1. The method of forming a permanent, non-adjustable universal joint, which comprises forming a portion of an outer housing with an inwardly converging contour at one end, inserting a bearing member having a longitudinally varying contour and a lubricant impregnated compressible expansible material within said housing, freely telescoping an outer housing member within said first housing portion to a point stopped only by said material whereby to compress and close in said material around the inner bearing member, said pressure being sufficient to lock the inner bearing in position, and then fixably locking the outer housing member relative to said housing to maintain said material under compression and lock said inner bearing member in position.

2,027,561
SHIPPING CONTAINER
Myron H. Smith, Dundee, N. Y., assignor to Edwin F. Brown, Murfreesboro, N. C.
Application July 7, 1933, Serial No. 680,702
4 Claims. (Cl. 217—124)

1. A shipping container comprising a cylindrical body provided with U-shaped hoops secured to the upper and lower ends thereof, a crown-shaped cover unit mounted on said body and provided with a vertically disposed rim forming a continuation of the cylindrical body, the upper edge of the rim lying in a plane substantially flush with the top of the cover crown, and fasteners cooperating with said rim and said hoops at the upper ends of said staves for securing the rim to the lower edge of the upper hoop.



2,027,562
FEEDING DEVICE
William A. Smith, Sr., Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application August 24, 1934, Serial No. 740,979
2 Claims. (Cl. 78—82.3)

1. In a feeding device, the combination of a casing and a feed screw extending through the casing, said casing having a recess and a wall at one end of the recess, a plurality of stationary feed nuts in the casing threadedly engaging the screw, and one of said nuts seating against the

end wall, means interposed between the nuts for effecting axial adjustment thereof, and a sleeve threaded into the casing and acting against one nut to hold said nuts in adjusted position.

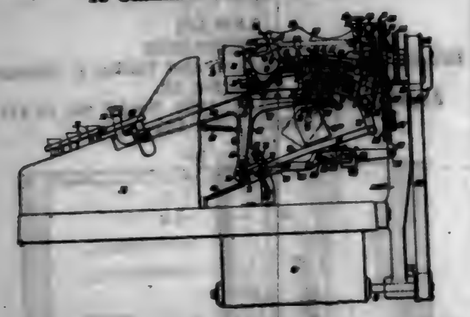
2,027,563
BOOKBINDER
Isidore Spinner, Chicago, and Philip V. Spinner, Wilmette, Ill.
Application March 11, 1933, Serial No. 10,416
2 Claims. (Cl. 281—19)

1. In a book binder, the combination with a filler consisting of leaves bound together along one edge with a spiral binding of stiff wire, of a binder comprising cover sections and a backbone, a bar extending lengthwise of said backbone and having its end portions bent to provide brackets projecting at right angles to the inner face of said backbone adjacent the ends thereof, a rod removably insertable through holes in said brackets and adapted to pass through said spiral binding when the same is positioned lengthwise of said backbone between said brackets, and a lug projecting from said bar intermediate its ends and having a hole in alignment with the holes in said brackets, said lug acting to support said rod intermediate its ends and to project between adjacent turns of said spiral binding.

2,027,564
ROLLING MACHINE
Jacob Stein, College Point, and George Stein, Astoria, N. Y.
Application May 1, 1925, Serial No. 19,266
9 Claims. (Cl. 153—25)

1. A rolling machine, comprising a single wall frame comprising horizontal bars connected by spaced vertical bars providing vertically extending slots in the wall, blocks adjustable in the slots, shafts extending through the blocks and

adapted to receive shaping rolls thereon at the front of the frame, sprocket wheels on the shafts at the back of the frame, and sprocket chains engaging the sprocket wheels, and said vertical bars also forming slots between the slots for the bearing blocks for the reception of attachments.



2,027,565

TABULATING DEVICE

Burnham C. Stickney, Hillside, N. J., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware

Application August 14, 1930, Serial No. 475,171

13 Claims. (Cl. 197—176)

1. In a machine of the class described, the combination of a laterally movable paper carriage, means normally tending to advance the carriage, a pair of stop means, one of said last mentioned means being effective to arrest the advancing movement of said carriage in a columnar position thereof, the second being effective to hold the carriage in said position, manual means effective to disable one of said stop means and to condition the other of said stop means for operation in a subsequent column, a part actuated in every cyclic operation of the machine, and means actuated by said part as an incident to disable the second of said stop means.

2,027,566

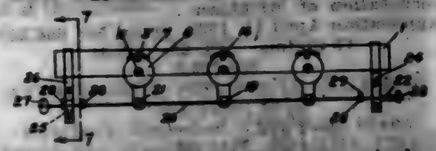
CAR DOOR

Kenneth J. Tobin and Thorvald Madland, Chicago, Ill., assignors, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio

Application May 26, 1933, Serial No. 671,972

26 Claims. (Cl. 20—22)

10. In a railway freight car having a door opening, a door therefor, a track, rolling means supporting said door for movement upon said track, said door being frictionally supported upon said track in full open position and means pivotally supported upon said car adapted to dispose said door upon said rolling means for movement to closed position, said means being actuated to operative position by said door in the opening movement thereof.



2,027,567

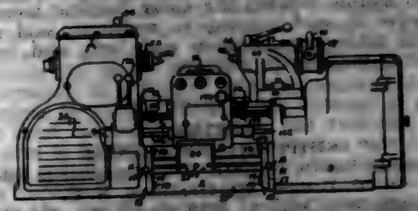
LAWN SPRINKLER

Holstein W. Webb, Columbus, Ohio

Application June 15, 1934, Serial No. 730,621

10 Claims. (Cl. 239—106)

1. A sprinkler nozzle comprising a nipple provided with a jet delivery passage, a plate carried thereby, and a block rotatably mounted on said plate and provided with a plurality of delivery controlling surfaces directed radially of the axis of rotation, and adapted to be selectively positioned to intercept an impinging jet issuing through the aforesaid passage.



2,027,568

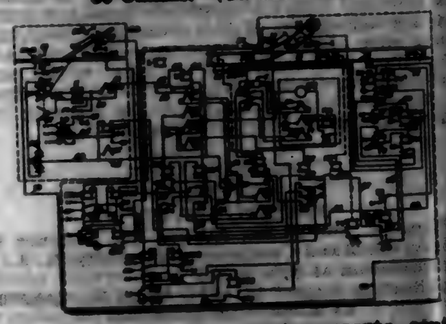
LATHE

Wendell E. Whipp and Clifford A. Bickel, Sidney, Ohio, assignors to The Monarch Machine Tool Company, Sidney, Ohio, a corporation of Ohio

Application October 11, 1932, Serial No. 637,719

31 Claims. (Cl. 82—2)

1. In a lathe, a head stock section, a pan section, a pump housing section and bar means for retaining said sections together as a unit, said bars consisting of cylindrical members means for retaining said members at either end in the head stock section and the pump housing section, a tail stock mounted on said interconnecting members, and means to align vertically the pan section with respect to the sections at either end thereof.



2,027,569

INTERLOCKING SYSTEM FOR RAILROADS

Sedgwick N. Wight, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application May 28, 1931, Serial No. 540,596

30 Claims. (Cl. 246—134)

9. In an interlocking system, route control means comprising, a circuit including contacts

which assume positions corresponding to the positions of associated track switches, a route relay at each end of said circuit, means for energizing said circuit from each end, and means for preventing de-energization of said circuit from one end if it has been energized from the other end.

2,027,570

VENETIAN BLIND BOTTOM RAIL BRACKET

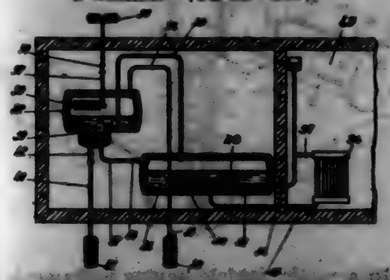
William W. Zingg, Chicago, Ill., assignor to The Columbia Mills, Inc., New York, N. Y., a corporation of New York

Application March 11, 1935, Serial No. 10,393

9 Claims. (Cl. 160—17)

5. A Venetian blind assembly adapted to be hung in an opening and comprising a plurality of tiltable slats and a bottom rail, a spring actuated plunger mounted on said bottom rail and engageable with the side wall of the opening, and a clip mounted on the rail and releasably engageable with said plunger for holding it in set position.

2,027,571



METHOD FOR THE TRANSFORMATION OF HEAT

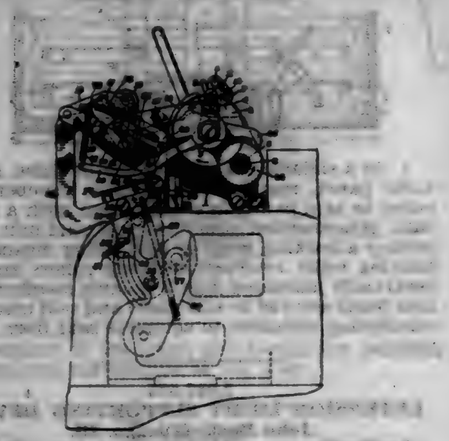
Edmund Altenkirch, Neuenhagen, near Berlin, and Kurt Neuschmann, Berlin-Siemensstadt, Germany, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a corporation of Germany

Application October 17, 1933, Serial No. 693,260

In Germany October 20, 1931

2 Claims. (Cl. 62—120)

1. In a system for the production of heat, an apparatus of the intermittent absorption type, comprising a generator-absorber and a condenser-evaporator, said condenser-evaporator being provided with two devices for the transfer of heat, one of said devices being so arranged as to give up the heat of condensation of the working medium to a medium of lower temperature, the other of said devices being so arranged as to transfer the heat from a medium of higher temperature to the condenser-evaporator, means in said two devices for controlling the transfer of heat, said generator-absorber being also provided with two devices for the transfer of heat, one of said devices of the generator-absorber being so arranged as to transfer during the period of condensation heat from a medium of lower temperature to the generator-absorber, and the other of said devices of the generator-absorber being so arranged as to transfer the heat of absorption to a medium to be heated.



2,027,572

PAPER FEED MECHANISM

Walter A. Anderson, Rockford, Ill., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware

Application November 23, 1934, Serial No. 754,564

7 Claims. (Cl. 197—114)

1. In a machine of the class described, a platen and means for rotating the platen comprising a link, a member arranged to reciprocate in each cycle of operations of the machine, a latch on said link adapted to connect the link with said member, a spring tending to move the latch into operative position, and a part arranged to move away from the latch when said member is moving in one direction to permit the spring to place the latch in operative position and to engage said latch when said member moves in the opposite direction to place the latch in inoperative position.

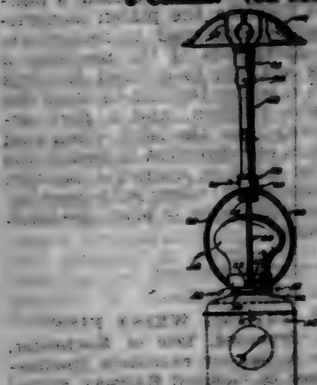
2,027,573

METHOD OF MAKING WRIST PINS

Frank H. Banner, deceased, late of Rochester, N. Y., by Beatrice A. Banner, executrix, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Original application May 2, 1928, Serial No. 274,932. Patent No. 1,876,556, dated September 13, 1932. Divided and this application July 19, 1932, Serial No. 623,583

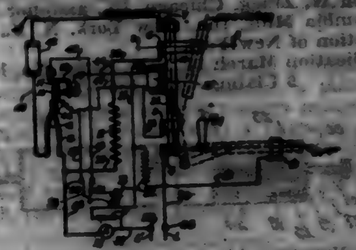
2 Claims. (Cl. 29—148.5)



1. The method of making wrist pins, comprising, cutting a piece of cylindrical stock to length, forming a peripheral groove near one end of said piece, forming a split ring, of resilient material, and of an internal diameter equal to that of the root of said groove, and an external diameter greater than that of the stock, springing said ring into said groove, and spot welding the ends of said split ring.

2,027,574
CAR DOOR
Wilfred A. Beauchamp, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application October 1, 1934, Serial No. 746,209
11 Claims. (Cl. 20—23)

1. In a slidable car door of the lift type, a metallic panel, marginal reinforcing members secured to said panel, in combination with a separate, preassembled structural unit, said unit comprising a backing member and lifting means embodying roller retainers carrying rollers and eccentrically journaled in said backing member, said unit being secured to said panel and said marginal reinforcing members to complete said door.



2,027,575
EXTENSION LIGHT SUPPORTING DEVICE
John Buck, Chicago, Ill.
Application June 24, 1935, Serial No. 28,157
6 Claims. (Cl. 240—2)

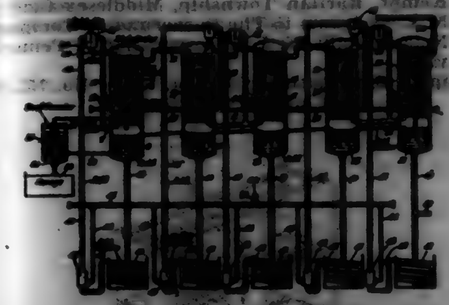
1. In an adjustable device for holding a lamp in extended position above a pump housing an upwardly opening receptacle having a right angled annular shoulder for engaging the upper portion of a pump housing, said receptacle providing mounted means for a light globe or the like; a plurality of curved spaced apart metal bars having their lower ends connected to said receptacle, one of said bars being removably mounted, a cylindrical member connected to the upper ends of said curved bars; a vertically extending pipe in said cylindrical member, and lamp supporting means removably mounted on the upper end of said pipe.

2,027,576
CIRCUIT CONTROLLER
Homer P. Chandler, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application June 6, 1932, Serial No. 674,981
9 Claims. (Cl. 175—329)

1. The combination with an electric motor having a field winding and an armature, of a circuit controller operable to "off", "starting" and "running" positions adapted to supply electric power to the motor, the said controller having a switch blade movable to each of the said positions and having at least one contact for each position and selectively engageable by the switch blade, means for connecting the armature to a contact in the "running" position, a resistor and means for connecting the armature

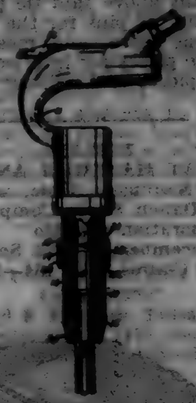
in series with the resistor and to a contact in the "starting" position, a second resistor and means for connecting the said field winding in series with the second resistor to a contact in the "off" position to energize the field winding below normal to warm the winding when the motor is inoperative and the armature deenergized.

2,027,578
AUTOMOBILE SUSPENSION SYSTEM
Henry M. Crane, New York, N. Y., assignor to General Motors Corporation, New York, N. Y., a corporation of Delaware
Application February 14, 1935, Serial No. 6,430
7 Claims. (Cl. 267—18)



1. In a motor vehicle having a frame, a rigid axle between a pair of wheels at one end of the vehicle, and independent suspension of a pair of wheels at the other end of the vehicle, the roll axis being inclined downwards towards that end of the vehicle having the independently suspended wheels, anti-roll stabilizing means between the frame and the independently suspended wheels whereby the control of rolling is borne equally between the front and rear road wheels.

2,027,579
SYSTEM FOR MANUFACTURE OF NITRIC ACID
Frederic W. de Jahn, New York, N. Y., assignor to Frank A. Bower, Bayside, N. Y.
Application February 2, 1929, Serial No. 351,807
11 Claims. (Cl. 23—169)



1. In the manufacture of acid the process of passing acid gases under pressure of a number of atmospheres into a plurality of successive ab-

sorption chambers, circulating acid through each of said absorption chambers, cooling said acid and maintaining the acid in surface con-

tact with said gases under said pressure and accumulating and drawing off the acid from said chambers.

2,027,579
EXHAUST DEFLECTOR
John De Missy, Shaker Heights, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application March 14, 1934, Serial No. 715,429
5 Claims. (Cl. 121—97)

1. In a fluid actuated tool, the combination with a cylinder having an exhaust port, an exhaust controlling device comprising a member secured to said cylinder and movable in exhaust port open or closed position, and an exhaust deflector normally rotatably supported by said member.

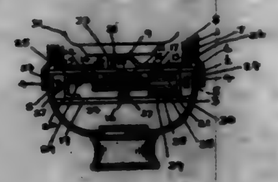
2,027,580
TESTING APPARATUS
Adiel Y. Dodge and Robert J. Stein, South Bend, Ind., assignors, by mesne assignments, to Bendix-Cowdrey Brake Tester, Inc., New York, N. Y., a corporation of Delaware
Application June 19, 1930, Serial No. 462,063
9 Claims. (Cl. 265—25)

7. A brake testing apparatus comprising a frame, a wheel supporting and driving member thereon, a gear train for driving the member, an indicating lever pivoted to the side of the member, a flexible tension member secured to the free end of the lever, a shaft arranged transversely of the frame and connected to the tension member to be rotated thereby, an indicating dial on each end of the shaft, means yieldingly resisting

movement of the lever, and means for damping rotational movements of the lever.

2,027,581
NITROUS PRODUCT AND METHOD OF MAKING THE SAME
George H. Ellis, St. Paul, Minn., assignor to The Insulite Company, Minneapolis, Minn., a corporation of Minnesota
No Drawing. Application February 5, 1934, Serial No. 709,804
4 Claims. (Cl. 92—21)

1. A fibrous mass derived from vegetable source having distributed therethrough an insecticide and fungicide comprising a toxic agent that has been mixed with melted rosin and the rosin having the toxic agent therein reduced to a finely divided state.



2,027,582
AQUEOUS DISPERSION
Jacob Mitchell Fain, Brooklyn, N. Y., assignor, by mesne assignments, to The Patent and Licensing Corporation, New York, N. Y., a corporation of Massachusetts
No Drawing. Original application November 21, 1928, Serial No. 321,645. Divided and this application January 24, 1931, Serial No. 511,165
15 Claims. (Cl. 134—3)

1. An aqueous dispersion of bitumen comprising not substantially less than 50% by weight of bitumen and containing a mixture of soluble soap and a mineral powder colloid as the primary emulsifying agent and not less than 25% of water as the continuous phase, said soap and mineral powder colloid being present in a combined amount less than 1% by weight of the dispersion.

2,027,583
ELECTRIC SWITCH FOR ELECTRIC LAMP SOCKETS
Tomas Fladie and George Henry Elwell, New Haven, Conn., assignors to The Girdel Manufacturing Company, New Haven, Conn., a corporation of Connecticut
Application December 1, 1931, Serial No. 578,278
4 Claims. (Cl. 175—336)

1. A switch element for an electric lamp socket having a casing comprising interlocked

cap and shell members, a washer of insulation held between the interlocked cap and shell, screw-shell and center contacts supported by the shell side of said washer, the switch element being mounted upon the opposite side of said washer and wholly within said cap member, the switch element including two fixed pairs of spaced metal plates, the plates of one pair being conductively connected, one with the

screw-shell contact and the other with a line terminal, and the plates of the other pair being conductively connected, one with the center contact and the other with a second line terminal, and a pivotally operable switch bar of insulation material having a conductive plate upon each of its extremities and adapted to conductively bridge each pair of said fixed plates to close both lines of an electric circuit.

2,027,584

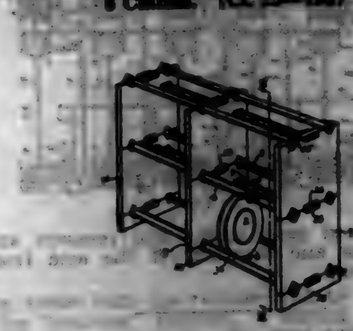
METHOD FOR TREATING MATERIALS CAPABLE OF UNDERGOING DISPERSION IN WATER AND FOR OBTAINING AQUEOUS DISPERSIONS THEREFROM

Leonard G. Gabriel, John F. T. Blett, William L. Peard, and Lawrence W. G. Flemin, London, England, Louis Meunier, Lyon, France, and Johan L. van der Minne, Amsterdam, Netherlands, assignors, by mesne assignments, to The Flintkote Company, New York, N. Y., a corporation of Massachusetts

No Drawing. Application June 15, 1932, Serial No. 617,479. In Great Britain June 18, 1931

12 Claims. (Cl. 134—1)

1. A method of treating crude petroleum oils, oil fractions or distillates, or residues obtained from the distillation or treatment of such oils, such as bitument, pitches, and the like, in order that residues obtained from said oils, oil fractions or distillates, or the said residues themselves when dispersed in water shall yield aqueous dispersions having relatively higher viscosities than could be obtained with the untreated residues when dispersed under otherwise similar conditions, which consists in combining with said materials substances which are water-soluble, and in quantities sufficiently low to be capable, when dispersion of the residues in water is effected, of producing within the dispersed particles of said residues, osmotic pressures which are initially greater than those exhibited by the continuous phase, thereby causing an absorption of water from the continuous phase into the dispersed phase, such combination with small quantities of said substances being so effected that when said residues are finally dispersed in water, the particles of the substances in the dispersed phase of the residues are substantially smaller in size than the size of the said dispersed particles themselves, and dispersing the thus treated residue in water.



2,027,585

KILN SETTER FOR BEARING OF TABLEWARE

Charles F. Geiger, Metuchen, and William G. Kempf, Raritan Township, Middlesex County, N. J., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania

Application November 8, 1934, Serial No. 752,126

6 Claims. (Cl. 25—153)

1. A setter unit forming a skeleton structure for the rearing of ceramic ware in glost firing, said unit comprising two vertically disposed walls, two tie pieces extending between said walls and carrying projecting edges for supporting ceramic ware, a third member extending between said walls above said tie pieces and carrying a plurality of pins for the lateral support of said ceramic ware, and means on one or more of the tie pieces for interlocking said walls with said tie pieces and holding the setter unit together.

2,027,586

DECORATIVE MATERIAL AND ARTICLE

Fred George, Sandusky, Ohio, assignor to The Hinde and Dauch Paper Company, Sandusky, Ohio, a corporation of Ohio

Application December 18, 1933, Serial No. 703,038

11 Claims. (Cl. 154—46)

12. As a new article of manufacture, a composite board consisting of a corrugated inner sheet, a crepe sheet secured to the peaks at one side of the corrugated sheet and having crinkles extending parallel to the corrugations to form surplus material in said crepe sheet to provide for difference in curvature in said sheets upon curving thereof in the longitudinal direction of the corrugations, and a plane sheet fixed to the peaks at the opposite side of said corrugated sheet for fixedly spacing said corrugations and preventing stretching of said corrugated sheet in a direction transversely of said corrugations when the sheets are curved.

2,027,587

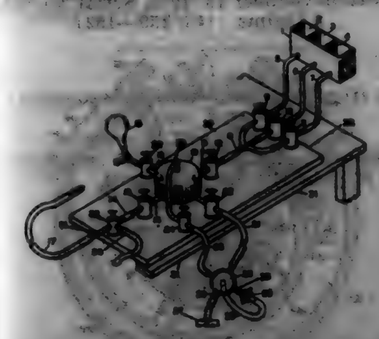
CURTAIN FIXTURE

William S. Hesson, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a corporation of Illinois

Application January 14, 1935, Serial No. 1,661

2 Claims. (Cl. 156—26)

1. In shade construction having a shade and a vertically disposed guide at one side thereof containing a channel with a constricted opening; a horizontally extending rod at the lower edge of the shade, a narrow bracket at one end of the rod projecting through the constricted opening into the channel in the guide, and a strip of slightly flexible material which is wider than the bracket and the opening in the channel and is attached to the bracket inside of the channel in a position extending longitudinally of the latter, said strip substantially filling the channel and extending a considerable distance above and below the upper and lower edges of the bracket whereby to provide in effect long flexible tips on the bracket within the channel for frictional coaction with the walls of the channel upon the bracket being moved by the rod into an out-of-normal position.



2,027,588

APPARATUS FOR TREATING THE LARGE INTESTINE

Edward F. Hannah, Tulsa, Okla.

Application September 5, 1933, Serial No. 688,117

11 Claims. (Cl. 128—227)

1. In an apparatus used for treating the large intestine a central by-pass control chamber, a gas dome therein wherein gas may be trapped, a valve controlled opening in said dome, a valve controlled inlet and outlet in said chamber to a cecum tube.

2,027,589

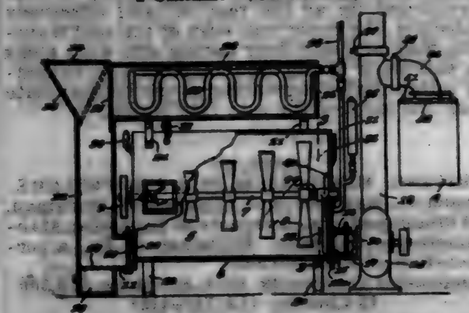
POINTER TYPE SPEEDOMETER

Ralph O. Heigsby, Flint, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application September 17, 1928, Serial No. 306,249

2 Claims. (Cl. 244—12)

1. In a measuring instrument, a main frame, a magnet supported by said frame, a supplementary frame, a thermostatic compensator adapted to be received between the poles of said magnet and secured to said second frame, means to secure said second frame to said first frame in a predetermined position whereby said compensator locates said magnet in a predetermined position on said main frame.



2,027,590

FEATHER CLEANING AND STERILIZING MACHINE

Henry Hirsch, Jersey City, N. J.

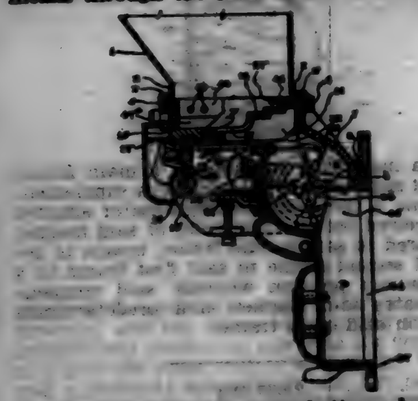
Application May 13, 1935, Serial No. 21,263

4 Claims. (Cl. 34—44)

1. A machine of the class described comprising a treating chamber having an inlet and an outlet for feathers, rotatable beaters mounted within said chamber, a feather-receiving chute leading to said inlet, a heating chest having one end open to the atmosphere, a shutter interposed between said chest and said chute and adapted to be operated to close said chute at its upper end and place said chest in communication with said treating chamber, and an exhaust fan having its intake end connected to the outlet of said chamber and adapted to draw heated air from said heating chest through said chamber and to draw cool air through said chamber when said shutter is closed.

2,027,591

MECHANICAL STOKER



Jerome A. Hoffman, Detroit, Mich., assignor to Hoffman Combustion Engineering Company, Detroit, Mich., a corporation of Michigan

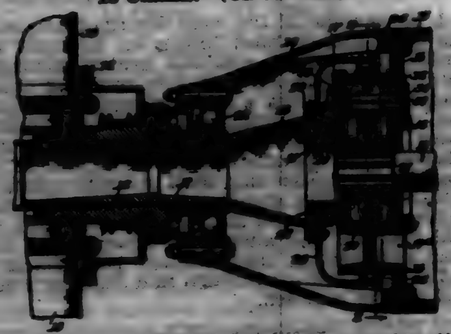
Application May 23, 1934, Serial No. 726,185

4 Claims. (Cl. 110—108)

1. A mechanical stoker having a feed chamber, side and end walls for said chamber, a

transverse wall intermediate the ends of the chamber and spaced from the rear end wall to form therewith a feed throat through which the chamber discharges, said transverse wall and the lower forward portions of the side walls having flanges in the same horizontal plane with one another and cooperating to form a skeleton base for the chamber, reciprocating feed means in said chamber, means for delivering to a furnace the fuel discharged by said reciprocating feed means through the feed throat and a liner for

said feed chamber having a bottom plate seated on the said cooperating flanges of the side walls and transverse wall and forming a supporting surface therefor for the reciprocating feed means, said liner bottom plate having a rear downturned lip at the rear of, and effectively protecting, the upper rear edge of the said transverse wall, and said liner having side walls along the side walls of the feed chamber and extending substantially rearwardly of the bottom plate along the sides of the said feed throat.



2,027,592

DRIVING MECHANISM FOR PROPELLERS

Samuel K. Hoffman and Clarence H. Wiegman, Williamsport, Pa., assignors to Lycoming Manufacturing Company, Williamsport, Pa., a corporation of Pennsylvania

Application October 29, 1934, Serial No. 750,569

15 Claims. (Cl. 74—412)

1. In transmission gearing, the combination of a drive shaft, a driven shaft, and mechanism for driving the driven shaft from the drive shaft comprising a pair of toothed gears, a plurality of intermediate toothed gears, each having teeth meshing with the teeth of both of said pair of gears, independently rotatable eccentrically mounted bearings on which the intermediate gears are respectively journaled, and means for rotatably, independently and rotatably positioning the bearings to permit angular deflection of the intermediate gears responsively to variations in the tooth loads thereon, the equalizing the tooth loads on the intermediate gears.

2,027,593

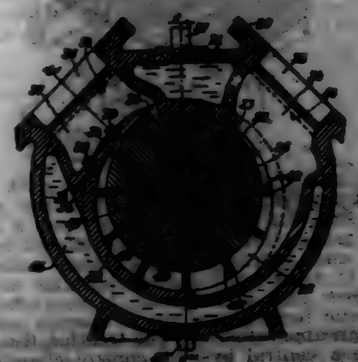
ELECTRIC TRANSFORMER

Charles H. Howard and Carl D. Miller, Detroit, Mich.

Application April 22, 1933, Serial No. 667,340

3 Claims. (Cl. 171—119)

1. A transformer of the class described comprising; a core having a passage formed therethrough; primary windings mounted on said core; secondary windings mounted on said core in spaced relation to said primary windings, said core having its passage formed therethrough between said primary and secondary windings; a magnetic regulating bridge insertable into said passage, for varying the voltage in the secondary windings through a by-passing of a portion of the flux set up by said primary windings; a plate engaging one face of said core and projecting across the passage therein; a yoke engaging the other face of said core and bridging said passage; guide bolts projecting through said passage and clamping said core between said plate and said yoke, said bolts serving as guides for said bridge upon its movement inwardly and outwardly of said passage; and threadable means projecting through said yoke, and adapted upon rotation for effecting movement of said bridge inwardly and outwardly of said passage.



2,027,594

ROTARY COMPRESSOR

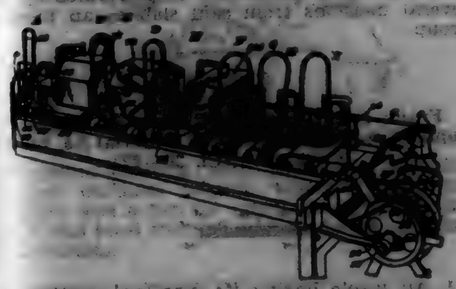
Leslie R. Hoff, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey

Application October 19, 1932, Serial No. 638,112

3 Claims. (Cl. 230—152)

1. In a rotary piston machine the combination with a cylindrical casing having an inlet and an outlet opening, of a rotary piston eccentrically

arranged within the casing, and of loose blades carried by and circumferentially spaced apart on the rotary piston, for outward and inward movement, the circumferential distances between adjacent blades being not all equal.



2,027,595

METHOD AND MACHINE FOR TESTING BLADES

Max Ruthol, Arlington, and Louis H. Young, Auburndale, Mass., assignors to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware

Application March 19, 1931, Serial No. 523,019

43 Claims. (Cl. 265—71)

1. That improvement in methods of detecting variations in the sharpness of blade edges which consists in directing a beam of light successively against the edges of a series of blades, and measuring variations in the intensity of the light reflected from successive edges.

13. In a machine of the character described, the combination of means for moving the edge of a blade through a beam of light, and means for measuring changes in the intensity of the light reflected from successive portions of said edge.

43. In a machine of the character described, the combination of a conveyor, mechanism for automatically placing razor blades one at a time on said conveyor with their edges in exposed position, means for performing a testing operation on the blades while their edges are thus located by said conveyor and for automatically indicating an appropriate response, and power driven mechanism for subsequently sorting the blades automatically controlled in accordance with the location of their edges as indicated by said testing operation.

2,027,596

FOOD PRODUCT AND METHOD OF MAKING THE SAME

Arthur V. Kurt, Chicago, Ill.

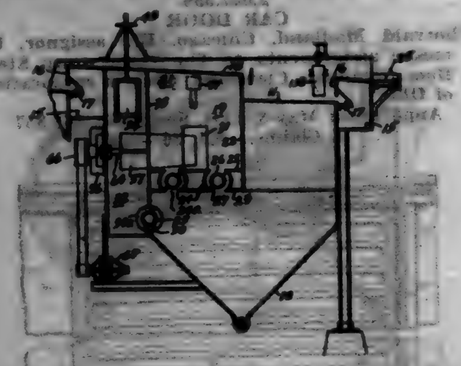
Application May 2, 1933, Serial No. 669,596

Renewed June 1, 1935

9 Claims. (Cl. 99—11)

1. A food product comprising a hollow shell formed from a vegetable such as a potato and French fried by exposure of both its inner and outer surfaces to the cooking action of hot grease, and a filler of plastic food in said shell.

3. The method of making a food product which consists in forming a one-piece elongated shell from a vegetable such as a potato, supporting said shell against deformation while cooking the same in hot grease, and introducing a plastic filler material into said shell after cooking.



2,027,597

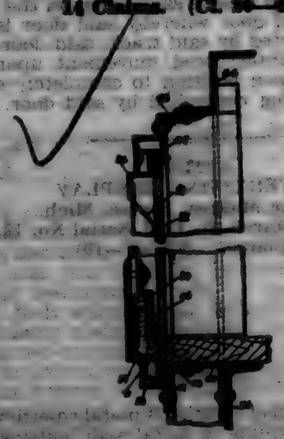
PULSATING JIG

Martin J. Lide, Birmingham, Ala.

Application September 19, 1932, Serial No. 633,531

27 Claims. (Cl. 209—455)

7. In a jig, a hutch, a screen over the hutch, means for effecting intermittent upward pulsations of water through the screen, a suction tank alongside the hutch, means for varying the level of water in the suction tank above its connection with the hutch, and valve means for intermittently connecting the suction tank to the hutch between the upward pulsations of water through the screen.

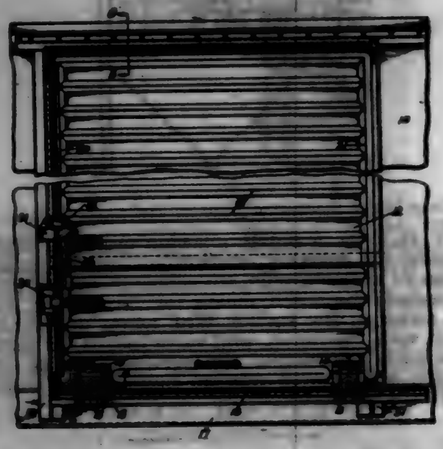


2,027,598

CAR DOOR

Carl Lois, Hammond, Ind., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio

Application April 19, 1934, Serial No. 721,255



14 Claims. (Cl. 20—69)

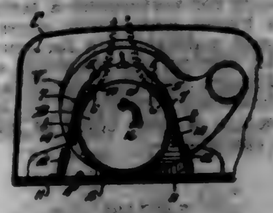
1. Means for providing a seal between a side member and a door member movable relative to said side member, said means comprising a flexible tubular sealing strip disposed upon one

of said members and a plurality of fastening elements for securing said sealing strip thereto, each of said elements comprising oppositely extending flanges, one of said flanges being positioned upon the inside of said tubular sealing strip and the other of said flanges upon the outside thereof, and means for securing said elements to said one member, the other of said members engaging said sealing strip for the purpose set forth.

2,027,589
CAR DOOR
Thorvald Madland, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application May 8, 1933, Serial No. 669,857
16 Claims. (Cl. 20—22)

1. In combination, a door having the normal width corresponding to the door opening controlled by said door, a track, spaced rollers secured to said door within and adjacent the vertical edges thereof adapted to support said door for antifrictional movement upon said track, spaced apertures or indentures provided in said track adapted to receive said rollers in the closed position of said door whereby said door is frictionally supported by said track, said door being capable of uninterrupted movement upon said track to full open position to completely expose the door opening controlled by said door.

2,027,590
ADVERTISING DISPLAY
George Makres, Keene, Mich.
Application March 27, 1935, Serial No. 13,189
2 Claims. (Cl. 41—10)

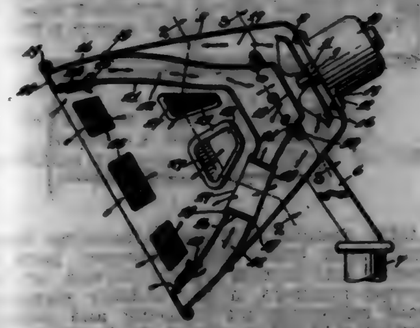


2. The method of forming a metal rosette which consists in providing a metal slab, cutting said slab to provide a comparatively long shallow gouge-like incision, consecutively providing said slab with a plurality of similar incisions each longer than the one preceding it and each underlapping the one preceding it with all of said incisions extending in the same general direction, bending the chips formed by said incisions into an arcuate form whereby each chip partially envelops the chips preceding, cutting said slab to form a second long shallow gouge-like incision extending in a direction opposite to said first named incisions and terminating at a point slightly spaced from the terminal of said first named incision, consecutively providing said slab with a plurality of incisions underlapping said second incision with each incision longer than the one preceding and each incision terminating at points spaced from the terminal points of the other incisions, bending the chips formed by said last named incisions whereby each chip is caused to partially envelop the one preceding it, and finally severing the several chips formed by the several incisions from said slab as an integral group.

2,027,591
INSOLE
Frank E. Mann, Preston, Ontario, Canada
Application September 29, 1934, Serial No. 744,185
2 Claims. (Cl. 36—32)

1. An insole having its marginal portion reduced at its lower surface to provide a flange of reduced thickness, said flange having its outer edge bent downwardly perpendicular to the remainder thereof to provide a sewing lip and a groove within which the sewing lip is adapted to be disposed.

2,027,592
VACUUM SWEEPER
Maurice L. Marotte, Carlisle, Pa., assignor of one-fourth to Arnold Bamberger and one-fourth to F. Lourene Woods, both of Carlisle, Pa.
Application October 1, 1935, Serial No. 43,696
5 Claims. (Cl. 15—15)



1. In combination with a vacuum sweeper, handle members pivotally connected with the upper portions and at the opposite sides thereof, said handle members having bars closely approaching one another when said handle members are in their raised position, said handle members when in their lowered position closely conforming to the sweeper.

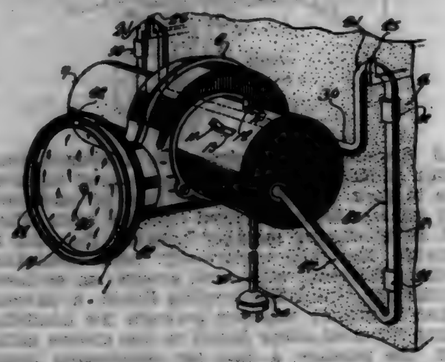
2,027,593
DRYING APPARATUS
Wendell L. Martin, Cleveland, Ohio, assignor to The Martin Brothers Electric Company, Cleveland, Ohio, a corporation of Ohio
Application July 1, 1933, Serial No. 678,151
9 Claims. (Cl. 34—24)

9. A hair drying apparatus of the character described comprising an outer housing, an inner

hood formed to receive the portion of the head of a patron to be dried, a shell member disposed intermediate said housing and hood to form inner and outer chambers between the hood and housing, said hood having openings through its walls communicating directly with the inner chamber

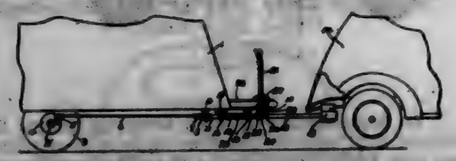
and communicating with the outer chamber through conduits passing through the inner chamber and a fan for circulating air into and out of said hood through said chambers, openings and conduits.

2,027,594
TROLLEY EAR
Samuel S. Matthes, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application September 13, 1933, Serial No. 689,274
7 Claims. (Cl. 191—43)



1. A channel member for a trolley wire ear comprising an elongated body formed of sheet metal and having spaced lips connected by a bight forming a groove, the bight being substantially flat along portions of the body and tapered circular openings extending through the flat bights and being larger on the groove side of the channel.

2,027,595
PORTABLE ELECTRIC DRIER
Alvin C. McCord, Chicago, Ill., and Guy L. Tinkham, Detroit, Mich., assignors, by mesne assignments, to McCord Radiator & Mfg. Co., Detroit, Mich., a corporation of Maine
Application January 20, 1932, Serial No. 587,652
8 Claims. (Cl. 34—24)

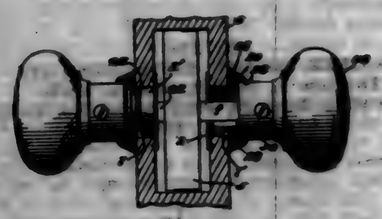


1. A portable drier comprising an elongated casing having end portions and an intermediate portion, a rotary blower and a motor located in the intermediate and one of the end portions of the casing, respectively, said motor being connected with the blower for rotating the same, a discharge nozzle for the blower carried by the intermediate portion of the casing and projecting outwardly therefrom in transverse relation to and at one side of the axis of rotation of the blower, and a support for the drier having a base portion and a pair of arms at the opposite ends of the base portion and extending outwardly from one side thereof, said base portion being substantially as long as the drier casing whereby the arms may span the drier casing over the ends of the same, said arms having pivotal connection with the drier casing on an axis substantially parallel to the axis of rotation of the blower and being substantially equal in length to dispose the base portion in parallel relation to the drier casing.

6. A portable electric drier comprising a casing, a motor-driven blower housed within the casing with the axes thereof aligned, a blower discharge nozzle carried by the casing and projecting laterally therefrom transversely of and at one side of the axis of rotation of the motor-

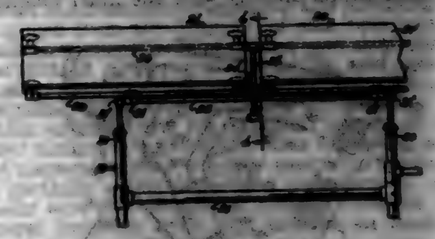
blower unit, a support for the drier pivotally carried by the casing and including a base arranged to be disposed in either a vertical or a horizontal plane to support the drier with the discharge nozzle in horizontal position, the pivotal connection between the support and casing being disposed on an axis substantially parallel to and eccentric of the horizontal axis of the casing whereby a greater clearance between the plane of the support and the casing is provided when the base is in a plane parallel to the nozzle than when it is vertical thereto.

2,027,596
TRAILER BRAKE CONSTRUCTION
Thurlow E. McFall, Sparta, Mich.
Application June 28, 1935, Serial No. 28,792
4 Claims. (Cl. 188—112)



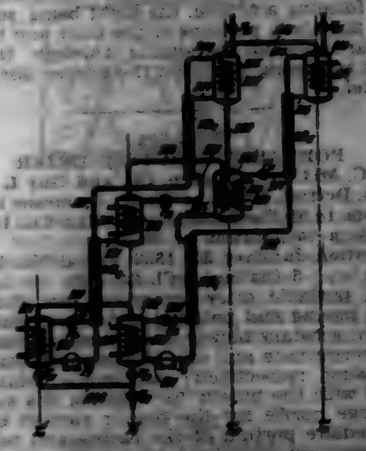
1. In combination, a trailer body, an axle extending underneath the same, wheels on the axle, brakes associated with said wheels, spaced apart front and rear brackets connected to and extending downwardly from the underside of said trailer body adjacent the forward end thereof, a rod slidably mounted upon said brackets, a collar on the rod engaging against the rear side of the front bracket, a coiled compression spring around the rod between said collar and the front side of the rear bracket, means connecting the rear end of the rod with said brakes whereby on rearward movement of the rod the brakes are operated to check rotation of the wheels or to hold the same against rotation, manually operable means for setting said brakes said manually operable means also being movable to prevent the brakes from operating.

2,027,697
TUBE WELDING MACHINE
Daniel C. McGuire, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 12, 1930, Serial No. 482,582
15 Claims. (Cl. 219—8)



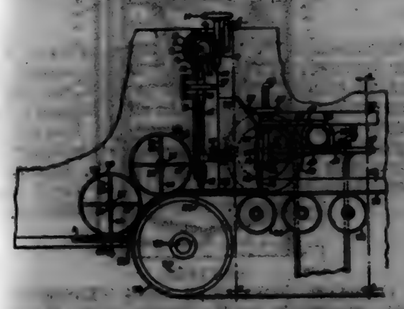
15. A welding head comprising in combination, a pair of electrode rolls rigidly secured together face to face, a groove in the face of each roll, said grooves being disposed opposite each other, and an insulating member between the rolls to separate the rolls electrically, said insulating member forming, with each groove, an enclosed conduit for circulating cooling liquid, a passage in the insulating member between the conduits, a duct for conducting liquid to one groove adjacent the passage, a duct for conducting liquid from the other groove adjacent said passage, and a dam in each groove between the passage and the duct for directing cooling liquid along substantially the entire length of the groove.

2,027,696
KNOB ROSE AND SECURING MEANS
Edward A. Moller, Baltimore, Md.
Application May 31, 1934, Serial No. 728,421
2 Claims. (Cl. 292—357)



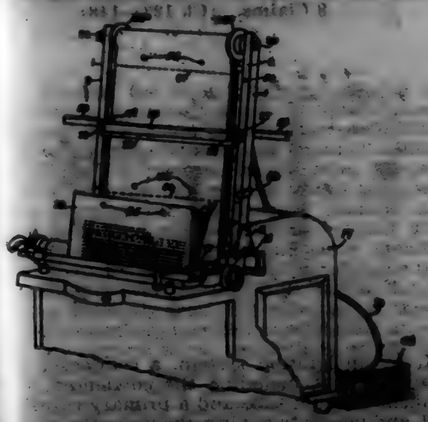
1. In combination, a rose, securing means for holding said rose in position upon a door panel, said rose having an opening therethrough for the passage of the said securing means, said rose provided with a pair of integral continuous shoulders within said opening, the outer shoulder forming a bearing for a knob, the inner shoulder forming a supporting member for the securing means, the securing means consisting of a relatively large hollow threaded female member extending outwardly through a mortise within the door panel and a relatively large hollow threaded male member threadedly receivable within said female member, the male member having about its outer portion a continuous flange member for engaging the shoulder within said rose, the said flange and male member being less in diameter than the shoulder member and opening respectively of the rose for the purpose of laterally adjusting the rose relative to the securing means.

2,027,698
FOLDING TABLE
Marville R. Nelson, Malta, Mont.
Application March 25, 1935, Serial No. 13,945
1 Claim. (Cl. 211—36)



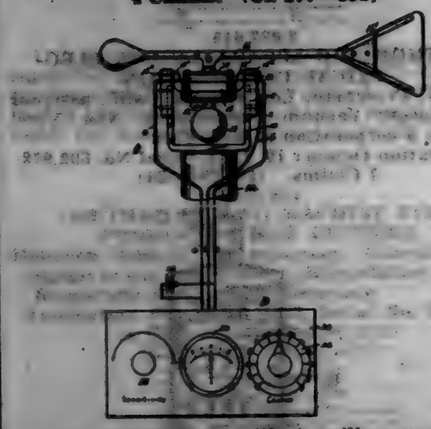
A table comprising a stand including longitudinally and transversely arranged pairs of members, anti-friction rollers carried by the transverse members, a bar slidably supported by said rollers, means hingedly and slidably connecting said bar to one of the longitudinally extending members, a transversely arranged arm secured at one end to said bar, an anti-friction roller carried by the arm and traveling on the other longitudinally extending member, a table top including elongated sections arranged in endwise relation and secured to said bar and connected to each other thereby to prevent said sections from having relative movement, and a curved arm secured to said table top and adjustably and slidably secured to the first-named arm.

2,027,610
SYSTEM FOR THE CONVERSION OF HEAT
Kurt V. Neumann, Berlin-Siemensstadt, and Edmund Altenkirch, Neuenhagen, near Berlin, Germany, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a corporation of Germany
Application December 16, 1933, Serial No. 702,819
In Germany December 21, 1932
6 Claims. (Cl. 62—119)



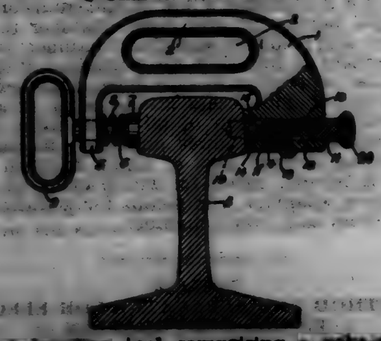
4. In a system for the conversion of heat in which at least four quantities of heat are totally supplied or carried off at different temperatures, a continuously operating absorption apparatus comprising at least four main parts, i. e., at least two operating vapor developing parts and two parts in which operating vapor is converted into another state of aggregation, at least four outer heat reservoirs in which different temperatures prevail, said heat reservoirs comprising heat sources and heat consuming devices, and heat exchange means between said main parts of the heat converter, on the one hand, and said heat reservoirs, on the other hand, at least one of said heat consuming devices serving to supply heat to a system combined with said heat converter.

2,027,611
PAPER MAKING MACHINE
Nicholas J. Nilo, Munising, Mich.
Application January 25, 1934, Serial No. 708,196
26 Claims. (Cl. 92—44)



1. In a method of paper manufacture, drawing a wire along one side of a body of paper stock upwardly and horizontally to distribute the stock thereon, agitating the stock to a plurality of zones while it is being deposited upon the wire, and thereafter regulating the depth of distribution of the stock and draining the water from the stock.

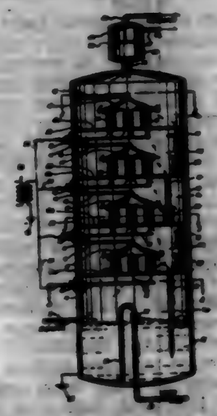
2,027,613
METHOD AND APPARATUS FOR HANDLING MULTIPLE PAPER SHEETS
William C. Pfeiffer, Dayton, Ohio, assignor to The Ezzy Register Company, Dayton, Ohio, a corporation of Ohio
Application May 8, 1933, Serial No. 669,676
18 Claims. (Cl. 197—126)



1. In combination with a typewriter having a platen, a frame attached at one end to the typewriter, a roller on the other end of the frame, said roller cooperating with the platen to support and feed a plurality of superimposed strips of paper to the typewriter, said strips first passing over the roller and then about the platen, and means on the frame to hold the strips in alignment as they approach the roller.

2,027,613
WIND ANGLE INDICATOR
Albert E. Pierce, Jr., New Bedford, Mass.
Application April 14, 1933, Serial No. 666,097
4 Claims. (Cl. 177—351)

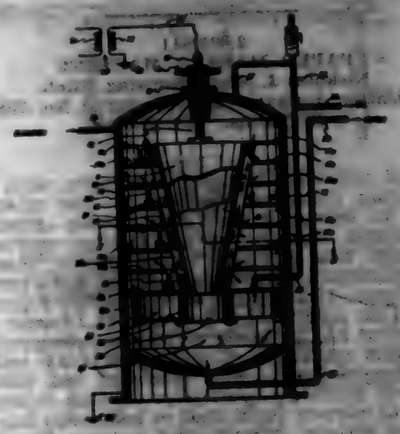
1. In combination with a sailing vessel, two units one positioned on the upper part of the mast and the other unit on the deck, said deck unit including an indicator, a vane movable by the wind, means for transmitting said vane movements to said mast unit, means responsive to said movement in the mast unit for setting up movement in the indicator of said deck unit, and means for adjusting the deck indicator to a reference point, whereby the shift of the wind relative to the direction of the vessel may be observed on deck by the skipper and action may be had to take advantage thereof.



2,027,614
APPARATUS FOR BONDING RAILS
Pliny P. Pipes, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application April 17, 1934, Serial No. 721,063
8 Claims. (Cl. 1—47)

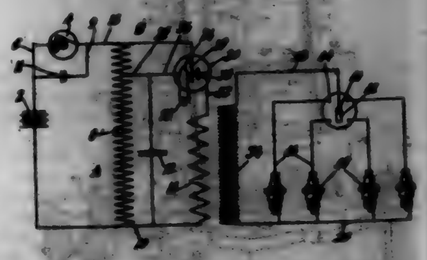
1. A bonding tool comprising a yoke-shaped frame to receive the head of a rail between its spaced arms, one arm having a slidably mounted holding member to engage one side face of the rail head, a spring urging the holding member to its advanced position, the other arm of the frame having a through passage with one opening opposite the other side face of the rail head,

the passage at the rail end arranged to receive and fit the head of the bond, a sliding drive member mounted in the passage and one end projecting therefrom and having a counter-sink in the end of the other end of the driving member to receive the end of a pin to be driven into the terminal, the spring advanced holding member holding the tool in position on the rail with the bond head mounted in the said end of said passage.



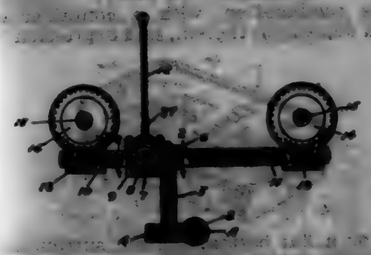
2,027,615
METHOD AND APPARATUS FOR ELECTRICAL DEHYDRATION
Paul W. Prutzman, Los Angeles, Calif., assignor to Sweeny-Vacuum Corporation, New York, N. Y., a corporation of New York
Application October 10, 1933, Serial No. 692,978
7 Claims. (Cl. 204—24)

1. An electrical dehydrator comprising: a shell; a horizontal partition dividing said shell into upper and lower chambers; a grounded electrode in the form of a tube projected from said partition and affording the sole means for the upward passage of liquid from said lower to said upper chamber; a live electrode in the form of an attenuated electrical conductor and means insulated from said shell for axially supporting said live electrode within said grounded electrode; means for maintaining a static electrical field between said electrodes and within said passage; means for introducing a flow of said emulsion into a medial portion of said lower chamber to flow through said field into said upper chamber; means independent of said tube for continuously draining water separating in said upper chamber into said lower chamber, said means being arranged to prevent the return of oil or emulsion from said upper to said lower chamber; means for preventing upward flow of liquid through said draining means; means for withdrawing oil from said upper chamber, and means for withdrawing water from said lower chamber.



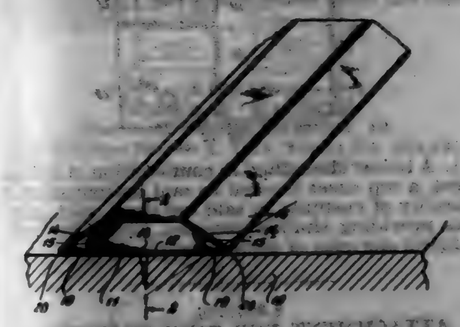
2,027,616
METHOD AND APPARATUS FOR ELECTRICAL DEHYDRATION
Paul W. Prutzman, Los Angeles, Calif., assignor to Sweeny-Vacuum Corporation, New York, N. Y., a corporation of New York
Application October 10, 1933, Serial No. 692,980
11 Claims. (Cl. 204—24)

1. An electrical dehydrator, comprising: a vertically arranged and substantially closed shell; a live electrode in the form of an electrically conductive cone, at least one end of said cone being closed; means insulated from said shell for supporting said cone in substantially the center of said shell with the smaller end of said cone directed downwardly; a grounded electrode in the form of a wire screen surrounding, spaced from and parallel to said live electrode; a plurality of horizontally disposed and vertically



spaced plates projected from the vertical walls of said shell to contact and support said screen, every alternate plate being provided with an opening adjacent said shell wall; means for impressing an electrical potential on said electrodes; means for introducing a flow of emulsion into said shell above said live electrode, and means for withdrawing water and oil from said shell below the lowermost of said plates.

2,027,617
IGNITION CIRCUIT
Donald W. Randolph, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 11, 1935, Serial No. 20,915
8 Claims. (Cl. 123—149)



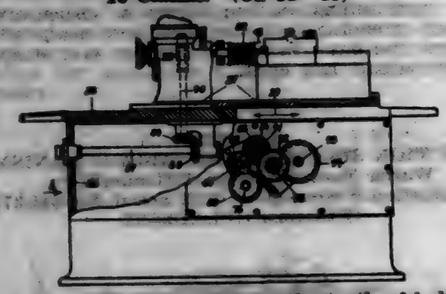
1. In an ignition system, a condenser, a discharge circuit including the condenser, a three element vacuum tube and a primary transformer coil, and means to apply a charge to the condenser said means including an induction coil, a portion of which charges the condenser and the remainder supplies energy for the grid to time the same and control the breakdown of the tube to allow electron flow and the condenser to discharge.

2,027,618
POWER TRANSMISSION
Adolph Rensing, Minneapolis, Minn.
Application April 14, 1933, Serial No. 16,156
16 Claims. (Cl. 74—329)

1. A control mechanism of the character set forth comprising a driving shaft disposed intermediate the ends of two driven shafts arranged at right angles with respect thereto, intermeshing gears on said driving and driven shafts, clutches for respectively connecting and disconnecting the driving and driven shafts and gears, and a single shipper lever movable in a plurality of directions for controlling all of said clutches.

2,027,619
CONDUIT FOR ELECTRIC WIRING
Charles E. Rutherford, West Hartford, Conn., assignor to The Wiremold Company, Hartford, Conn., a corporation of Connecticut
Application April 27, 1935, Serial No. 18,555
1 Claim. (Cl. 247—37)

In a conduit for electric wiring suitable for installation as a floor raceway, a channel member adapted to be fastened to the floor and having upwardly extending flanges, said channel member being adapted to receive electric wires, a cover member of substantially greater width than said channel member for closing said channel and adapted to extend into substantial contact with the floor at its outer edges, said cover member being so shaped as not to present an obstacle to a person walking over the floor and having flanges extending inwardly from the outer edges thereof, the two members together constituting an enclosure for electric wires, projections on the upwardly extending flanges of said channel member cooperating with the inwardly extending flanges on the cover member to hold the cover member in place after it is snapped onto the channel member, the said upwardly extending flanges of said channel member tending to support the upper portion of the cover member whereby additional strength and rigidity are secured.

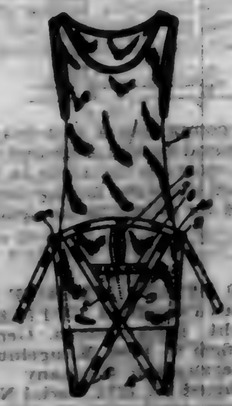


462 O. G.—22

2,027,620
SCOOTER
Elbert E. Schaad, Berkeley, Calif.
Application April 24, 1934, Serial No. 722,113
18 Claims. (Cl. 280—182)

1. A scooter comprising a foot board, a wheel supported plate and a strap anchored to the plate for removably securing the plate to the bottom face of the board the strap having means underneath the board for adjusting the length thereof.

2,027,621
METHOD OF AND MACHINE FOR PRODUCING HOB CUTTERS
Heinrich Schlebi, Hochemgarten, Germany, assignor to the firm W. Ferd. Klingelnberg Söhne, Remscheid-Berghausen, Germany
Application August 20, 1932, Serial No. 629,685
In Germany August 25, 1931
16 Claims. (Cl. 51—45)



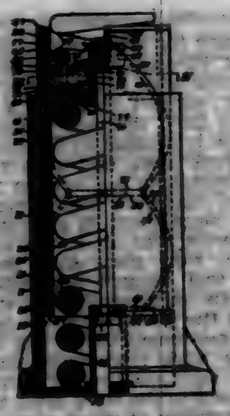
1. A machine for relieving the teeth of helical hobs having threads with concave pitch and root lines, comprising a work slide having a rotatable work support thereon; a tool support having a tool fixed thereon; a bed upon which the work slide is slidable in the direction of the axis of the work piece, and upon which the tool support is slidable in a direction perpendicular to the axis of the work piece; means for turning the work piece about its axis; means for displacing the work slide along the tool in the direction of the work piece axis; means for displacing the tool support perpendicular to the work piece axis for adjusting the working depth of the tool on the work piece; means for imparting relieving movement to the tool in a direction radial to the work piece axis; and means for imparting an additional radial movement to the tool with respect to the work piece and at such a ratio to the velocity at which the work piece is moving along the tool, that the tool follows concave pitch and root lines and generates teeth of varying thickness on the work piece.

2,027,622
SHIRT SUSPENSORY
Orville Stam, Los Angeles, Calif.
Application February 26, 1935, Serial No. 7,415
10 Claims. (Cl. 128—159)

1. A garment comprising a skirt portion of stretchable material and having substantially non-stretchable tape applied thereto to form a substantially triangular design having its apex adjacent the bottom of the skirt and its sides

substantially conforming to the lines of the groin of the wearer and its base extending across the abdomen, a transverse tape across said triangle intermediate the base and apex whereby the base of said triangle forms an abdomen support and

the remainining portion forms a suspensory, straps extending from the apex, and means adjacent the base corners to support said straps intermediate their ends.



1,927,622

FRICTION SHOCK ABSORBING MECHANISM

Walter Merville Austin, Pittsburgh, Pa.

Application November 5, 1932, Serial No. 641,379

17 Claims. (Cl. 213—31)

1. In a friction shock absorbing mechanism, a pair of relatively movable members having engaging surfaces, means for expanding one of said members to press said engaging surfaces together, means for exerting a force to be transmitted to said expanding means, and means between said force exerting means and said expanding means for causing the magnitude of the force applied to said expanding means to be greater than the magnitude of the force exerted by said means for exerting the force and said means for exerting the force opposing relative movement of said pair of members upon the application of load to the friction shock absorbing mechanism.

1,927,624

COMBINED LABEL AND CAR-SPINNER HOLDER

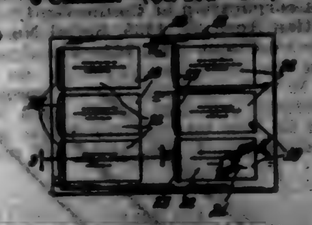
Lloyd W. Bastow, South Portland, Maine

Application August 6, 1924, Serial No. 732,644

2 Claims. (Cl. 40—7)

2. The combination, with a container cover having a depression therein, said depression being

defined by a flat bottom portion surrounded by wall portions rising at right angles thereto, of a card, having indicia impressed thereon, disposed in said depression, said card closely fitting the walls of said depression and frictionally held therein by the engagement of its edges with said walls, and a transversely sheared portion of said card having a diagonal, symmetrically made slit dividing said portion into two ears adapted to be forced outwardly for tool-embracing and holding purposes.



1,927,818

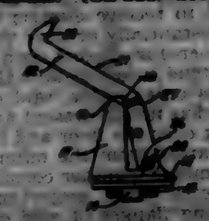
SHEET HOLDER

John Bauer, Chicago, Ill.

Application June 20, 1924, Serial No. 722,234

6 Claims. (Cl. 101—407)

1. A holder including, in combination, a bottom sheet, a top sheet secured to said bottom sheet, a plurality of openings in said top sheet, said openings providing shallower recesses, and a lip overhanging one edge of each recess.



1,927,826

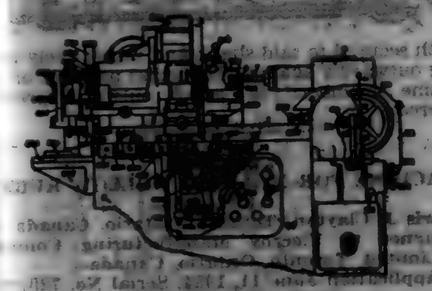
ATTACHMENT FOR TIRE CHANGING MACHINES

Harry J. Bernhard, Pasadena, Calif.

Application December 26, 1924, Serial No. 758,127

4 Claims. (Cl. 144—288)

1. In combination with a tire changing machine having movable gripping blocks thereon, said blocks being characterized as having an upright member and a hook-shaped base lug, disposed oulmost with relation to the spindle, an attachment arm adapted to overhang the upright and to be engaged by the lug and to interlock with said lug at the base thereof.



1,927,827

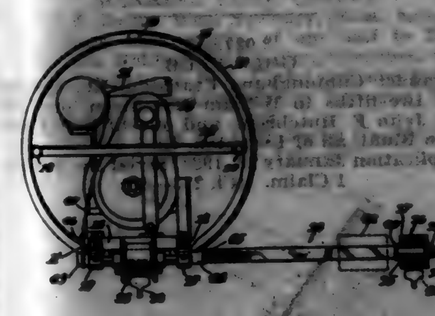
GRINDING MACHINE

Harold L. Head and Alfred F. Bowen, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a corporation of Massachusetts

Application August 4, 1923, Serial No. 656,310

25 Claims. (Cl. 51—34)

1. In apparatus of the class described, a work-supporting structure comprising a rotating drive wheel engaging with the periphery of a work-piece, a supporting member engaging said work-piece, a pressure member resiliently engaging said workpiece for holding said workpiece in engagement with the drive wheel and the support, and a backing plate engaging the workpiece to prevent axial movement thereof in the work-supporting structure, and a plug gage member axially slidable within the backing plate for entry within the bore of the workpiece when the latter reaches a desired size.



1,927,830

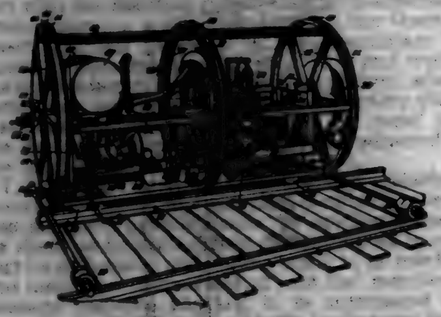
ROADWAY MACHINE

Martin D. Bowen, Savanna, Ill.

Application March 9, 1923, Serial No. 624,231

6 Claims. (Cl. 105—177)

1. A railway machine adapted to travel along a railroad track, the combination of a base frame, front and rear wheels arranged in tandem supporting the frame over one of the track rails, apparatus mounted on the frame with its center of gravity substantially in vertical alinement with said rail, a guide arm projecting from the frame in the direction of the other rail and adapted to ride upon said other rail to steady the machine on the track, said arm being capable of being attached to and quickly removed from either side of the base frame.



1,927,829

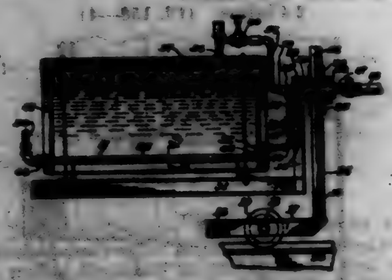
ROADWAY MACHINE

Martin D. Bowen, Savanna, Ill.

Application March 2, 1924, Serial No. 713,874

16 Claims. (Cl. 105—162)

1. In a roadway machine, a main frame comprising side pieces connecting spaced end frames, each having a circular loop and braces connecting the loop with a center bearing, flanged wheels aligned lengthwise to the main frame to bear it on a rail, trunnions journaled in the center bearings, one being hollow, hangers depending from the trunnions, an apparatus bed carried by the hangers, apparatus on the bed, and a cable extending from the apparatus through the hollow trunnions.



1,927,830

ROADWAY MACHINE

Martin D. Bowen, Savanna, Ill.

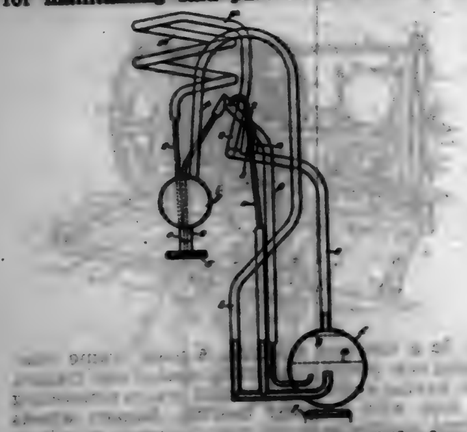
Application April 25, 1924, Serial No. 722,254

6 Claims. (Cl. 184—3)

1. A railway track oiler comprising a wheeled vehicle having a tank for oil and air, means to deliver compressed air to the tank below the surface of the oil, a mixer, valve controlled means connecting the mixer with the tank adjacent to the bottom, other valve controlled means connecting the mixer with the tank adjacent to the top, and a valved delivery nozzle connected to the mixer to receive mixed oil and air therefrom.

1,927,831

REFRIGERATION APPARATUS



Lee S. Chadwick, Shaker Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a corporation of Ohio

Application March 10, 1923, Serial No. 624,275

25 Claims. (Cl. 62—120.5)

8. In refrigeration apparatus of the class set forth including evaporator and generator-absorber sections and incorporating a conduit for returning residue liquid from the evaporator section to the generator-absorber section at the be-

ginning of a heating period, means for maintaining a part of said conduit at a relatively low temperature for a predetermined interval of time after the beginning of each heating period and for maintaining said part at a relatively high

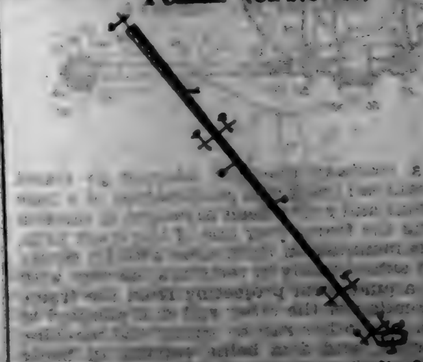
temperature during the remainder of the heating period.

2,027,632
OIL BURNING APPARATUS
Lee S. Chadwick, Shaker Heights Village, Mare Rosck, Cleveland Heights, and John Alger Dahlstrom, Bay Village, Ohio, assignors to Perfection Stove Company, Cleveland, Ohio, a corporation of Ohio
Original application July 27, 1929, Serial No. 381,690. Divided and this application April 1, 1932, Serial No. 603,962
2 Claims. (Cl. 158—4)

1. In a rotary oil burner, the combination of an atomizing cup supported for rotation on a substantially vertical axis and whose lip constitutes its discharge end, means for supplying oil to said cup, means for spinning the cup, and a hearth rim surrounding the cup in spaced relation thereto, said hearth rim flaring upwardly at a slight angle to the vertical and having an inwardly facing circumferential groove, having its center in substantially the plane of the discharge end of the cup, the inner surface of the rim above and immediately below the groove being in a substantially common plane.

2,027,633
ROOT CUTTER FOR SEWER PIPES
George J. Christian, Northfield, Minn.
Application August 14, 1933, Serial No. 685,693
1 Claim. (Cl. 15—104.36)

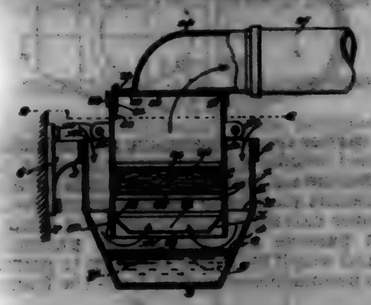
In a root cutter for use in sewer pipes and the like, a shank, a pair of elongated frame members attached to said shank and extending forwardly and outwardly from one end thereof in spaced relation, an arcuate cutter bar secured at two portions thereof to the forward portions of the respective frame members so as to be disposed in substantially concentric relation to the axis of said shank and a pair of resilient elements



both secured to said shank and respectively bearing outwardly against the medial portions of said frame members to exert outward pressure thereon.

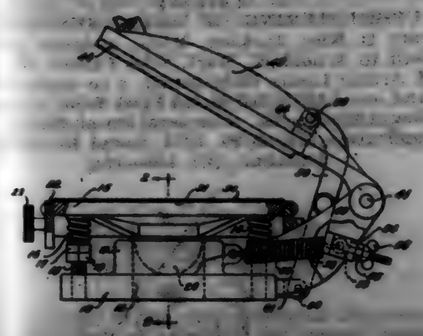
2,027,634
MACHINE FOR MOLDING HOLLOW RUBBER ARTICLES
Lewis J. Clayton, Toronto, Ontario, Canada, assignor to Viceroy Manufacturing Company Limited, Toronto, Ontario, Canada
Application June 11, 1934, Serial No. 730,504
5 Claims. (Cl. 18—6)

1. In a machine for molding hollow rubber articles, the combination with a heat chamber slotted in one side, mold-carrying arms extending through the slot in said heat chamber and conveying the molds therein, and guide means supporting said arms in passage through said heat chamber, of a guide rail spaced above the means for guiding the mold-carrying arms with their operating position in the molds in the heating chamber, and means for optionally shifting said mold-carrying arms to and from the upper guide rail.



2,027,635
GOLF CLUB
Alexander Cunningham, Evanston, Ill., assignor of two-fifths to William Hutchison, one-fifth to John F. Hutchison, and one-fifth to Carlton Blunt, all of Evanston, Ill.
Application January 23, 1931, Serial No. 511,769
1 Claim. (Cl. 273—80)

In a golf club construction, a shaft of substantially round cross section on the front surface



and provided with a groove on the rear surface whereby to increase the air resistance on the back swing, said groove being of a width approximately equal to the maximum width of the shaft.

2,027,636
AIR CLEANER
Robert E. De Bell, Spokane, Wash.
Application April 2, 1935, Serial No. 14,478
9 Claims. (Cl. 183—15)

1. In an air cleaner, an annular housing having a bottom portion adapted to contain an air cleaning liquid, a cylindrical cartridge shell in said housing and of reduced diameter with respect thereto to form therewith an annular air ingress passage leading toward the liquid, the interior of said shell forming a conduit for egressing cleaned air and said shell having a lower air velocity controlling edge, the lower portion of said housing converging and coacting with said edge to increase or decrease the velocity of the air dependent upon the position of said shell, an air cleaning cartridge in said shell for cleaning the air egressing through said conduit, and means for holding said shell in relatively different positions of adjustment with respect to said housing.

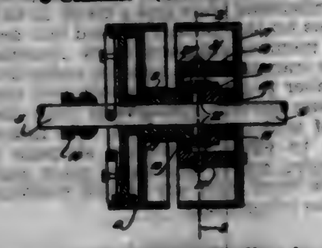
2,027,637
METHOD OF AND APPARATUS FOR MARKING SHOE UPPERS
Charles F. Eaton, West Newbury, Mass., assignor, by mesne assignments, of one-half to North American Holding Corporation, Syracuse, N. Y., a corporation of New York, and one-half to Parshad Holding Corporation, Syracuse, N. Y., a corporation of New York
Application April 16, 1934, Serial No. 720,690
10 Claims. (Cl. 101—397)

1. The method of marking blanks for shoe uppers and the like by means of a pigmented transfer sheet and a marking plate having marking projections thereon delineating the design to be applied to the blank, which comprises interposing the blank between the marking plate and the transfer sheet so that the surface to be marked is in contact with the pigmented surface of the transfer sheet and the opposite surface is in contact with the marking projections on the marking plate, disposing a slip plate beneath the transfer sheet, applying pressure to the assemblage by means of opposed pressure members, and during the application of pressure causing a slight lateral movement between the assembled marking plate, blank and transfer sheet on the one hand and the pressure member and slip plate adjacent to the transfer sheet on the other hand.

7. Marking apparatus comprising relatively movable cooperating pressure members, one of said members having means for holding a transfer sheet on its surface and being adapted to support an embossing plate and a blank to be marked, and means on the surface of said last mentioned pressure member adapted to be interposed between the transfer sheet and the underlying pressure member to provide a smooth and non-yielding slipping surface engageable with the under surface of said transfer sheet, said means being operative to effect a relative slippage between said transfer sheet, embossing plate and blank on the one hand, and one of said pressure members on the other hand.

2,027,638
POWER TAKE-OFF
Fredrick Forsberg, Robert A. Forsberg, and Casper C. Forsberg, Rural Municipality of Dauphin, Manitoba, Canada
Application October 7, 1932, Serial No. 636,668
3 Claims. (Cl. 287—108)

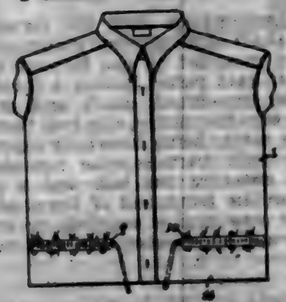
3. The combination with the forward end of the crank shaft of an internal combustion engine, of a pulley mounted on the forward end of the crank shaft, said pulley having a forward cavity surrounding the crank shaft and driving ribs extending into the cavity, the hub thereof to the rear of the cavity being interiorly tapered, a longitudinally split friction cone mounted on the shaft and entering the hub and a nut screw threaded on the front end of the shaft and engaging the cone and a coupling receivable into said cavity and engageable with said ribs.



2,027,639
AUTOMATIC SHAKER SHOVEL
Robert Gibson, New Waterford, Nova Scotia, Canada, assignor of thirty-seven and one-half percent to Joseph Kalbfleisch, New Waterford, Nova Scotia, Canada, and thirty-seven and one-half percent to Peacock Brothers Limited, Montreal, Quebec, Canada
Application July 29, 1932, Serial No. 625,899
In Canada July 31, 1931
8 Claims. (Cl. 198—220)

1. In a device of the class specified the combination of a reciprocating trough section and a

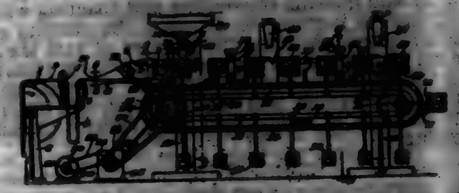
shovel trough section mounted to slide thereon and means to feed the second section in either direction, mounted under the first section, having ropes at the sides of the second section adapted to control its movement.



2,027,643
POWER DEVICE
John J. Hartl, Cedar Rapids, Iowa
Application August 13, 1934, Serial No. 739,631
6 Claims. (Cl. 74—328)

1. A power mechanism including in combination a through shaft, a pulley rotatably mounted on and with reference to the shaft, a clutch for engaging the pulley to the shaft, a sleeve having a bevel gear thereon engaged to the pulley, a second sleeve having an oppositely disposed bevel gear secured to the shaft, a second pulley rotatably mounted on the journals formed by the two sleeves and having a pinion adapted to engage the teeth of the bevel gears, and means for selectively applying a braking action to the pulleys.

2,027,644
SHIRT
Sidney Heymann, Brooklyn, N. Y., assignor to Estelle Heymann, Brooklyn, N. Y.
Application July 17, 1935, Serial No. 31,786
4 Claims. (Cl. 2—106)

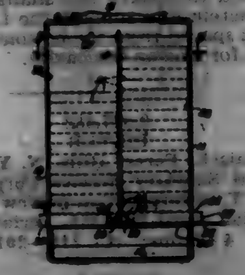


1. A garment of the class described having means for holding it from rising on the wearer, comprising an elastic strap carried by the shirt at the waist portion and located on the inner surface of the shirt, tie strings fastened to the ends of the elastic band for stretching the latter about the waist of the wearer, means for fastening together the flaps of the shirt, one of said means being located below the elastic band whereby the tie strings are concealed, and means securing said elastic band at its intermediate portion to the shirt, the remainder of the band being free.

2,027,645
PHOTOGRAPHIC PLATE AND APPARATUS FOR LOADING THE SAME
John C. Hewitt, Jr., and Vivian Edward Kuster, Long Beach, Calif., assignors to Hewitt-Kuster Company, Long Beach, Calif., a co-partnership
Application February 25, 1935, Serial No. 7,318
11 Claims. (Cl. 95—78)

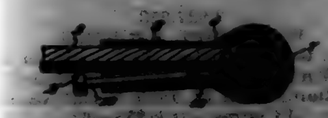
1. A carrier for photographic plates adapted to be carried within a photographic loading device which includes a frame with relation to which a photographic plate may be temporarily associated, a cover carried by the frame and adapted to prevent passage of light to the photographic plate, and which may be withdrawn to permit the plate to become disassociated from the frame.

2,027,646
METHOD OF MANUFACTURE OF CELLOPHANE BAGS
William R. Howard, Washington, D. C., assignor to U. C. T. Corporation, Washington, D. C., a corporation of Delaware
Application December 31, 1934, Serial No. 759,945
4 Claims. (Cl. 226—53)



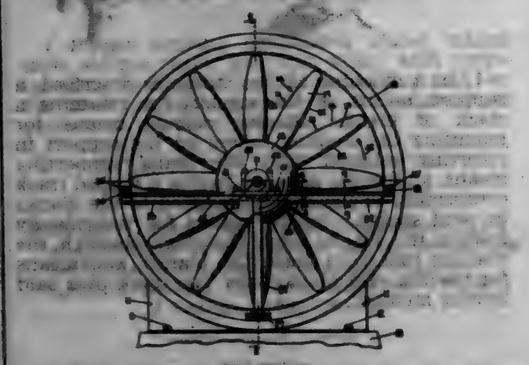
1. A method of packaging dry, loose material such as tea or the like which comprises, discharging a predetermined quantity of tea into a folded piece of cellophane, crimping opposite edges of said folded piece of cellophane including the folded edge thereof, sewing one of said crimped edges, rotating said folded cellophane, crimping the remaining opposite edges and sewing the same.

2,027,644
UPHOLSTERING OF METAL SURFACES
Henry O. Klee, Jackson, Mich., assignor of one-half to Arnold W. Merf, Niles Center, Ill., and J. Arthur Lyons, Chicago, Ill., a co-partnership, and one-half to All Metal Card Table Corporation, Chicago, Ill., a corporation of Illinois
Application March 20, 1933, Serial No. 663,384
1 Claim. (Cl. 155—184)



An upholstered article of the class described comprising a light gage sheet metal surface of relatively high modulus of elasticity, a groove of substantial depth having parallel sides located in said surface, bordering the upholstered area, a relatively thin yet flexible tightly twisted textile cord of substantially circular cross section, an upholstering material covering said area and carried by said cord into said groove, and a hole located in the bottom of said groove through which an end of said cord extends whereby said cord may be tightly and neatly positioned in said groove, the walls of said groove bearing resiliently against said cord and material to frictionally clamp said material in said groove.

2,027,645
DISPENSING AND ADVERTISING CONTAINER
Frank A. Marx, Cincinnati, Ohio, assignor to The Richardson Taylor-Globe Corporation, Cincinnati, Ohio, a corporation of Ohio
Application May 3, 1934, Serial No. 722,741
4 Claims. (Cl. 206—44)

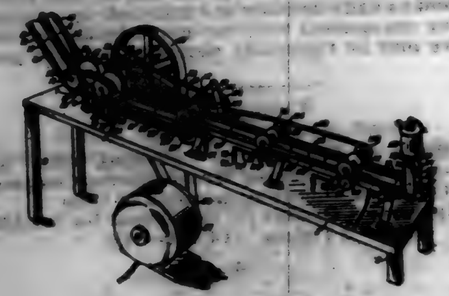


1. A dispensing container comprising a container body, a vertical partition in the body dividing the interior into two compartments each adapted to receive a stack of dispensable articles, the container body adjacent the bottom being provided with a pair of oppositely-disposed dispensing apertures each associated with one of said compartments, a tongue in one of said compartments adjacent the bottom thereof and beneath the stack of articles normally disposed therein, said tongue having one end extending exteriorly of its compartment through the associated dispensing aperture, and a link member hingedly connected with the inner end of said tongue and the lower end of said partition and normally disposed vertically between the lowermost articles of said stacks, said link member upon inward or outward movement of said tongue being adapted to project the lowermost dispensable article in one or other of said compartments through the associated dispensing aperture.

2,027,646
BATTERY TERMINAL
Thomas H. McGrath, Detroit, Mich.
Application January 15, 1934, Serial No. 706,597
1 Claim. (Cl. 173—329)

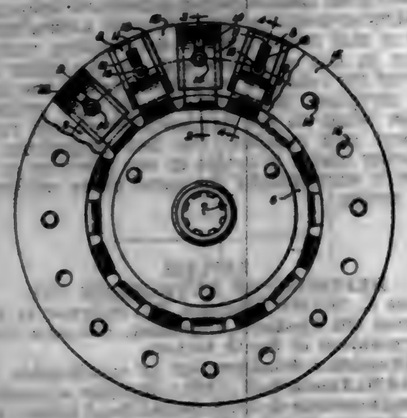
1. A device of the class described including an elongated body of relatively soft metal having a head at one end formed with an opening adapted to receive a battery post, a ring of relatively hard metal embedded in the head concentrically thereof and reinforcing the head, said body being formed with a longitudinally extending socket to receive a battery cable, and a bolt extending longitudinally through the body at one side of the socket and through the ring and head into the post receiving opening of the head, said bolt having a portion projecting into the socket for clamping engagement with a cable to hold the cable in the socket, means being provided to adjustably mount the bolt for longitudinal movement to shift its inner end into and out of abutting engagement with the post whereby the device may be removably clamped about the post.

2,027,647
VENTILATOR
William J. Montgomery, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a corporation of Ohio
Application October 17, 1931, Serial No. 569,484
3 Claims. (Cl. 230—120)



1. In a ventilator, the combination with a casing, of a rotary support having flat faces on opposite sides thereof, aerofoil propeller blades each having a relatively thick leading edge and a relatively thin trailing edge and each having spiraled surfaces on opposite sides thereof to provide a graduation in the pitch angles radially outward on such opposite sides, and means for detachably securing said propeller blades on one side of said rotary support for rotation with the latter in one direction and on the other side thereof for rotation with the latter in the opposite direction, the mounting of said propeller blades being on the flat surfaces of said rotary support and enabling the fan comprising the propeller blades to rotate in one direction or the other in substantially the same plane relative to said casing.

2,027,648
REFINING OF PETROLEUM OIL
Jacque C. Morrell, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
No Drawing. Continuation of application No. 164,131, January 27, 1927. Division of application December 9, 1926, Serial No. 74,393. This application October 21, 1929, Serial No. 401,911
2 Claims. (Cl. 196—33)

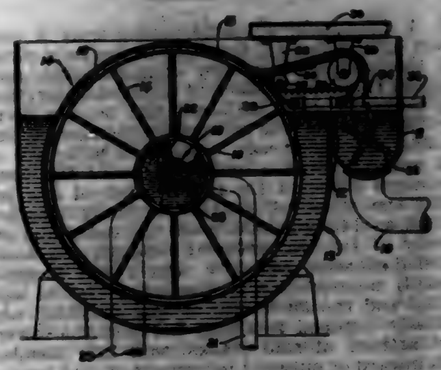


1. Steps in the process of refining a lighter gravity liquid product produced from the cracking of petroleum oil, comprising subjecting the oil first to the action of a mixture of nitric and acetic acids, and then to the action of concentrated sulphuric acid, to remove or convert objectionable compounds present in said lighter gravity liquid product.

2,027,649
MACHINE FOR SHAPING CARDBOARD ARTICLES
Edwin H. Newton, Kansas City, Mo., assignor to National Paper Box Co., Kansas City, Mo., a corporation of Missouri
Application September 18, 1933, Serial No. 689,943
12 Claims. (Cl. 93—1)

1. In a machine of the character described, a support, means on the support for retaining a stack of blanks, shaping rollers, means for mounting the shaping rollers on the support in receiving relation with the blank supporting means, an ironing member having a shaped track conforming to the shape imparted to the blanks by said shaping rollers, means for individually feeding the blanks from the stack through the shaping rollers to shape the blanks, and means for moving said blanks over the track over said ironing member.

2,027,650
CLUTCH PLATE
Harold Nutt, Chicago, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application April 25, 1935, Serial No. 18,168
5 Claims. (Cl. 192—107)

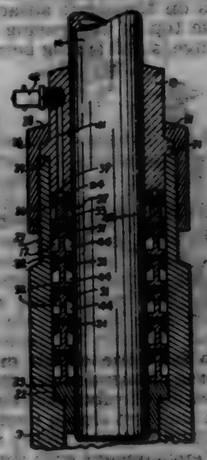


1. A clutch plate comprising a disc, tongues at the periphery of the disc alternately and oppositely bent from the plane thereof, separate cushion members mounted on opposite sides of adjacent tongues, and friction facings arranged on opposite sides of the disc and engaging the tongues and said cushion members alternately to cushion both of the facings during engagement of the clutch.

2,027,651
MOLD FOR THE PRODUCTION OF RUBBER HEELS
Dominic Penardi, Stoughton, Mass., assignor to Panther-Panco Rubber Co. Inc., Chelsea, Mass., a corporation of Massachusetts
Application July 11, 1934, Serial No. 734,525
3 Claims. (Cl. 18—42)

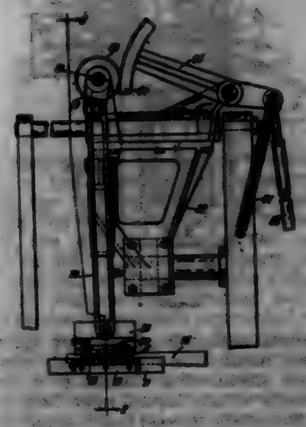
1. A mold for rubber heels comprising a cavity portion, a plurality of hollow mold pins projecting from the bottom of the cavity portion and designed to receive the shank of a headed fastener therein and support the fastener at the headed end spaced from the bottom of the cavity, and means for closing the cavity.

2,027,652
FILTER
William Raisch, Forest Hills, N. Y., assignor to Municipal Sanitary Service Corporation, New York, N. Y., a corporation of New York
Application April 25, 1935, Serial No. 18,067
4 Claims. (Cl. 210—391)



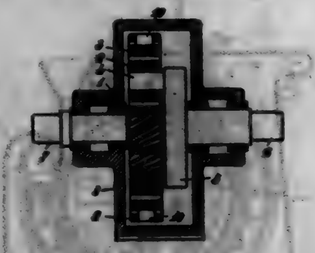
1. The method of removing cake from the drum of a rotary filter which comprises throwing a liquid spray on the peripheral surface of the drum in a direction opposite to the direction of movement of said surface and removing cake in a continuous sheet from said peripheral surface by a rearward and outward brushing action on said peripheral surface in advance of the spraying action.

2,027,653
WASH PIPE PACKING
Richard T. Reyo, Houston, Tex., assignor to Grey Tool Company, a corporation
Application March 28, 1935, Serial No. 13,468
4 Claims. (Cl. 285—9)



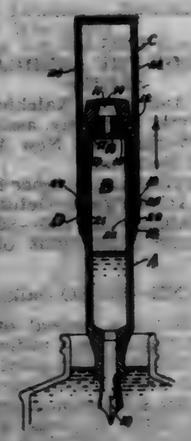
4. A multiple U-packing assembly for sealing between relatively rotating members including a plurality of U-packing rings faced in the direction of the applied pressure, spacers between said U-packing rings, said packing rings and spacers being adapted to rotate with one of said members

a lubricant port formed in the uppermost spacer, and a lubricant passage through the top U-packing and terminating in said port whereby a lubricant may be forced into the packing system at a



point beneath the top U-packing and between the packing assembly and the rotating member with which it seals.

2,027,654
BAG FORMING MACHINE
David Schmidt, Cleveland, Ohio, assignor to The Dobeckmun Company, Cleveland, Ohio, a corporation of Ohio
Application September 4, 1934, Serial No. 742,593
12 Claims. (Cl. 93—35)

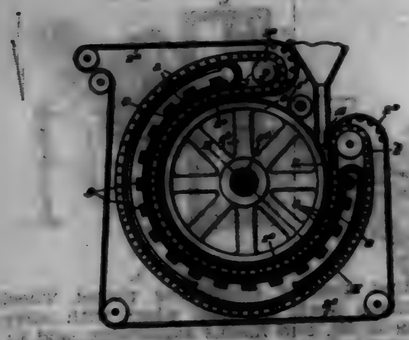


1. The combination in a bag forming machine of means for severing a tubular stock transversely, a cutter operating upon the stock at the rear of the transverse cut, and formed to cut longitudinally and transversely of the stock to form wings on opposite sides of the center line thereof, and movable gripping means adapted to seize the upper panel of the stock and move it rearwardly to form a diamond fold.

2,027,655
PLANET GEARING
Wilhelm Steeckicht, Munich-Solln, Germany
Application June 4, 1932, Serial No. 615,419
In Germany June 12, 1931
2 Claims. (Cl. 74—805)

1. Planet gearing comprising planet wheels with oblique teeth, an orbit wheel with corresponding teeth, and means supporting said orbit wheel in such manner as to enable it to perform a pendulous motion.

2,027,656
FOUNTAIN PEN
William O. Tassie, St. Boniface, Manitoba, Canada, assignor of one-half to James Armstrong Richardson, Winnipeg, Manitoba, Canada
Application May 25, 1934, Serial No. 727,525
5 Claims. (Cl. 120—47)



1. Improvements in fountain pens comprising, in combination with a barrel, reservoir and writing point, means for drawing fluid into said reservoir comprising a capping sleeve provided with orifices capable of being manually sealed, a threaded collar encircling the exterior of said barrel, a packing ring within said collar, a valve cap upon said pen, a float valve within said valve cap, a passageway extending through said valve cap, said passageway permitting communication between the interior and exterior of said valve upon manual operation thereof, said float valve acting to seal the interior orifice of said passageway when the level of the float within the reservoir reaches said valve.

2,027,052

PRESS FOR DEHYDRATING COLLOID MATERIAL

Mathieu van Roggen, Spitsmeet, and Leo Robin, Brussels, Belgium

Application February 16, 1933, Serial No. 657,143
In France February 17, 1932
8 Claims. (Cl. 100—37)

1. In combination in a press for dehydrating colloid material, a pair of cooperating endless members, a backing for one of said endless members, means for pressing the second of said endless members against the first of said endless members, and elastic means interposed between the second of said endless members and said pressure means, said elastic means comprising parallel rails each made of a single continuous rail extending throughout the portion of the press where pressure is exerted.

2,027,053

DYESTUFFS OF THE ANTHRAQUINONE SERIES

Klaus Weinand and Ernst Kalckbrenner, Leverkusen I. G.-Werk, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application October 13, 1933, Serial No. 693,392. In Germany October 31, 1932
3 Claims. (Cl. 260—40)

1. Anthraquinone compounds of the general formula:

A—(NH—R—SO—alk)$_n$

wherein A stands for a radical of the anthraquinone series, R stands for a radical of the benzene series, alk stands for an alkyl group and n stands for one of the numbers one and two, and wherein at least one sulfonic acid group is present in the molecule, being in form of their alkali metal salts generally crystalline dark metallic lustrous powders, easily soluble in water and dyeing wool from an acid bath generally bluish to greenish shades.

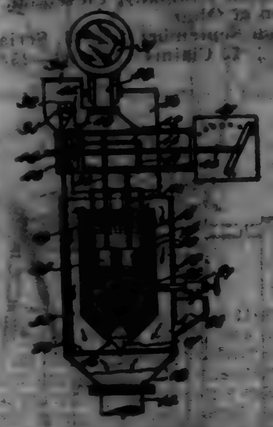
2,027,659

CLUTCH STRUCTURE

Carl C. Weisbrod, Newton, Iowa, assignor to One Minute Washer Company, Newton, Iowa, a corporation

Application May 1, 1933, Serial No. 668,761
3 Claims. (Cl. 192—67)

1. In a structure of the class described, a gear casing comprising upper and lower members, a shaft journaled in the lower member and projecting through the upper member, an angular block fixed on the shaft within the casing, a clutch member having an angular hole slidably receiving the block, and provided with an annular flange, a clutch member rotatable on the shaft below the first clutch member held by the lower gear casing member against downward movement, washers on the shaft adjacent to the under side of the top of the casing and the upper face of the flange, a coil spring between the washers tending to hold the clutch members in engagement, a rod journaled in the upper gear casing member, a collar fixed on the rod, with its arms receiving the first clutch member below the flange thereon and adapted to lift the first clutch member out of engagement with the second clutch member when the rod is rocked, and an over center spring device for holding the rod in either of two positions to which it may be rocked.



2,027,668

FREENESS DETECTOR

Harold Donald Wells, Glens Falls, N. Y.

Application July 22, 1926, Serial No. 725,543
11 Claims. (Cl. 92—28)

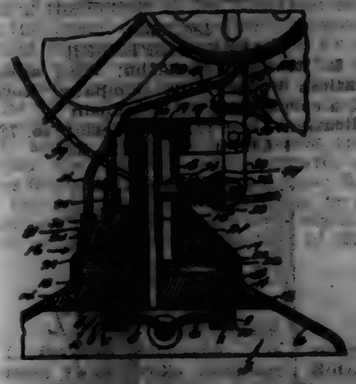
1. A freeness detector comprising an undulation chamber, means for continuously conducting stock to said undulation chamber, a discharge screen through which liquid may flow continuously from the stock in said undulation chamber, means for producing undulation of the stock in said undulation chamber to keep said screen clean and prevent accumulation of fibrous stock in said undulation chamber, and a freeness detection chamber positioned to receive the liquid discharging through said screen, said freeness detection chamber being provided with an outlet through which the liquid continuously discharges therefrom, the variance of the liquid level in said freeness detection chamber being indicative of the freeness of the stock.

2,027,661

DRAIN CLEANER

Raymond D. Woodward, Summit, N. J.

Application March 12, 1935, Serial No. 660,896
2 Claims. (Cl. 4—209)



1. A drain cleaner comprising a frustrated cone having an opening therethrough of substantially uniform diameter one end of which is adapted to be connected to a source of fluid under pressure, the other end of said passage being adapted to discharge said fluid into a drain, said truncated cone being of rigid, hard insulating material and a member of resilient material adapted to fit over one end thereof in frictionally sealed relation, the outer wall of said resilient member being a multiplicity of circular steps adapted to seal to a drain, the largest outside diameter of said cone being substantially greater than the diameter of said opening therethrough.

2,027,662

ELECTRIC FAN

William H. Young, Harrisburg, Pa.

Application August 28, 1934, Serial No. 742,676
5 Claims. (Cl. 230—234)

1. An electric fan comprising a stationary base portion, a fan and motor supporting portion mounted for free rotational movement on the base, said fan and motor being off-set with respect to the axis of rotation of said portion whereby to set-up a back pressure upon actuation of said fan tangential to the axis of rotation thereby to actuate the rotating portion, and a braking device operatively connected with the fan and motor assembly and functioning through centrifugal force generated by rotation of said fan and motor assembly to engage the stationary base portion with increasing pressure as the speed of rotation of the fan and motor assembly increases to form a drag, and means for regulating said pressure.

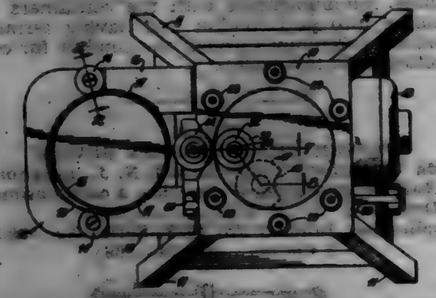
2,027,663

OPHTHALMOSCOPE

William N. Allyn, Auburn, N. Y.

Application October 20, 1933, Serial No. 694,486
10 Claims. (Cl. 88—38)

1. In an ophthalmoscope, a frame, a rotary carrier having a series of different lenses and a corresponding number of lens-designating characters, one for each lens, said lenses and characters being arranged about the axis of the carrier, said frame having openings at diametrically opposite sides of said axis, each lens and its corresponding character being adapted to register



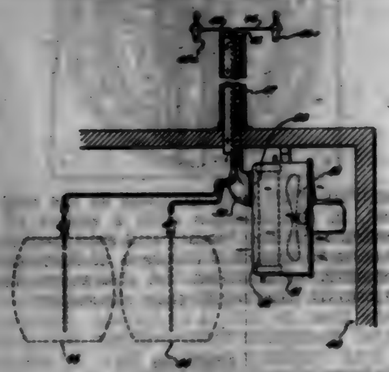
respectively with said openings as the carrier is rotated, in combination with a source of light connected with the frame, and said carrier having means to transmit the rays of light through the opening with which the characters register to illuminate the registering character.

2,027,664

APPARATUS AND METHOD FOR SETTING UP CONTAINERS

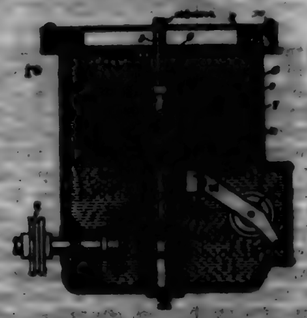
William K. Andrew, Wauwatosa, and Harold I. Drake, Appleton, Wis., assignors to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin

Application July 1, 1935, Serial No. 29,254
16 Claims. (Cl. 153—1)



1. In a machine of the class described, the combination of a bed plate for supporting the end of a container with a binding strip applied thereto, a crimping roll extending above the bed plate, said crimping roll acting upon the inner surface of the binding strip applied to the margin of the container, a compression roll in spaced relation to the crimping roll and in position to act upon the outer surface of the binding strip, and means for drawing in the compression roll toward the crimping roll to cause biting engagement of the rolls on opposite sides of the binding strip.

16. The method of applying a binding strip to the margin of a cylindrical container, which consists in compressing a split expansible mandrel by externally applied pressure, fitting a container upon the mandrel, releasing the mandrel from compressive action to permit expansion thereof within the container, exposing a margin of the

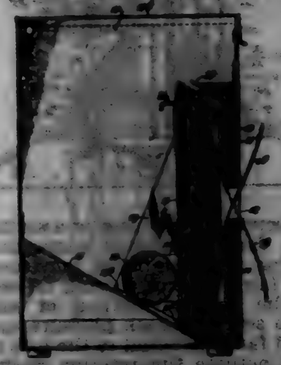


container beyond the mandrel, applying a channelled binding strip to said margin, rotatably applying crimping pressure to a given portion of said binding strip on the exterior and interior thereof, and imparting relation to the container by the application of said rotatably applied crimping pressure to cause each portion of the strip to be subjected to crimping pressure.

2,027,865
BEVERAGE COOLING DEVICE
Joseph Askin, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y.
Application October 26, 1933, Serial No. 694,957
2 Claims. (Cl. 62—102)

1. In a cooling system, a storage room for liquid containers, a cooling device therein comprising a cooling coil and a motor driven fan for directing air therethrough, a conduit exterior of the room having input and output ends communicating therewith, an air scoop on the input end of the conduit disposed in the path of a portion of the air stream from the cooling coil, and tubing communicating with the containers extending into said conduit and having terminal portions extending through the conduit for connection with tap devices.

2,027,866
POWER TRANSMISSION DEVICE
Alda V. Bedford, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 28, 1933, Serial No. 653,253
3 Claims. (Cl. 74—394)



1. In combination, a driving shaft subject to slight speed fluctuations, a driven shaft, an intermediate shaft co-axial therewith, means for imparting to said driven shaft a uniform speed free from the speed fluctuations of said driving shaft, said means comprising an inertia member carried by said intermediate shaft, a planetary gear mechanism connecting said intermediate shaft and said driven shaft and including a substantially stationary gear adapted to respond to a change in the speed of said driving shaft, and means connected to said gear for damping out the speed fluctuations transmitted by said driving shaft.

2,027,867
HOLDING DEVICE
Carl A. Brinkman, Euclid, Ohio, assignor to Seaver-Brinkman-Gerstenberger, Inc., Cleveland, Ohio, a corporation of Ohio
Application March 3, 1934, Serial No. 713,983
2 Claims. (Cl. 229—87.9)

1. An advertising coupon having a redeemable value by virtue of being accompanied with a coin held thereby, the coupon comprising an apertured sheet of flexible material having an aperture therein so proportioned and dimensioned that a coin may be manually forced into said aperture and will be firmly frictionally retained therein, said coupon bearing an inscription indicative of the nature of its method of redemption.

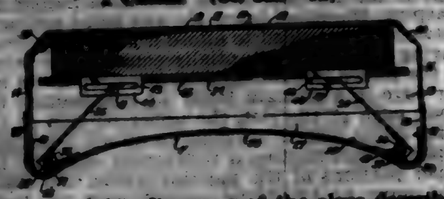
2,027,868
PAPER DISPENSER
Frank L. Brocren, Menasha, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application April 11, 1934, Serial No. 720,026
1 Claim. (Cl. 312—62)

A dispenser for stacked sheets of paper comprising a container of bottle formation having front and back walls and side walls, the front wall having a transversely extending slot formed therein for the withdrawal of sheets singly and adjacent which said sheets are held in facewise relation, an inclined floor adapted to have the sheets stacked thereon, a follower plate normally standing vertically, a roller beyond the follower plate and journalled at its ends thereto in position to normally roll with its full free surface upon the inclined floor and hold the follower plate in elevated relation thereto and permit the follower plate to tilt in order to adapt its surface to the stack of sheets, and means associated with the follower plate for limiting the extent of said tilting.

2,027,869
PAPER DISPENSER
Frank L. Brocren, Menasha, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application July 30, 1934, Serial No. 736,185
2 Claims. (Cl. 312—62)

A dispenser for sheets of paper comprising a container of bottle formation having a bottom and a front panel provided with a transversely extending slot adjacent which said sheets are held in facewise relation and through which the sheets may be withdrawn singly, a floor above the level of the bottom of the container for supporting the lower edges of sheets composing a stack, said floor being provided near its center with a slot, a link extending through the slot in the floor and having its lower end pivoted between the floor and the bottom of the dispenser, a follower plate pivoted to the upper free end of the link, and a spring acting against the link for urging the follower plate forward, and a retaining finger pivotally mounted upon the rear wall of the container and adapted to be moved to engage and hold the follower plate when swung back into proximity to the rear wall of the container.

2,027,870
PAPER DISPENSER
Frank L. Brocren, Menasha, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application September 17, 1934, Serial No. 744,279
4 Claims. (Cl. 312—62)



1. In a dispenser of the character described, the combination of a container for a stack of napkins or the like when folded to each present a free tab terminating on a line above the center and below its upper edge, said container including a panel provided above its center with a transversely extending slot lying in an oblique plane and positioned to expose only the upper edge of the free tab of the outermost napkin for grasping, the panel below the slot being obliquely outwardly protruded to afford a pocketed portion having a width substantially equal to the width of the folded napkins and terminating at its upper edge in a straight lower lip constituting the lower edge of the slot, the upper portion of the panel being dished inwardly to afford a straight upper lip constituting a restraining edge for the upper portions of the napkins within the stack, said upper lip extending parallel with the lower lip substantially from side to side of the upper portion of the stack and serving in conjunction with the lower lip to bow forward the medial portion of the stack in position to present the foremost tab for grasping and to hold the foremost napkin in position to completely close the slot, and means for advancing the stack to permit successive withdrawals of the napkins or the like.

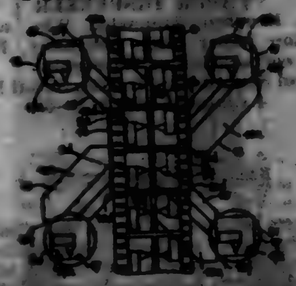
2,027,871
PAPER DISPENSER
Frank L. Brocren, Menasha, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application October 1, 1934, Serial No. 746,233
4 Claims. (Cl. 312—62)

3. A dispenser for folded sheets, comprising a container having a wall provided with an elongated slot for the withdrawal of the sheets, a follower plate bearing against the rear of the stack of sheets, means for advancing the follower plate, supporting means for the lower edges of the sheets, said means having an opening formed therein and having guide members formed along the edges of said opening below the surface of the supporting means, a member projecting downwardly from the lower edge of the follower plate and into said opening and having means engaging the guide members for guiding the lower edge of the follower plate from points below the level of the supporting means for the sheets, and a foot on the lower edge of the follower plate being flush with the upper surfaces of the supporting means and in position to underlie the lower edges of the rearmost sheets.

2,027,672
PORTABLE DISPENSER FOR SHEETS
Frank L. Brocron, Menasha, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application April 18, 1935, Serial No. 16,619
1 Claim. (Cl. 312—42)

In a portable dispenser of the class described, the combination of a container for sheets having a discharge slot in one of its walls, a follower plate positioned to bear against a stack of sheets to advance the same toward the discharge slot, a pair of link members pivoted at their outer ends to the rear portion of the container, said rear portion being curved so as to fit the body contour of a wearer, said link members extending inwardly obliquely in convergent relation to one another, slotted guide members on the follower plate slidably engaging the free ends of the link members, and springs bearing against the link members for swinging the free ends forwardly to advance the follower plate, the follower plate being held by the links in suspended relation to the walls of the container.

2,027,673
PAPER DISPENSER
Frank L. Brocron, Menasha, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application April 15, 1935, Serial No. 16,249
2 Claims. (Cl. 312—42)

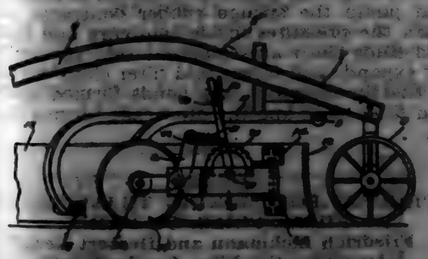


1. A dispenser for sheets of paper comprising a container having a front panel provided with a transversely extending slot positioned intermediately the upper and lower edges of said sheets held adjacent thereto through which the sheets may be withdrawn singly, a forwardly and downwardly inclined floor having its rear portion elevated above the level of the bottom of the container for supporting the lower edges of sheets composing a stack, said floor being provided in its rear portion with a slot, a link extending through the slot in the floor and having its lower end pivoted between the floor and the bottom of the dispenser, a follower plate pivoted to the upper free end of the link, and a spring acting against the link for urging the follower plate forward so as to hold said sheets in compressed condition adjacent said transverse slot.

2,027,674
DISPENSER FOR FOLDED SHEETS
Frank L. Brocron, Menasha, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application August 28, 1933, Serial No. 686,151
1 Claim. (Cl. 312—39)

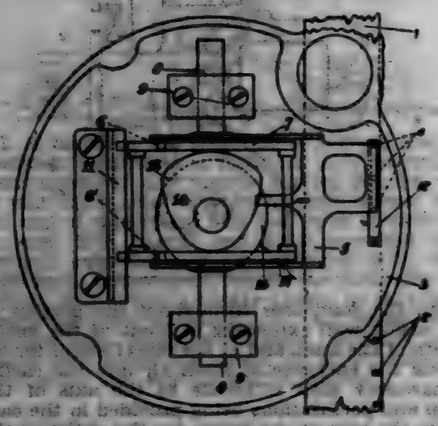
A dispenser for sheets folded to each provide a grasping tab of less width than the body comprising a box-like container having its lower wall in the form of a panel provided with an elongated dispensing slot, said sheets being fed by gravity towards said slot, one of the edges of the slot being straight and having a lip standing in forwardly advanced relation to the general plane of the panel and the other edge being in the form of a lip convexly curving from each end inwardly toward the center, and the lip extending inwardly within the general plane of the panel and protruding inwardly to a maximum at its center to afford a medial crest portion for contacting the body portion of the innermost folded sheet of a stack at a point beyond the edge of the grasping tab.

2,027,675
MOTION PICTURE PROJECTOR
André Collier, Ganzt and Fernand Heger, Brussels, Belgium
Application December 21, 1932, Serial No. 648,464
In Belgium December 24, 1932
1 Claim. (Cl. 88—16.6)



A motion picture projector, comprising four projecting lenses for simultaneously projecting four neighboring images of a normal film on which these images are registered in such a way that two images lie side by side in each normal image space of the film but require to be rotated through 90° when projected, and an optical system between each image on the film and the corresponding projecting lens, each optical system consisting of a right angled isosceles roof prism of which the plane of symmetry which passes through the edge of the roof is perpendicular to the direction of projection, and of two ordinary right angled prisms cemented by one of their cathetus faces to one of the oval faces of the roof prism, the two ordinary right angled prisms being arranged with their free cathetus faces parallel to and on opposite sides of the said plane of symmetry, the ordinary right angled prisms of each optical system being disposed in the direction of a diagonal of the rectangle formed by the four images to be simultaneously projected, one of these right angled prisms being in front of the corresponding image and the other in front of the corresponding projecting lens.

2,027,676
MOTOR VEHICLE DRIVER'S PERMIT AND REGISTRATION CARD HOLDER
John Cheshko, Dunbar, Pa.
Application March 22, 1934, Serial No. 717,168
2 Claims. (Cl. 40—16)

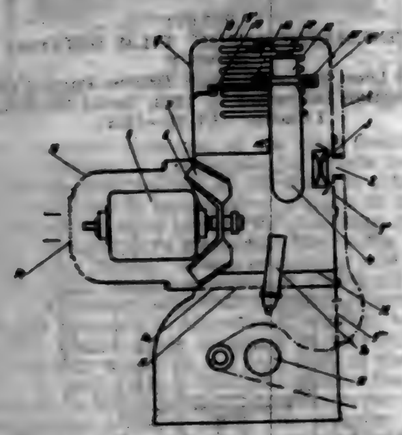


2. A motor vehicle certificate holder comprising a body portion, an arm extending therefrom provided with right angularly disposed lugs, an arcuate portion in the outer angular wall of each of said lugs, said lugs equipped with apertures, one wall of said arm being offset from said body portion, the body portion provided with a recess and smaller recesses communicating with the body recess, the smaller recesses equipped with a bore, an opening in the body portion smaller in size than said recess in the body portion, a transparent plate and closure plate in said body recess, said closure plate provided with ears equipped each with an aperture, said ears engageable in the smaller recesses and securing means cooperating with the apertures in said ears and the bores in said smaller recesses.

2,027,677
ANTIVIBRATOR ATTACHMENT FOR ROAD MACHINERY
James Clifton Cease, Wilmar, Ark.
Application April 9, 1935, Serial No. 14,967
1 Claim. (Cl. 97—142)

In combination with the grader board of a road machine, a U-shaped member swingably mounted at its bight portion on the rear side of said grader board and extending laterally therefrom, a bell crank arm mounted within said U-shaped member adjacent the free end thereof, a roller pivotally mounted on one end of the bell crank for engagement with the ground, an upstanding lever pivotally mounted on said U-shaped member, a rack on said member cooperable with a detent on said lever for securing said lever in a predetermined position, a link connecting said lever with the free end of the bell crank arm, a collar secured to said link adjacent said lever and a coil spring encircling said link one end thereof abutting said crank arm and the other end said collar on said link.

2,027,678
CINEMATOGRAPHIC FILM DRIVING DEVICE
André Léon Victor Clément Debrie, Paris, France
Application December 11, 1934, Serial No. 757,458
1 Claim. (Cl. 88—18.4)



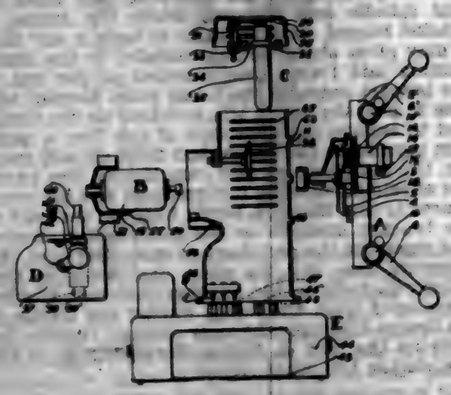
An intermittent driving device for apertured cinematographic films comprising a flange located parallel to the film and serving as a backing for said film, a movable frame having stems mounted thereon, bearings upon said flange in which said stems slide, a rectilinear guide positioned on said flange in which a portion of said frame slides, a spindle perpendicular to said flange and rotating with uniform speed, an eccentric cam fixed on said spindle and disposed inside the frame, a bracket hinged on said frame in such a way that it may pivot about an axis parallel to the stems guiding said frame, pins disposed at the end of the bracket opposite the hinge point thereof and able to pass through a slot provided on the flange and to engage the apertures of the film, a plate cam parallel to the flange and fixed on said spindle, the periphery of said cam having two parts, one of said parts being further from and the other nearer to said flange, a prong fixed on the part of the bracket opposite to the hinge point thereof and engaging the periphery of said plate cam, the eccentric cam and the plate cam being so disposed relatively to one another that said bracket is removed from the flange during one stroke of the frame and brought near enough thereto for allowing the pins to engage the apertures of the film during the other stroke.

2,027,679
CINEMATOGRAPHIC PROJECTOR
André Léon Victor Clément Debrie, Paris, France
Application November 1, 1934, Serial No. 751,474
In France July 9, 1934
2 Claims. (Cl. 88—24)

1. In a cinematographic projector, the combination of a casing, a projecting gate in the said casing, a condenser to the rear of the gate, a

socket in the front upper part of the casing, a projection lamp held therein with its free end pointing downwards, current terminals connected with the socket and in close proximity thereof, a motor arranged to the rear of the lamp inside the casing, a projecting mechanism driven by the motor, a fan keyed to the motor shaft behind the lamp and adapted to suck the air in front of said fan, perforations being provided in the casing

round the condenser throughout the portion of the casing wall extending in front of the entire length of the lamp and to the sides thereof for allowing the entrance of fresh air into the casing transversely with reference to the axis of the lamp and perforations being provided in the casing to the rear of the motor for the outlet of the hot air.



2,027,660

PROJECTING MACHINE FOR SOUND CINEMATOGRAPHS

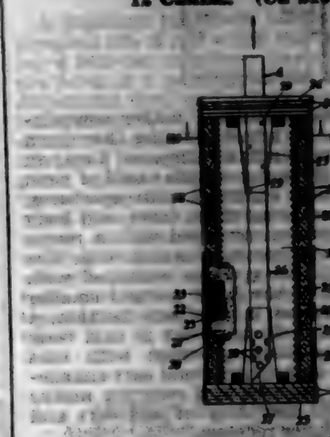
André Léon Victor Clément Delerie, Paris, France

Application December 11, 1934, Serial No. 757,660

7 Claims. (Cl. 88—16.2)

1. A projecting machine for sound films comprising a casing, an apertured hollow support adapted to be removably fitted to the outside of a lateral wall of the casing, a film-driving and carrying mechanism inside said hollow support, arms pivotally secured to the hollow support and carrying the film feed and take-up reels an electric motor adapted to be removably fitted in the opposite lateral wall of the casing, a shaft for said motor adapted to frictionally engage the film driving mechanism, a picture projecting and sound record illuminating lamp, a support removably carrying said lamp on its underside and adapted to removably close the upper part of the casing, a sound reader including a photoelectric cell adapted to be removably fitted in the casing underneath the motor with the cell lying in vertical alinement with the location of the lamp, a base to which the lower part of the casing is removably secured, a sound current amplifier in the base, means for feeding current to the base and electric leads and contact means for electrically connecting the lamp, cell, amplifier and motor with the current feeding means.

2,027,661



FILTER

Henry Thomas Durant, Crawley, and Eric Owen Stubbings, Carshalton, England, assignors to Bloomfield Engineering Company, Limited, London, England, a British company

Application March 22, 1933, Serial No. 662,230

In Great Britain April 30, 1932

12 Claims. (Cl. 210—151)

1. A filter element comprising a rigid core formed with passages to permit the flow of filtrate, a pipe mounted within said core and a pump in communication with said pipe for establishing a difference of pressure between the inside and outside of said element, a layer of sponge rubber mounted on said core, and a filter cloth surrounding said sponge rubber, the arrangement being such that when suction is applied by said pump the sponge rubber contracts, while when the pressures inside said core and outside said filter cloth are equalised said sponge rubber expands and forces said filter cloth outwardly, thereby loosening any bonds formed between said filter cloth and the filter cake formed thereon.

2,027,662

PROCESS FOR MAKING TRANSPARENT FILMS, FOILS, OR SKINS

Friedrich Eichmann and Herbert Nerad, Aussig-on-the-Elbe, Czechoslovakia

No Drawing. Application August 25, 1933, Serial No. 686,552. In Czechoslovakia September 16, 1932

5 Claims. (Cl. 18—57)

1. A method of making transparent films, consisting in selecting an insoluble polyoxybenzide, dry grinding it to a particle size of approximately 0.5 to 50 microns if not already of this particle size in the naturally occurring state, preparing a hydrosol of said polyoxybenzide by swelling the latter without chemical change in an aqueous medium, layering said hydrosol to a film, and drying the film formed.

2,027,663

ALL-METAL COLLAPSIBLE BOX CASE

Fern B. Elliott and Earl I. Pollard, Meadon, Md.

Application April 2, 1934, Serial No. 718,581

1 Claim. (Cl. 220—6)

A case of the class described, comprising a pair of side members and a pair of end members, said members having hinges at their vertical edges rolled inwardly to provide hinge barrels, pins passing through the barrels for hingedly connecting the four members together, the pins at two diagonally opposite corners being removable whereby one side and end member can be separated from the other side and end member, each member having its lower edge bent inwardly into channel shape, a bottom member of slightly less length and width than the space formed by said side and end members, said bottom member having its edges bent into substantially inverted U-shape for interengagement with the channels, and the corners of said bottom member being cut away to clear the hinges, whereby said bottom member can be pushed downwardly through the space formed by the side and end members to engage the inverted U-shaped edges thereof with the channels of the side and end members, a top member having a depending flange of considerable width for fitting over the upper edges of the side and end members when the case is set up and said top member receiving the side and end members and the bottom when the case is collapsed.

2,027,664

PNEUMATIC TIRE COMBINATION RAIL AND HIGHWAY UNIT

William H. Fageol, Kent, Ohio, assignor to Twin Coach Company, Kent, Ohio, a corporation of Delaware

Application May 24, 1933, Serial No. 672,731

3 Claims. (Cl. 105—71)

1. A highway and rail vehicle for operation on track rails comprising a body, axles, resiliently tired wheels supporting said axles, resilient means interconnecting said axles and frame, retractable members having means in contact with the rails during normal operation on the rails, brake drum housings on said axles, each comprising a supporting bracket to receive one of said retractable members in supporting relation, means for operating said retractable members, and a stop member on each of said brackets cooperating with adjustable means on associated retractable member to limit movement thereof.

2,027,665

ROAD RECONDITIONING MACHINE

Benjamin H. Flynn, Alexandria, La.

Application October 25, 1934, Serial No. 749,583

7 Claims. (Cl. 37—196)

1. A machine for removing a surface from a roadway, comprising a frame, a hood extending transversely of and rigidly carried by one end of said frame, said hood being open toward said one end of said frame and also open downwardly, said hood having end walls provided with vertical guideways, slides engaged with said guideways, independent means for vertically adjusting said slides, a rotary cutter in said hood having its ends supported by said slides, supporting and propelling means carrying said frame, and actuating means on said frame for said cutter and said propelling means.

2,027,666

COATING COMPOSITIONS AND THE PROCESS FOR THEIR PRODUCTION

Paul Friedrich, Cologne, Germany, assignor to Trustkantoor Amstelland N. V., Amsterdam, Netherlands

No Drawing. Application July 1, 1933, Serial No. 678,707. In Germany July 4, 1932

7 Claims. (Cl. 134—13)

1. The process for producing a composition for coating metal, stones, sand, wood, paper, board and textiles comprising mixing a preponderance of bituminous hydrocarbons together with smaller amounts of aliphatic chlorohydrocarbons and a mixture of fluid homologues and fluid derivatives of benzene and heating the whole above 130° C. under superatmospheric pressure whilst stirring very quickly until a reaction product is formed.

2,027,667

ELECTRIC FAN

Hugh Hereus Cavendish Fuller, London, England

Application October 2, 1935, Serial No. 43,361

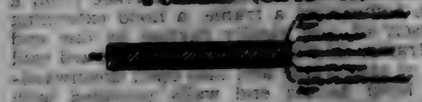
In Great Britain August 28, 1934

2 Claims. (Cl. 254—274)

1. A table fan comprising an open ended tubular stand having supporting feet at its bottom,

a motor disposed vertically in said stand, an air impeller fixed to the upper portion of the motor shaft above said stand, an open casing for said impeller carried by said stand and disposed above the same about said impeller, and a disc resting upon said casing and having a depending annular head surrounded by said casing to hold the disc in place upon the casing, said disc having its marginal portions projecting outwardly beyond the casing and curved upwardly to provide a bordering flange for the disc and adapting the disc to serve as a deflector for directing air outwardly from sides of the casing and also as a tray.

2,027,682



MANUFACTURE OF FOILS

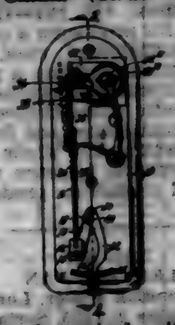
Max Hagedorn, Bonn-in-Schloß, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York

Application April 23, 1932, Serial No. 606,111

In Germany April 30, 1931

4 Claims. (Cl. 91—68)

1. A laminated sheet comprising an internal stratum comprising an organic cellulose ester and adjacent to said internal portion and blended therewith at point of contact on both faces external strata of regenerated cellulose bearing on their outer surfaces and firmly adhering thereto a layer of a colloid less sensitive to water than cellulose hydrate.



2,027,683

HYGROSCOPIC CONTROL SWITCH

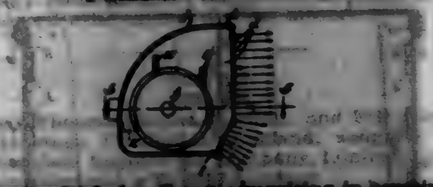
Malcolm E. Henning, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a corporation of Iowa

Application March 26, 1932, Serial No. 601,125

1 Claim. (Cl. 200—52)

In a hygroscopic control switch, the combination of an armature, means for pivotally supporting one end of said armature, a magnet tending to swing said armature in one direction and a humidity responsive, warpable element anchored at one end and having its opposite end arranged to engage said armature intermediate its ends when the element warps in one direction and thereupon move the armature away from the magnet and to disengage the armature and move away from it when the element warps in the opposite direction, the means for anchoring one end of said element being pivoted and having a portion spaced from the pivot thereof, an adjusting lever pivotally mounted and having a portion adjacent its pivot engaging said portion of said means to cause slight adjustment of the element upon considerable movement of the adjusting lever.

2,027,690



VEHICLE HEADLIGHT

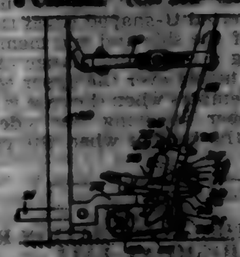
Timothy Joseph Burgess, Wednesbury, London, England

Application January 25, 1934, Serial No. 707,945

In Great Britain January 24, 1933

4 Claims. (Cl. 240—41.3)

1. A vehicle headlamp comprising in combination an outer casing, a source of illumination, means for supporting said source of illumination within said casing, and light directing means having a substantially rectangular projection on a vertical plane mounted in said casing, and comprising a combination of lenses formed in a plurality of strips disposed in a circular formation around said light source to project light rays emanating from said source as an uninterrupted beam forwardly, laterally, and rearwardly in order to secure illumination of a considerable stretch or area of road surface in the neighbourhood of the vehicle without any regions of contrast therein.



2,027,691

STABILIZING DEVICE FOR PICKER STICKS

Ben Huggins, Greenville, S. C.

Application September 4, 1934, Serial No. 742,600

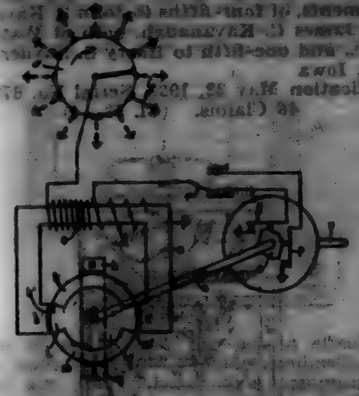
6 Claims. (Cl. 139—159)

1. In a device for connection with a picker stick, as a sub-combination, a yoke to be attached to the picker stick and adapted to receive the ends of a shoe and oscillating stand therein, yielding means carried by the yoke to engage the lower face of the stand, and a wear element attached to the yoke and including a blade projecting longitudinally between the ends of the contacting faces of the shoe and stand.

2,027,692

METHOD OF OBTAINING ADVANCED AND RETARDED IGNITION

Erich Klother, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany



Application April 28, 1934, Serial No. 723,284

In Germany June 24, 1933

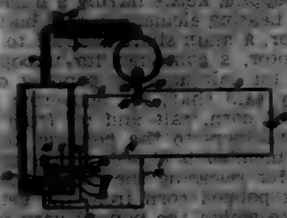
7 Claims. (Cl. 123—148)

1. The method of obtaining advanced and retarded ignition from a magneto having at least

two periods of flux change per rotation, which consists in providing twice as many possible periods of ignition as are required, and selecting

alternate ones of said periods for advanced ignition and the intermediate alternate ones of said periods for retarded ignition.

2,027,693



DISCONTINUOUS ABSORPTION OR ADSORPTION COLD MACHINE

Stig Lindeberg, Stockholm, Sweden, assignor of one-half to Aktiebolaget Elton, Stockholm, Sweden

Application May 12, 1934, Serial No. 725,981

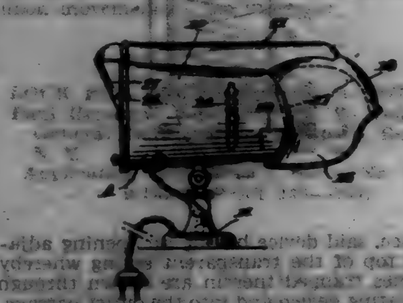
In Sweden May 15, 1933

5 Claims. (Cl. 62—5)

4. Discontinuous absorption or adsorption cold machine, including a generator for driving off a cold medium, means for condensing the cold medium vapours, a refrigerator for evaporating the liquid cold medium, means for supplying heat to the generator, means for controlling the supply of heat to the generator, one responsive to the temperature of the refrigerator and one responsive to the temperature of the generator and auxiliary heating means for counteracting the responsiveness of the last mentioned means to the temperature of the generator at the beginning of the cold period.

2,027,694

HAIR DRIER



Andrew Lisi and Charles Stanford Stuart, Regina, Saskatchewan, Canada

Application March 1, 1934, Serial No. 713,526

In Canada August 28, 1933

3 Claims. (Cl. 34—99)

1. A hair drying device comprising a casing enclosing an air passageway, an air impeller and heating element mounted within said passageway, a head piece mounted on the casing adjacent over a major portion of its surface to communicate with said passageway, an air channel above said passageway extending between said head piece and passageway for removing hot air introduced to the head piece from the passageway, said air channel communicating with the suction side of the air impeller, and damper means

in the end of the casing communicating with the atmosphere to regulate the supply of fresh air to said passageway.

2. A device as claimed in claim 1 in which the damper means include a plurality of openings in the rearward end of the casing, and a valve member for regulating the size of said openings.

2,027,695

PROCESS FOR THE PREPARATION OF ACTIVATED OR ABSORBENT CARBON OR DECOLORIZING CARBON

Andrew McCulloch, Stalybridge, and Robert Edwin Hargraves, Derbyshire, England; Winifred Elizabeth Hargraves, Burbank, Derbyshire, England, administratrix of said Robert Edwin Hargraves, deceased, assignors to Carbo-Norit-Union Verwaltungs Gesellschaft m. b. H., Frankfort-on-the-Main, Germany, a corporation of Germany

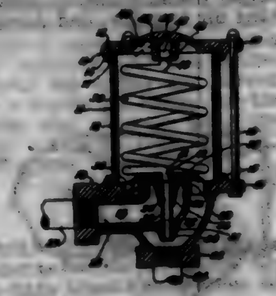
No Drawing. Application December 11, 1933, Serial No. 701,940. In Great Britain December 14, 1932

5 Claims. (Cl. 252—3)

1. A process for the production of active carbon of great strength and activity from carbonaceous initial materials containing chlorinatable constituents, which comprises preliminarily subjecting the material to chlorination treatment while suspended in an organic liquid inert to chlorine while preventing the temperature from rising to a point materially in excess of 100° C., thereafter compressing the so-treated material into briquets, and carbonizing and activating the briquetted material.

2,027,696

SIGHT GLASS



Porter S. Morgan, New York, N. Y., assignor to Liberty Shave Corporation, Buffalo, N. Y.

Application August 10, 1934, Serial No. 739,234

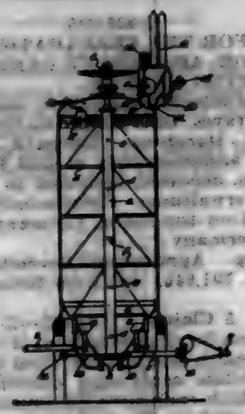
5 Claims. (Cl. 116—117)

1. In a liquid flow indicator, a turbine casing having inlet and outlet passages, a turbine mounted for movement therein, a transparent casing disposed above the turbine casing and communicating with the outlet passage whereby

air volumes will rise gravitationally in liquid introduced into the transparent casing, a hollow indicating device secured to the turbine, an injector in the outlet passage communicating with

said device, said device having an opening adjacent the top of the transparent casing whereby air volumes trapped therein are drawn through said indicating device and into the outlet passage.

2,027,697



HOMOGENEIZING PULVERULENT MATERIALS

Niels Nielsen, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a corporation of New Jersey

Application December 5, 1928, Serial No. 761,068

In Great Britain December 8, 1923

1 Claim. (Cl. 302—53)

The combination of a bin for the homogenization of pulverulent material, means to introduce air under pressure into the bin at its lower end to render the material fluent, means for agitating and homogenizing the whole mass of material in the bin, valve controlled means for the delivery of material to the bin to be homogenized, valve controlled means to permit the escape from the bin of air separated from the material during the homogenization process, pressure actuated means for closing both said valve controlled means during the discharge of the fluent material from the bin, a valve controlled outlet for the material, means for regulating the air pressure in the bin to effect the discharge of the material from the bin, a float within the bin, and operative connections between the float and said valve controlled means for the delivery of material.

2,027,698

AUTOMATIC CORN POPPING MACHINE

Robert D. Parks and Glenn Hildebrandt, Lakeville, Iowa, assignors, by direct and mesne assignments, of four-fifths to John P. Kavanaugh and James C. Kavanaugh, both of Waterbury, Nebr., and one-fifth to Henry S. Snyder, Sioux City, Iowa

Application May 22, 1933, Serial No. 672,227

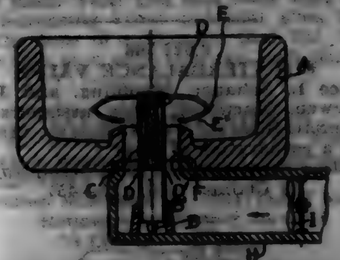
46 Claims. (Cl. 53—4)

1. A machine of the character set forth comprising a popping kettle having a hinged bottom member, a heating element in said bottom member, a motor, a main shaft adapted to be driven by said motor, a container for unpopped corn, containers for salt and for popping oil, means operable by said shaft for delivering measured quantities of corn, salt and oil from their respective containers to the popping kettle when its bottom member is closed, means operable by said shaft for releasing the bottom member for discharging popped corn from the kettle, a receptacle into which the popped corn is received from the kettle, said receptacle having a sloping wall, a float device movable along said sloping wall and adapted to come to rest against the body of popped corn in the receptacle, means connected with said main shaft for raising said float device each time a fresh quantity of popped corn is delivered to the receptacle, and for thereafter releasing said float device whereby it may come to rest against the enlarged body of popped corn, a switch controlling the circuit through said heating element, and means operable by a part on said float device for causing said switch to assume circuit-breaking position at such time as the float is caused to remain at a certain predetermined elevation due to the presence of the desired quantity of popped corn in the receptacle.

2,027,699

BURNER FOR LIQUID FUELS

Charles Perrichet, Geneva, Switzerland



Application January 21, 1934, Serial No. 707,198

Renewed October 26, 1935. In Switzerland February 6, 1930

2 Claims. (Cl. 158—97)

1. A burner for liquid fuel comprising a cup-shaped fire pot having an air-inlet orifice in the

center of its base, a tube of lesser diameter than said orifice for the supply of liquid-fuel extending through the center of said orifice, a tubular axle, axially and rotatably mounted within said tube, a hollow rotor fixed on said tubular axle within said fire pot, and a conduit communicating with said air inlet orifice for supplying a

current of air to said fire pot to effect rotation of said rotor and provide combustion supporting air, said tubular axle communicating with the liquid fuel supply tube for distributing liquid fuel onto said rotor for atomization and projection onto the wall of said fire pot.

2,027,700

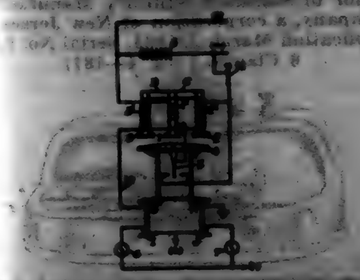
DRILL CUTTER

Henry Regnis, Sayre, Okla., assignor to Phillips Petroleum Company, Bartlesville, Okla., a corporation of Delaware

Application December 20, 1933, Serial No. 703,036

15 Claims. (Cl. 255—71)

1. A frusto-conical drilling bit having a cone shaped cutting area provided with a plurality of axially aligned rows of cutting teeth alternate teeth having cutting surfaces terminating in either a flat top grinding surface or a sharp top cutting edge, and a plurality of axially aligned non-cutting surfaces disposed upon said cone between the rows of said cutting teeth.



2,027,701

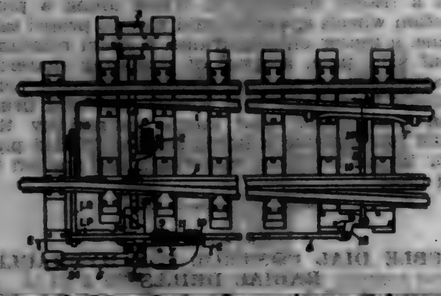
ELECTRICAL CIRCUIT AND RELAY THEREFOR

Frank X. Rose, Albany, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application November 27, 1931, Serial No. 577,138

8 Claims. (Cl. 177—311)

1. In detecting means, in combination with a circuit, a single magnetic indicator movable in either of two opposite directions, opposed stabilizing coils connected across the circuit and arranged to exert substantially equal and opposite actions on the indicator, a ground connection to a point between the coils, whereby an unbalanced ground on either side of the circuit tends to cause movement of the indicator, an operating coil common to the stabilizing coils and connected to aid each stabilizing coil, and an energizing circuit for the operating coil closed upon movement of the indicator.



2,027,702

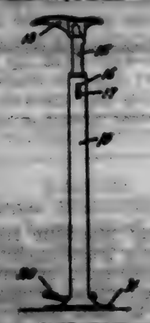
LOCK FOR RAILWAY SPRING SWITCHES

Paul Rossbaw, New York, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application July 14, 1934, Serial No. 735,246

9 Claims. (Cl. 246—238)

1. A locking device for spring switches comprising, a lock rod and a locking plunger, and a wheel actuated treadle device associated with the track rails of the diverging track for releasing said plunger upon the approach of a train in the trailing direction.



2,027,703

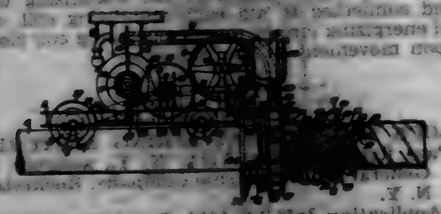
SHOE JACK

Peter Ribar, Pueblo, Colo.

Application June 21, 1934, Serial No. 731,594

4 Claims. (Cl. 12—123)

1. A shoemaker's jack comprising: a hollow vertical standard; a last shank rotatably mounted in the top of said standard and having crossed grooves in its bottom; a key member extending laterally across said standard and engageable in said grooves; a spring acting to force said key member into said grooves; a foot treadle projecting from said standard adjacent the bottom thereof; and a connecting rod extending from said foot treadle to said key member to withdraw the latter from said grooves when desired, said key member extending through slotted holes in the opposite sides of said standard.



1,627,704

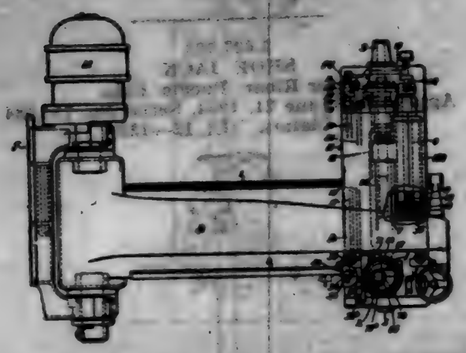
PIPE WRAPPING MACHINE

Leland S. Rossner, San Francisco, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a corporation of Delaware

Application January 16, 1926, Serial No. 496,711

1 Claim. (Cl. 242—11)

A pipe wrapping machine having in combination a frame, mounted to travel along a pipe, traction wheels engaging said pipe to propel said frame, a motor on said frame, a drum rotatable about said pipe, a spool of wrapping material on said drum at one side thereof, operative connections to actuate said wheels and said drum from said motor, and means carried by the frame for applying a liquid coating to said pipe prior to the wrapping material being applied to said pipe.



1,627,705

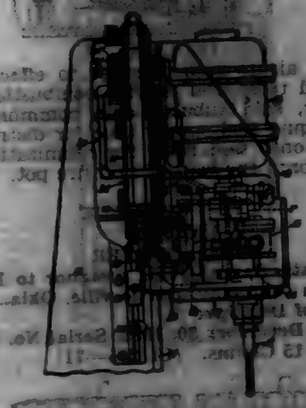
DOUBLE DIAL CONTROL FOR HYDRAULIC RADIAL DRILLS

Lawrence L. Schauer, Wyoming, and John H. McKown, Cincinnati, Ohio, assignors to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a corporation of Ohio

Application March 26, 1923, Serial No. 628,197

19 Claims. (Cl. 77—32)

8. In a drilling machine having a tool-head and a tool spindle translatably mounted in said tool-head, an hydraulic system carried by said tool-head for effecting reciprocation of said spindle relative to said head, said system comprising an hydraulic motor connected with the spindle; a reservoir for the actuating fluid; a pump for drawing fluid from said reservoir and discharging it into said motor; a system of conduits connecting said reservoir, pump and motor, and a selector valve embodied in said conduits for selectively admitting fluid into opposite ends of said motor and for isolating said motor from said pump to arrest the translation of the spindle; automatic means including rotary members actuated by the translatory movements of said spindle and provided with trip dogs, and a control member adapted to be actuated by said dogs, to effect automatic actuation of said selector valve thereby to produce predetermined cycle of movement of said spindle; and manual means and operative connections with said valve operable at will to control the movement of said valve independently of said automatic control means and the cycle normally presented thereby.



2,627,706

COUNTERBALANCE VALVE

Lawrence L. Schauer, Wyoming, and John H. McKown, Cincinnati, Ohio, assignors to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a corporation of Ohio

Application September 11, 1926, Serial No. 743,531

9 Claims. (Cl. 121—46)

1. An hydraulic system for propelling an element in a direction opposed to the force of gravity including an hydraulic motor comprising a fluid piston and a translatable cylinder; a fluid supply conduit; valve means in said conduit comprising a casing member and a valve element movable therein; power means normally tending to move said element to a valve-closed position, said valve element being provided with two pressure responsive areas, fluid connections between one of said areas and the intake side of said hydraulic motor, fluid connections between the other of said areas and said supply conduit, said areas being so proportioned that the sum of the hydraulic forces acting thereon overcomes said power means and maintains said valve element in its open position whereby said fluid supply is permitted to enter said motor to propel same.

1,627,707

FIELD-RACK SINK

Victor H. Schmidlapp, Louisville, Ky., assignor to Standard Sanitary Manufacturing Company, a corporation of New Jersey

Application March 5, 1925, Serial No. 13,461

6 Claims. (Cl. 4—187)

1. A sanitary sink structure adapted for

basin, a shelf extending across the back of said structure above said drainboard and overhanging said drainboard and basin, and a back wall extending downwardly and rearwardly from the forward edge of said shelf to the drainboard on one side and meeting with the basin back wall at the side of the drainboard, the space defined by the basin walls and said back wall being of such decreasing cross sectional area inwardly from the tops of said walls that the structure can be cast as a unit in a two part flask.

1,627,708

SEPARABLE FASTENER

Elliot G. Sundh, Meadville, Pa., assignor to Hoeltzer Manufacturing Company, a corporation of Pennsylvania

Application November 19, 1924, Serial No. 874,058

Renewed September 20, 1926

13 Claims. (Cl. 24—205)

1. In a multiple interlocking fastener adapted to be separated at its ends, a pair of flexible stringers, cooperating series of interlocking elements attached to adjacent edges of said stringers, a slider movable along said stringers to engage and disengage said elements, a separable end connection for said stringers comprising means forming a socket attached to one stringer, and a tube-like pin member clamped around the edge of the other stringer adapted to be inserted longitudinally through said slider and into said socket, said pin member being curved convexly at its outer edge throughout its longitudinal extent to facilitate engagement of said pin member in said socket.

2,627,709

SAFETY DEVICE FOR PROTECTING MOTOR CARS AGAINST FIRE AFTER COLLISION

Dirk Sluiter, The Hague, Netherlands

Application December 15, 1923, Serial No. 762,433

In the Netherlands December 16, 1922

5 Claims. (Cl. 200—82)

1. A safety device for protecting motor cars against fire after collision, comprising a switch adapted to be brought into action by shock, circuit controlling contacts in said switch, an egg-shaped body, a ring forming with said body a cup-and-ball joint, said egg-shaped body being provided with a stem, a mass carried by said stem, and spring-pressed means depressed by said stem and carrying said contacts, whereby when in response to a shock said mass and stem are displaced, the spring pressed means is released and opens said contacts.

2,627,710

COMPOUND DIFFERENTIAL FOR ROVING FRAMES

Walter G. Stewart, Gastonia, N. C., assignor to Walter A. Klein, Gastonia, N. C.

Application February 5, 1924, Serial No. 690,763

6 Claims. (Cl. 74—236)

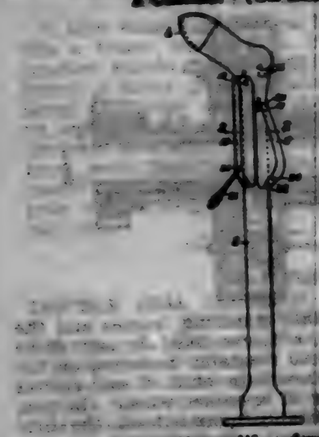
1. In a differential for roving frames and the like, a drive shaft, a sleeve fixed on said drive shaft, a second sleeve rotatably mounted on the drive shaft, the proximate ends of said sleeves each having a pair of sprocket wheels thereon, a third sleeve rotatably mounted on the first sleeve, a casing integral with the third sleeve, a fourth sleeve rotatably mounted on the second sleeve and having integral therewith a cover for the casing, means for securing the cover and its casing together for unitary rotation, two members rotatably mounted in the casing, each member having three sprocket wheels integral therewith, a pair of sprocket chains mounted on the sprocket wheels on said second sleeve and on a pair of sprocket wheels on said rotatable members, a pair of sprocket chains mounted on the sprocket wheels on said first sleeve and on one sprocket wheel each of said rotatable members, driving means between the drive shaft and said fourth sleeve, and a power take-off on said third sleeve.

2,627,711

SPAR STRUCTURE

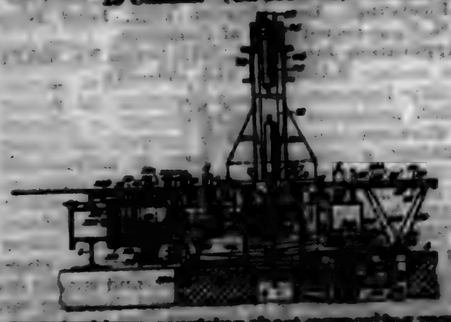
Wilson L. Sutton, Long Island, N. Y., assignor to Fleetwings, Inc., Garden City, Long Island, N. Y., a corporation of Delaware

Application January 7, 1923, Serial No. 650,825



5 Claims. (Cl. 189—37)

4. In a spar, tension and compression chords spaced apart, opposite side webs, and spaced diaphragms extending transversely between and fixed to the webs, said opposite side webs being formed of sheet metal corrugated with corruga-

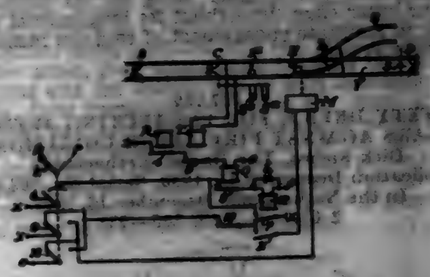


tions extending longitudinally of the spar, and said webs having top and bottom longitudinally extending out-flaring flanges, the chords being fixed by their opposite longitudinal marginal portions to the adjacent flanges of the webs respectively, and said diaphragms having portions engaging and fixed to the corrugations of the webs, said diaphragms also having other portions extending and fixed to the chords and webs where the chords and webs are fixed together.

2,027,713
HOSIERY DRYING FORM
Rudolph Weber, Philadelphia, Pa., assignor to Philadelphia Metal Drying Form Company, Philadelphia, Pa., a corporation of Delaware
Application June 10, 1931, Serial No. 544,768
2 Claims. (Cl. 223—76)

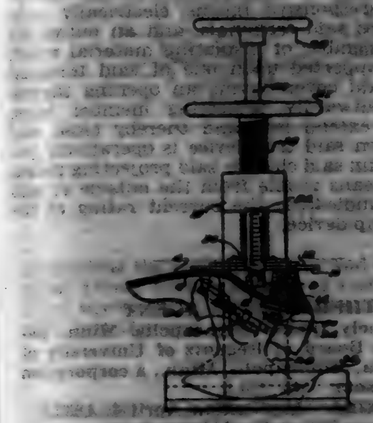
1. In combination with a drying form body having a leg portion and a shaped foot portion including a defined heel, the leg portion being thin relatively to its width whereby it presents longitudinal thin edges for engagement with hosiery or the like, a bifurcated member arranged for detachable frictional engagement with the form over an upright edge thereof to locally vary its width, the engagement being such that the member is freely held over the upright edge of the form by such engagement alone.

2,027,714
DOUBLER
Alexander R. Weibel, Aliquippa, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application August 2, 1932, Serial No. 623,460
19 Claims. (Cl. 182—13)



1. A doubler comprising sheet supporting means having a doubling passage therethrough, means for creasing a sheet and forcing the creased portion through said passage to double the same, means constructed and arranged to compress the doubled sheet at or adjacent the crease while a portion of such sheet remains in the doubling passage, and a separately operable control for said last mentioned means.

2,027,715
PROCESS OF MANUFACTURING BASIC MAGNESIUM CARBONATE
Samuel A. Abrahams, Redwood City, Calif., assignor to Flintkote & Asbestos Works, San Francisco, Calif., a corporation of California
No Drawing. Application November 24, 1931, Serial No. 577,165
2 Claims. (Cl. 23—67)

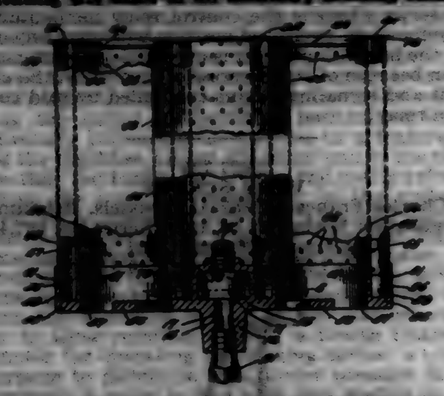


2. The process of preparing basic magnesium carbonate for insulating material which comprises adding sodium carbonate and sodium bicarbonate to a magnesium salt solution in amounts suitable for precipitating an initial basic magnesium carbonate precipitate which is transformable to an altered form, and then introducing steam into the mixture of liquid and precipitate until the temperature of the mixture is raised to approximately 160°–208° F. for transforming the initial precipitate to a relatively light strongly bonded form having increased volume per unit of weight and also having increased bonding properties.

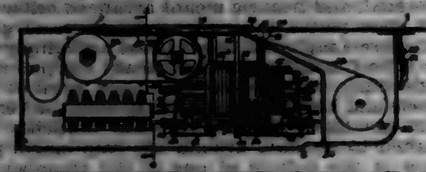
2,027,715
RAILWAY TRAFFIC CONTROLLING APPARATUS
Earl M. Allen, Edgewood, and Henry S. Young, Wilkinsburg, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application March 14, 1935, Serial No. 11,120
6 Claims. (Cl. 246—219)

1. In combination, a stretch of railway track including a switch, a manually operable switch lever having a normal and a reverse position and having a normal and a reverse contact closed only when said lever is in said normal and reverse positions respectively as well as having a middle contact closed only when said lever is between its normal and reverse positions, a stick relay, a pickup circuit for said stick relay controlled by said middle contact and by traffic conditions in said stretch of track, a stick circuit for said stick relay controlled by traffic conditions in said stretch of track independently of said lever, and means controlled by said normal and reverse contacts and by said stick relay for operating said switch to its normal and reverse positions if said stick relay is energized.

2,027,716
METHOD AND MEANS FOR BENDING SHOE SHANKS
Adolph Dudley Bush, Newton, Mass.
Application November 12, 1934, Serial No. 752,871
21 Claims. (Cl. 12—142)



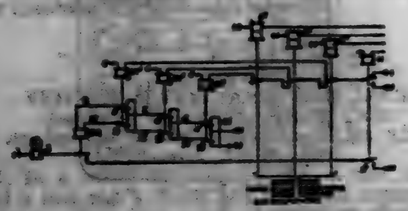
8. A machine for shaping metallic shank stiffeners in a shoe to conform with the foot of the wearer having, in combination, a main frame having a groove formed in the base portion, a clamping member mounted in the frame to act on the tread surfaces of a shoe, means for effecting a permanent change in curvature along the sections of the shoe and stiffener, a removable shoe support arranged within the groove of the frame to restrict movement of the support transversely of the shoe length, and means for holding the support in any desired position lengthwise of the groove.



17. The method of changing the longitudinal curvature of the shank of a made-up shoe having a shank stiffener permanently assembled therein between the insole and the outsole thereof, which comprises clamping the rear portion of the shoe in such a manner as to hold immovable the rear end of the stiffener, supporting one of said soles adjacent the forward end of the stiffener, and applying a bending pressure to the unsupported shank portion of the other of said soles between the clamped and supported portions of the shoe.

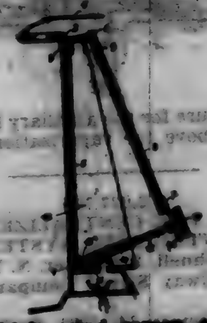
2,027,717
FUEL OIL BURNER
Albert Ellis, Providence, R. I., assignor, by mesne assignments, to Charles Marshall, Newark, N. J.
Application November 28, 1933, Serial No. 644,626
11 Claims. (Cl. 158—37)

1. In a fuel oil burner, a base provided with a fuel opening, a plurality of burner units comprising vertical concentric outer and inner flanges integral with the base and enclosing annular grooves arranged around the opening, the outer flanges being adjacent to each other to form at least portions of the side wall of a vaporization chamber and provided with openings connecting said grooves to said vaporization chamber, a top closure for the vaporization chamber, outer and inner perforated tubes seated upon said outer and inner flanges respectively, the outer tubes constituting the sides of an auxiliary heating chamber, and a closure for the auxiliary heating chamber directly above the vaporization chamber.



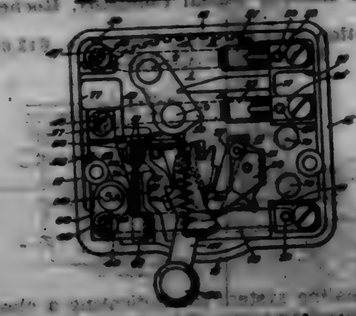
2,027,718
RECORDER FOR CENTRALIZED TRAFFIC CONTROLLING SYSTEMS
Charles S. Bushnell, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application January 14, 1931, Serial No. 508,809
27 Claims. (Cl. 246—125)

13. A railway traffic recorder for recording the passage of a train past a particular location at a particular time as well as distinctively recording the track over which such train moves comprising a recording sheet moved in accordance with the lapse of time, traffic controlled means for making a mark on said sheet for identifying the location of said train, and means for imparting a distinctive character to the mark to thereby identify the track on which said train is moving.



2,027,719
INDICATING MEANS FOR RAILWAY SIGNALING SYSTEMS
Charles S. Bushnell, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application May 26, 1932, Serial No. 613,674
13 Claims. (Cl. 246—2)

1. A signaling system for indicating a change in condition of any one of a plurality of indication relays comprising a control relay, pole-



changing contacts operated by each of said indication relays, an energizing circuit for said control relay including said pole-changing contacts in series whereby the control relay momentarily assumes a de-energized position whenever any one of the indication relays is operated to a new position because of the reversal of current in the circuit and signaling means controlled by said control relay.

2,027,720
WIND SCREEN
Charles Francois Charlotti, Brussels, Belgium
Application November 10, 1933, Serial No. 697,459
In Germany November 11, 1932
4 Claims. (Cl. 20—69.5)

1. In a vehicle wind screen comprising two glass plates constituting walls whereby a chamber is formed, and heating means arranged below the said glass plates, means whereby the said glass plates are adapted to be set apart swingingly the one from the other, the said means comprising a single hinge pin fixed on the coach work of the vehicle and branches of hinges to which different walls are fixed whereby the said branches are adapted to oscillate around the said single pin, a pin in the bottom of one of the chambers, a bushing adapted to oscillate around the said pin, a screw threaded rod engaged in the said bushing and fixed on one of the said glass plates whereby when the chamber is opened the said bushing is adapted to follow the glass plate during its oscillation.

2,027,721
CIRCUIT INTERRUPTER
Robert M. Davis, Longmeadow, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 22, 1934, Serial No. 707,009
16 Claims. (Cl. 200—116)

16. In electrical apparatus, a base member, a cover means for cooperating therewith to provide a closure for said apparatus, and a removable, current-carrying trip device for effecting the operation of said apparatus upon the occurrence of predetermined conditions, said trip device including a pair of rigid terminal members which are adapted to engage said base member and upon which the other elements of said device are supported, insulating means for mechanically connecting said terminal members in order to impart greater rigidity to said trip device, current-carrying electro-responsive means electrically connected across said terminals, and an outwardly projecting member of insulating material which is rigidly supported upon one of said terminal members, said cover having an opening therein and said outwardly projecting member being adapted to extend into and thereby close said opening when said trip device is operatively positioned within said closure, said projecting means including means visible from the outside of said closure for indicating the current rating of the associated trip device.

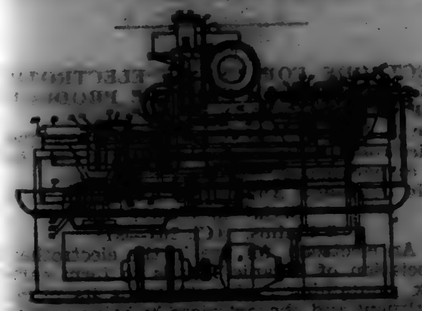
2,027,722
THERAPEUTIC AGENT
Harold Sheely Diehl, Minneapolis, Minn., assignor to Board of Regents of University of Minnesota, Minneapolis, Minn., a corporation of Minnesota
No Drawing. Application April 4, 1934, Serial No. 719,838
6 Claims. (Cl. 167—67)

1. A therapeutic agent consisting of a mixture of a salt of codeine with a salt of papaverine.

RETLES
STRINGED MUSICAL INSTRUMENT
Rudolph Dupyen, Los Angeles, Calif.
Application March 22, 1933, Serial No. 661,284
11 Claims. (Cl. 84—296)

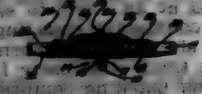
1. For use in a stringed musical instrument having a body with a well therein, a resonator adapted to be supported at its periphery in the well, said resonator including a dished portion and a peripheral portion, said dished portion including a circumferentially extending flanged portion and a second circumferentially extending thin portion in said peripheral portion.

2,027,724
CONCEALED HINGE FOR AUTOMOBILE AND OTHER DOORS
Fred Steel, Buffalo, N. Y.
Application May 11, 1933, Serial No. 670,561
3 Claims. (Cl. 296—44)



1. A hinge mounting for automobile and other doors comprising a body pillar provided in its front transverse face with a recess, a door pillar provided in its transverse front face with a recess adjacent to the outer front corner and an elevation adjacent to the inner front corner, and a hinge including a body-leaf mounted in the body pillar, a door leaf mounted on said elevation of the door pillar, the latter projecting from said door leaf into the recess of the body pillar, and a spindle arranged in the recess of the body pillar adjacent to the outer front corner thereof and pivotally connecting the body hinge leaf and said arm, said pillar recess being adapted to receive the outer front corner of said body pillar upon turning the door into its open position.

2,027,725
EXPANSION JOINT INSTALLING MEANS
Wallace C. Fletcher, Chicago, Ill.
Application February 27, 1934, Serial No. 713,754
2 Claims. (Cl. 94—18)



1. An expansion joint installing device comprising a loosely mounted clip embodying a blank having a pair of base flanges for engaging an expansion joint strip, and a triangular ribbed portion connecting the base flanges and perforated to receive a staking means.

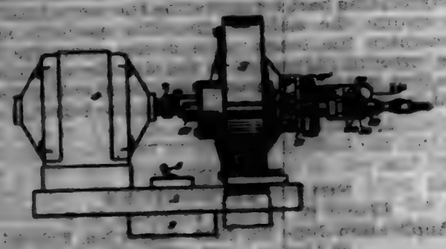
2,027,726
MILLING MACHINE
Henry O. Fletcher, Manchester, N. H.
Application January 11, 1933, Serial No. 651,578
20 Claims. (Cl. 90—13.1)

11. In a milling machine, a rotatable work holding turret, and a cutter; means to reciprocate one of said parts to provide an advance movement for performing a cutting operation on the work by the cutter and restore the parts to relative initial position; a first hydraulic motor for reciprocating the reciprocating part; a cutter carrying slide adapted to move the cutter in a second path for retracting the cutter from the work after the operation is completed, and restoring the cutter to operating position; a toggle pivotally connected at one end to a framework of the machine, and at the other end to the slide, so that the toggle will fold as the cutter retracts from the work and straighten as the cutter is restored to operating position; a second hydraulic motor for operating the slide and the toggle; means, including a third hydraulic motor, for rotating the turret; a locking device for locking the turret and holding it in locked position during the operation by the cutter, and unlocking it to allow rotation thereof; a fourth hydraulic motor for operating the locking device; a piping system to distribute fluid under pressure to the motors; a valve in the pipe line leading to the first motor for advancing the reciprocating part, adapted to be closed at the beginning of the turret rotation, and opened as the turret completes its rotation; means operative by the advance movement of the reciprocating part to operate the second motor for retracting the slide in the second path and folding the toggle; means operative by the retracting movement of the slide for operating the first motor for returning the reciprocating part; the fourth motor for unlocking the turret, and the third motor for rotating the turret; means operative by the rotary movement of the turret for operating the valve; means operative by the return movement of the reciprocating part for operating the second motor to restore the slide to operating position and straighten the toggle; and means operative by the retracting movement of the slide for operating the first motor to advance the reciprocating part and the fourth motor for locking the turret.

2,027,727
SOUND REPRODUCER
Ernest W. Franck, Paterson, N. J.
Application June 28, 1934, Serial No. 733,795
39 Claims. (Cl. 274—37)

5. In a sound reproducer, a supporting means, a diaphragm comprising a sheet supported against said means, an annulus held tight against said sheet to produce a plane radial tension in the diaphragm, a stylus holder connected with said diaphragm, and damping means engaging the diaphragm within said annulus.

2,027,728
VEHICLE WHEEL AND TIRE LOCK
James S. Gray, Long Beach, Calif.
Application March 4, 1933, Serial No. 659,526
3 Claims. (Cl. 70—30)

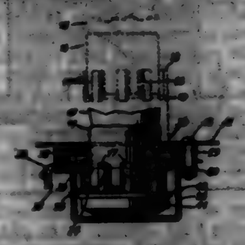


1. In a wheel including a rim, a tire, a hub and a hub cap; a wheel and tire lock comprising a body, a base removably mounted on the body, lock means securing the body and base together, a threaded stud depending from the base, said stud being being adapted and arranged to en-

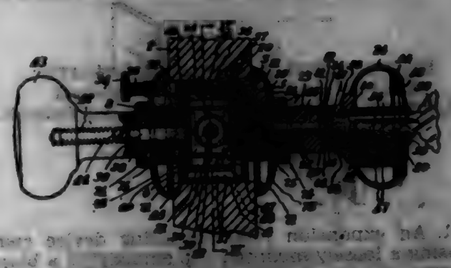
tend thru the wheel hub and hub cap, a rod extending from the body and mounted therein, means extending thru the tire and rim, and

means on the rod removably attached to said last named means.

2,927,729
METHOD AND APPARATUS FOR REMOVING FEATHERS FROM FOWL
Edward H. Hinchliffe, Lynbrook, N. Y., assignor of one-half to Albert R. Hand, Malverne, Long Island, N. Y.
Application January 17, 1933, Serial No. 652,107
21 Claims. (Cl. 17—11)



11. A device for removing pin feathers from plucked fowl comprising two oppositely rotating shafts mounted at an angle to each other and having conical collaterally engaging ends of small diameter, the shafts being journaled at their large ends, the small ends being free.

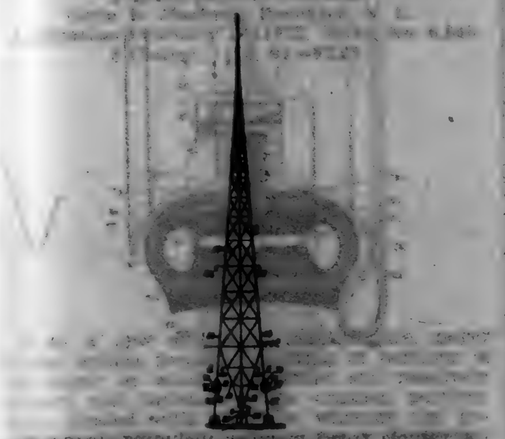


18. A plucking machine comprising a pair of collaterally disposed plucking rolls, means for rotating the same in opposite directions, and means to draw air through said rolls, each of said rolls being provided with a plurality of air passages extending through the body of the roll transversely of its axis.

2,927,730
TUBE BASE AND SOCKET
Julius Hirmann, Hillside, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application August 16, 1932, Serial No. 628,247. Divided and this application May 18, 1934, Serial No. 726,220
5 Claims. (Cl. 173—328)

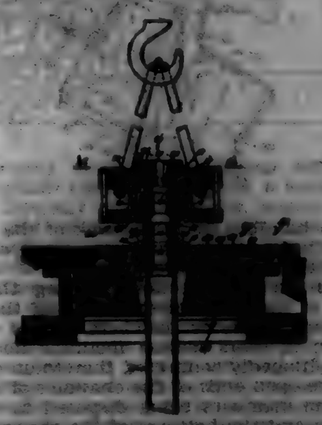
1. A socket for a vacuum tube having spaced contact supporting bosses on the periphery of the base, including a cup-shaped member having an outwardly extending flange like lip, an annular member supported on said lip and overhanging the interior of said cup-shaped member, spaced radial contact members supported on the under side of said annular member and insulated from said cup shaped member and overhanging said cup-shaped member to a less extent than said annular member, said annular member being provided with interior longitudinal slots intermediate said contacts to permit the insertion of the base into the socket, and means for biasing the base to force the contacts on the base against the contacts in the socket.

2,927,731
LOCK CONSTRUCTION
Marcus Heights, Pittsburgh, Pa., assignor, by mesne assignments, to The American Hardware Corporation, New Britain, Conn.
Application April 24, 1931, Serial No. 533,537
24 Claims. (Cl. 70—91)



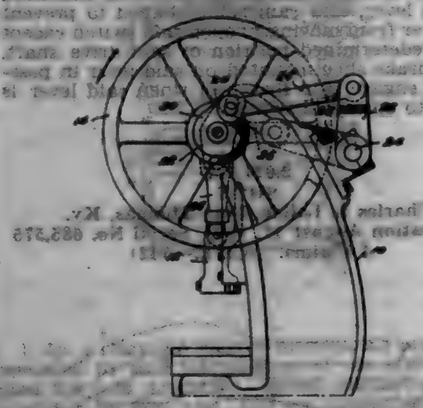
1. Lock structure, comprising a plug, a cylinder adapted to receive the plug, lock tumblers cooperating with the plug and cylinder, a casing adapted to receive the cylinder, and means connected with and rotatable with the plug about a common axis and movable relatively thereto for normally holding the cylinder in place in the casing, said means being adapted for movement to inoperative position to permit the cylinder to be removed from the casing upon movement of the plug out of locked position.

2,927,732
ELECTRODE FOR USE IN ELECTROTHERMAL PROCESSES FOR THE PRODUCTION OF CARBON BLACK
John J. Jakosky, Los Angeles, Calif., assignor to Electroblacks, Incorporated, Culver City, Calif., a corporation of Nevada
No Drawing. Application August 29, 1924, Serial No. 735,257
3 Claims. (Cl. 204—311)



1. An electrode, for use in the electrothermal dissociation of organic liquids to form carbon-black, containing carbon-black as its principal constituent and characterized by being easily dispersed in a rubber mix by the ordinary rubber milling procedure.

2,927,733
VERTICAL MAST WAVE ANTENNA
Ralph L. Jenner, Le Roy, N. Y., assignor to Locke Insulator Company, Inc., a corporation of New York
Application August 7, 1922, Serial No. 580,997
11 Claims. (Cl. 250—33)



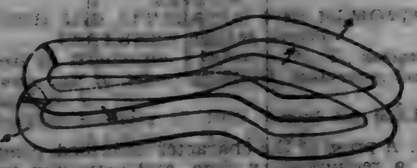
3. A wave antenna comprising a rigid vertical mast provided with two principal supports at the base, and secondary supporting means connected to the mast at a single point within the same located between the ends of the mast, said means being disposed on opposite sides of the principal supports and acting to support the mast as a cantilever and resist bending forces applied thereto in any lateral direction, said mast being insulated from ground and adapted to place function as an antenna.

2,927,734
ROTARY WELL DRILLING APPARATUS
Arthur E. Johnson, Taft, Calif., assignor of one-half to Hamrel & Miller, Los Angeles, Calif., a partnership composed of Herman Miller and Fred H. Miller
Application April 28, 1923, Serial No. 637,929
23 Claims. (Cl. 255—28)

1. In a well drilling apparatus, the combination of a section of drill pipe having a tool joint coupling at the top, a plug secured to the upper end of the coupling and having a flange extending beyond the periphery of the coupling, the lower edge of the coupling having a shoulder adapted for suspension on a rotary table, and the flange of the plug being adapted to form an elevator shoulder for suspending said section by an elevator.

2,927,735
PRESS
William Klecka, Westhaven, N. Y.
Application May 4, 1926, Serial No. 723,866
11 Claims. (Cl. 74—48)

1. A press of the character described, comprising a reciprocatory slide, and actuating mechanism for said slide comprising a crank turning through a full revolution in each cycle, a rocking part having a pair of angularly spaced arms thereon (24, 26, 28) and a second rocking part having an arm thereon (46, 48), a link connecting an arm on said first named rocking part with the arm on said second rocking part, a link connecting said crank (36) with the other arm of said first-named rocking part, and means on said second rocking part for translating rocking movements thereof into reciprocatory movement of said slide, said parts being interconnected and arranged to produce a "dwell" in the movement of said slide at the bottom of its working stroke.



2,927,736
POWER DRIVEN TAG MARKING MACHINE
Frederick W. Lasscher, Flushing, N. Y., assignor to A. Kimball Company, New York, N. Y., a corporation of New York
Application June 18, 1932, Serial No. 617,519
11 Claims. (Cl. 198—148)

1. In a tag marking machine having tag feeding means and tag printing means, in combina-

tion, a main drive shaft operating said feeding means and printing means in timed relation, a fly-wheel mounted thereon, a pivotally mounted friction wheel resting against said fly-wheel, a pivotally mounted motor having an armature shaft adapted to engage said friction wheel, a switch controlling said motor, a pivotally mounted lever for operating said switch, said lever having an extension engaging said motor to move the same to cause said armature shaft to engage said friction wheel as said switch is closed and to cause said armature shaft to disengage said friction wheel as said switch is opened, a cam on said main drive shaft engaged by a second extension on said lever, said cam being shaped to prevent said lever from moving to open said switch except in a predetermined position of said drive shaft, and a brake shoe mounted on said lever in position to engage said fly-wheel when said lever is moved to open said switch.

2,827,727
SHOE
Charles L. Labbe, Fort Thomas, Ky.
Application August 17, 1932, Serial No. 629,575
4 Claims. (Cl. 12—142)

1. The method of making shoes consisting in reducing a leather outsole by paring a skiving marginally from one surface thereof, the skiving corresponding in outside outline to that of the outsole, securing the skiving upon the bottom side of a sock lining layer, turning up an inseam lip on said skiving from the heel breast line forwardly, applying a layer of fabric material upon said sock lining layer and inner margins of the skiving within the boundary of the inseam lip, lapping and securing the edges of said layer of fabric material upon the inner sides of the inseam lip, securing a shoe upper to the inseam lip and later securing the outsole as reduced to the bottom of the shoe.

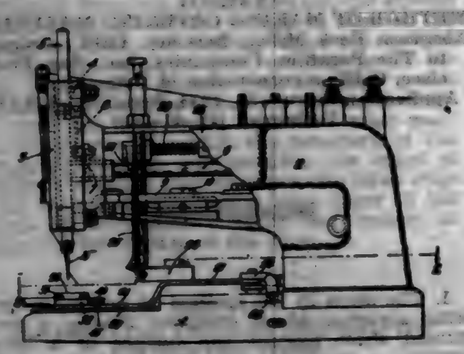
2,827,728
LUBRICATING OIL AND METHOD OF PRODUCING SAME
Erwin M. Lederer, Fort Worth, Tex.
No Drawing. Application May 4, 1931, Serial No. 535,609
1 Claim. (Cl. 196—13)

The method of producing a 0° F. cold test distillate fraction of paraffin base lubricating oil from the neutral fraction normally produced as part of a paraffin base lube residuum in diverting it to S. R. cold test, which comprises mixing a portion of undiverted residuum with said neutral fraction, diluting said mixture, chilling to —20 to —60° F., removing the precipitated wax from said chilled oil, removing the diluent and separating the neutral and residual fractions, to provide a 0° F. cold test distillate fraction having a viscosity of 100'' to 300'' at 100° F. and a 0° F. cold test residuum fraction stock having a viscosity of 50'' to 900'' at 210° F.

[illegible]
[illegible]
[illegible]

within said casing comprising a radial aerofoil blade, and an inwardly projecting annular lip between said intake and outlet surfaces adjacent

the blade tip of said fan unit and in radial overlapping relation with the tip of said blade.



2,027,742

MEANS FOR BINDING WIRE OR THE LIKE

Harold W. Morris, Waltham, Mass., assignor, by mesne assignments, to The Singer Manufacturing Company, Elizabethport, N. J., a corporation of New Jersey

Application December 18, 1930, Serial No. 502,996

4 Claims. (Cl. 112—8)

1. A work holder for a sewing machine comprising a base, a pair of angle members each having a flange supported on said base and together presenting a pair of spaced upstanding wall members between which strands of work may be placed, means fixing one of said angle members to said base, an abutment member secured to said base adjacent to the other of said angle members, springs between said abutment member and said other angle member to press said other angle member toward said fixed angle member, said wall members being recessed on their confronting faces between their ends to provide space between them and the work for the passage of a sewing needle.

2,027,747

JOINED STRUCTURE

Lawrence D. Morton, Sandusky, Ohio, assignor to The Hinde and Dauch Paper Company

Application October 26, 1934, Serial No. 749,502

6 Claims. (Cl. 229—45)

2. A box of inherently stiff sheet material comprising portions, each of said portions having an open end, said open ends being complementarily shaped to prevent side motion in any direction when abutting.

2,027,748

BEAM WITH ADJUSTABLE HEAD

Frank Mossberg, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, a corporation of Massachusetts

Application June 27, 1932, Serial No. 619,529

8 Claims. (Cl. 248—124)

1. In a beam, a body member of relatively soft material, a head member having a contractile hub of a material harder than said body member and provided with an opening therein to receive said body member and be movable therealong to different adjusted positions, and a split tube of a material harder than said body with its edges spaced and of a length to extend longitudinally of said body sufficient to be engaged by said hub when contracted in its different positions of adjustment whereby, when the tube is clamped on the body the body member is protected and yet variation in size due to the hydroscopic nature of the body is provided for.

2,027,749

BEAM

Frank Mossberg and Robert V. Olson, Attleboro, Mass., assignors to Mossberg Pressed Steel Corporation, a corporation of Massachusetts

Application August 26, 1932, Serial No. 630,281

3 Claims. (Cl. 248—120)

1. In a warp beam, a barrel member, an adjustable head member comprising a disk and a hub band embracing said barrel member and having terminal ears, ribs secured to said hub and extending outwardly therefrom, one of said ribs located substantially opposite said ears and fixed to the outer surface of said disk, means

fixed to the disc and straddling portions of said other ribs for holding said other rib against said disk and yet permitting movement thereof upon contraction of said hub, and means for contracting said hub.

2,027,750

COPPER BASE ALLOY

Elmer L. Munson, Naugatuck, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut

No Drawing. Application October 26, 1934, Serial No. 749,576

10 Claims. (Cl. 148—31.3)

1. An alloy composed of copper, nickel, aluminum and beryllium in proportions substantially within the following ranges:

	Percent
Copper	91.75 to 96.75
Nickel	2.0 to 5.0
Aluminum	0.5 to 2.0
Beryllium	0.75 to 1.25

2,027,751

PHOTOELECTROSTATIC RELAY

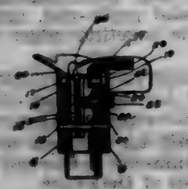
Herbert Nelson, East Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application February 15, 1934, Serial No. 711,351

5 Claims. (Cl. 250—27.5)

1. A unitary photo relay comprising a highly evacuated bulb having a press at one end and enclosing a fixed contact mounted on said press, a resilient blade mounted at one end on said press and tensioned to normally engage said fixed contact, a support wire projecting from said press into said bulb alongside said blade, a

low leakage insulator on the inner end of said support, a sheet metal photocathode supported on said insulator beside said blade and sensitized to light on its surface opposite said blade, a rod anode mounted on said press parallel to and on the sensitized side of said photocathode, an insulating spacer mounted on said press adjacent the upper end of said photo-cathode, an actuator plate mounted on said spacer near the free end of said blade parallel to the side of said blade, and an electrical connection between said photocathode and said actuator plate and extending through the other end of said bulb.



2,027,752

LOOM SHUTTLE STRUCTURE

Herman Nova, Woonsocket, R. I., assignor to Shambow Shuttle Company, Woonsocket, R. I., a corporation of Rhode Island

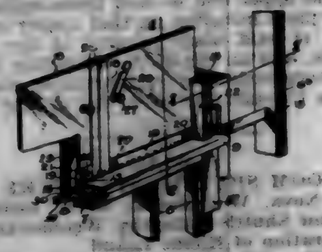
Application July 7, 1933, Serial No. 679,257

1 Claim. (Cl. 139—217)

In a weft replenishing loom shuttle provided with means for exerting substantially normal tension upon a thread before the thread is drawn into the thread delivery eye, a thread block provided with a normal thread passage communicating directly with the thread delivery eye and having a restricted thread receiving opening communicating therewith through which the thread is drawn into thread passage for entry into the thread delivery eye, means for pretensioning the thread prior to its being drawn into the thread delivery eye to an extent substantially equivalent to the tension exerted upon the thread when located within the thread passage and thread delivery eye comprising, upright tension members located at the bobbin end of said thread passage and having contact surfaces extending materially above said thread passage for receiving and tensioning a thread above said normal thread passage on the first pick after transfer, said tension members being supported at a point in the same horizontal plane as the lower portion of said normal thread passage for combined sliding and tilting movement transversely of said thread passage, and resilient means engaging one of said tension members at a point in the same horizontal plane as the upper edge of the normal thread passage and substantially midway between the point of support for said tension member and the location of the thread when initially subjected to tension as it is drawn between the tension members at the commencement of the shuttle movement on the first pick after transfer.

2,027,753

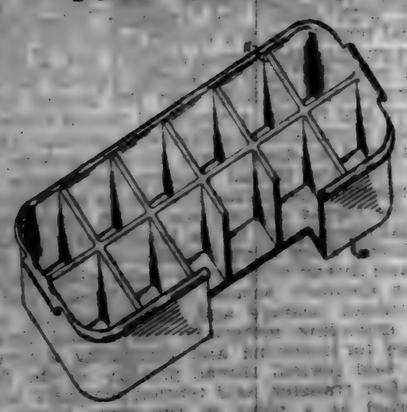
SASHLESS SLIDING WINDOW



Frank McMurray Sawyer, Houston, Tex.

Application August 16, 1934, Serial No. 740,378

2 Claims. (Cl. 20—52.1)



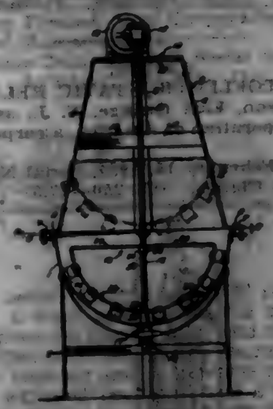
1. A sashless window embodying a pair of window-panes, inner and outer sills, a guide-rail formed with a vertical wall and a sloping outer

wall extending across the bottom of the window, a pair of vertical studs at each side of the window with their inner faces spaced apart to permit the panes to slide therebetween, a metallic shoe secured to the bottom edge of each of the window-panes and having spaced walls, the outer wall being provided with a flexible lip adapted

to slide on the sloping outer wall of the guide-rail, bearing sheaves mounted between said spaced walls and mounted to roll upon the top edge of said guide-rail, and meeting strips secured to the meeting edges of the window-panes.

2,027,754
ICE TRAY
Albert C. Smith, Larchmont, N. Y., assignor, by mesne assignments, to Servel, Inc., Dover, Del., a corporation of Delaware
Application July 28, 1933, Serial No. 682,543
2 Claims. (Cl. 62—106.5)

1. In an ice freezing receptacle for refrigerators, wall structure formed substantially entirely of small particles of good thermal conductive metal bonded together by a flexible material, thereby providing paths of good thermal conductivity therethrough and adapted for flexure in all directions to loosen the ice after freezing.



2,027,755
SYNCHRONIZING DEVICE FOR MACHINE GUNS ON AIRCRAFT
Jan Szal, Warsaw, Poland
Application March 2, 1935, Serial No. 9,944
In Poland March 14, 1934
8 Claims. (Cl. 89—37)

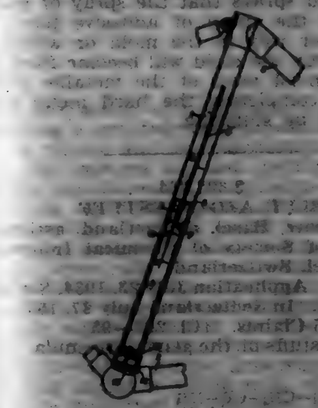
1. A synchronizing device for machine guns on aircraft, comprising in combination: a cam disc mounted on the propeller shaft and exactly adjustable thereon in the direction of rotation thereof; means for sliding said cam disc on the shaft into an operative position when the latter is in a certain definite angular position; a push member co-operating with said cam disc so as to move to-and-fro when the latter is in the operative position; a lever operatively connected with said push member so as to participate in the to-and-fro movements of the latter; a link member operatively connected to said lever; and

a second lever operatively connected to said link and to the firing device of the machine gun, whereby twice the number of to-and-fro movements are imparted to the said firing device, each of said movements causing the firing of a shot.

2,027,756
CENTER LINE SCRAPER AGITATOR
George H. Tay, Phillipsburg, Pa., assignor to Lo Metal Products Company, Inc., Phillipsburg, Pa.
Application December 30, 1934, Serial No. 758,496
11 Claims. (Cl. 259—43)

1. A vessel having an outlet in its bottom, a shaft extending into said vessel coaxially with said outlet and terminating a short distance above said outlet, means for rotating said shaft, and scraper mechanism slidable on and rotatable with said shaft and including means rotatable in said outlet and closing the same when the mechanism is in scraping position in said vessel.

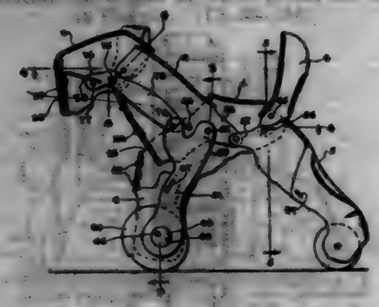
2,027,757
ARCH SUPPORTER
Cleveland Whitfield and Sarah Georges, Albuquerque, N. Mex.
Application January 8, 1934, Serial No. 705,935
2 Claims. (Cl. 36—71)



1. An arch supporter comprising a body member shaped to fit within a shoe and to conform to

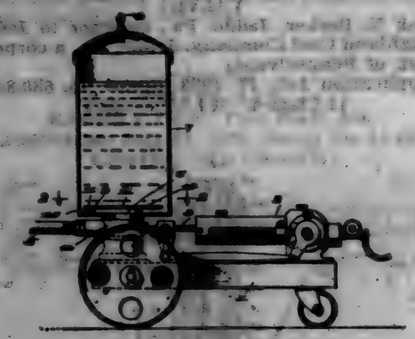
the natural shape of the instep portion of the foot, said body member comprising two superimposed laminations, the lower lamination being substantially hard and the upper lamination soft, said body member at its instep portion having a high portion extending from substantially one side of

the body to the other, the high side of said portion being separated from the first lamination by a groove in the inner side face of said high portion, said groove extending lengthwise of the instep portion and extending partially within the heel and toe portions.



2,027,758
CYCLE
Philipp Becker, Zurich, Switzerland
Application February 23, 1935, Serial No. 8,767
In Switzerland December 18, 1933
7 Claims. (Cl. 230—155)

1. In a cycle, a pump connected with the cycle frame, a seat tube forming a cylinder for the plunger of the pump, a guide slot provided in said seat tube, this tube having an air discharge opening, a tube forming the plunger of the pump and having a passage communicating with said guide slot, a separate pump handle having a base, the said passage being adapted to receive said base, and means for anchoring the plunger tube in the seat tube.

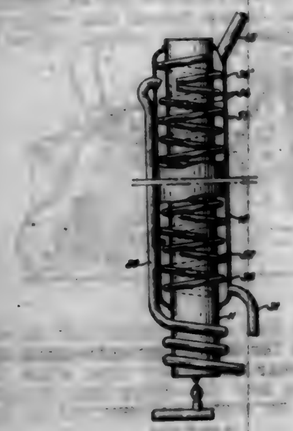


2,027,759
STOCKING FOOT
Frederick Anderson, Detroit, Mich.
Application December 6, 1933, Serial No. 701,973
23 Claims. (Cl. 46—[illegible])

1. A figure toy comprising a body provided with rigid front legs, a neck pivoted to the body, pivoted rear legs connected to the body and pivoted to and directly actuated by the neck, a traction wheel mounted on the front legs, and a crank connection between the traction wheel

and the neck for imparting movement to the neck and the rear legs.

2,027,760
DISPENSING CONTAINER
Albert W. Arnold, Miami, Fla.
Application August 31, 1933, Serial No. 687,111
Renewed June 11, 1935
3 Claims. (Cl. 221—47.1)

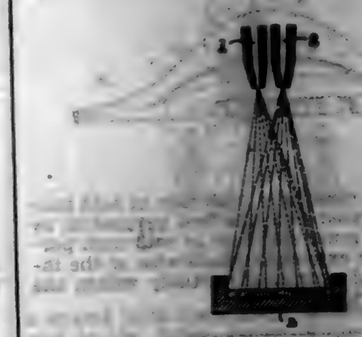


1. A grease container having a discharge orifice therein, and a distributing disk extending approximately throughout the area of said container and mounted over said orifice in spaced relation therefrom and having openings of gradually diminishing size from the outer portion of the disk toward the center thereof and arranged therein over a substantial portion of the area thereof, through which the grease passes to the discharge orifice.

2,027,761
REFRIGERATION
Sigurd Mattias Blichtrihn, Stockholm, Sweden, assignor, by mesne assignments, to Servel, Inc., Dover, Del., a corporation of Delaware
Application March 5, 1935, Serial No. 9,361
In Germany March 7, 1934
10 Claims. (Cl. 62—119.5)

1. The combination in a refrigeration system with an absorber, a generator vessel, and means for circulating absorption liquid between the generator vessel and the absorber so that liquid flows downwardly in the generator vessel and thence to the absorber, of oppositely oblique

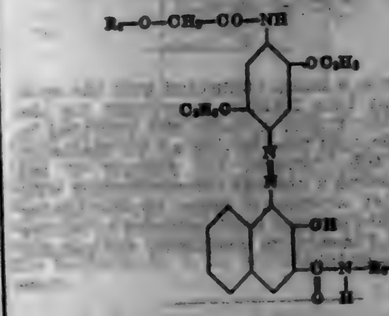
members in said generator vessel for causing vapor flowing upwardly through the generator to repeatedly reverse its direction of flow and



liquid flowing downwardly in the generator to repeatedly reverse its direction of flow.

2,027,762
VALVE
Frank N. Becker, Jeddo, Pa., assignor to Jeddo-Highland Coal Company, Jeddo, Pa., a corporation of Pennsylvania
Application July 17, 1933, Serial No. 680,833
11 Claims. (Cl. 137—152.5)

1. An automatic stop valve of the type described, including in combination, a body having an inlet and outlet in communication through a passage in the body, a closure member movable to establish or cut off communication between said inlet and outlet, a bleeder passage connecting the inlet and outlet, a cylinder having a piston therein, a piston rod connecting the piston and closure member, a port affording communication between the cylinder and outlet side of the closure member, a spring having one end acting on said piston to force it in the direction to close the valve member, and means to subject the other end of the spring to a force varying as the fluid pressure on the inlet side of the valve member.



2,027,763
PROCESS OF MAKING HARD SINTERED METALS
Gustav Becker, Essen, Germany, assignor to "Acidia", Thionville, France, a joint-stock company of France
Application October 12, 1931, Serial No. 568,891
4 Claims. (Cl. 75—1)

1. Process for making sintered hard metals, in a mold, which comprises producing a spray of a dry, finely powdered mixture of difficultly fusible metals and a more readily fusible auxiliary metal, under high pressure, producing a spray of an adhesive agent customary for binding hard metals likewise under high pressure, so directing said sprays that the spray of metallic powder and the spray of adhesive liquid will meet on their way to the mold or within the latter, whereby the mold will become filled with a compact moist mass of the metallic powder, and finally completing the hard metal article thus molded by sintering.

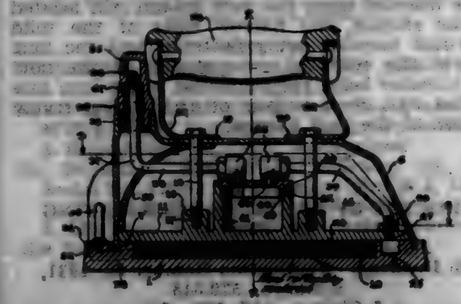
2,027,764
BLUE AZO-DYESTUFF
Gérald Benbitz, Basel, Switzerland, assignor to the firm of Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application July 23, 1934, Serial No. 736,612. In Switzerland July 27, 1933
5 Claims. (Cl. 260—25)

1. The dyestuffs of the general formula

wherein R_1 represents an aromatic nucleus of the benzene series, and R_2 also represents an aromatic nucleus of the benzene series in which one of the ortho-positions to the OCOHR-group is occupied by the substituent X, X standing for a group of substituents consisting of methyl and O-alkyl, the alkyl radical of the O-alkyl-group containing

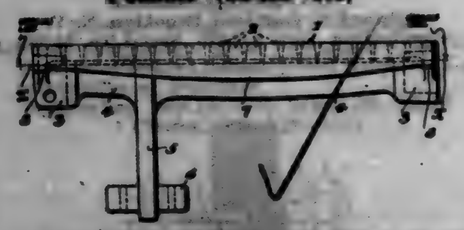
at most of 3 carbon atoms, which products form dark powders dissolving in pyridine to blue-violet to blue solutions and dyeing cotton fast blue tints.

2,027,765
FENCE POST
John B. Cuneo, San Francisco, Calif.
Application October 11, 1934, Serial No. 748,168
1 Claim. (Cl. 72—33)



As a new article of manufacture, a fence post comprising a concrete body substantially square in cross section and an intermediate section between the extreme top and ground section reduced an equal amount on opposite sides thereof to provide an oblong cross section, to provide flat horizontal shoulders at the junction of said ground and reduced sections, to support the ends of lower fence rails, said post being further provided with a longitudinally disposed dovetailed groove in one unreduced side thereof and a substantially square recess in the top of said post; and a readily penetrable material mounted within said dovetailed groove and recess to provide a securing means to which rails, or other members to be supported by said post, may be readily nailed.

2,027,364
PROCESS FOR AMMONIATING ORGANIC MATERIALS
Royall O. E. Davis and Walter Scholl, Washington, D. C.; dedicated to the free use of the Public
No Drawing. Application February 15, 1933, Serial No. 657,473
2 Claims. (Cl. 71—5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. The process of manufacturing fertilizer materials which comprises charging peat into an autoclave, closing the autoclave, bringing anhydrous ammonia into contact with the peat, heating the mixture to a temperature of 150° to 300° C., maintaining said temperature for a period of eight hours, allowing the mixture to drop to a temperature of 35° C., and removing the unconsumed ammonia from the mixture.

2,027,767
ELECTRIC IRON AND DAMPENER
Donald A. Deems, St. Louis, Mo., assignor to Ernest F. Fuhl, St. Louis, Mo.
Application November 24, 1934, Serial No. 754,630
18 Claims. (Cl. 68—24)

1. An electric iron and dampener including a base having steam channels therein and outlet ports opening from said channels through the lower surface of the base, a casing on the base forming therewith a water reservoir and having a steam dome, means forming a hot spot water trapping and vaporizing chamber on the base within the reservoir, means for heating the base as well as the water in said reservoir and in the vaporizing chamber, a steam pipe leading from the steam dome to said chamber, and a steam pipe leading from the said chamber to the steam channels of the base.

2,027,768
GRATE-BAR
Edward S. Dilley, Pine Bluff, Ark.
Application July 15, 1935, Serial No. 31,481
4 Claims. (Cl. 126—178)

1. A dual cast grate-bar comprising an ash supporting upper portion of metal of a nature which will primarily resist heat and sagging; and reinforcing ribs fused to the underside of the upper portion of metal of a nature having primarily a high resistance to shock.

2,027,769
WEFT BOBBIN FOR AUTOMATIC WEFT SUPPLY
Eduard Egli and Edwin Schoch, Ruti, Switzerland, assignors to Maschinenfabrik Ruti vormals Caspar Honegger, Ruti, Switzerland
Application November 22, 1934, Serial No. 754,364
In Switzerland November 29, 1933
1 Claim. (Cl. 139—207)

A weft carrier for looms with automatic change of bobbins, comprising a flat front por-

tion with the long axis in the horizontal direction, to carry the weft, a conical rear portion having two opposite feeler slots, a solid hold-fast member provided with holding beads and elliptical in cross section for the purpose of preventing rotation and slipping of the fresh bobbin of weft to be inserted upon the weft bobbin still located in the shuttle, the narrow sides of the solid hold-fast member being flattened and the long axis of the elliptical cross-section of the hold fast member being perpendicular to the long axis of the flat cross-section of the weft-carrying portion of the weft carrier.

2,027,770

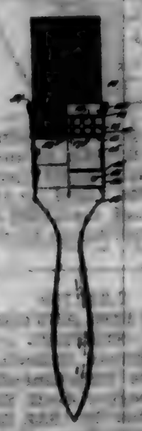
PROCESS OF TREATING LUBRICATING OIL STOCK

John B. Fields, Los Angeles, Calif.

No Drawing. Application October 30, 1931, Serial No. 572,945

5 Claims. (Cl. 196—34)

1. A process of treating a lubricating petroleum oil stock which comprises thinning same with a light petroleum hydrocarbon solvent, in such proportions as to give a mixture of low viscosity, and thereafter flowing the mixture, in a substantially anhydrous condition, into intimate contact with a solid alkali metal in a comminuted state at not substantially above normal room temperature, until impurities therein have been coagulated, separating said oily materials and the coagulated impurities from each other, before chemical reaction of any substantial proportion of the alkali metal with hydrocarbon compounds is effected, and distilling said light petroleum hydrocarbon solvent, from the lubricating oil stock.



2,027,771

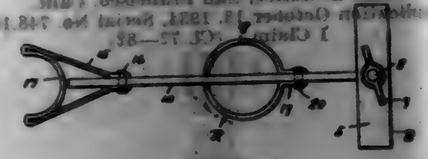
PAINTBRUSH BRIDLE

Edward N. Garrison, Brooklyn, N. Y.

Application April 5, 1935, Serial No. 14,989

4 Claims. (Cl. 15—248)

1. A paint brush bridle of tubular form adapted to fit the forward end of a paint brush handle and the base of the bristle bunch of such brush provided with circumferential and longitudinal ribs forming a reticulation, said reticulation being located between the ends of the bridle and forming pockets to catch drippings from the brush bristles.



2,027,772

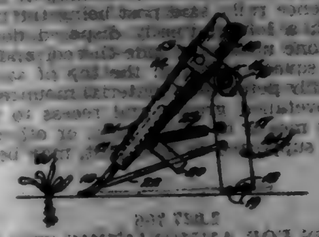
FISHING POLE HOLDER

Otto R. Hein, Milwaukee, Wis.

Application April 12, 1935, Serial No. 16,061

2 Claims. (Cl. 248—30)

2. In a fishing pole holder, an arm, a yoke member including a pair of arms and a bight, the bight being bowed inwardly between the arms of the yoke member to form a seat for a fishing pole and the arms of the yoke member converging from their junctures with the bight to the free ends, said free end being pivoted to one end portion of the first mentioned arm at a point spaced from the free end of said first mentioned arm a distance less than the distance between the bight and the pivotal-point whereby the yoke member can be swung to a horizontal position when not in use, and a holder member pivoted to an intermediate part of the first mentioned arm and composed of two substantially semi-circular portions having their free ends spaced apart whereby said holder can be swung into a horizontal position with the two parts at the sides of first mentioned arm or to a vertical position to hold a part of the rod.



2,027,773

WEED PULLER

Earl Tom Hendy, Portland, Oreg.

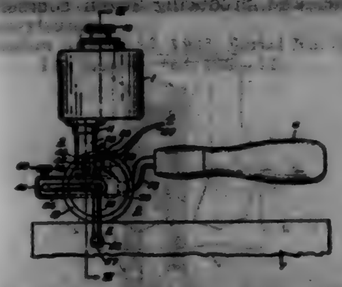
Application May 4, 1935, Serial No. 19,961

9 Claims. (Cl. 294—123)

1. In a weed puller, a handle, a pair of diverging tines carried by said handle at its lower end, a finger movable into and out of position with its lower end between said tines, said finger pivoted to a leg, said leg pivotally connected to said handle, said leg adapted to retract the finger upon insertion of said tines into the ground.

2,027,774

STRIPPING TOOL



Frank B. Hewes, Pittsburgh, Pa.

Application May 16, 1934, Serial No. 726,241

10 Claims. (Cl. 81—3.8)

1. A device for [illegible] comprising a rotatable outlet means, a container for said fluid,

and a conduit communicating with said container and said outlet means, said conduit having an adjustable miter joint, and means for securing the

parts of said joint in different relative fluid-feeding positions.

2,027,775

STOP MOTION FOR LOOMS

William H. Hill, Kannapolis, N. C.

Application September 13, 1934, Serial No. 41,163

4 Claims. (Cl. 139—337)

1. A harness stop motion device comprising a stand to be placed under the harness frame of a loom, said stand having upstanding spaced arms, a tubular member carried by one of the arms, a rod insertable from above within the tubular member, a bar carried by the upper extremity of the rod and substantially bridging the space between the upstanding arms, a spring within the tubular member below the rod for normally maintaining said rod and bar in a raised position, a stop off bar, and an upstanding rod carried by the bar having a part for engaging the stop off bar upon depression of the first named rod and bar, said bar being positioned below the harness to be contacted by a dropping frame.

2,027,776

WEAVING LOOM

Radolf Hrdina, Cerveny Kostelec, Czechoslovakia

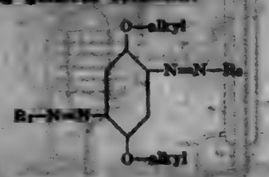
Application April 12, 1934, Serial No. 720,501

In Czechoslovakia April 20, 1933

8 Claims. (Cl. 139—121)

1. In a device for automatically changing the weft spools of a mechanical weaving loom, a hammer, a two-part telescopic push-rod for actuating said hammer, a pawl on one part of said push-rod, a retainer in the other part of said push-rod, and means for causing said pawl to enter said retainer when the shuttle is correctly positioned for a spool-changing operation.

2,027,777



MORDANT DISAZO-DYESTUFFS AND THEIR MANUFACTURE

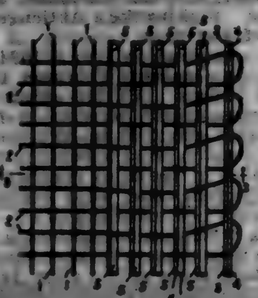
Ernst Hug, Neu-Allschwil, near Basel, and Max Müller, Basel, Switzerland, assignors to Durand & Huguenin S. A., Basel, Switzerland

No Drawing. Application February 25, 1935, Serial No. 8,296. In Germany March 3, 1934

6 Claims. (Cl. 260—151)

6. Mordant disazo-dyestuffs corresponding to the following general formula:

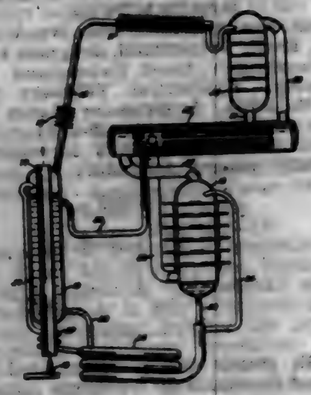
wherein R_1 stands for a sulphonated benzene nucleus and R_2 stands for a benzene nucleus containing as substituents a hydroxyl- and a carboxylic group in ortho position to each other, said dyestuffs constituting brown powders being in form of their alkali salts easily soluble in water, yielding orange-brown to red-brown solutions giving with concentrated sulphuric acid red-violet to blue-violet colorations, and yielding in chrome printing on cotton red-brown to violet-brown of good fastness properties.



2,027,778

WOVEN WIRE SCREEN CLOTH

John H. Hollingsworth, York, Pa., assignor to New York Wire Cloth Company, New York, N. Y., a corporation of Delaware

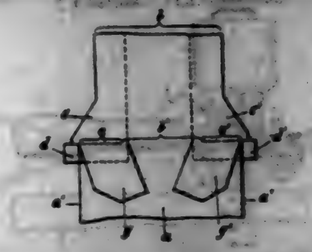


Application July 27, 1935, Serial No. 33,457

7 Claims. (Cl. 139—425)

1. Woven wire screen cloth consisting throughout substantially its entire extent of conventional and similar warp and weft elements and provided along at least one selvage edge thereof with a printing band comprising a plurality of closely spaced special warp elements each consisting of a flattened wire and a round wire laid in contact with each other and together presenting a surface substantially wider than the diameter of any of said conventional warp and weft elements, and adapted to receive and to afford a background for suitable indicia printed upon said printing band.

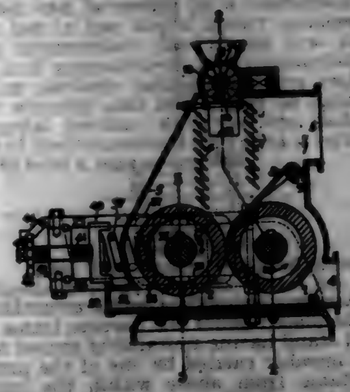
2,027,779
REFRIGERATION
Wilhelm Georg Kägi and Nils Widell, Stockholm, Sweden, assignors, by mesne assignments, to Servel, Inc., Dover, Del., a corporation of Delaware
Application June 12, 1934, Serial No. 730,275
In Germany June 12, 1933
7 Claims. (Cl. 62—119.5)



1. In an absorption refrigeration system, a generator, an evaporator, an absorber, means including a gas heat exchanger interconnecting said absorber and evaporator for circulation of inert gas therebetween, means including a liquid heat exchanger interconnecting said absorber and said generator for circulation of absorption liquid therebetween and means also including said gas heat exchanger and exclusive of said absorber and liquid heat exchanger for conducting unevaporated liquid from said evaporator to said generator.

2,027,780
PROCESS OF TREATING COBALT-TUNGSTEN-CHROMIUM ALLOYS
Werner Köster, Krefeld, Germany, assignor to Vereinigte Stahlwerke Aktiengesellschaft, Duesseldorf, Germany
No Drawing. Application May 4, 1934, Serial No. 723,976. In Germany February 18, 1931
2 Claims. (Cl. 148—11.5)

1. The process which consists in forming an alloy comprising about 40 to 85% cobalt, about 5 to 40% of tungsten and the balance constituting about 10 to 40% of the alloy consisting substantially of chromium, said alloy containing carbon in amounts not exceeding 0.2%, subjecting said alloy to a precipitation hardening by heating the alloy to a temperature between about 1000° C. and the melting point of the alloy, rapidly cooling from this temperature and annealing at temperatures between 500 and 900° C.

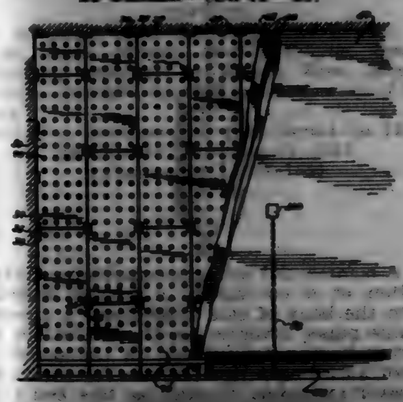


2,027,781
METHOD OF MAKING HOSIERY
Paul Lieberknecht, Einsiedel-Chemnitz, Germany
Application March 18, 1933, Serial No. 661,240
In Germany November 17, 1932
5 Claims. (Cl. 66—167)

1. The method for the manufacture of stockings on a flat hosiery frame which comprises knitting the leg part, knitting the separating courses in front of the edge parts of the leg, and then knitting the foot part consisting of front and sole parts and the toe and impaling this section, at the places where the heels are to be applied, on the needles of an auxiliary knitting machine, and producing stitch courses on the

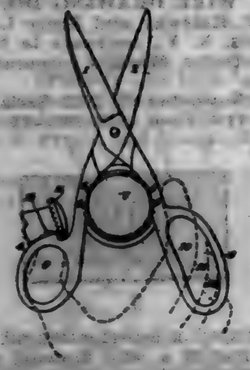
transferred section which are longer than the separating courses, whereupon the heel is made broader than the separating courses, and finally finishing the stocking.

2,027,782
PULVERIZING MILL
Eric Lundgren, Linganore Hills, Md.
Application June 22, 1931, Serial No. 545,981
7 Claims. (Cl. 83—12)



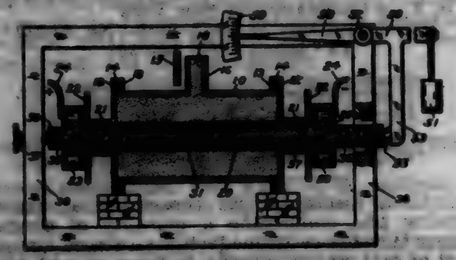
6. A pulverizing mill having a casing, horizontally extending pulverizing elements provided by cooperating rollers the axes of which extend horizontally and longitudinally, feeding means provided at the top of the casing and constructed for delivering material to the pulverizing elements for the full length thereof, horizontally and transversely extending shafts below the feeding means and carrying deflecting vanes provided by longitudinally spaced transversely extending plates arranged for directing at will material in larger quantities to certain portions of the rollers than to others and to thereby regulate the wear upon the rollers, and above the rollers but below the feeding means two sets of longitudinally extending deflecting plates between which sets the transversely extending deflecting plates are located, which said sets are sufficiently spaced to define a downwardly extending passageway through which the material fed by said feeding means must pass on its way to the rollers, each said set of longitudinally extending deflecting plates being composed of vertically spaced plates that slope forwardly and downwardly, there being one set of such plates over one roller of a pair of the cooperating rollers and another set of such plates over the other roller of said pair of cooperating rollers.

2,027,783
PUMP ANCHOR
John N. Martin, Tulsa, Okla., assignor to Bradford Motor Works, Bradford, Pa., a corporation of Pennsylvania
Application August 27, 1935, Serial No. 37,945
17 Claims. (Cl. 166—13)



1. A pump anchor for use in well tubing, comprising an anchor tube, a downwardly tapered tubular head secured to the upper end thereof, a resilient packing surrounding said head, and a sleeve slidably mounted on said tube with its upper end engaging the packing and adapted to be held stationary in the well tubing while said head moves downwardly relative thereto to expand said packing into frictional engagement with said tubing, said tapered head being provided with a plurality of circumferential grooves into which portions of the expanded packing are compressed to aid in restraining upward movement of the head in the packing.

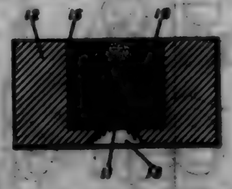
2,027,784
PARTITION STRUCTURE
John Page, Evanston, Ill.
Application April 26, 1934, Serial No. 722,473
21 Claims. (Cl. 72—44)



1. The method of erecting a partition, which comprises arranging plaster boards edge to edge in a substantially vertical plane with joints broken, connecting said boards together, providing one side of said boards with stiffening members, applying a plaster coating to the other side of said boards, and then applying a coating of plaster to the first mentioned side of said boards.

2,027,785
BOTTLE CAP REMOVER
Frederic H. Sauk, South Orange, N. J., assignor to J. Wiss & Sons Co., Newark, N. J., a corporation of New Jersey
Application December 17, 1931, Serial No. 581,549
1 Claim. (Cl. 65—46)

A unitary, integral tool for removing crimped bottle-caps, provided with a sharp, angular, engaging point, an extension projecting in the same direction as the point and sufficiently far beyond the bottle-cap to be firmly gripped by the hand, said extension having a single, convex and smoothly curved portion adapted to rock over the top of a bottle-cap to draw the said point upward when the said extension is pushed downward, and a smoothly and continuously, convexly curved element in the form of an arc of an ellipse, having its greater axis parallel to the said extension, extending backward from said engaging point, and adapted to rock smoothly and evenly against a bottle neck to act as a fulcrum when the said point is engaged under the edge of the bottle cap and the said extension is swung upward and away from the cap.



2,027,786
METHOD OF MAKING BORON CARBIDE ARTICLES
Raymond R. Ridgway and Bruce L. Bailey, Niagara Falls, N. Y., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application October 20, 1933, Serial No. 694,562
13 Claims. (Cl. 13—23)

1. The method of making a shaped article of boron carbide comprising the steps of heating boron carbide granules in a metal environment to a temperature at which they will cohere under pressure, pressing the grains in a carbon mold to shape the article and preventing the boron carbide from remaining in a molten condition in contact with the mold and dissolving a material

amount of carbon therefrom, thereby forming an article of boron carbide having a conchoidal crystalline fracture which appears substantially as a single phase free from parting planes of graphite.

2,027,757
WIRE DRAWING DIE
Raymond R. Ridgway and Bruce L. Bailey, Niagara Falls, N. Y., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application November 13, 1933, Serial No. 697,744
11 Claims. (Cl. 205—29)

1. A die shaped as a perforated nib of required dimensions having a wire drawing surface, the effective portion of which comprises boron carbide of the formula B_6C.

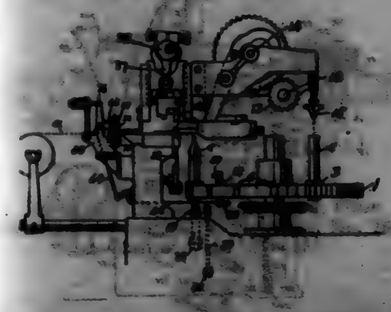
2,027,758
BEARING
Raymond R. Ridgway and Bruce L. Bailey, Niagara Falls, N. Y., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application March 8, 1934, Serial No. 714,536
5 Claims. (Cl. 308—242)

1. A bearing comprising a molded body of the required dimensions and shape which is composed of boron carbide of the formula B_6C.

2,027,759
DISPLAY DEVICE
Charles Roberts, New York, N. Y., assignor to Multipester Advertising Corporation, New York, N. Y., a corporation of New York
Application July 21, 1933, Serial No. 681,871
13 Claims. (Cl. 40—26)

1. In a display device containing a display window and comprising a plurality of display sheets movably restrained within a closed circuit, part of said circuit crossing in front of said window, means to compact in said circuit the said sheets in an overlapping series across the entire front of said window, the leading sheet thereof being in register with said window, and means to advance the leading sheet of said series out of register of said window, and subsequent means therewith to advance into register with said window the sheet next to said leading sheet.

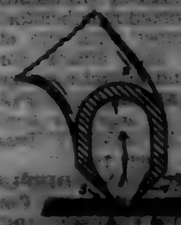
2,027,760
SIGN REPLAY CHANGE
Louis J. Schmitter, Chicago, Ill.
Application September 30, 1935, Serial No. 42,021
2 Claims. (Cl. 40—125)



1. A plate retaining structure comprising a frame member comprising a peripheral wall and an inwardly projecting peripheral flange integral with one edge of said wall and against which a peripheral edge portion of a plate is adapted to bear, there being slots in the top and bottom and in the side portions of said peripheral wall, a skeleton flexible, normally bowed retaining member adapted to fit within the peripheral wall of the said frame member and coinciding in shape and size substantially with the inwardly extending peripheral flange of the frame member, projections on the upper and lower ends of the retaining member for engaging in the slots in the top and bottom portions of the peripheral wall when said retaining member is flexed to extend substantially parallel with said inwardly projecting peripheral flange, and digitally operable latch members on the side portions of said retaining member for engaging in said slots in the side portions of said peripheral wall.

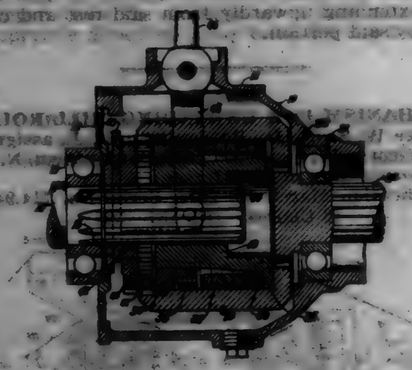
2,027,761
CONFECTION COVER
Joseph Schreyer, Brooklyn, N. Y.
Application April 5, 1933, Serial No. 664,538
2 Claims. (Cl. 206—56)

1. A commercial package comprising the combination of a confection, a handle embedded within the body of said confection, a one-piece bag like paper covering for the confection, said covering having an opening in the sealed end thereof affording a free passage for the handle, the cover extending beyond the free end of the confection, and being outside of the mouth thereof around the free end of the confection said covering thereby forming a continuously sealed one-piece sanitary housing for the confection, and there being tearing lines formed in the covering starting from the mouth thereof to facilitate the progressive exposure of the free end of the confection during the eating operation.



2,027,762
AUTOMATIC TUBE CLOSING AND CLIP ATTACHING MACHINE
Francis J. Stokes, Philadelphia, Pa., assignor to F. J. Stokes Machine Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 21, 1932, Serial No. 600,189
19 Claims. (Cl. 112—1)

1. In a machine of the type described, means for conveying a plurality of tubes having open ends, means for creasing the open ends of said tubes, means for folding and closing said creased ends, means for forming a metallic clip, means for feeding metal to said last mentioned means, means for preventing the operation of said feeding means when there is no tube in position, and means for applying said clip to a tube and for clamping it thereon.

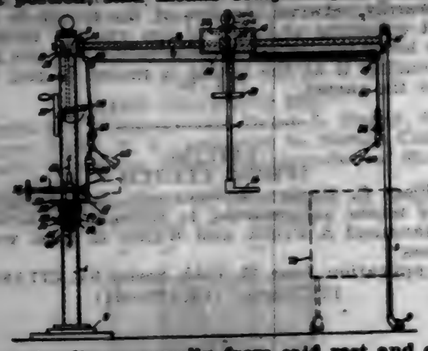


9. In an automatic machine for closing collapsible tubes, means for conveying a plurality of tubes having open ends, a reciprocating member mounted above the line of travel of the open ends of said tubes, a pair of blades rigidly and immovably mounted on said reciprocating member and depending therefrom so as to form a triangle in side elevation, means for providing for horizontal adjustment of said blades on said member relative to each other, and means for reciprocating said member and said blades so that said blades enter the open ends of said tubes and spread said open ends from circular into prolate transverse cross-section.

2,027,763
NOZZLE FOR VACUUM CLEANERS
Victor Neufeld-Mosher Smith, Fergus, Ontario, Canada, assignor to Beatty Bros. Limited, Fergus, Ontario, Canada, a corporation of Canada
Application December 21, 1932, Serial No. 648,236
In Canada December 21, 1932
2 Claims. (Cl. 15—385)

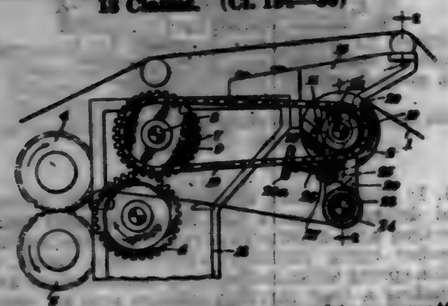
1. A vacuum cleaner nozzle for cleaning carpets, rugs and the like having two parallel wedge shaped lips forming a substantially narrow mouth, one of said lips being at a higher elevation than the other lip, the higher positioned lip directing the flow of air before it enters the mouth over the surface of the carpet in close proximity to the mouth of the nozzle and then down into the dirt gutter at the base of the pile and then upwardly between the lips of the nozzle to the dirt collecting chamber of the vacuum cleaner, the lower positioned lip penetrating the pile and spreading it as the nozzle is moved to and fro over the carpet.

2,027,764
SPRING CLUTCH
William C. Starkey, Indianapolis, Ind., assignor, by mesne assignments, to William C. Starkey, Raymond S. Pruitt, and Walter H. Beal, trustees
Application June 17, 1932, Serial No. 617,731
11 Claims. (Cl. 192—41)



1. In combination, relatively rotatable driving and driven members, the driven member being provided with a cylindrical recess and the driving member being disposed within said recess, a clutch spring arranged between said members and including a load carrying portion and an energizing portion, the latter portion normally having a slight frictional drag against the annular wall part of said recess, an abutment on the driving member against which an end of the load carrying portion of the spring is adapted to engage so that when the driving member is rotated in one direction it will operate through the energizing portion to unwind the load carrying portion of the spring and cause the same to expand and firmly grip said wall of the recess of the driven member and cause said two members to be clutched together, and means for preventing relative axial and rotative movement between the spring and driving member.

2,027,765
FRACTURE AND ORTHOPEDIC OPERATING FRAME
Albert Stephenson, New York, N. Y., assignor of one-half to Herbert M. Bergamini, New York, N. Y.
Application January 13, 1934, Serial No. 706,473
12 Claims. (Cl. 128—84)

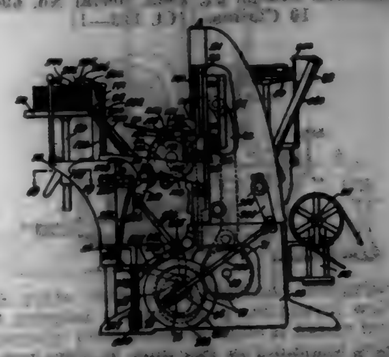


1. In combination, a sacral rest, extremity supporting members and means whereby said rest and members are supported in desired position with reference to each other, said means comprising a frame, means for supporting said members on said frame, said frame comprising a single upright at one end, a pair of uprights at the other end and a horizontal portion connecting

said uprights and extending over said sacral rest, and means for supporting said sacral rest from said portion, said means comprising a perineal

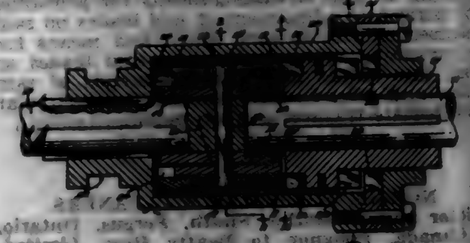
bar extending upwardly from said rest and carried by said portion.

2,027,796
MECHANISM FOR UNWINDING MILL ROLLS
George W. Swift, Jr., Bordentown, N. J., assignor to George W. Swift, Jr., Inc., Bordentown, N. J., a corporation of New Jersey
Application March 19, 1934, Serial No. 714,943
13 Claims. (Cl. 154—30)



1. In combination with a machine operating on a continuous web, a power-driven web-feeding roll constructed and arranged to operate frictionally on said web and having a peripheral speed slightly in excess of the velocity of the web passing through said machine, a freely journalled web-guiding roller arranged to guide said web around a peripheral portion of said web-feeding roll and to hold it in frictional engagement therewith when said web is under tension, and means for varying the angular tilt of the rotary axis of said web-guiding roller with respect to the axis of said web-feeding roll.

4. Mechanism of the character described comprising web-corrugating rolls operating at substantially constant speed, a power-driven web-feeding roll geared to said corrugating rolls and having a peripheral speed slightly in excess of the velocity imparted to the web by said corrugating rolls, and a web-guiding roller freely journalled upon an axis oscillatable about the axis of said web-feeding roll.

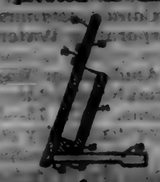


2,027,797
PRINTING PRESS AND METHOD OF PRINTING
Francis V. Toppin, Lyndhurst, N. J.
Application December 12, 1933, Serial No. 646,782
18 Claims. (Cl. 101—232)

1. The method of printing, which consists of registering inner forward corners of two spaced stacks of sheets, simultaneously selecting a sheet from each registered stack, feeding said sheets and simultaneously impressing them respectively on two printing forms, repeating the selecting, feeding and impressing on successive registered sheets of the stacks, delivering the impressed

sheets in two stacks, returning the stacks to register position in varied relation to their original register position so that the presentation of the sheets thereof to the printing forms is varied, and continuing the selecting, feeding, impressing and delivering of the sheets.

2,027,798
TORQUE TRANSMITTING MECHANISM
Bern P. Wall, Seattle, Wash., assignor to James Graham Wall, Seattle, Wash.
Application March 7, 1931, Serial No. 521,847
11 Claims. (Cl. 192—48)



9. The combination with a pair of rotative toothed members and a shaft supporting one of said members and providing bags for driving the same, means operatively interconnecting said shaft and the supported member for meshing the teeth of said member with the other of said toothed members, said means comprising an angular cam slot and a stud arranged for tracking engagement in said slot.

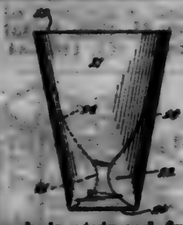
2,027,799
ARTICLE STORAGE AND DISPLAY STAND
Thomas E. Wharton, Bridgeport, Conn., assignor to Remington Arms Company, Inc., a corporation of Delaware
Application August 12, 1932, Serial No. 628,630
4 Claims. (Cl. 221—13)

The combination with a display panel having article holding and displaying means mounted on one side thereof, of an article receptacle comprising a plurality of separate compartments pr

cured to and wholly supported on the opposite side of said panel, and a supporting base comprising a bar pivoted to said receptacle and

adapted to be swung from an effective extended position to an ineffective position beneath said receptacle.

2,027,800
MARINE FENDER
Dana T. Whitlock, Lakewood, Ohio
Application January 8, 1934, Serial No. 705,143
2 Claims. (Cl. 61—48)



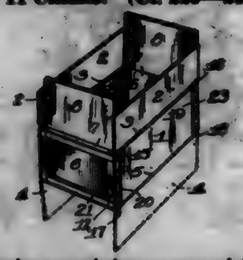
1. In a marine fender, in combination, a pair of longitudinally extending wooden sills spaced apart and parallel with each other, and a relatively long and narrow block of resilient material mounted between said sills, the outer surface of said resilient material extending outwardly beyond the surfaces of said sills.

2,027,801
PROCESS OF TREATING COFFEE
Harold K. Wilder, Battle Creek, Mich., assignor to Kellogg Company, Battle Creek, Mich., a corporation of Delaware
No Drawing. Application December 14, 1933, Serial No. 702,921
21 Claims. (Cl. 99—4)

1. A process for improving the flavor of coffee, comprising heating green coffee beans having a moisture content while under treatment in excess of the natural moisture content of dried coffee beans; to an elevated temperature but less than 170 degrees F. for several hours to permit the enzymes thereof to convert the chemical substances within the beans, the time varying inversely with the temperature.

2,027,802
PAPER ICE CREAM CUP
Andrew C. Wood, Chicago, Ill., assignor to Vortex Cup Company, Chicago, Ill., a corporation of Delaware
Application June 16, 1933, Serial No. 676,042
1 Claim. (Cl. 229—1.5)

As an article of manufacture, a cup adapted to contain a frozen confection and arranged to be subsequently stripped from its contents, said cup being formed from a blank comprising a single sheet cut to provide a pair of opposed sector-shaped side walls having inwardly converging edges and joined at their narrow portions, said blank being folded about a single transverse line of fold and having overlapped marginal portions on opposite sides of the cup secured together by adhesive of such amount and character as merely to hold the cup in shape but being insufficient to preclude ready separation of the side edges

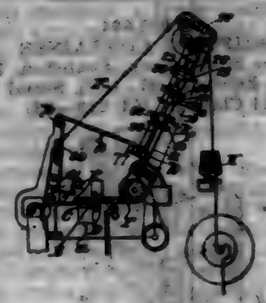


when the blank is stripped from the confection therein, and a plurality of stripping tabs extending freely from opposite secured portions of the cup and by means of which said cup may be stripped from its contents by pulling said tabs in opposite directions away from the cup body.

2,027,803
CAP AND LOCK DEVICE FOR TANKS
Emil O. Young, Cleveland, Ohio
Application August 4, 1932, Serial No. 628,838
7 Claims. (Cl. 220—46)

1. In a cap and lock mechanism for tanks, a tubular intake spout having an inturned and spaced flange concentric therewith, said flange having a bayonet slot therethrough, a flanged cap member fitting over said spout and having a central opening, a lock bolt insertable in said opening, a cross member secured on the inner end of said bolt and having an extended end laterally engaging in said slot for locking or unlocking the cap, and means engaging said bolt to raise the said bolt member into said slot to lock the cap on said tubular spout.

2,027,804
SHIPPING CONTAINER
Oliver M. Babcock, Evanston, Ill.
Application February 27, 1935, Serial No. 8,549
11 Claims. (Cl. 229—23)



1. A shipping container comprising a pair of side members each having a top and bottom flap, a pair of reinforced end members each having a top and bottom flap, each of the side members adjacent each end having a scored portion, and a slot at each end of the scored portions, whereby the container may be collapsed into flatwise condition to permit stacking for shipping, storing or the like.

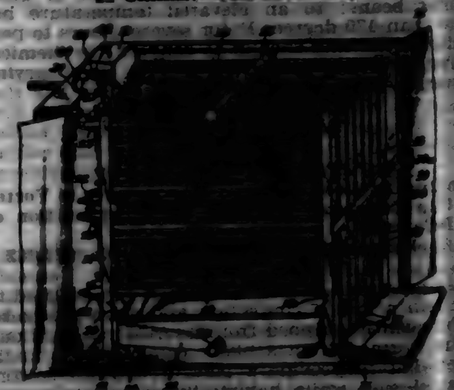
2,027,295
FRACTURE AND ORTHOPEDIC OPERATING MACHINE
Herbert M. Bergmann, New York, N. Y., assignor of one-half to Albert Stephenson, New York, N. Y.
Application March 21, 1935, Serial No. 12,244
12 Claims. (Cl. 128—84)

1. In combination, a sacral rest, extremity supporting members and means whereby said rest and members are supported in desired position with reference to each other, said means comprising a frame, means for supporting said members on said frame, said frame comprising a portion extending over said sacral rest, and means for supporting said sacral rest from said portion, said means comprising a perineal bar extending upwardly from said rest and carried by said portion.

2,027,296
LOOM
Whitworth Fontaine Bird, Drexel Hill, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware
Application August 14, 1931, Serial No. 557,149
In Great Britain August 16, 1930
10 Claims. (Cl. 139—126)

9. In apparatus of the character described, a thread holder, a gripper, one of said members being movable relatively to the other in a reversing movement to draw a thread from said holder, means for elongating into a loop a thread drawn from said holder, means for releasing the thread from said gripper and a cutter for severing said thread adjacent to said holder.

2,027,297
COPPER BASE ALLOY
Henry L. Burghoff, Yalesville, and David H. Lawson, Waterbury, Conn., assignors to The Chase Companies, Incorporated, Waterbury, Conn., a corporation
No Drawing. Application May 12, 1932, Serial No. 611,223
11 Claims. (Cl. 75—1)



1. A ductile copper-base alloy comprising copper and tellurium, with the copper content being at least 75% and the tellurium being present in an amount from 0.03% to 1.75% inclusive, the said alloy being characterized by substantially improved machinability over what the alloy would possess in the absence of said tellurium.

2,027,298
ARTIFICIAL HORIZON FOR AIRCRAFT
Bert G. Carlson, Queens Village, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application November 23, 1933, Serial No. 643,361
5 Claims. (Cl. 33—204)

1. In an artificial horizon for aircraft, a horizon bar, a gyroscopic artificial horizon connected therewith to cause it to simulate the apparent movements of the real horizon on pitching of the craft, a movable reference-member therefor, a barometric device, and means connecting said device and member whereby the bar is, in apparent movements also simulates the real horizon when the craft is descending or rising without pitch.

2,027,299
HEAT EXCHANGE DEVICE
Fritz G. Carnall, Jr., Mountain Lakes, N. J.
Application January 24, 1934, Serial No. 708,011
41 Claims. (Cl. 257—254)

3. An attemperating device comprising a plurality of heat exchange units each comprising a

pair of vertical headers connected by horizontal tubes, a pair of superposed horizontal headers, a plurality of pipes extending from the bottom horizontal header into the bottom tubes of said units, and a plurality of pipes extending from the upper horizontal header into the top tubes of said units and sliding liquid-tight connections between said pipes and unit headers.

2,027,310
PERFORATED CELLOPHANE AND THE LIKE, AND METHOD OF MAKING THE SAME
Simon Cooper, Brooklyn, N. Y., assignor to Cooper Tea Packet Company, Brooklyn, N. Y., a corporation of New York
Application October 30, 1933, Serial No. 695,342
5 Claims. (Cl. 154—133)

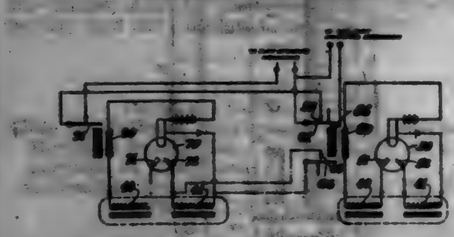
1. A perforated thin sheet of "Cellophane" and like amorphous material usable as a wrapper and in which tears readily start from perforations therein, the finished sheet having permanent bosses thereon and the perforations being in the bosses, the sheet in use being thereby made resistant to tearing under pressure applied thereto.

2,027,311
LINING FOR WINDOW GUIDES AND METHOD OF APPLYING THE SAME
Edgar R. Creamer, Detroit, Mich., assignor to The George R. Carter Company, Detroit, Mich., a corporation of Michigan
Application January 4, 1934, Serial No. 705,254
7 Claims. (Cl. 296—44.5)

1. A textile lining for the channels of window frames comprising, in a transversely flat and unbent strip and in combination, an outer pile portion adapted to engage one side face of the window sash and a body portion embodying a selvage edge to engage the side wall of the channel, both lying closely superposed so that the window may slide in two directions thereon and the body portion being reenforced with pliable inert wire also lying flat in transverse loops.

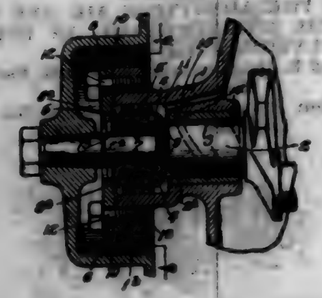
6. A method of applying a bendable lining strip to curved window frames having deep channel guides which consists in bending the strip to the form of the frame, permanently attaching a templet to the curved portion thereof, and applying the formed strip to the guide so that the templet is concealed within the frame.

2,027,312
A PROCESS FOR PREPARING BASIC TITANIC OXALATE
Sydney Francis William Grundell, Manchester, England, assignor to Peter Spence & Sons, Limited, Manchester, England
No Drawing. Application April 6, 1932, Serial No. 603,678. In Great Britain April 24, 1931
2 Claims. (Cl. 260—21)



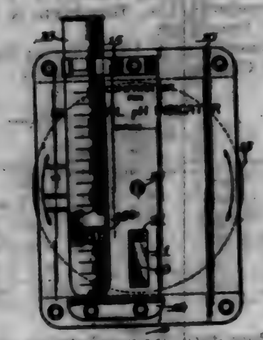
1. The process for preparing basic titanic oxalate which includes the steps of forming a solution of titanium in a mineral acid, the solution having approximately 0.5 molecules of acid, expressed as SO_3, for each molecule of TiO_2, adding to the solution approximately 0.2 molecules of oxalic acid for each molecule of TiO_2 and diluting the solution to precipitate basic titanic oxalate, the solution being maintained at a temperature below 50° C.

2,027,313
DEVICE FOR ADMITTING AIR AND WATER TO THE CYLINDERS OF AN INTERNAL COMBUSTION ENGINE
Alfred E. Dearing and William B. Parker, Manchester, Tenn.
Application January 19, 1934, Serial No. 706,873
2 Claims. (Cl. 127—132)



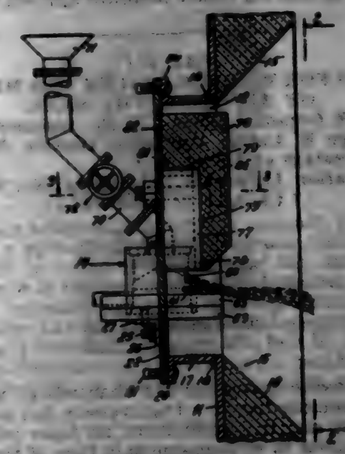
1. A device comprising a body adapted to be arranged between the outlet of the carburetor and the intake manifold of an internal combustion engine, said body having a chamber adapted to communicate with the intake of the manifold and a plate arranged near the intake of the chamber, said plate having an imperforate portion and an opening, said body having a fluid supply port passing through the side wall of the chamber and a reciprocatory valve element including a disk and a marginal portion disposed upon the outlet side of the plate, said disk having an imperforate portion which contacts with said plate to cover and close the opening in the plate and an opening to be covered and closed by the imperforate portion of the plate when the disk has substantially its entire contact face seated upon the plate which contacts with said disk, said marginal portion of the valve element serving to cover and uncover the outlet end of the port.

2,027,314
RAIL FLAW DETECTOR CAR
Loren J. De Lanty, Spring Valley, N. Y., assignor to Sperry Products, Inc., Brooklyn, N. Y., a corporation of New York
Application November 4, 1933, Serial No. 696,529
11 Claims. (Cl. 172—132)



1. In a rail flaw detector mechanism, means responsive to flaws, an indicator, means whereby said indicator is actuated by said responsive means, the rails being joined by joint-bars, and means for rendering said actuating means ineffective when said responsive means passes over a rail joint, said last-named means comprising an oscillatory circuit and means whereby said circuit is varied by said joint-bars.

1,827,515
SEAL
Edward R. De Laix, Chicago, Ill., assignor, by mesne assignments, to Apex Electrical Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application June 12, 1926, Serial No. 115,691
8 Claims. (Cl. 286—11)

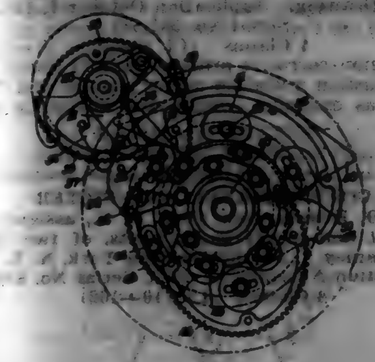


1. In a device of the character described; a casing; a bearing in said casing; a shaft journaled in said bearing; a longitudinally expansible cylindrical sheath surrounding the shaft and having one end hermetically attached thereto; a sealing ring hermetically attached to the other end of said sheath and adapted to contact with the casing; means for holding said sealing ring in contact with said casing, said means comprising a spiral spring surrounding said shaft and lying inside of said sheath; and means for adjusting the tension of said spring, said spring adjusting means comprising a spring seat threaded in said sealing ring and located in an aperture formed in the side of said casing.

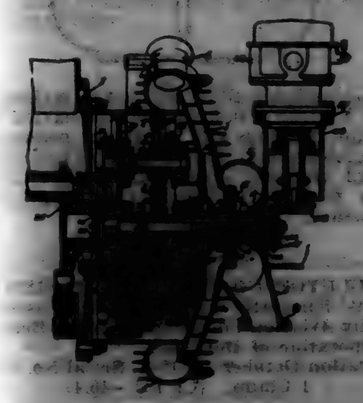
1,827,516
COMPARATOR
Albert Drucker, Chicago, Ill.
Application August 6, 1921, Serial No. 515,533
4 Claims. (Cl. 88—14)

1. A comparator embodying an opaque shield, provided with an opening therethrough, a movable element mounted upon and behind said shield and across said opening to form an opaque closure therefor, said element having arranged thereon a scale of pre-established color values adapted to be successively exposed through said opening as the element is rotated upon the shield, means connected with the shield for removably holding a container for a quantity of the substance whose color is to be tested, a portion of said container being disposed in close proximity to the said opening and adjacent that face of the shield opposite to that face adjacent which said element operates, and means for holding a mask over the said opening and in proximity to the portion of the said container which is adjacent the said opening, for assisting in detecting color differences between the said value exposed through said opening and the substance to be tested and whereby the light rays will pass through the substance being tested and be reflected back by the shield through such substance to the eye.

1,827,517
FURNACE
Charles A. Gallagher and Carl M. Allen, California, Pa., assignors to General Chemical Company, New York, N. Y., a corporation of New York
Application December 28, 1932, Serial No. 648,962
11 Claims. (Cl. 263—21)



1. Apparatus for distributing materials comprising a unitary casing, a chamber in the casing, a slot in the side of the casing, a surface in the chamber for feeding material through said slot, a second chamber in said casing adapted to contain fluid and a second slot longer than the first in the casing communicating with said second chamber, said slots being positioned so that fluid discharged through the second slot is introduced into material discharged through the first slot.



1,827,518
DRIVE MECHANISM
Hyman E. Gelber, Chicago, Ill., assignor to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application May 11, 1931, Serial No. 536,548
24 Claims. (Cl. 74—435)

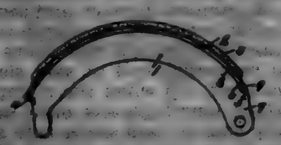
1. Means for transferring motion from a driving shaft to a follower including a plurality of gear segments on said driving shaft, gear segments adapted to mesh therewith on the follower, [illegible] rigid with said driving shaft, and [illegible]

different planes, and blocks on the follower having engagement with the cams to permit the shaft to rotate while the follower remains at rest, said means having a single point of contact with each cam respectively.

1,827,519
INTERNAL COMBUSTION ENGINE
David Gregg, Caldwell, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application March 6, 1931, Serial No. 521,556
4 Claims. (Cl. 123—188)

1. In combination with an internal combustion engine having a crankcase and a crankshaft, a unitary supporting member detachably secured thereto comprising a housing constituting an extension of said crankcase, a shaft having a slidable driving connection with the crankshaft rotatably mounted in said housing, a plurality of engine accessories supported on said housing, a gear on said shaft, driving gears for said accessories meshed with and spaced about the periphery of said shaft gear, a sleeve rotatably mounted on the shaft, a supercharger on the sleeve and driven thereby, a gear train connecting the sleeve with the shaft, said sleeve and gear train being positioned between the accessories and the engine, and said housing, said supercharger, said sleeve, said gear train and accessories being detachable as a unit from said crankcase.

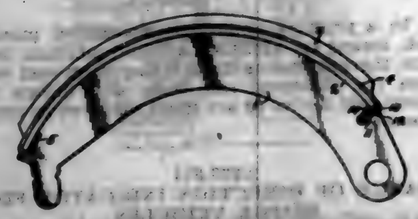
1,827,520
PRINTING OF FIBROUS MATERIALS BY IMPREGNATION
Melvin R. Gruner, Cincinnati, Ohio, assignor to Carthage Mills Incorporated, Carthage, Ohio, a corporation of Ohio
Original application June 7, 1932, Serial No. 616,722. Divided and this application March 12, 1935, Serial No. 10,856
8 Claims. (Cl. 91—16)



1. In a printing apparatus, means for moving a web, means for applying a liquid mordant substance thereto, means for printing upon said web, means for steaming said web, and means for causing said device to act upon said web in timed sequence.

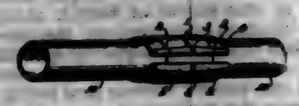
1,827,521
CHANGE OF DIRECTION INDICATOR FOR MOTOR VEHICLES
John Nelson Hasse, St. Peters, South Australia, Australia
Application May 26, 1934, Serial No. 727,842
In Australia March 12, 1934
2 Claims. (Cl. 177—329)

2. In a direction indicator for motor vehicles, the combination of a tubular member comprising at its outer end a housing to accommodate front and rear lenses, means to attach the member to the vehicle, a socket, a sleeve for the socket slidably mounted in said tubular member, a lamp in said socket, means limiting the movement of the sleeve, a switch comprising a stationary contact mounted in the sleeve connected to the center terminal of the lamp, and a movable contact mounted in the sleeve having limited movement therein and being normally spaced from the stationary contact by a spring, means for moving the movable contact into engagement with the stationary contact and upon continued movement cooperating with the sleeve to position the lamp within the housing between the lenses, and an electric circuit including a battery and the said lamp and the switch.



1,827,522
BRAKE LINING DEVICE
Allan C. Hoffman, Englewood, N. J., assignor to Hoffman Brakes, Inc., New York, N. Y., a corporation of New York
Application February 27, 1933, Serial No. 658,450
5 Claims. (Cl. 188—234)

1. Brake mechanism comprising in combination a brake shoe, a strip of friction material, a

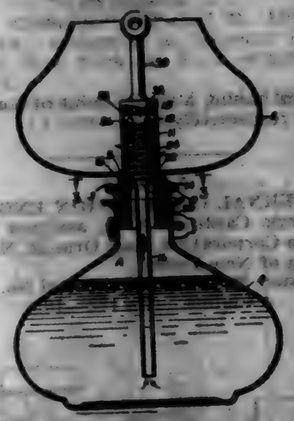


metallic band to which said material is secured, said band being wrapped about said shoe, and means at each end of said band for holding the same in position on the shoe, one of said holding means being so constructed that when the band is in place on the shoe the said holding means will exert a wrapping tension on the metallic band.

2,027,823
BRAKE LINING DEVICE
Allan C. Hoffman, Englewood, N. J., assignor to Hoffman Brakes, Inc., New York, N. Y., a corporation of New York
Application April 2, 1935, Serial No. 14,460
13 Claims. (Cl. 188—334)

2. Brake mechanism comprising in combination a brake shoe having a peripheral flange, a metallic attaching band, friction material secured to the face of said band, fingers carried by one end of said band and interlocked with one end of said flange, and spring fingers at the other end of said attaching band engaging the other end of said brake shoe flange under tension thereby holding the attaching band to the shoe under tension.

2,027,824
COUPLING
Martin A. Hunt, Chicago, Ill.
Application April 19, 1934, Serial No. 721,261
4 Claims. (Cl. 285—194)



1. A coupling of the character described comprising a sheet metal member formed to provide a sleeve to receive the abutting ends of conduits or the like therein and having the transverse ends of said member formed to provide outwardly extending flanges, said flanges being wider at the transverse center of said sleeve than at the ends, at least one of said flanges being slotted adjacent the transverse center of said sleeve, a centrally disposed lateral groove in said sleeve and forming a circumferential seat therein, a longitudinally split lining substantially filling said seat and having its open side remote from the open side of said sleeve, the exposed inner surface of said sleeve being roughened for engagement with a conduit when clamped thereon, and tapered sheet metal clamping members having inturned side flanges arranged to engage said sleeve flanges to clamp each respective end of said sleeve on its respective conduit end when the clamping members are driven longitudinally onto said flanges from opposite ends of said sleeve said split lining being arranged to permit independent insertion of conduit ends therein and independent clamping thereon.

2,027,825
PRIMER FOR AMMUNITION
George E. Jacobs, Kings Mills, Ohio, assignor, by mesne assignments, to The Peters Cartridge Company, a corporation of Delaware
No Drawing. Application October 7, 1931, Serial No. 567,515
4 Claims. (Cl. 52—2)

3. A non-corrosive priming mixture comprising a combustion initiating agent, nitrates and chromates as oxidising agents, and zirconium as a fuel.

2,027,826
COFFEE MAKER AND FILTER
Clyde D. Keaton, New York, N. Y., assignor, by direct and mesne assignments, of two-thirds to Stanley S. Tumbridge, New York, N. Y.
Application November 7, 1932, Serial No. 642,961
4 Claims. (Cl. 210—162)

1. A removable filter for coffee makers comprising a vitreous tubular member having one or more side openings and a passage communicating therewith and a gravity operated vitreous disk-like element loosely disposed within the tubular member and normally almost closing said passage.

2,027,827
CLUTCH CONTROL MECHANISM
Victor W. Kliesrath, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 10, 1931, Serial No. 568,699
1 Claim. (Cl. 121—46.4)

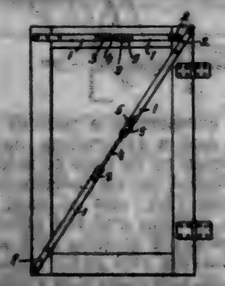
A three-way control valve for pressure operated fluid motors comprising a bored casing having inlet, outlet and atmospheric ports, a reciprocable spring pressed sleeve member within the bore of said casing, said member serving to control the communication between said inlet and outlet ports, a second reciprocable sleeve member disposable within said first mentioned sleeve member

and adapted to control the communication between said atmospheric and outlet ports and means, slidable within said last mentioned sleeve member, for successively operating both of said sleeve members, each of said sleeve members being provided with a triangular-shaped end flange member adapted to slidingly contact the contiguous sleeve member.

2,027,828
RADIO APPARATUS
Arthur H. Knight, Delaware, Ohio
Application September 14, 1933, Serial No. 689,050
5 Claims. (Cl. 250—20)

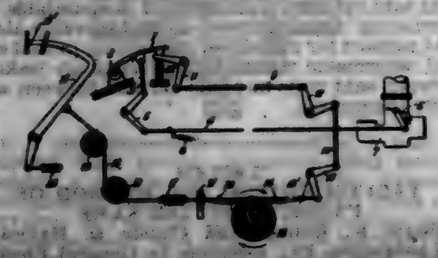
1. In a method of radio reception which utilizes a regenerative radio receiving circuit, adjusting a resonant circuit to a given frequency which it is desired to receive, setting the vacuum tube in oscillation at radio frequency, likewise setting the tube in oscillation at variation frequency, adjusting the intensity of oscillation of the radio frequency and variation frequency to be equal, admitting a signal wave having the same frequency at which the resonant circuit is adjusted, whereby the variation frequency ceases oscillation and causes a substantial change in the plate circuit current, and utilizing the thus increased plate circuit current to operate electrical indicating devices.

2,027,829
METHOD OF CASTING TRANSPARENT FILMS
Edward M. Krein, Gary, Ind., assignor, by mesne assignments, to Marbo Products Corporation, Chicago, Ill., a corporation of Delaware
No Drawing. Application November 8, 1933, Serial No. 697,180
6 Claims. (Cl. 18—57)



1. The method of protecting the surface of a carrier web in the casting of transparent films thereon, which comprises coating said surface with a solution of petroleum jelly in a volatile solvent and evaporating the solvent therefrom to leave a uniform thin film of petroleum jelly.

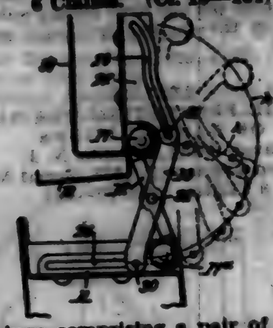
2,027,830
SLAB FILLER
Frederick Thomas Krein, Park Ridge, Ill., assignor to Vortex Cup Company, Chicago, Ill., a corporation of Delaware
Application June 16, 1932, Serial No. 617,478
2 Claims. (Cl. 226—92)



1. In combination, an open-work tray having a relatively narrow side bar thereabout and cup sockets therein, and a filling hopper having a relatively flat bottom with holes punched therein and the circumferential margin around each of said holes turned downwardly, resilient means depending from said hopper for frictional gripping engagement with said side bar and disposed so as to hold said hopper at all sides on said tray with said holes registering with said cup sockets, said hopper having an upstanding flange around a substantial part of its periphery with the balance of its periphery free of the flange, and the bottom of said hopper having an upward inclination at the flange-free portion of the hopper sufficiently to retain an amount of substance in the hopper and permit any excess substance to be swept from the hopper over said inclination.

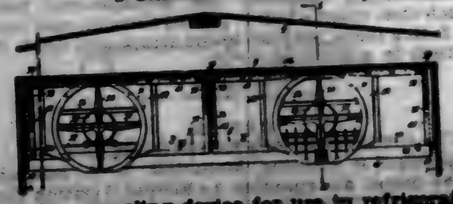
2,027,831
DEVICE FOR PREVENTING THE SAGGING OF GARAGE DOORS
Jacob Kunz, Hillside, N. J.
Application January 7, 1935, Serial No. 636
3 Claims. (Cl. 20—35)

1. A device for bracing, reinforcing and preventing the sagging of garage doors comprising two flexible metal straps having means permitting attachment of the straps at one end to the garage door, and having attachments at their other ends, said attachments being box-like structures made of sheet metal and being secured to the strap, each of said attachments extending some distance along the strap, and being provided with aligned holes in its end portions for the passage of a bolt for pulling the straps and attachments together, the arrangement being such that when a bolt is passed through said holes it is in a plane parallel to the straps and holds the straps in alignment.



2,027,832
CLUTCH OPERATING MEANS
Raymond P. Lansing, Montclair, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application November 10, 1931, Serial No. 574,169
15 Claims. (Cl. 192—.01)

1. A clutch control for an automotive vehicle comprising throttle control means, a clutch control member, a friction member having power means for rotating the same in one direction, and a flexible cable connected between said throttle



control means and said clutch control member and having a wrap around said friction member for frictional engagement therewith.

2,027,321
AUTOMOBILE DOOR HINGE
Emil H. G. Lefevre, Detroit, Mich.
Application August 28, 1933, Serial No. 687,879
6 Claims. (Cl. 16—164)

1. A hinge comprising a pair of hinge plates, a hinge link, and a controlling link, said hinge link being pivoted at its ends to said hinge plates and being pivoted at an intermediate point to said controlling link, one of said hinge plates having a cam portion and the other hinge plate having an elongated guiding slot and said controlling link having end parts slidably engaging said cam portion and elongated guiding slot as the hinge is opened or closed and thereby controlling the opening and closing movements of said hinge.

2,027,324
CAR COOLING DEVICE
Walter C. Phillips, San Francisco, Calif., assignor to Phillips Refrigeration Products, Inc., San Francisco, Calif., a corporation of California
Application September 17, 1932, Serial No. 633,802
5 Claims. (Cl. 98—6)

1. A car cooling device for use in refrigerator cars of varying transverse dimension and having an upper bunker opening comprising a support adapted to extend transversely of said car adjacent said opening, a plurality of demountable air circulating units mounted on and movable along said support for individual positioning in said car, and deformable means for inhibiting air leakage between said units and said car and between said units themselves.

2,027,335
VACUUM SWITCH AND METHOD OF FABRICATING THE SAME
William K. Rankin and Claude D. Hayward, Lansdowne, Pa., assignors to General Electric Company, a corporation of New York
Application October 12, 1932, Serial No. 637,563
5 Claims. (Cl. 200—144)

1. A vacuum switch comprising an evacuated envelope, a lead-in conductor sealed through a wall of said envelope, a stationary contact secured within said envelope to an end of said conductor, said contact comprising a cylinder-like portion arranged to surround and clamp said conductor, the axis of said cylinder being generally in alinement with said conductor, and a movable contact extending through the opposite wall of said envelope generally parallel to said conductor coacting with a side wall of said cylindrical stationary contact.

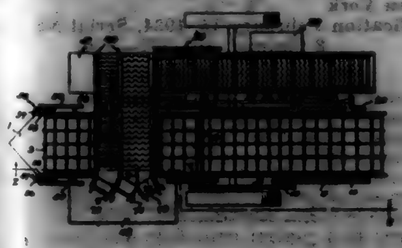
2,027,336
VACUUM SWITCH
William K. Rankin and Claude D. Hayward, Lansdowne, Pa., assignors to General Electric Company, a corporation of New York
Application February 22, 1934, Serial No. 712,522
5 Claims. (Cl. 200—144)

1. In a vacuum switch comprising an evacuated casing and relatively movable contacts disposed therein, a coiled substantially flat conductor connected in series with said contacts for producing a magnetic field adjacent the coacting contact surfaces thereof, and insulating bonding members individually disposed between adjacent turns of said coiled conductor, each member positioned in recesses formed in opposing faces of adjacent turns for resisting compression and bursting forces acting on said coil.

2,027,337
PROCESS FOR MAKING ALLOYS
William C. Read, New Rochelle, N. Y., assignor to Electro Metallurgical Company, a corporation of West Virginia
No Drawing. Application July 31, 1934, Serial No. 736,242
5 Claims. (Cl. 75—65)

1. Process for making metals and metallic alloys containing relatively large amounts of nitrogen which comprises reacting an exothermic mixture of a nitrogen-containing oxidizing agent and a strong reducing agent in close association with the metallic constituents of said alloy, at least one of said constituents being a metal that has a substantial affinity for nitrogen and said mixture being substantially free from metal oxides; whereby the said constituents are melted and nitrogen liberated by the reaction is brought into contact with the said molten constituents.

2,027,338
STABILIZING HYDROGEN PEROXIDE SOLUTIONS WITH PYROPHOSPHORIC ACID
Joseph S. Reichert, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application September 12, 1932, Serial No. 632,756
5 Claims. (Cl. 23—221)



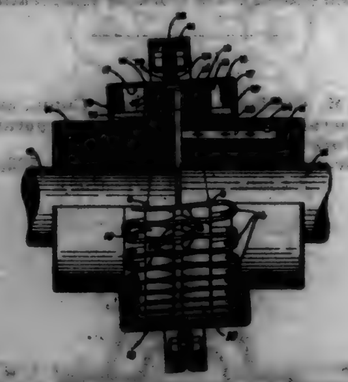
1. A method of stabilizing a hydrogen peroxide solution which comprises adding thereto a stabilizer which consists of a small amount of a pyrophosphate, and then adjusting the acidity of said solution to a pH of between 1 and 7.

2,027,339
PURIFICATION OF HYDROGEN PEROXIDE SOLUTIONS
Joseph S. Reichert, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application February 8, 1933, Serial No. 656,451
20 Claims. (Cl. 23—207)

1. A process for the purification of a hydrogen peroxide solution comprising precipitating stannic hydroxide therein at a pH above 1.4.

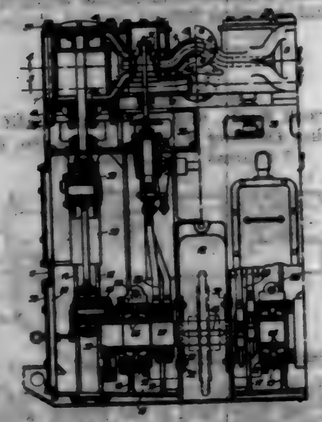
6. A process for the purification of a hydrogen peroxide solution comprising precipitating stannic hydroxide therein at a pH of 2.5 to 3.5 in the presence of a substance capable of coagulating the stannic hydroxide precipitate.

2,027,340
POTATO HARVESTER MACHINE
Fritz Joakim Redin, Chatham Center, N. Y.
Application March 4, 1935, Serial No. 9,261
4 Claims. (Cl. 11—31)



2. In a potato harvester and grader, in combination: a plow; an agitated devining elevator leading immediately from the plow; a first potato elevator having agitating means and surrounded by said devining elevator; a second potato elevator at right angles to and receiving from the first one, its receiving end surrounded by said devining elevator; a third potato elevator at right angles to and receiving from the second one; a blower discharging between the delivery end of the second, and the receiving end of the third, potato elevators; a first grading belt at right angles to and receiving from the third potato elevator; a sackholder at the delivery end of said first grading belt; a chute whose receiving end is surrounded by said first grading belt; a second grading belt at right angles to, and receiving from, said chute, and parallel to said first grading belt; a sackholder at the delivery end of said second grading belt.

2,027,341
HAM-BOILER
Frank Roth, San Francisco, Calif.
Application October 5, 1933, Serial No. 693,824
7 Claims. (Cl. 146—37)



6. In a ham cooker of the type having a container for the meat and a lid fitting within the container provided with hooks at the ends arranged for hooking to the container for clamping the lid down upon the meat, the improvement which comprises providing a pair of rack-members at the ends opposite ends of the container each comprising a plurality of spaced horizontally extending bars secured between vertical ribs, said bars being adapted for selective engagement by the hooks of the lid.

2,027,342
COUPLING
Walter F. Schmitter and Percy C. Day, Milwaukee, Wis., assignors to The Falk Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application May 29, 1935, Serial No. 673,495
5 Claims. (Cl. 64—14)
